FIGS may not commonly grow on thistles, but the fine crop of British good wishes that has followed the uncomplimentary remarks of Sir Lionel Carden on our Mexican policy has the look of some such strange reversal of nature. Sir Lionel is British Minister to Mexico, presenting his credentials the very day after Huerta had clapped a large part of his Parliament into jail, and when this coincidence was called to his attention, he remarked, according to the dispatches, that "it was not incumbent upon him to investigate what President Huerta had done," and he "did not consider it right for foreigners to constitute themselves a committee of investigation into the internal affairs of Mexico." Elucidating his meaning further, he remarked rather pointedly, as reported, that "I do not believe that the United States fully realizes the seriousness of the situation here." Next day he observed that the United States was "working in the dark," and went on to contrast the strength and ability of Huerta with the weakness and disorganization of the rebels.

AN UNINTENTIONAL HARMONIZER.

Sir Lionel Carden's reported strictures on our policy in Mexico produced a most gratifying outburst of sympathy with us from the British press. Some of them suggest that he should return to his native land.

Several days later the British Embassy in Washington made a formal disclaimer of the authenticity of the interview—altho we have seen no denial of it from Sir Lionel himself—but the importance of the incident lies in the prompt action of the organs of British opinion in telling us that the British people are with us in our Mexican policy. True, considerable doubt seems to exist as to just what our policy is, but whatever it is, they say plainly that they value our friendship more than they do the British gold that is invested in the land of Huerta. "The friendship of the United States is more important to Great Britain than any oil concession," declares *The Pall Mall Gazette;* and the London *Graphic* thinks the British Government should first have assured itself that in supporting Huerta it "did not risk vexing the United States, whose friendship is far more than all Lord Cowdray's railways and copper-mines in Mexico." The London *Daily News* believes that "the interests of our friendship with America require the recall of a Minister who does not appreciate that the maintenance of such friendship is the keystone of British policy," and the London *Telegraph* would also recall British recognition of the Mexican ruler. Comparing what Britain has at stake in Mexico and in the United States, *The Daily News* says:

"What have we at stake in Mexico? What is governing our policy? Simply and solely money invested in Mexico by English bondholders, mine owners, and oil concessionnaires. The higher interests of Mexico are frankly admitted to be out of the purview of British policy there.

"Not all the British capital in Mexico would be compensation for even the risk of losing America's friendship. Under the present circumstances it would be our duty and the plainest common sense to acquiesce in the American policy, even tho we thought it mistaken; but President Wilson's policy is not mistaken. All that has happened in Mexico confirms the keenness of his insight and justifies the courage of his conduct.

"We can only see one explanation of the British policy. We believe this country's Mexican policy is just the Mexican policy desired by a handful of British capitalists, who may have made it more palatable by persuading the British Foreign Office that behind President Wilson is the Standard Oil Company, reaching out for control of the Mexican oil supplies. There is a great deal which we are prepared to suffer at the dictation of rich men, anxious about their speculative investments, but we are not prepared to sacrifice the friendship of the United States; let the Foreign Office understand that."

Sir Hiram Maxim goes even further, and writes in the London *Morning Post* that Britain should stand with us, right or wrong:

"Nothing is so important to England as the friendship of the great American Republic. The destiny of Mexico is inevitable, and it is only a question of time when the great Anglo-Saxon race will enter into possession of the country. This ought to be understood by the Anglo-Saxons of the British Isles, and her officials should not attempt to put a brake on the wheels of progress, especially on the continent of America.

"Rightly or wrongly, England should stand by the American policy in Mexico."

The London *Times* is more lukewarm, and the London *Globe* thinks we are expecting too much when we demand constitutional government in a country like Mexico. We are too idealistic, thinks *The Daily Mail*, and it adds:

"The danger in the Mexican situation is that which is always found lurking where idealism mingles with politics. Idealists seem fated to stir up trouble, and their idealism, if only for its transparent honesty, is more deadly in its effect if there are forces behind it which are by no means idealistic, but are only seeking to use it to serve their own earthly ends."

The Times takes this matter-of-fact view of the situation:

"We have no sort of political interests in Mexico other than those which we have in any other foreign State in which our financial and commercial interests are large. It is no concern of ours by what men or what party the Government is carried on. It does concern us, for the sake of our trade and our capital invested there, that the Government should be able and willing to preserve some measure of order and justice and maintain a regular and stable administration. That is the limit of our interest in the internal affairs of the Republic. . . . . .

"We are awaiting the development of events with a sincere desire to see peace and decent government reestablished in Mexico. Americans, we all know, are inspired by the same motives, but they seem to define their attitude toward any new Government which the elections may bring forth before it has come into being. If they have a practical plan for realizing the immediate benefits which we and they agree that Mexico requires, we shall be ready, we need hardly say, to give it our best, our most friendly consideration. To speak frankly, we do not believe a Government can be established in Mexico in accordance with their ideals. We shall be delighted to find that we are mistaken.

"There has, we repeat, been no friction between London and Washington on the question hitherto; we earnestly hope there will be none in the future."

TURKEY WILLING TO RESCUE MACEDONIA

THE FRIGHTFUL ATROCITIES in Macedonia since the Allies "rescued" it from Turkish rule arouse the pity of the Moslems, who think now that they should rescue the bleeding province from the Christians. It is stated as a fact by the *Ikdam* (Constantinople) that "to-day all the inhabitants of Macedonia, Bulgarians included, desire autonomy for Macedonia under Ottoman suzerainty," and it believes that "this would settle the whole vexed racial problem." The international Carnegie commission that has been making a searching investigation of the atrocities has just ended its labors, and the dispatches state that the commission blames all the Balkan Powers for their inhumanity. The letters of the Greek soldiers relating their atrocities, which were captured by the Bulgarians and denounced by the Greeks as forgeries, are declared authentic, and in addition the Greeks are charged with using the forbidden dum-dum bullets. The Bulgarians, however, are found to have outdone all the rest in atrocity, infuriated by what they considered the treachery of their allies. Turkey, Bulgaria, and Greece gave the commission every facility for inquiry, while Servia "did its utmost to prevent an unhampered investigation." The *Tanine* (Constantinople) remarks that the good name of the Turk is now cleared and the excellence of his rule in Macedonia is demonstrated. It observes:

OMINOUS FOR GREECE.

This photograph, sent to us by the Greek Legation in Washington, shows Mr. Bilinski with his wife and his vice-consul, standing behind the gibbet at Janina on which ten of the Greek notables of the city were executed during the war, condemned by the Turkish authorities. Mr. Bilinski has been appointed to represent Austria-Hungary on the commission which will trace the boundary between Greece and Albania, and Greece considers the appointment grossly unfair. A mass meeting of protest against it was recently held in Janina.

"Since the invasion of the Allies poor Macedonia has been a scene of blood and fire. From every quarter, from Mussulman, Albanian, Bulgar, Serb, Greek, comes one cry of complaint. The Christians, who were to be delivered from Turkish slavery, have found no rest. We can safely affirm that if there was any need of exculpating the good name of the Turks, the Balkan wars have accomplished that. Europe charged us with all the calamities suffered in Macedonia; we were the ones who killed, burned, maladministered, tried to make Turks of Christians. Well, we have retired. Paradise should now be restored there. But instead of a restored paradise, we see confusion, strife, and division run riot, so that the Greeks declare they have suffered more from the Bulgarians in six months than they did from the Turks in six centuries. While the Bulgars are publishing the brutalities of the Greeks, news comes of the slaughter of Albanians by Servians, and of the burning of Servian villages by Albanians, fearful anarchy everywhere. We don't propose to meddle with the business of Greeks, Bulgars, Serbs cutting each other's throats. We stand far off, spectators, and cry to all the world, There! now you see! But, alas, the poor Mussulman Turks are mixed up in the confusion and distress. The Greeks, on retiring from the regions they give up to the Bulgars, burn Moslem villages as a testimony to the justice of Greek rule, and drive the people far away. In Salonika there are many Moslem and non-Moslem merchants who are planning removal to Anatolia to start anew their business there, leaving all business prostrate in Salonika. But to-morrow's state will be far worse than that of to-day

"The hot blood in which old hatreds have fermented will develop brutal passions which will brook no restraint, and the Moslems will suffer most, till they are wiped out altogether. For they have no comitadji, adepts at slaughter, and can not defend themselves. Therefore if it is our duty to plan for the protection of the Moslems in Macedonia, it is also the duty of Europe, in the name of humanity, to consider what is to be done to restore security to the population of those regions, for Europe is in part responsible for present conditions.

"In our opinion, to put an end to the anarchy of to-day and to the wars which will burst out to-morrow, the remedy is to erect Macedonia into an autonomous principality with Salonika as its capital city, under the joint control of the Powers, when all rivalries and hostility shall be suppressed.

"How is this result to be attained? Shall we send our Army to Macedonia to expel the Greeks and establish an autonomous principality? That would be a wearisome expedition, and besides it would subject us to charges which, in the face of our previous protestations, it would be difficult to meet. The work should be done by the united action of the Powers. We need financial aid from Europe, and must not do what will close this door in our faces. As to the settlement of the question of the islands, we have left it to the Powers, and I see no reason why we should be impatient over some delay in reaching that settlement. Is it not better if we wait? The scales are day by day turning in our favor. The dreadnought *Reshadie* will soon be added to our Navy and we shall then be in better condition to treat with Greece."

The *Ikdam* notes what others have also reported, that there is less religious liberty in Macedonia now among the Christian sects than there was under Moslem rule, and it favors a military invasion of Macedonia to restore the sway of the Crescent. It says:

"The Balkan War was to have liberated the various races from galling servitude. It has not so resulted. It has rather resulted in the loss of the rights those races held under Ottoman rule, when the Government recognized the religious and civil officers who were freely chosen by the several Christian communities. But the various elements of the population that have fallen into the hands of the Balkan Government can no longer possess the rights they formerly enjoyed. It is therefore natural that they should, all alike, without distinction of race or religion, desire autonomy under Ottoman sovereignty. This defines the present duty of the Ottoman state, viz., to go forward relying on her military strength and establish Macedonian autonomy. The Greeks have no right to remain in Kavala, or in Salonika, the capital of the new principality. The Ottoman Army should advance beyond Salonika, to Elassona, and enter Thessaly, and cancel the claims of the Greeks to the islands also. This erection of Macedonia into an autonomous principality would serve the interests of Roumania and of the Great Powers of Europe, and make possible a real balance of power in the Balkans, and stop the present deadly rivalry."—*Translations made for* THE LITERARY DIGEST.

THE "INFERIORITY" OF WOMEN

SUCH IS THE VERDICT of no less an authority than Sir Almroth Wright, who is not only an M.D., an F.R.S., and an F.R.C.S.I., but is the author of the systems of anti-typhoid inoculation and of therapeutic inoculation for bacterial infections. His critics, not dazzled by all this, are asking what he would say about feminine inferiority if he should meet some such specimens as Jael, the wife of Heber the Kenite, as Deborah and Ruth, as Mary of Bethlehem, as Joan of Arc, and Miss Nightingale, not to speak of the innumerable women who did heroic work in our own Civil War. What the shades of Harriet Beecher Stowe and George Eliot would say of the British scientist's book would make interesting reading. Its title is "The Unexpurgated Case Against Woman Suffrage," and it contains the following broad statement: "The failure to recognize that man is the master, and why he is master, lies at the root of the suffrage movement." Upon which the London *Daily Chronicle* comments in the verses of the following lampoon, under the title of "The Master":

Female! Wilt thou court disaster,
Striving hard against the light?
Man declares that man is master—
Man is Wright.

Shouldst thou press for why and wherefore,
Woman's reason thou'lt invite;
Man is boss because he's master;
That's all Wright.

Hence, with thy mistaken "movement,"
Puny, servile parasite;
Status quo and self-improvement
Sounds all Wright.

Almroth thus succeedeth Almroth;
Have we not convinced you quite?
Female! Thou wouldst make a lamb wroth;
That's not Wright.

It will be remembered that last year Sir Almroth wrote to the London *Times* denouncing what he called "the hysteria and folly" of the Pankhurst campaign. He declares that "woman has hitherto stifled discussion by placing her taboo on anything seriously unflattering being said about her in public," so he announces now that he will set aside convention and speak what he conceives to be "indisputable but unflattering proof." He

sums up the suffragists as women who want to have everything for nothing—"wives who do not see that they are beholden to men for anything and those who consider that they have not made a sufficiently good name for themselves—in short, all ungrateful women." Woman as a class is pronounced by this learned man to be an "insolvent citizen." "She contributes little to the finances of the state. If she has money, it has been made for her in the vast number of instances by man, and being a dependent of man, it follows that she is not entitled to vote."

"The vote represents physical force, and woman does not possess that force," says Dr. Wright. "The virile and imperial race will not permit any attempt at forceful control by women."

BABY WOUNDED BY THE BULGARIANS AT SERRÈS.
From "A Sad Page in Balkan History," published at Athens.

Viewed from this standpoint of force, "the woman-suffrage measure stands on an absolutely different basis to any other extension of the subject. It would undermine the physical sanction of the laws." Woman, he says, "is intellectually unfit to exercise the vote. Her morality is as defective as her intellect. It is personal and domestic, not public, morality which is instinctive in her." To quote further:

"It would be difficult to find one who would trust a woman to be just to the rights of others in the case with the material interests of her children or of a devoted husband involved. Woman is almost without a moral sense in the matter of choosing or engaging herself to political assistance with the view to influencing votes. In this matter one would not be very far from the truth if one alleged that there are no good women, but only women who have lived under the influence of good men. Even more serious than this sacrifice of public to private morality is the fact that even reputedly ethical women will, in the interest of what they take to be idealistic causes, violate laws which are universally accepted as being of moral obligation."

Sir Almroth proceeds by considering what is the reason for this sudden outburst for woman-suffrage, and he says:

"The suffrage movement has resulted from an excess of female population which has produced economic difficulties for woman, and the severe sexual restrictions which obtain in England have bred in her sex hostility. The real aim of the suffrage movement is to give women the economic independence out of the earnings and taxes of men. If this movement succeeds, if the ambitions of the suffragists could be realized, every assembly, board, university, and learned society would be converted into an epicene institution until we should have nothing everywhere but one vast cock-and-hen show."

The learned doctor closes with an appeal to teachers who must impress upon the minds of girls the fact that individual men will shower upon individual women "every good thing which, suffrage or no suffrage, they could never have procured for themselves."

The question of woman's rights received a somewhat different treatment at the Church Congress recently held at Southampton, where Bishop Welldon, one of the most advanced thinkers in the English episcopate, declared that in his opinion "women

should have equal authority with men in asserting their conjugal and property privileges." The *Daily Mail* (London) takes up the various pleas of the Doctor and the Bishop, the latter of whom summed up his views by saying, "What is needed is that the half-learned lesson of chivalry toward women should be mastered." On which this paper remarks, "We prefer the Bishop's standpoint and temper to the scientist's."

AMERICAN INFLUENCE IN INDIA

LITTLE as we may suspect it, the occasional visits paid to our country by some of the native Princes of India are having a far-reaching effect upon the advancement of the millions of East-Indians over whom these rulers exercise government in their own name and right, tho subject to some interference on the part of the British-Indian authorities. The Gaekwar of Baroda—his Highness Shri Sir Sayaji Rao III. Gaekwar, G.C.S.I., *Sena Khas Khel* (Commander of the Select Army), *Sham Sher Bahadur* (Illustrious Swordsman), to give him some of his titles—who has come to us more than any other of his fellow chiefs, was so struck by the liberality with which we make provision for the education of our rising generation that he sent orders home to make primary education free for all and compulsory for schoolable boys and girls. This innovation caused considerable annoyance to the authorities of British India, for they fight shy of the expense, not only because to meet it they will have to cut down the huge "white" army kept in Hindustan, but because by investing the natives with knowledge they will make them long for self-government. However, we read in the "Statement Exhibiting the Moral and Material Progress and Conditions of India During the Year 1911–12 and the Nine Preceding Years," issued by the British-Indian Government, that the reform inaugurated by the Maharaja of Baroda has made remarkable headway. This document, prepared by officials the reverse of friendly to the Gaekwar, says:

AN AMERICAN AT HEART.

The Gaekwar of Baroda, as he appears in Oriental garb and surroundings. While his looks here seem to belie his Yankee predilections, his reforms in Baroda reveal his underlying Americanism.

"The Gaekwar has shown great interest in education, and notable advances have been made. In 1904 an act was passed to provide for the extension to other parts of the State of the system of free compulsory education (up to a certain standard) that had been in force experimentally in one *taluka* (subdivision) since 1893, and in the following year it was decided to extend the system accordingly to all parts of the State, excepting certain very backward tracts. The number of schools was greatly increased in the next few years, special grants being made to some villages whose local boards were unable to open schools for want of funds. The ages between which attendance is compulsory are 7 to 12 for boys and 7 to 11 (7 to 10 previous to 1909) for girls; exemption is allowed on various grounds. At the end of 1910–11 there were 6,906 students in 41 English-teaching institutions and 178,571 in 2,985 vernacular schools. The number of girls attending different schools was 54,497.

"There were various special schools, including four music schools. The expenditure from State funds on education increased from £42,650 in 1902–03 to £92,421 in 1910–11. . . . . .

"The report for 1910–11 (issued by the Baroda Government) states that the Education Department is under orders to open primary schools wherever it is possible to gather together fifteen children, and that on this basis no village with a population of one hundred souls will long remain without a school, save under exceptional circumstances."

The Gaekwar also is advancing agriculture by means outlined thus by the same authority:

"Agriculture has been helped by means of seed depots, by the employment of specialists, and by various arrangements for instruction and demonstration. Three agricultural banks were established in 1899 and subsequent, and two organized in 1910–11 brought the total to five; their operations have been on a rather limited scale, the working capital in 1912 amounting to £11,300. Considerable progress has, however, been made under a Cooperative Credit Societies Act passed in 1905; at the end of 1911–12 there were 122 societies, with 2,815 members, and a working capital of over £13,000."

The Maharaja of Baroda engaged the services of an American expert, Mr. R. Cahoon Whitneck, to advise him on the organization of finance and banking, and as a result a great economic advance has been made. More recently the Maharaja employed an American expert to make a thorough survey of the economic resources of Baroda. We read:

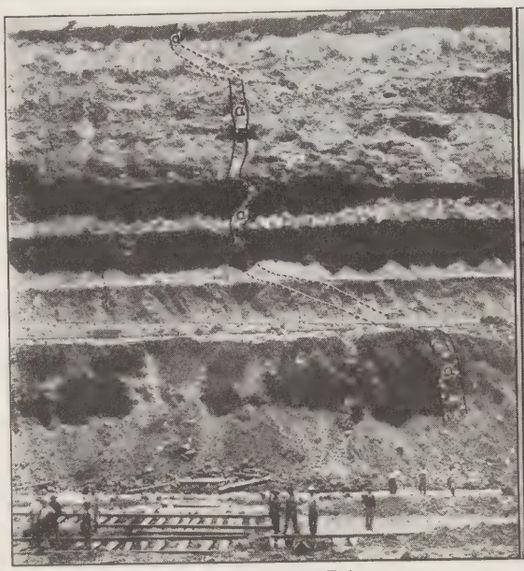
"Manufacturing industries have made some progress. The State cotton-spinning and weaving mill was sold to a company in 1905, and various other companies have been floated. In 1906 an economic adviser was appointed, and the Bank of Baroda, subsidized by the State, was opened in 1908. A geological survey of the State from an economic point of view was carried out in 1908, but no very notable result was accomplished."

Among the other notable reforms made by this enlightened East-Indian, the following are mentioned in the Blue Book:

"Mention should be made of the Infant Marriage Prevention Act, a tentative measure of social reform passed in 1904, which fixt twelve as the minimum age of marriage for girls. The act made provision for exemptions of which advantage has been taken in large numbers of cases, and offenses have been very leniently dealt with."

During the last four years an American expert has been busy at Baroda organizing stationary and circulating libraries at the capital of the Gaekwar's State and throughout his dominions, which had, according to the recent census, an area of 8,099 square miles, a population of 2,032,798 souls, and which yielded an annual revenue of about $5,500,000.

SCIENCE AND INVENTION



A DIKE OF BASALT (*a*), WHICH CUTS VOLCANIC CLAY ROCK.

This basalt was hot molten lava when it was injected into the clay rock. Since cooling it has been subjected to shearing stresses which have broken and jogged it considerably. The parallel benches mark excavation levels.

REMARKABLE FAULT PLANE (*c*) ON THE WEST SIDE OF THE CULEBRA CUT.

The earth adjustments which caused this, and similar breaks or faults, took place thousands of years ago. The rocks on the right of (*c*) dropt downward about forty-five feet, as shown by the fact that (*a'*) is a continuation of the lava flow (*a*), (*b'*) of (*b*), and so on. A minor break or fault plane is shown at (*d*).

EVIDENCES OF DISTURBANCE AT PANAMA.

The Geologist of the Canal Commission says that while it is "not absolutely impossible that a destructive earthquake might visit the Canal, still it is so extremely improbable as to be well outside the range of all practical considerations."

EARTHQUAKES AND THE CANAL

THE RECENT OCCURRENCE of two earthquake shocks at Panama gives special interest to a study of geological conditions on the isthmus and of what they reveal, contributed by the geologist of the Isthmian Canal Commission, Donald F. MacDonald, to *The Scientific American* (New York, October 18). He tells us that while the earthquake belts of Central and South America are approximately co-extensive with the regions of fairly high mountains, there are few, if any, mountain ranges, properly so-called, in the Panama Republic, altho there are high mountain groups. According to the older geographies the North and South American Cordilleras were practically one continuous chain from Alaska to Cape Horn. This, Mr. MacDonald assures us, is quite incorrect, for the mountains of Panama, Costa Rica, and some of the other Central-American republics are younger than the great ranges and had a different origin, for they are not due to folding by lateral pressure, as the mountains of western America chiefly are, but originated from intrusions of volcanic rocks. He goes on:

"Therefore, the Canal is far removed from the great mountain masses, the settling and adjustment of which might cause cumulative stresses that would culminate in rock ruptures great enough to give destructive earth vibrations. Furthermore, the relative weakness of most of the rocks within the Canal Zone region prohibits the accumulation of stresses sufficiently great to cause violent rock rupture, with concomitant earth jars of destructive proportions. Theoretically, then, we would expect the Canal Zone to be well outside the Central American earthquake belt. This is quite in accordance with the facts of observation as given in a long and fairly complete record of the quakes that have occurred from the time of the Spanish conquest to the year 1886.

"In all that time and up to the present only two sévere shocks were noted; one of these, in 1621, destroyed many of the buildings in Panama, and one in 1882 damaged several buildings and bridges, and locally threw the railway track out of alinement. In Colon the latter quake is said to have opened a few crevices, and to have been attended with some fatalities. Very many smaller shocks have occurred, and since the installation of seismographs by the Isthmian Canal Commission, numerous tremors, most of which are detectable only by instrument, are recorded every month. The liability of the Canal to injury and destruction by earthquakes has been proclaimed; but the fact is that no earthquake since 1621 would have inconvenienced it, and the shock of that year, tho severe enough to shake down adobe houses, and even some masonry structures, would have had no serious effect on canal slopes, and little effect on such rock-founded, solid concrete structures as the locks. . . . . .

"Tho not absolutely impossible that a destructive earthquake might visit the Canal, still it is so extremely improbable as to be well outside the range of all practical considerations. In summary, then, the following are the chief resons why it is believed the Canal will never be in any appreciable danger from earthquakes:

"1. The large number of tremors instrumentally recorded every month is evidence that slow adjustments are constantly taking place, and thus no great accumulations of stress, that might later culminate in a big shock, are possible.

"2. The absence from the Isthmian region of high mountains and of geologically recent volcanic activity is evidence in favor of the absence of earthquakes; especially as such high mountains are a striking geological feature of the whole Central American earthquake belt.

"3. The presence of numerous small faults and of the faulted-down conditions of such volcanic cores as Gold Hill and Contractors' Hill is evidence that adjustment here has progressed well on toward the establishment of normal conditions of equilibrium.

"4. The tensile strength of the majority of the rocks within

the Canal Zone is quite low, and they would shear with comparative ease, thus preventing any relatively great accumulation of stress which might result in a comparatively intense shock. However, experience teaches that where earthquakes happen, maximum destructive effects on buildings occur where they are built on loose and friable material. This consideration might therefore subtract a little from the saving benefits of the yielding and preventive qualities of the Canal Zone rocks.

"5. Over three hundred years of earthquake observation shows only two shocks of considerable magnitude, and there is every reason to believe that the severest of these would not have seriously damaged even the most delicate parts of the Canal.

"That many small and harmless shocks will traverse the Canal Zone is certain, but that the Canal is liable to be seriously damaged by earthquakes is contrary to all the evidence."

THE OLD STYLE.

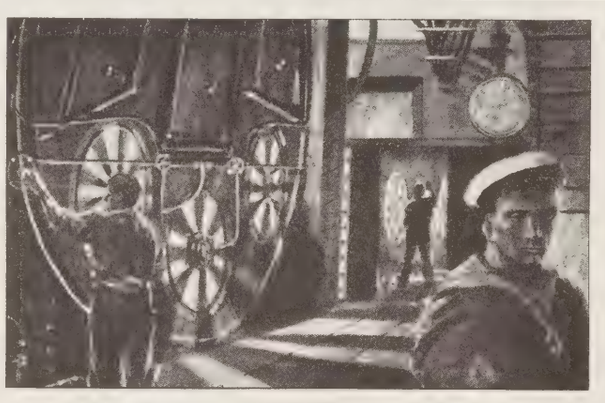
In the stoke-hold of a coal-burning ship. The present stoke-hold is an inferno of heat, noise, dust, and incessant labor.

A NAVAL REVOLUTION THROUGH OIL-FUEL

THE MEANING of oil-fuel in the Navy, as an all-round promoter of efficiency, is explained in an illustrated article contributed to the London *Graphic* (October 11) by Percival A. Hislam. The matter, we are told, has been occupying the attention of the British Admiralty since 1900, when they began experiments with the old cruiser *Blenheim*, and when Winston Churchill became First Lord, a few years ago, there were already 112 British war-ships built or building to burn oil-fuel exclusively. Under the Churchill régime, a further great impetus has been given to this use, and in his first ship-building program—that of 1912–13—every unit will use oil alone to make steam, including five battle-ships, eight cruisers, twenty destroyers, and many submarines. This looks as if the powerful British Navy would ultimately use coal only in exceptional cases. What are the advantages that have induced the British naval authorities to make this great change? Says Mr. Hislam:

"In the first place, when a coal-burning ship has emptied her bunkers the whole crew have to shovel and carry, stow and trim for hours on end. An average armored ship can carry 2,000 tons, and it would be a good performance for six or seven hundred men to get such a quantity on board in ten hours; and for another ten hours after that they would be fit for very little.

"An oil-burner simply goes alongside a wharf, hoses are screwed on to the pipes which lead down from the tanks, and the whole operation of 'oiling' is completed in a marvelously short space of time without the least manual labor. What a vast difference, too, when it comes to feeding the furnaces! In a coal-burning ship when running at full speed the stoke-holds are full of sweating stokers, stript to the waist and shoveling madly but methodically, trimming the furnaces, or clearing one of rubbish. This operation leads to a reduction of steam, so that no coal-burning ship is able to maintain full power for any great length of time. On the other hand, the stoke-hole of an oil-burning ship is as quiet as a reading-room by comparison. A spray leads from the tanks into the furnace, and through this the oil is pumped; and all that the 'stokers' have to do is to see that the proper pressure is maintained, that the oil is burning properly, and that the sand into which the waste falls is occasionally renewed."



THE NEW STYLE.

The furnaces of an oil-fuel warship. The stoke-hold of the future, where all is clean and silent, and little labor is required.

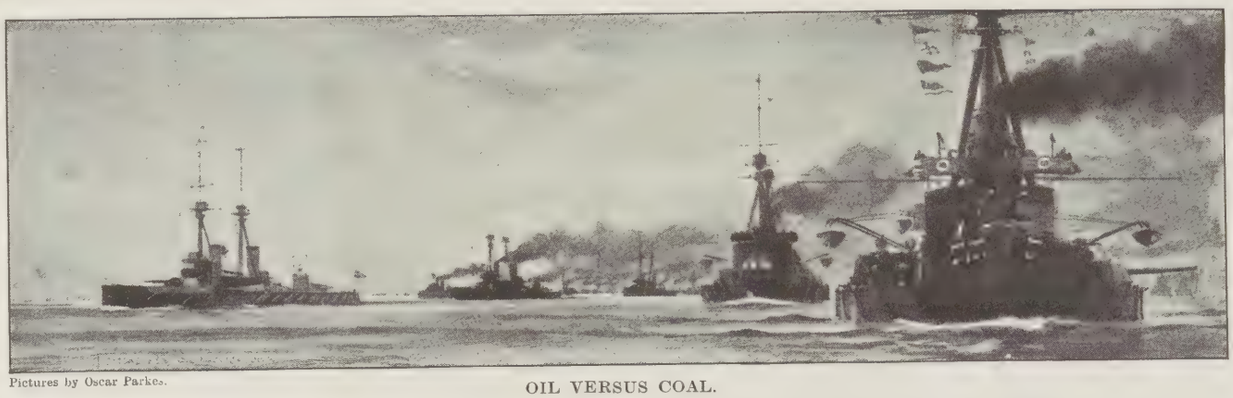
There is, however, one trouble confronting the British Admiralty—that of supply. Supplies must be drawn from oversea, and besides this, prices are being held up by a complicated system of 'rings.' To overcome the first difficulty, the Admiralty is constructing depots for storing oil at an expense of over $5,000,000, and is also building ships for the carriage of oil from the oil fields to these depots. To render the Navy independent of rings, the Government is becoming the owner, or at any rate the controller, of at least a portion of the supply of oil required, now about 200,000 tons a year. To quote further:

"Ultimately, of course—and perhaps very soon indeed—the internal-combustion engine will replace steam as the motive power of even the largest ships, and oil will then be used in the most efficient manner.

"In addition to its many other advantages for naval purposes, oil scores heavily over coal as a steam-raiser. The burning of 1 pound of oil will convert 13 pounds of water to steam, whereas a similar weight of coal converts only 8 or 8½ pounds. This means that a given weight of oil will carry a ship more than 50 per cent. farther than an equal weight of coal; and the liquid has another notable advantage, inasmuch as it occupies only 86 per cent. of the space required for coal.

"Altogether, it is not exaggerating to say that as a means for moving ships oil is at least 60 per cent. superior to coal—that is, while our latest ships can carry sufficient coal to take them some 1,800 miles at a speed of 22 knots, they would be able to travel 3,000 miles if oil instead of coal were burned in their furnaces. This is obviously a factor which may influence naval strategy very considerably. It reduces the value of coaling stations and fuel depots generally by 60 per cent., and consequently those nations which are less favorably situated in this respect than Great Britain will feel the severity of the handicap much less. Germany is a notable instance of a strong sea Power possessing practically no oversea bases whatever, and this has always been held to afford a very strong guaranty of protection to British commerce in the event of war, since a commerce-destroyer can not for long pursue its duties without replenishing its bunkers.

"The substitution of oil for coal, and of tanks for bunkers, will not remove the handicap altogether, but it is reduced by every increase in the endurance of the ship. This advantage is not a one-sided one. The stronger Power acts on the offensive, a policy which involves the absence of its ships from their own bases. With oil instead of coal they would have to return much less frequently for fresh fuel, and, indeed, the necessity for doing so would be obviated altogether, since the oil can be taken out to them by tank-ships and transferred at sea."



Pictures by Oscar Parkes.

OIL VERSUS COAL.

THE USES OF UPSIDE-DOWN FLYING

AT LEAST one authority on aviation thinks that the recent demonstrations of upside-down flying, described in THE LITERARY DIGEST, are likely to do more harm than good. What Pégoud has proved, says the editor of *The Aeroplane* (London, October 2), is that a properly constructed machine, with a pilot who keeps his head, is safe in any position, provided it is far enough from the ground. But he has not proved the stability of the machine, which could only be shown by locking the controls, and then seeing whether it would right itself without human aid. Pégoud's performance is likely to give confidence to pilots under adverse circumstances, but the trouble is that it will probably be imitated by less able pilots on less suitable machines. Possibly it may be well, says the author, with somewhat brutal cynicism, if the first pilot who attempts M. Pégoud's performance breaks his neck, as this will act as a useful deterrent to others. As a sane pronouncement on this question he prints a letter from an English aviator, Mr. J. W. Dunne, which ends as follows:

"Allow me to point out that there are at present three possible lines of development toward safety in flying.

"(1) An unstable machine controlled by a skilled human being. (2) An unstable machine controlled by automatic insentient mechanism, as in the 'Moreau,' with its inevitable risk of failure at some critical moment. (3) A stable machine which does not require controlling at all.

"I believe in the future of the last-named type, and I believe I carry the majority of pilots with me."

The editor's conclusion is given briefly in the following lines:

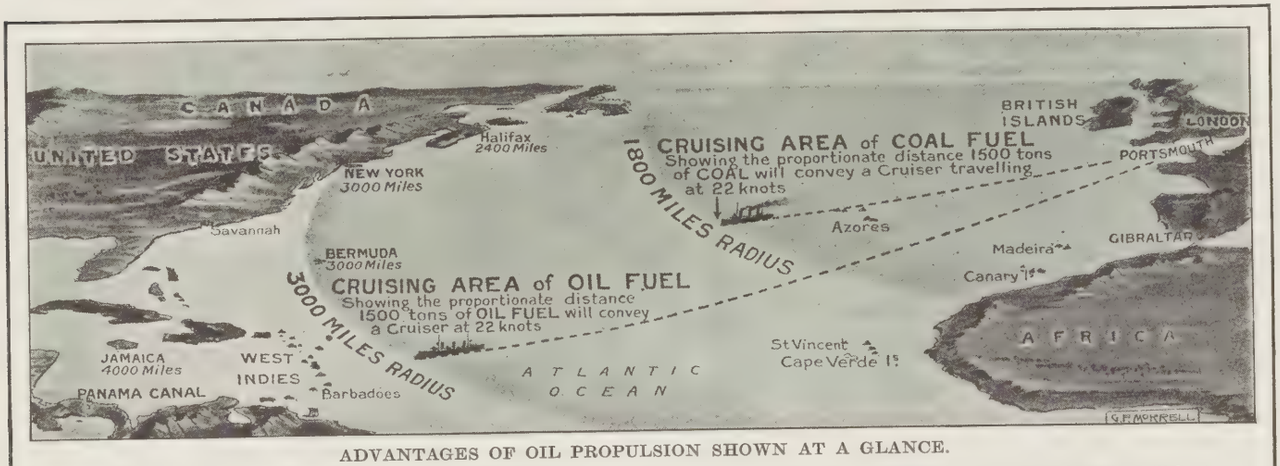
"What is wanted is not a machine which can be righted by the pilot when turned upside down, but a machine which will never turn upside down at all."

A NEW METHOD OF STERILIZING MILK

WHILE PASTEURIZATION effectually destroys germs in milk, it somewhat modifies both the properties and the flavor. A new process invented by Dr. Lobeck, of Leipsic, is said to be free from these objections. Pasteurization consists in heating the milk to a temperature of from 144° to 149° F. The new method consists of a more sudden heating to about 135° F., followed by an immediate cooling, the theory being that harmful bacteria are instantly destroyed by the right temperature, while a change in the flavor and other qualities of the milk requires longer time to effect. In the *Revue des Sciences* (Paris) for September 30 the following description is given:

"The apparatus consists of two cylinders, one inside the other. The milk enters the inner cylinder through a blast-pipe in the form of spray. The space between the two cylinders serves as a heating chamber into which steam enters by lateral tubes and heats the milk to the desired temperature (about 135° F.). The two compartments are closed by tightly fitting lids or caps. The accessory parts are a force-pump, a pressure reservoir, and a refrigerating apparatus. This last is provided with a hood to prevent infection from outside and contact of the air with the cooling surfaces.

"The force-pump draws the milk, and throws it into the reservoir, where it finds a pressure of three or four atmospheres.



ADVANTAGES OF OIL PROPULSION SHOWN AT A GLANCE.

This map is designed to show the relative value of oil as compared with coal for long-distance cruising purposes. The effect will be to render many coaling stations superfluous. In fact, the radius of action of a war-ship would practically extend to the Antipodes.

A regulator prevents this degree of pressure being exceeded and pushes all excess of milk toward the reservoir."

An excellent feature of the machine is the ease with which it is cleansed and sterilized. This is accomplished by the simple method of operating it for ten minutes with very hot water instead of milk. The sterilizer can then be set to work and will run for hours without interruption and without attention. The process is said to be especially effective in destroying the bacilli of tuberculosis, typhoid fever, etc.

TO CONQUER A NEW DUTCH PROVINCE—A new province is to be added to Holland as the certain result of a costly and laborious contest, waged not with human foes, but with the forces of nature—forces that the hardy Dutch have many times met and subdued in the past. The much-talked-of reclamation of the Zuider Zee is apparently at last to be carried out in earnest. Says *The Sphere* (London, October 4):

AMELAND

THE LAND IN THESE PARTS IS FROM 8 to 20 FEET LOWER THAN THE SEA & RIVERS & IS PROTECTED BY EMBANKMENTS OR DIKES.
THE DOTTED LINES SHOW FORMER SCHEMES FOR RECLAMATION
ZUIDER ZEE
Marken
NOW TO BE DRAINED TO FORM A NEW PROVINCE

From the London "Sphere."

HOW HOLLAND WILL WIN A NEW PROVINCE FROM THE ZUIDER ZEE.

"In her speech from the throne at the recent opening of the Dutch Parliament, Queen Wilhelmina stated that a bill would be introduced for the drainage of the Zuider Zee, so as to form a new province. A study of the map will convince one of the immense advantages which must result if this bold proposition is successfully carried into effect. The Zuider Zee (Southern Sea) was formerly a lake surrounded by fens and marshes, its present extent being chiefly the result of floods which occurred in the thirteenth century. Its area is about 2,000 square miles and average depth from 10 to 19 feet. It has always been the work of the Hollanders to recover as much as possible of the land lost to them in this manner in past ages, and in the literal sense they can be said to have half made their country, having reclaimed over 1,000,000 acres from sea, lake, and river since the sixteenth century. Schemes for the reclamation of the Zuider Zee have been at various times discust, and a bill was introduced in 1900, but afterward withdrawn to deal with, first, some 115,000 acres of the southern part at a cost of $40,000,000, and eventually 500,000 acres at an estimated additional cost of $120,000,000. The present measure before the Dutch Parliament is doubtless an extension and completion of those plans."

QUICK LUNCHES AND OTHER MEALS

THE "QUICK LUNCH" has been so vilified, deplored, and objected to that the reader hardly believes his eyes when he actually sees a defense of it in the conservative pages of the London *Lancet*. If a lunch is "quick" merely because it is small, it may be commendable, we are quite reasonably told. A heavy meal bolted rapidly is not conducive to digestion; but one can not occupy much time in eating a biscuit; and a biscuit may be all that one needs. The writer's conditional commendation of the "quick lunch" comes as the climax of an excellent little treatise on the subject of "Meals," most of which we quote below. He says:

"Were the entire food supply of the world equitably distributed, the labors of surgeons and physicians alike would be sensibly reduced, but in the meantime those who eat too much are as frequently the care of medical men as are those who eat too little. . . . The victims of excess or of deprivation can be relieved by treatment, but the advice must be carefully followed, and neither patient necessarily does this. . . . In the case of the man who eats too much, and equally in the case of the man who can not obtain more than two meals a day, it is suggested, we have read recently, that the meal to be sacrificed should be breakfast. The reason offered for this belief is that after the night's sleep the bodily strength, nervous and muscular, is at its highest, and work can be carried on without food. The machine is running strongly, and no fuel is required for the time being. There would appear to be good foundation for such belief, and yet, in this country at any rate, we believe very few people act upon it.

"How many men are in the habit of doing any work before they have breakfast? Very few, we imagine. Yet, as the evidence of some literary men proves, there is no time of day more fitted for the production of intellectual or imaginative work than the early morning hours, which, quiet and refreshing, are friendly to brain-work, breakfast or no breakfast. For manual labor the no-breakfast plan is not so suitable. A little fresh-air exercise to start the day, following the habit of some athletes in training, is a thing that many a professional or business man might cultivate with advantage. . . . . .

"There is a great deal to be said in favor of the 'coffee and rolls' plan, and for men whose day is spent in work which taxes the brain and nervous system generally more than the muscles, the wise course is to relegate anything approaching a hearty meal to the period of relaxation, the evening. But that part of the continental system which involves the eating of a heavy lunch is as objectionable as our own heavy-breakfast plan. It can be excused only if adequate time is given after the meal for the digestion thereof, and most professional and business men can not spare the hour's ease which should follow a hearty mid-day meal. In most continental cities, where the mid-day meal is a heavy one, an hour or so is commonly spent in smoking and chatting afterward. This leisurely proceeding, however, is not possible with the more strenuous business habits of England and America, as the 'quick-lunch' institution testifies. Nor need the quick lunch be severely deprecated if the quantity of food ingested is reduced in accordance with the time taken for its consumption. If the quick luncher is also a heavy luncher, then he combines the evil properties of both the continental and English methods, and will doubtless incur the punishment of

Photographed by the National Geographical Society's Excursion of 1913.

THE GLACIER IN SEPTEMBER, 1913, AFTER THE ADVANCE WHICH DESTROYED CANADA'S NEW HARBOR.

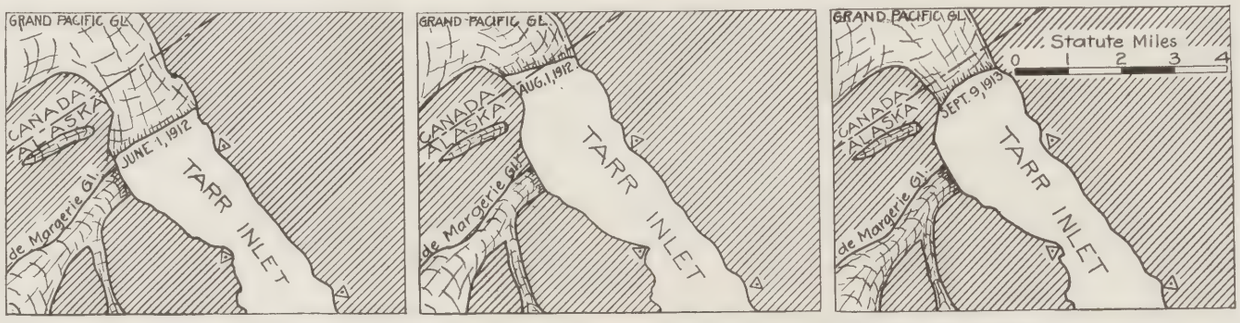

DIAGRAM SHOWING RETREAT AND ADVANCE OF GRAND PACIFIC GLACIER.

In our issue for October 4 we quoted an article by Prof. Lawrence Martin, of the University of Wisconsin, telling how the Grand Pacific Glacier had retreated across the Canadian-Alaskan boundary line and given Canada an unexpected harbor. But the glacier reversed its action while the article was in process of reaching the public, and now Professor Martin sends us this photograph and diagram, showing that in September the fickle ice-field had returned across the international boundary and robbed Canada of its midsummer gift.

the dyspepsia which his habits invite. But if the meals during the day be light, we do not think that the worker need be asked to forego either his breakfast or his lunch."

INJURIOUS SOAPS

IT IS APT to be assumed by users of soaps that their only difference is one of cleansing quality and that the quickest and most thorough cleanser is the best. Soaps act, however, largely through chemical properties, and both textiles and the human skin often suffer from the chemical action that they induce. The most widely accepted theory is that soap cleanses because it forms an emulsion with dirt and the liberated alkali removes the fat which causes dirt to cling. The effect of soap upon the skin therefore depends on the sensitiveness of the skin to the action of alkali. A writer in *The Lancet* (London, September 6) cites an interesting contribution on this subject recently issued from the laboratory of the Royal College of Physicians of Edinburgh, entitled "Soaps and their Effect on the Skin." The author, Dr. Frederick Gardiner, points out that among the dearer toilet and superfatted soaps the proportion of mineral ash and alkali is at least as high as in the coarser types. His findings are thus given:

"When an alkaline solution such as that of soap touches the skin there is induced both an excessive secretion of the acid sebum and sweat, and a solvent effect on the protective epithelium. Reviewing the different ingredients found in soaps, he concludes that all soaps from their chemical constitution must be irritant to the normal skin. The effect varies, he states, with the individual skin, and is more pronounced in senile and diseased skins. Cottonseed-oil and rancid fats, according to his observations, are probably largely responsible for the irritant effects in cheaper soaps. Castor-oil soap, he finds, is least irritating, but it has the disadvantage of being too freely soluble, and therefore wasteful, while it is apt to become rancid. Cocoanut-oil soap is decidedly irritating, while palm-oil soap, tho still an irritating variety, is less so, and tallow soap shows a low irritating value. If these deductions are correct, Dr. Gardiner thinks they supply a reason for the bad effects of modern domestic soaps of the cheaper and clothes-washing kinds, as they are made mostly from cheaper fats and the cheap oils, coconut and cottonseed. Formerly tallow and olive-oil were more used, and the evil effects of soaps were not so pronounced at that time. No one can be in touch, he says, with the outpatient department of a large hospital and not observe the economic loss and physical damage due to soaps and soap-powders."

LETTERS AND ART

WHO GETS THE MONEY IN THE THEATER?

SINCE PUBLICITY is the *motif* of modern life, it is apparently thought no failure in dignity or taste to open one's note-books or account-books to public inspection. So we have a "prominent manager" who tells the financial secrets of actors, playwrights, and other managers, showing how the "people's money" is divided up. The implication is not a socialistic argument, tho socialists will doubtless gasp at the sudden rise in lucky "stars" from a wage of $25 to $600 a week with no other explanation than the capricious gift of public favor. The manager whose confidences are given to the public in *The American Magazine* (November) dubs the "show business" "a business of false and inflated values." He tells how the public is bluffed regarding the large sums spent on productions, despite the fact that some real figures loom large. "The $100,000 production probably cost $60,000," he asserts, and out of that sum, "in case of failure, there was a salvage of $10,000." Other large figures may be proportionately scaled down. How much of even this conservative sum the author of a play gets depends on the quality of his reputation. "If the author is new the manager pays him as little as possible to 'bind the bargain,' and promises nothing." But—

"If, on the other hand, the author is a playwright of established reputation, the proceeding is businesslike and usually greatly to the advantage of the man with something to sell. Augustus Thomas, for instance, is reckoned among managers as the shrewdest trader among playwrights. On the acceptance of a script he demands advance royalties of from $1,000 to $2,000, depending upon his own estimate of the play he is selling.

"Pinero will neither write nor consider writing a play until he has been paid a bonus of £1,000. But he is the only playwright I know of who is paid an out-and-out bonus. Many playwrights receive advances which, in case the play is a success, are deducted from their royalties, but Sir Arthur collects his £1,000 and his royalties as well.

"Broadhurst, Klein, Sheldon, Walter, Harry B. Smith, and other American writers are content to gamble on the result, but demand some advance for the work they have done or are promising to do in preparing the play for production. This is to protect them against completely wasting their time in case of failure."

The revealing manager dwells on the "spectacular winnings of a few showmen and a few playwrights" which stand as "stock quotations of the show business, dangled before the eyes of a fascinated public for the same reason and with the same pride that a native of a mining-camp calls attention to the great strike in the Independence, but says nothing of the hundreds of abandoned prospect holes lying round about." Thus:

"Many playwrights gamble with their own plays. That is, they will 'take a part of the show.' A sixth, a fourth, a third, or possibly a half interest. But they seldom put up any money. An author will, for instance, reserve for himself a third interest in his own play, to be paid from his royalties—if any there are. But usually he stipulates that in case of failure he shall not be held responsible for any part of the loss. . . . . .

"George Cohan always has an interest in the plays produced by his firm. From those in which he personally appears in New York he usually draws royalties as author, salary as performer, and profits both as part owner of the attraction and lessee of the theater in which it is played.

"James Forbes, among the younger playwrights, also prefers to gamble with his plays, retaining for himself an interest in them as well as a hand in their management. As a result he has made $300,000 with 'The Chorus Lady,' 'The Commuters,' and 'The Traveling Salesman.' He lost a bit of it last year with 'A Rich Man's Son,' but not much.

"George Broadhurst is said to have netted $120,000 with 'The Man of the Hour'; and 'Arizona,' which was Thomas's firmest stepping-stone to fortune, has probably paid him $175,000. Margaret Mayo, with a flock of companies playing 'Polly of the Circus,' netted $150,000. No one is just now prepared to say how much 'Within the Law' has made for the syndicate controlling it. In one year in New York it probably has cleared $100,000 for its owners and another $100,000 for the theater (the Eltinge) in which it still is playing. Next season it is to be played by five or six companies, covering practically every established circuit of theaters in the country. Unquestionably this play will 'clean up' more effectively than did either 'The Lion and the Mouse' or 'Madame Sherry,' the sensational winners of the last decade.

"It usually is 'The Lion and the Mouse' to which theatrical men point when seeking a basis of comparison for big business. Henry B. Harris produced that play when he had a bank balance of exactly $680, and from it he made a clear $1,000,000 for himself and $300,000 for Charles Klein."

The next peep is into the pocketbooks of some of the favorite actors, and we see how a "cast" is made up "with the least expense compatible with the quality of the production to be made":

"It is the custom for the manager first to cast the play with what he considers an ideal cast. That is to say, he will write opposite the name of each character in the play the name of the actor or actress best suited to that particular type of rôle. This is done, not with any hope of engaging these particular players, but in order to get a line on the type and class of players needed. If, for instance, the hero is a John Barrymore, a Richard Bennett, or a Joe Coyne type the object of the manager is to find an actor who can best do the Barrymore, the Bennett, or the Coyne line of work. If the heroine suggests Maude Adams, Laurette Taylor, or Helen Ware, the search the manager makes is for someone who suggests similar virtues of style, personality, temperament, and appearance. Then he tries to match this ideal cast as nearly and as cheaply as possible.

"To each character he allots a salary of $100. If there are fifteen characters in the cast he figures on a salary pay-roll approximating $1,500, and then tries to stick as closely to that as possible. He knows, of course, that he will have to pay his leading man $200 or $250 at least, but he knows, also, that there are several small characters he is going to fill for $40 and $35.

"It is at this point that the actor's inflated salary first makes its appearance.

"The 'angel' who is to sign checks as the manager proceeds with the production is suddenly called into conference. The manager, knowing a kick is coming sooner or later, would like to ask the angel just what his opinion is regarding salaries. Should they, for instance, try to get John Barrymore for the leading juvenile? Yes, agrees the angel; young Mr. Barrymore is exactly the type they need. What is his salary?

"Six hundred dollars a week!

"The manager considerately places a cushion where it will do the most good in breaking the shock and proceeds to call off a list of leading juveniles. Barrymore, $600; William Courtenay, $500; Richard Bennett, $500; Orrin Johnson, $400; Bruce McRae, $500, and so on until the list of available favorites seems exhausted.

"Then they consider the young fellow who has just come to town. He has had considerable experience in stock, having played in Xenia, Ohio, and at Peak's Island, Maine, and the papers all have spoken beautifully of his work. They can get him for $125, maybe $100. And, if he is pretty well discouraged and footsore, for $75.

"But his name would mean nothing! 'The cast headed by Hiram Smithroyd!' That would never do. Yet, the manager points out, there is an even chance that Hiram might land. If he should they would be getting him for a butler's salary until he found it out. Then Hiram's salary would jump at the rate of one hundred dollars a week. So they agree, after much talk, that it would be much better to get an actor and a name, too, at a reasonable price, but failing in that, to try Hiram and see what happens.

"The same problem occurs in the search for a suitable leading

LAURETTE TAYLOR.

JACK BARRYMORE.

JANE COWL.

FORTUNE'S FAVORITES ON THE THEATER SALARY-LISTS.

It was only a few years ago that $50 a week looked a "pile" to these, but the smiles of chance suddenly bring them where they ask and get $600 a week for their services tho they do not yet rank among the "stars."

woman. If she is young and attractive, if she can wear clothes, look the part and act it, she is worth almost her weight in gold. And if she is a comédienne—if she possesses a real comedy sense in addition to her other virtues—there is hardly any salary she can not demand and receive. For years the ideal for this type was Henrietta Crosman, the Crosman of twenty years ago, when 'Gloriana' was a comedy success. To-day it is Laurette Taylor—Laurette, who for twelve long years remained undiscovered while she played shrieking heroines in all parts of the West and Middle West for $35 and $40 a week, and is to-day, after a part of three seasons in New York, drawing $600 a week and a percentage of the profits of the very successful 'Peg o' My Heart.'

"So, from part to part, manager and backer proceed through the cast. There is an emotional rôle for a woman, the female heavy. What will she cost? Well, we have Helen Ware's name opposite this character, and Helen was holding out rather successfully for $750 a week. Jane Cowl is not quite so heavy, but altho Jane was glad of earning $75 a week four or five years ago, it probably would take $600 a week even to tempt her to-day.

"For the male heavy the manager has scheduled Wilton Lackaye first, and George Nash second. Lackaye, he knows, would not look at the part for less than $500 a week, and if he could get Nash for $350 he would consider it a bargain. There is a character rôle that Henry Dixey could play beautifully, but $500 a week would be Dixey's price. It would take as much, or nearly as much, as that to lure William H. Thompson away from vaudeville. William B. Mack might play it—for $350—but there are so many Mack parts, these days of the crook drama, it would be pretty hard to get Mack. Which, the manager explains, is one serious thing that is wrong with the casting of a drama to-day—there are too many parts named after actors; parts that once a producer has them fixt in his head as representing an actor like Mack, or Bruce McRae, or Julian L'Estrange, no one else seems to fit. That is one of the things that has boosted salaries unfairly.

"The rest of the cast is comparatively easy. There are plenty of butlers and maids and character 'bit' actors, and a good selection of the ordinary ingénue and juvenile types, tho for these last two the prices range from $85 to $150. And finally the manager fixes up a tentative list that reads like this:

Leading man	$250
Leading woman	350
Juvenile	125
Ingénue	100
Heavy (male)	200
Heavy (female)	175
Character old man	75
Character old woman	65
Comedian	125
Butler (and stage manager)	60
Maid	35
	$1,560

TO NAIL THE FAKE OLD MASTERS

THE NEWEST AMERICAN MILLIONAIRE who wishes to become an art expert in three weeks and have a gallery of unquestionable masterpieces may think that fortune has raised up a champion especially for him. Dr. A. P. Laurie, the Principal of Heriot-Watt College, Edinburgh, and Professor of Chemistry of the Royal Academy of Arts, London, has discovered a process of microphotography by which the genuineness of old masters may be infallibly tested. A cable dispatch to the New York *Times* asserts that he has used a camera designed by himself to photograph portions of pictures in the National Gallery in London, the National Gallery of Scotland, and at Amsterdam and The Hague. "He found that microscopic photographs, greatly enlarged, revealed character in the brushwork in just the same way as a magnified photograph of a signature on a check showed characteristics of which even the writer was unaware." His test, then, is to compare the magnified portions of an authentic picture with a doubtful one and so establish the identity of the latter with a certainty. Further:

"He has already proved a so-called Teniers and Wouverman in private collections to be fakes, and has found a picture in the National Gallery here, labeled 'The Old Gray Hunter, by Paul Potter,' which is really by two artists, the one who painted in the horse being a rather clumsy copyist of Paul Potter.

"Examples of typical brushwork of Teniers, Rembrandt, Titian, Van Dyck, Velasquez, Constable, and Paul Potter have been obtained and are in process of time expected to influence greatly decisions in doubtful cases."

Bond Street picture-dealers are said to look upon the discovery as unimportant for them, since it tells them nothing beyond what they already knew. But they can no longer keep their professional secrets, after the public at large are thus to be let in. "It has never been able to understand upon what evidence dealers and experts base their decisions," but Dr. Laurie's method is "as clear to the average understanding as the system of personal identification by means of finger-prints." The New York *Sun* takes a half-humorous view of the discovery and rather regrets that the world is thus to be robbed of one more of its pleasing mysteries:

"That is the worst of the scientific attitude. It must have the truth and nothing but the truth, and it takes no account of the fact that the truth may be extremely unpalatable and a little polite fiction quite innocuous. In the public and private galleries of Europe and America are thousands of old masters, prized and cherished by their owners, looked at with humble reverence by visiting pilgrims at the shrine of Art. There are small towns in Italy which owe their whole prosperity to the possession of a picture. What possible good could come of demonstrating that many of these pictures are pious frauds? The people who view them do not want disillusionment; they would much rather regard them with the eye of faith.

"Think, too, of the experts, a harmless and amiable race of men. Why should they be confounded and robbed of their occupation? And the Western millionaire who has purchased old masters by the yard. They are a real source of pride and consolation to him. Worldly wise and cynical in all else, in the authenticity of his pictures he has the simple faith of a little child. Would you deprive him of the one thing in life in which he believes?

"Then there is the question of national pride. Turn Dr. Laurie loose with his microphotographic apparatus in the National Gallery or the Louvre and you would run the risk of humbling to the dust the artistic pride of two mighty nations. What, too, of the novelists and the playwrights? If the genuineness of a work of art were so easily determined there would be no excuse for the warts on the neck of Mr. Arnold Bennett's hero; there would be no excuse for the book or the play, and the artist's valet would never have been buried in Westminster Abbey.

"If Dr. Laurie is a genuine philanthropist he will smash his microphotographic machine to atoms and guard the secret of his discovery within his own bosom."

DIAGNOSING POST-IMPRESSIONISM

EYE-STRAIN, according to a famous American physician, accounts for many of the eccentricities of literary genius. We do not recall that he has had much to say of painters, but Mr. A. Warren Dow supplies the lack in *The Catholic Review* by accounting for the post-impressionists as overstrained nervously. He confesses to having felt, when suffering from a deranged nervous condition, an impulse to paint similarly, and speaks of losing all interest in subject or form, but being "strangely thrilled by combinations of color." So he accounts for modern art tendencies:

"In a condition of mental overstrain, a man (an artist especially) is at the mercy of his senses, and is tempted to all forms of indulgence. He will almost certainly fly to stimulants, whether they be puritanically condemned, like whisky, or puritanically sanctioned, like strong black coffee. And the output of this artist will affect those who look at his work. At first they will see nothing, but, spurred by the critics, they will try to be more receptive, and, unconsciously, create an attitude of mind similar to that of the artist who created the picture.

SHADOWS OF THE HASSARD FAMILY.

If "coming events cast their shadows before," some one may be able to tell how the mite of this group became John Rose Green Hassard, musical critic and managing editor of the New York *Tribune*.

"One must remember, too, the crowds of young men who are trying, somewhat against the grain, to see life in this peculiar way. Such students will often resort to almost any expedient to excite their imaginations, just as certain neurotic poets in Paris write their poems at night, amid the glare and fumes of a cabaret, sleeping during the day.

"If the souls of these artists suffer they will plead that art demands a sacrifice, forgetting that a sacrifice to evil is of no value at all. So much for the claim that art should be purely the 'painting of passion,' that an artist should paint with 'naked senses.' It has never been claimed for any other department of human skill that sense, without construction or rule, alone should reign. Why should it be so with art?

"Behind any position, however, esthetic or otherwise, there are always motives of which its supporters are scarcely conscious. To-day there is a strong tendency to self-limitation, the result of impatience, idleness, or want of strength. At one time workers of every kind were anxious to make their work as complete as possible. Painters crowded their pictures, not always wisely, with study and thought. Authors plodded along for years before they produced their books, while even those who worked quickly seemed to be Titans of energy and industry. . . . But now an artist is eager to make his mark at the least possible expenditure of energy."

WILLIAM HENRY HARRISON.

A President represented by the "Shadow-man."

SILHOUETTES RESCUED FROM THE SEA

THE ART of the silhouette seems to belong naturally to a bygone period, and tho it is found practised sporadically at the present time, yet as an object for a collector's mania it is perhaps more potent. Certainly the little black heads or figures that hang in remote farmhouse parlors go well with the quaint fashions of dress that they perpetuate. For those who aim to collect these relics a great opportunity is furnished by the return to America, after the lapse of half a century, of a large number of these counterfeit presentments, done by August Edouart, the most famous silhouettist of his day. The story of their survival from shipwreck and their rescue from years of neglect lends a romantic interest to the collection, which includes nearly every prominent American of the decade from 1839 to 1849. Edouart was a Bonapartist and left his native country for England at the time Napoleon was banished to St. Helena. From England he came to America, where, says a writer in the New York *Tribune*, "he made more than three thousand silhouettes of presidents, poets, and financial magnates, creating almost a Who's Who" that are now on exhibition in New York. We read:

"John Jay, Winfield Scott, Longfellow, Webster, Van Buren, Harrison, and many others of equal importance are among them. Also there can be found the leading citizens of towns all the way from New Haven to New Orleans, for Edouart traveled widely. Visitors at Mr. Vernay's are learning things

about their genealogy. Descendants are fighting for the possession of his shadows. One young lady recognized the profile of a relative upon his wall and wished to purchase it, but Mr. Vernay had already promised it to another customer, who turned out to be her brother. Brother and sister are now squabbling over the possession of the picture. A family row has been caused by the influence of a shadow.

"Edouart remained in the United States for ten years, traveling widely and executing the silhouettes of abolitionists and nigger-drivers, of Cambridge professors, lexicographers, and men of all political persuasions—even of slaves who were the favored retainers in certain old Southern families. John Tyler, who, we are told, was 'the only man who was President without election,' had his profile made by Edouart in the White House in 1841. The silhouette disappeared, but after seventy years was returned there, by President Taft, in June, 1911.

"James Bryce, the British Ambassador, was present at the time, and was intensely interested, as Edouart had visited the north of Ireland and had made the silhouettes of Bryce's father and grandfather, said to be excellent likenesses and still preserved in the old Bryce home.

"The number of interesting silhouettes that Edouart made in this country is astonishingly large and they included over three thousand of the most prominent people in the country. Family groups were often made by the silhouettist, and future orators and statesmen may be seen in shadow, riding the hobby-horse or arrayed with sword and gun and twopenny trumpet by the side of their shadowy parents."

Toward the end of 1849 the craze for shadow likenesses seemed to fall off, and Edouart decided to return to his native land. Then opened the particular chapter of romance in connection with them:

"When Edouart decided to leave America, in 1849, he took all his portfolios of silhouettes with him and embarked on the *Oneida*, sailing for England. As Edouart had always taken care to cut duplicates of all his silhouettes, his collection was complete. He would sell one silhouette and paste the other in his portfolio.

"The *Oneida* set sail soon after the artist had embarked, and made good time across the ocean until near the coast of Guernsey, where a terrific storm broke and the *Oneida* was wrecked in Vazon Bay on December 21. Edouart and most of his silhouettes were saved and afterward received by a family named Lukis.

A FAMILY CONFERENCE OF THE FORTIES.

Mr. and Mrs. Schiffelin, two of New York's social leaders.

"The day of the wreck was a bitter one and the aged artist suffered greatly from exposure. The loss of his property was a terrible blow to him and he never practised his craft afterward. The family that took him in treated him with great kindness, and when Edouart left Guernsey he gave the remainder of his portfolios to Frederika Lukis as a token of his gratitude. From Guernsey he went to France and died at Guines in 1861.

"In the meantime the books that the artist gave to Miss Lukis were consigned to the garret, as is the case with so many other interesting relics. Their value was not generally known, and in the garret they remained until accidentally discovered by Mrs. Neville Jackson, who succeeded in purchasing them. From Mrs. Jackson they went to Mr. Vernay, who has brought the collection to this country. He is, therefore, only the third possessor from the day in which they were outlined."

HENRY W. LONGFELLOW.

As his figure appeared about 1842.

Edouart had a remarkable career in Europe before he came to this country:

"His first customer is said to have been the Bishop of Bangor, who gave the Frenchman five shillings for his profile, and later on added materially to his slim purse by ordering forty others at the same sum per silhouette. Others hastened to follow the worthy Bishop's example, and Edouart was soon fortunate enough to become the fashionable rage. He was no longer poor, for everybody sought him out. He cut the portrait of Charles X., the former King of France, in spite of 'a feeling of ill will toward the Bourbon family, remembering, as I did, the losses I suffered in consequence of their restoration to the throne of France.' He also cut the portraits of Dickens, of Thackeray, of Sir Walter Scott, and many other notables in all walks of life. In 1832 Edouart had already taken 45,000 profiles."

Mr. A. S. Vernay, the present owner of the collection, traces the art into the remote times of Egyptian painting and the manufacture of Attic and Etruscan vases. He says:

"The earliest artists in monochrome, Cleanthes of Corinth, Crates of Sicyon, and Philocles of Egypt, practised 'shadowgraphy,' which then went by the name of 'skiagraphy,' and it is therefore highly probable that they were the first to make what are now known as shadowgraphs or profiles in silhouette.

"The name 'silhouette' was originally that of a French Minister of Finance, who, unlike the famous Dr. Guillotine, did not invent the art of scientific profile-cutting. Etienne de Silhouette was made minister at the end of an exceedingly expensive war, and he was responsible for a system of economy in the national finances that proved itself highly unpopular to the spendthrift nobility. Being witty, however, they pretended to acquiesce in De Silhouette's reform, and by cutting their coats short, using wooden snuff-boxes, and carrying tin swords they heaped ridicule on the minister's well-intentioned endeavors at economy. Even the artists drew their portraits in outline only and sold them for a few francs in order—so they averred—to help along De Silhouette's 'reform.' All these economies were referred to as being 'à la Silhouette,' and the minister became so unpopular that he speedily resigned.

"After a time when France once more returned to her extravagant ways, the expression 'à la Silhouette' fell into disuse, but with one notable exception. It was still applied to outline portraits, and continues to be so applied to this day."

RELIGION AND SOCIAL SERVICE

A CHINESE HELEN KELLER

CHINA is said to have four hundred thousand deaf-mutes. Among this number it is not estimated how many are also blind, but one at least is to be found in the Chefoo School for the Deaf who presents a parallel to the case of Helen Keller. Without her teacher, Miss Sullivan, Helen Keller would not furnish the brilliant example she does of reclamation from the most hopeless of darknesses. Likewise without Miss A. E. Carter little Wang Fung-Ying would not be finding life tolerable after eighteen years or so of mere unwelcome existence. She came to the school from the Hildersheim Catholic Mission in Hongkong, where the sisters could not devote the necessary

WANG FUNG-YING,

With Miss Carter, who had to learn the Chinese language and customs before she could awaken her pupil's soul.

time to such a charge. Her plight is the result of smallpox, contracted in early childhood, which left her deaf and blind. She had grown up in absolute ignorance, and at times would go into violent outbursts of temper. "Nature was fighting for expression in some form." In *The Sunday-School Times* (Philadelphia) her story is given in this way:

"Miss Carter took the girl in hand, with the assistance of Mrs. Sen, a graduate of the Teng Chow Tu Girls' High School. It required three months of the combined effort of these two women to teach the child that d-o-l-l, spelled into her hand with the alphabet for the blind, stood for the object which they had put into her arms. Many times they were on the point of giving up, but with infinite patience they worked on.

"Mrs. Sen would say, 'She will have an opening of the heart very soon.'

"When light began to penetrate this darkened brain the work went more easily and the fits of rage were less frequent. By the end of ten months Miss Carter and the child had both learned the Braille system of raised letters.

"Miss Carter was a graduate nurse from Bellevue Hospital, New York. At the time when there was an epidemic of trichoma among the children of that city she was appointed under the Civil Service as one of the health inspectors of public schools. She served for three years, when she resigned to go out to China and take up a different work, the teaching of the deaf. Her aunt, Mrs. Mills, had said to her, 'There are plenty here at home who can take your place, but you are needed so much in China.' So Miss Carter went to China to undertake a work that necessitated the learning not only of Braille and of Bell's Visible Speech Symbols, but the Chinese language.

"As soon as Fung-Ying had learned to use the sign language and write and read the Braille, she began to express herself in a feeble way, and each step carried her farther along the road.

"When I visited the school and met Fung-Ying she had been just two years and a half under the training, and the result was marvelous. As Helen Keller has her Miss Sullivan, so Fung-Ying has her Miss Carter. What a debt the seeing, speaking world, as well as those cut off from these advantages, owes to such unselfish women who work quietly in the background to help one soul upward, and in that one help thousands of others!

"The school is in a small one-story building, partly built after the Chinese style of architecture, on the east hill back of the city. As I entered Miss Carter welcomed me, and she did all that she could to give me an understanding of the work as it is being carried on in Chefoo. There are known to be over four hundred thousand deaf and dumb in China. They are looked upon as most undesirable in a family; the girls in poor families, as soon as they are old enough, are sold into slavery; the boys are often turned out to make their way among a people most unsympathetic toward the deaf.

"A short time after my entrance Fung-Ying was brought to the door, and with little hesitancy she found her way to Miss Carter's side, and held the palm of her hand up to learn what was wanted of her. Miss Carter told her to get her Braille slate and her handkerchief. She did both without the least hesitation.

"While we were talking, Miss Carter spelled in English into Fung-Ying's hand that she was to go out and pick some flowers for the guest. This she did, carefully finding the flowers from among the leaves. When she had picked a large bunch she brought them into the house, presented them to me, and then took my hands and put the palms together. This is a Chinese greeting or thank you: she wished to show me how to do it.

"A few moments after this, she discovered that she had lost her hair-ribbon among the flowers, and this worried her very much. She wrote in Braille upon her slate: 'Lost my hair-string among the flowers.' She became nervous over the loss, and some one was sent to find the ribbon. When her photograph was taken, Miss Carter put two combs in Fung-Ying's hair, much to her satisfaction. But later she carefully returned the combs, as she knew that they had only been lent to her.

"Then followed the most wonderful demonstration of all. Miss Carter is commencing to teach her to speak by the Bell Visible Speech Symbols. Of course, she must learn these, not in the usual way, but by placing her fingers upon Miss Carter's tongue, lips, and throat, then putting her fingers upon her own tongue, and emitting the sound according to the position of the tongue. She first made the 'f' sound with the lips, then the 't' and 'k' sounds with the tongue. As a fitting climax, Miss Carter touched the girl's hair, and she spoke distinctly the Chinese word 'fa,' which means hair. For this effort I put my arms about her, and she responded with keen pleasure to the endearment.

"The blind and deaf girl has been won and taught by love, to which at first she was quite unresponsive. She now finds a joy in life; she has a means of intercourse with the other girls, and she takes an interest in what goes on in the school. Her greatest delight is to be with Miss Carter and her slate, and her constant prayer is, 'Teach me.' The result is all the more marvelous when one considers the age of the girl before she received any training whatever, and the fact of her antecedents,—generations of poor, uneducated people."

The difficulties which Miss Carter has surmounted can hardly be realized here in the Western world. First,

"It was necessary that she learn the Chinese language by the Bell Visible Speech Symbols. Then she had to become familiar

with the Chinese way of doing things, in order that she might not give offense to the Chinese people, who are inclined, not without ground, to be very suspicious of the foreigner. All the difficulties have been met and conquered, and she now sees before her, as a result of two years of work, the awakening of a soul whose body was afflicted in many ways.

"An interesting history could be written about each of the other girls whom Miss Carter is trying to lift into lives of usefulness. In China the deaf are more truly outcasts than even the blind; these are sometimes looked upon as wise men, but the deaf are, according to the current belief, being punished for previous sins, and are possest of a devil."

CHURCHES IN THE DISCARD

A CALL for "some rich and reverent soul" to come forward and "endow a society for the decent interment of old churches" is voiced by Lucy D. Thompson in the current *Churchman* (New York). For this writer thinks it a sign of lack of reverence for hallowed places that a building looked upon for years as the "house of God" should be turned over to base uses for some "thirty pieces of silver." True, she says, we may find standing here and there "some historic temple like the 'Old South' in Boston—a storehouse of memories; the element of worship gone, but reverence left behind to guard its relics." But too often, we are told, "an old church is of value only as it may turn money into the hands of the people; its fate, most often, to serve as a stable, garage, or a 'movie.'" The writer first came across "an instance of these base uses" years ago when her college town "turned little old 'St. John's' into an 'agricultural depot.' Plowshares and hay-tedders were in the chancel; seed-corn and condition-powders, timothy seed and potatoes occupied the seats of the faithful; shovels, rakes, and hoes leaned about the door." And "one could point to numerous other instances."

"In Boston, for example, I found the gas company installed in a pretty little stone church; a g(h)astly (!) combination, which incites to unholy jests. In Providence, bloused and paint-stained art students raced in and out of a Gothic structure once a house of worship; while in the same city gay shop-girls and grocers' clerks spun madly about on roller-skates in an old colonial 'meeting-house.'

"In Pittsfield a fine old building, designed by Bulfinch, of the celebrated 'Front,' serves as the ballroom of a summer hotel, its old timbers shaking under turkey-trots and tangoes, bunny-hugs, and grizzly bears.

"In New York one finds similar instances at every turn. It is not long ago that an express-office was installed in an old church on Madison Avenue. Farther down-town Frohman's chorus-girls practised their steps where stern denunciation of all things theatrical once rang out. The closets once heaped with hymn-books were gay with ballet skirts; the pastor's study had become a dressing-room. Still farther down town a church has been converted (if that be a suitable term) into a 'Hofbrau,' and baize doors now swing there on the heels of the thirsty. Greenwich Village has an ex-church garage; East Houston Street a Lutheran church which now serves for 'movies.' On Twenty-sixth Street is a German church which is now used as a stable."

All over the land, so we read, there may be found "buildings sanctified by years of holy service now become, not dens of thieves, to be sure, but 'commercialized,' sold for thirty pieces of silver, reduced to humble and often very doubtful service." Yet, we are reminded, "there is not one such place that could not have been used, to blest advantage, for the higher needs of the community, for social centers, club-rooms, and helpful recreation and entertainment." Or,

"If no other provision can be made for a reverent disposition of these once sacred places, if they can not be conserved for some good work in the community whose higher interests they have so faithfully served, why does not some rich and reverent soul endow a society for the decent interment of old churches? Thus might we be saved from the sight of these staid old ecclesiastical fronts plastered over with signs and posters—reminding one of some old saint fallen into senility, hat set rakishly over one ear, cigarette in mouth, leering tipsily down upon a duly scandalized public."

RUSSIA'S CHRISTIANITY ON TRIAL

WORLD-WIDE ATTENTION has been given to a trial in Russia, ostensibly of an individual named Beiliss, and in a larger sense of the race of which he is a member. But it is neither Beiliss nor the Jews who are really on trial, asserts *The Jewish Tribune* (Portland, Ore.). "It is Christianity that is on trial," says this Hebrew paper, "in the name of which innocent people are hounded, murdered, and robbed." Beiliss's crime is named "ritual murder." He is accused of murdering a Christian boy for the purpose of mixing

ONCE A HOUSE OF PRAYER.

The like of it may be found all over the land, "reduced to humble and very often doubtful service."

the victim's blood in the unleavened bread which the Jews eat on their Passover. This act, avers *The Tribune*, "Christian Russia insists is a religious demand upon the Jews." It would appear, then, that "Russia's Christianity" would more nearly represent what *The Jewish Tribune* insists is the thing on trial; but it further insists that the press service sending its reports from the place of trial "gives to these dastard falsehoods a color of truth." The press of England and America teem with comment on the prosecution of this obscure individual, nearly all of it in harmony with the statement of the New York *Tribune* that "this persecution of the Jews on a charge which is both monstrously and absurdly false is at par with the persecution of Christians by the Romans in the days of Justin Martyr on the practically identical charge that they used human sacrifices in the Eucharist, and with the mad riotings of Chinese against 'foreign devils' in recent years for a similar cause." The Jews became the object of this sort of accusation in England in King Stephen's reign, but it now persists mainly in Eastern Europe. *The Jewish Tribune* gives the following account of the present

persecution, illuminating many points obscure to non-Jewish writers:

"Mendel Beiliss is an ignorant laborer and knows very little about Judaism; he is an honest man, and even the worst of his enemies, if he has such, would never accuse him of being a murderer. However, the Russian Government trumped up evidence, selected petty thieves, and coached them to tell such tales which should incriminate Beiliss in the murder case; it has also discovered a Catholic and a Greek Catholic priest, and a professor, who agreed to state that ritual murder is sanctioned by the Jewish religion.

BARBARITY. ORTHODOXY. FANATICISM. STUPIDITY.

THE JUDGES OF KIEF. —*Vorwärts* (Berlin).

"At the trial of Beilis the priests could not be found, the witnesses upon whose evidence Beiliss was indicted denied every word of their supposed statements entered into the minutes of the court investigator (*Sudebni Sliedovatel*), and when asked the reason of the change in their evidence, fearlessly stated that in the minutes of the court investigator were entered statements which the Government wanted them to tell, but they did not tell. An explanation is due to our readers in this change of evidence. According to the Russian law witnesses before the court investigators give their evidence not under oath, while when before the court they are sworn in by a clergyman of their own religion, and before taking the oath the clergyman instructs them in the sacredness of an oath and the responsibility for false swearing in this and in the future world. This explains why these law-breakers changed their evidence in the court: fear for becoming the dwellers of inferno in the future world compelled them to tell the truth.

"It is reported that the president of the court ordered the rabbi to shorten the oath administered to the Jewish witnesses. Again the reporters did not understand the procedure. The Russian law has a certain form for oaths and it can not be shortened or lengthened. What the court did is to order the rabbi to shorten his instruction to the witnesses.

"While the trial is on, the Black Hundreds are agitating a slaughter of the Jews. In fact, two Jews have already been killed in the streets of Kief, and tho policemen and police officers are parading all the streets and this murder could not escape their eyes, yet the murderers escaped and the police report states that it could not find the guilty."

While the lawyer for the defendant was persecuted by the Government for signing a protest against this vicious libel against the Jews, continues *The Tribune*, the "Black Hundreds" spread broadcast circulars in which they insist that the ritual murder is a Jewish law. Here is a fragment of one of the circulars:

"Price 3 kopeks. In re Yushinsky (the murdered boy).

"In a very short time the case concerning the ritual murder of Andrei Yushinsky will be heard in Kief. The Zshidi (a hateful name for the Jews) do and have done all they could to hush up this crying case. There are bought up police officers, witnesses, intimidation of the same, unexplained deaths of some witnesses, unexplained fires on the place where Yushinsky was murdered.

"While striving to hush up this case, the Jews insistently deny the existence of such a ritual murder law in their religion, calling 'liars' the persons who bring light before the Russian people upon the truth of these ritual murders, and the murders 'legends.'

"But can there be talk about legends in this case when during one thousand years such murders have been repeated, the truth of which has been certified by the church, history, and science?

"True, very far from frequently were there means to face these wrong-doers—Jews—with perfect proof of their guilt, but there were some occasions when the Jews were proved guilty in fanatical murder of Christian children and sentenced to death or hard labor.

"And how dare the Jews speak of the Christian lies and legends when in many centuries such victims were canonized by the Church, and became saints?"

This journal further refutes the "ritual murder" charge as follows:

"The question arises, Can the people who are accused of superfluity of service to God, can they as Jews neglect the 'Thou shalt not murder' of the Ten Commandments? Can any human being whom God has not yet deprived of common sense believe that there is any Jew who commits murder as a practise ordered by his religion? Has not the same libel been labeled as pure falsehood by the greatest scholars both of the Jewish and Christian religions? We can not but mention that among those Christians who protested against this false accusation against the Jews were:

"Johan Emanuel Veith, the eminent preacher of the Cathedral of St. Stephen, Vienna; Alexander McCaul, in his 'Reasons for Believing that the Charge Lately Revived Against the Jewish People is a Baseless Falsehood,' London, 1840, published a protest signed by 58 converts, the first of whom was M. S. Alexander, Bishop of the Anglican Church at Jerusalem (died 1845), and Popes: Innocent IV., Gregory X., Martin V., Paul III., and Lorenzo Ganganelli, later Clement XIV.; also Monarchs: Frederic III. (1470), Charles V. (1544), Ottocar II. of Bohemia (1254), Boleslaw V. Pius (of Poland), (1264), Stephen Bathori (1576). . . . . .

"And the greatest scholars of America, England, Germany, France, Austria, recently."

The Continent (Chicago) reports mass meetings in its city where the attendants "were in many instances Christians" who "did not hesitate to arraign the Russian Government itself for encouraging the outcropping of medieval superstition and persecution at Kief."

THE MADONNA OF THE GRAY HAIR—No artist has yet painted the face of the gray-haired Mary in her later days, "after she had seen of the travail of her Son's life and was satisfied." If any inspired painter could accomplish that, says the editor of *The Continent* (Pres., Chicago), his work "would be the world's greatest picture." As this editor puts it:

"There is a picture yet unpainted. It is the picture of the aged Madonna. A host of artists have put on canvas their dreams of the virgin mother brooding over her babe. Many have painted her in her eager hope for her growing boy. More have sought to delineate the awful sorrow of 'mater dolorosa' at the cross. But who has had imagination to show the face of gray-haired Mary in her latest days? Perhaps it is beyond the reach of human genius. Reverent art already seems to ascend its highest pinnacle as it strives to express the heart that pondered mysteries in Bethlehem and the soul that was pierced with a sword on Golgotha. But to read into the lines of a painter's brush Mary's understanding and peace after she had seen of the travail of her Son's life, and was satisfied—after she had beheld his living power in missionary courage and martyr endurance, while she waited for him to fulfil his promise to come again and receive her unto himself—could there ever be an artist with the daring to venture that? Surely nothing less than a divine inspiration could qualify a painter to accomplish such a picture. And surely when done it would be the world's greatest picture."

REVIEWS OF NEW BOOKS

ADMIRAL DEWEY'S AUTOBIOGRAPHY*

Reviewed for THE LITERARY DIGEST by

RUFUS FAIRCHILD ZOGBAUM

IN overcoming his modest hesitation to formulate his deeds in words by writing the recollections of his life and in finally "yielding to the arguments" of his friends to have them published, Admiral Dewey has again done good service, not only to his countrymen at large, but to the Navy, that arm of the nation of which he is the active holder of the highest rank. For, in the nearly threescore years of his service, the story of the Admiral's life has been the story of the Navy.

"My memory," he says in the preface to his book, "stretches from an apprenticeship under the veterans of the War of 1812; from the earlier days of the steam frigates through the Civil War; from the period of inertia in the seventies to the building of the ships of our new Navy, to which I was to give its first baptism of fire; and, finally, to my service as head of the General Board of the Navy since the Spanish War."

The "spirit of the service," that intangible sense of duty, of patriotic elimination of self in the interests and for the honor of the service, happily common to practically all officers of our Navy, permeates the brief and simply told story of the facts and events of the Admiral's career; the dominant influence of the best traditions of the service breathes all through the book. Farragut, himself pregnant with lofty sentiment of naval duty, is to Admiral Dewey "the ideal naval officer," and he makes grateful acknowledgment of all he owes to the great seaman's precept and example. When perplexed over difficult conditions, or questions as to the right course to pursue, Admiral Dewey has often asked himself, "What would Farragut do?" The thought was present with him as in the gloom of night the American squadron entered Manila Bay, and the comforting conviction came to its commander that he "was doing precisely" what Farragut would have done.

The outbreak of the Civil War found Dewey, at the age of twenty-three, a newly commissioned lieutenant. Now was to come a time to put the youthful mettle of the future Admiral of the Navy to the test. "It was war for us for four years, a war which brought us so frequently under fire and required such constant vigilance that war appeared to be almost a normal state of affairs to us." The necessary limitation of a review forbids more than cursory attention to this intensely interesting part of Admiral Dewey's autobiography, the narrative of his experiences in the Civil War.

Ordered to the "old side-wheeler" *Mississippi* in May, 1861, Dewey served for nearly two years with this ship, most of the time, "tho very young for the post," as executive officer (in the idiom of the Navy then and for many years after "First Lieutenant"), the officer of a ship of war next in rank to the captain. He held this post until, fire-stricken under the batteries of Port Hudson, the *Mississippi* "perished on the river for which she was christened." It was at the passage of Forts Jackson and St. Philip below New Orleans —the Battle of New Orleans the Admiral designates the action—that Dewey first came under fire, where by order of his captain, who himself took charge of the ship's battery, he handled the vessel in her course through the storm of shot. "For a man of twenty-four I was having my share of responsibility," he says, adding that there was "little time to consider the psychology of the experience." Once in action, all he was thinking of was the work in hand, "doing what you have been taught is your duty to do as a trained unit on a man-of-war." There was to be no lack of responsibility for him in the life which followed that first fierce introduction to the strain of war: Port Hudson, where the *Mississippi* gave up the ghost; the ensuing service as "executive" of the *Monongahela*, at times flagship of his hero, Farragut; "active and trying service on the James River," and finally the desperate fighting on the *Colorado* at Fort Fisher.

Thirty-three years were to pass before the sound of hostile guns again should strike upon the Admiral's ears; years of slow promotion; of sea service in obsolete ships; of shore duty at various stations. Admiral Dewey passes briefly over this part of his life. His last command afloat previous to a few months before the Spanish War was the *Pensacola*, "interesting because of her antiquity"; the work of the next eight years was to him "the best sort of preparation" for the work that was to fall to his share in the war with Spain. It was the period of transition from the antiquated, worn-out, wooden vessels of the old Navy to the steel-hulled armored ships of the new, wherein, first for four years as chief of bureau of equipment, later as president of the board of inspection and survey, he made good use of the opportunity to keep up with the progress of his profession.

On October 21, 1897, Dewey, promoted from captain to commodore, was detached from the bureau of inspection, and directed to proceed to Japan, there to take over the command of the Asiatic Squadron, an order the unforeseen results of which were to "mark an epoch" in the history of the Navy and make his own name famous in its annals. Commodore Dewey hoisted his broad pennant on the *Olympia* in January, 1898; four months later the battle of Manila Bay was fought. Seven thousand miles away from any home base; with an incomplete supply of ammunition—"only about 60 per cent. of the full capacity" of his ships—with no large reserve of ammunition within reach, one can readily understand that such apprehensions as its commander-in-chief may have had when the squadron set its course for Manila Bay "were not confined entirely to the hazards of action." But as he says, in one of his short, crisp sentences in another part of the book, "the thing to do when your country expects you to attack is to attack," and there was not a second's hesitation when his final orders reached him. The Admiral gives graphic description, unassumingly picturesque, of the ensuing events—the steady, silent night advance of the American fleet, past the battery-crowned heights of the entrance, into the great bay; the rising of "the misty haze of the tropical dawn," and the opening fire of the battle in which the naval power of Spain in the Pacific went down, fighting valiantly to the last, before the blows of the grim, gray Yankee ships, and the city lay at the mercy of their guns. That night, May 1, 1898, Dewey wrote in his diary: "Reached Manila at daylight. Immediately engaged the Spanish ships and batteries at Cavite. Destroyed eight of the former, including the *Reina Cristina* and *Castilla*. Anchored at noon off Manila." Twenty-nine words compose this record of the greatest event of his life.

The intervening months between the victory and the occupation of Manila by the troops proved very trying to officers and men of the squadron. While "there was little leisure or rest" either for himself or his subordinates, the burden of care rested most heavily on the shoulders of the commander-in-chief, a weight only to be lifted when he saw "the Spanish flag come down and then our own float in its place" over the citadel of Manila, where Flag-Lieutenant T. F. Brumby—brave, loyal, true-hearted Brumby, who met his death shortly afterward, but his name still lives in the affectionate memory of shipmates and friends—had hoisted it. The Admiral's narrative of this "period of anxiety" brings vividly to the mind's eye the picture of the little squadron, unsupported and alone for so many weeks, holding on with tenacious grip and grim determination to what it had grasped.

On the great honors done him on his return to the United States Admiral Dewey touches lightly. "I knew what to do in command of the Asiatic Squadron, but being of flesh and blood and not a superman, it seemed impossible to live up to all that was expected of me." The closing paragraph of the autobiography illustrates the spirit of pride and confidence in the Navy which pervades the book. In speaking of the work of the General Board of the Navy, he says:

"War, which would bring a test of its results, will find, unless I am mistaken in my knowledge of officers, men, and ships, the spirit of Jones, Perry, and Farragut still dominant, with the certainty that our commanders will go into action not only with a sufficiency of ammunition but with

Isn't It Fun!

Let the young folks revel in *real billiard-playing* on the beautiful "Baby Grand." This royal game, though centuries old, still reigns supreme. No finer pastime for evening hours has ever been evolved. Splendid for brain-fag and "nerves."

The "Baby Grand" Billiard Table

The oldest and largest billiard table concern in the world offers a splendid line of "Baby Grands" in genuine Mahogany.

Fitted with Slate Beds, Monarch Cushions, Concealed Cue Rack and Accessory Drawer. Superlative playing qualities and *very* moderate prices.

Choose Any Style —A Year to Pay

Both the "Baby Grands" and "Convertibles" are sold on small monthly payments. The Brunswick Guarantee of Quality means *lifetime satisfaction.*

Playing Outfit Free!

Including Cues, Balls, Bridge, Rack, Markers, Chalk, Cover, Book of Rules, etc., etc.

Mail Coupon—Book Free

Large, splendidly illustrated book shows each style in actual colors, quotes lowest factory prices, easy terms, etc. Mailed free for request on coupon or by letter. (132)

FRAZER'S "THE SCAPEGOAT"

Frazer, J. G. (D.C.L., LL.D., Litt.D.). The Golden Bough. Third ed. Part VI. The Scapegoat. 8vo, 453 pp. London and New York: Macmillan Company. $3.00 net.

This is the last but one of the portly series in which the renowned Liverpool anthropologist is summing up his studies in magic and religion. The general theme is the attempt to unload evils of whatever sort upon some being or beings, and to be rid of them by leading or driving away the beings on whom they are cast. The central point of attention is the use of the Dying God (with which subject Part III of the series dealt) as the "scapegoat to free his worshipers from troubles of all sorts," culminating in "the sublime conception of a God who dies to take away the sins of the world." The subjects specifically dealt with here are the transference of evils to various objects, animate or inanimate; the omnipresence of demons; public expulsion of evils; scapegoats; killing the god in Mexico; and the Saturnalia and kindred festivals. Vicariousness of suffering is shown to have wide acceptance as a theory of avoidance of evil, and the substitutes are taken from all grades of being. Side-lines, like the evidences for belief in demons, are followed wherever the ramifications suggest profitable inquiry. An interesting excursion is that which takes up the dramatic side of various festivals, and leads to a considerable discussion of Purim or Esther's Feast. This is brought into connection with the eastern Sacaea, where a man-god is put to death. Mordecai and Haman are connected with this and the Attis-Adonis cycle (in a way that is by no means conclusive). When to this is added a note which explains the crucifixion of Christ and the release of Barabbas as belonging to this same cycle and being the acting-out of a Jewish Sacaea-Purim, we feel that the evidence is being forced. It is in such matters as this that the reader feels most strongly Dr. Frazer's inability to control completely and legitimately the facts with which he deals.

As usual with Dr. Frazer's works, a mass of primitive beliefs are dealt with and the attempt to correlate them is consistently made. When the critical reader will sometimes dissent is in interpretations of the evidence. Mere collocation of facts does not always make out a case.

The book is fully up in typography and form to the other volumes. The side-heads, summaries of chapters, and index form a complete apparatus for the survey of the material presented.

PATRIOTISM AMONG THE ENGLISH

Wingfield-Stratford, Esme. The History of English Patriotism. 2 vols., 8vo, pp. 614–672. New York: John Lane Company. $7.50 net.

This is the work of a man of learning. It is really a history of England, written from one point of view, that is, the love of Englishmen for their country as a unit, and almost a personality. Greece and Rome are drawn upon as analogous instances of empires made great and beneficent from a popular sense of their own worth and a love by the people of their own soil. We naturally turn to the story of the Spanish Armada, and to the days of a dreaded French invasion, for examples of British patriotism roused to the intensest ardor. It is also reflected in literature. Swift might lampoon, Hogarth might caricature, and Pope might satirize his fellow countrymen, but Goldsmith and Reynolds, and even Day in "Sandford and Merton," could represent the graces as well as the foibles of the English people. It requires an effort to realize what genuine emotion sounded in the words of the once popular song:

> "There's a land that boasts a well-known name,
> Tho 'tis but a little spot;
> 'Tis the first on the gilded scroll of fame,
> And who will aver it is not?
> 'Tis a glorious charter, deny it who can,
> That lies in the words, I'm an Englishman."

Ubi bene, ibi patria is a maxim wholly at variance with the interpretation Mr. Wingfield-Stratford has given to the sentiment which sends Englishmen to the mines of Africa, the jungles of India, the forests and prairies of Canada. At this time, when statesmen endeavor to perfect the homogeneity of the English race throughout the Empire, a work like that before us, written with a definite purpose, will be interesting as a study to all intelligent men of whatever nationality. The author has treated of his nation as an organic whole, and of national life as a process of development in religion, politics, war, philosophy, literature, architecture, painting, law, and commerce. He writes with point and enthusiasm. He is no narrow islander, but has broad views, is philanthropic and statesmanlike. His judgments are likely to be acceptable to, and accepted by, citizens of many nations.

TWO RECENT NOVELS

Patterson, Marjorie. The Dust of the Road. Pp. 321. New York: Henry Holt & Company. $1.30.

The glamour and unconventionality of the stage never lose their fascination. Many stage secrets are revealed in this romance with a background of theatrical life. "Tony" the heroine, decides to leave her uninteresting father and stepmother to become an actress. So, with her faithful dog, Samuel Pickwick, she sails away to London and determines to make a success. The descriptions of her home life and the experiences which she weathers safely do not ring very convincingly true, but the mass of material relative to stage life, stage characters, and the training she received in a touring company all seem more real, and consequently more interesting. It is the player's life as she lived it. David, the red-headed hero, a sculptor turned playwright and actor, does not seem very lovable to the reader, but "Tony" finally willingly gives up her profession to devote herself to him. The story as a story is rather involved, but the aim of the book is evidently to describe conditions "behind the scenes." In that, it succeeds.

Day, Holman. Squire Phin. Pp. 393. New York and London: Harper and Brothers. $1.25.

This is a characteristic "Down East" story, dealing with keen-witted humorous people in mirth-provoking, as well as pathetic, episodes in a little Maine village. There is a love theme that underlies the plot, but most of the scenes revolve around Squire Phineas Look, the village lawyer,

and his renegade brother Hiram, commonly called "Hime," of circus fame.

"Narrer to the heel and wide to the toe,
And that's the way the Look boys go.
Good boy, Phin, he don't raise time,
But pepper-sass's hot and hell's in Hime."

There is the usual sanctimonious hypocrite, the village eccentric, the deep-dyed villain, and other necessary types. Every opportunity is given "Phin" to utilize his wonderful perspicacity and exhibit his self-sacrificing greatness of spirit. The real keynote of the book is fun; clean, spontaneous, hearty fun. It is voiced in a humorous, homely philosophy that makes amusing reading.

OTHER BOOKS WORTH WHILE

Peixotto, Ernest. Pacific Shores from Panama. Illustrations by the author. Cloth, pp. xiv–285. New York: Charles Scribner's Sons. $2.50 net.

Promoters of winter cruises take notice! Mr. Peixotto has been pioneering for future tourists and has discovered a region of rare beauty and romantic history soon to be of easy access—especially to American travelers. This land of delight is the Pacific coast of Spanish America, running south from the big canal to La Paz in Bolivia and north to Mexican ports and the Golden Gate. It offers the snow peaks of the Andes and the blue shores of tropic seas and in between memories of *conquistadores* and the vanished races of pre-Spanish days, venerated saints and historic churches, gaily drest peasants, and tropical gardens. "The luxurious indolence that possesses the traveler as he glides over the lazy tropical sea, the romance of Spanish cities, the picturesqueness and appeal of its vast Indian population, the desolation of its arid wastes, the dizzy heights of its Cordillera, the sharp contrast of climate and vegetation—where equatorial tropics and eternal snows are often but a few hours apart—all these make up a journey the fascination of which can scarcely be overstated." We cry—"All aboard!" That land is fortunate which has Mr. Peixotto to sketch it with pencil and pen. He is equally facile with both, and the pleasant narrative vies with the fourscore drawings in descriptive excellence. This should be one of the travel and gift books of the season.

Dozy, Reinhart. Spanish Islam. A History of the Moslems in Spain. Translated with a biographical introduction and additional notes by Francis Griffin Stokes. Frontispiece. Map. Cloth, pp. xxxvi–769. New York: Duffield & Co.

Mr. Francis Griffin Stokes has rendered substantial service to all English and American students of the medieval history of Europe and especially of Spain by his translation of Reinhart Dozy's famous "Histoire des Musulmans d'Espagne." The first and only edition of this work was published in 1861 and has since become rare and inaccessible to the majority of students, and the only other translations—those into German and Spanish—were made in 1874 and 1877. The present translation is unabridged and has been improved by corrections and notes from Dozy's later works and more recent studies. Those, whether historians or not, who have dipt into medieval life and thought know that there is no more remarkable chapter in the history of Europe than that of the Moors of Spain. Not only was it set in the history of Western Europe like some bizarre jewel from an Eastern clime, but it even flashed

Pot Percolator
No. 11392

Manning-Bowman
Electrics

The widespread demand for electrically heated cooking utensils has been most adequately met with the line of Manning-Bowman Electrics, comprising Percolators, Chafing Dishes, Tea Ball Tea Urns, Water Heaters, Toasters, and many other utensils. Every article has been designed to secure the greatest utility and durability and to operate at a minimum consumption of current.

The neatness of the electric application makes all M-B Electrics especially attractive. There is an absence of cumbersome and awkward wiring, the connection being made by patented detachable plug. In every article with enclosed heater there is a small fusible nut which acts as a safety device. Should the current be left on and the vessel boil dry, the nut melts and automatically shuts off the heat, preventing any damage to the utensil.

MB Ware a Quality Standard

The name Manning-Bowman has long identified a line of cooking devices for use with alcohol burner or on ordinary coal or gas range. With the addition of the Manning-Bowman Electrics, whose quality and durability are in keeping with Manning-Bowman standards, this line is most complete, and the most satisfactory selections can be made from it. On sale at jewelry, hardware, housefurnishing and department stores.

We have an instructive and attractive booklet which will be sent upon request. Write for booklet L-3, "Manning-Bowman Electrics."

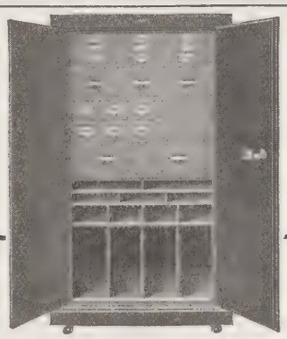
HALSEY MFG. CO., 1213 Filbert Street, Philadelphia



12 Fires in 14 Months Tell the Same Story

Between July 15, 1912, and September 15, 1913, there were twelve fires of terrific intensity through all of which

THE SAFE-CABINET

protected the documents, papers and records entrusted to it without injury, although its outer walls were in every case heated red hot. In all of these fires THE SAFE-CABINET was subjected to the direct action of the flames for almost an hour.

If you are interested in fire protection for your office records, you will find food for thought in the fire records of THE SAFE-CABINET. Ask the nearest SAFE-CABINET Dealer or write to

THE SAFE-CABINET CO.
Dept. L-2 Marietta, O.

new and illuminating rays to the learned world of that day. Tho in a most amazing palimpsest of language no less an influence than the great Aristotle came to medieval Europe under an Arabian philosopher's arm. Dozy himself was a historian and linguist whose literary ability and scientific achievement combined with his devotion to his task make his career an inspiration to every one who lays sacrifices on Clio's altar. By the inclusion of a brief biography Mr. Stokes has added much to the value of the masterpiece itself.

Mannix, J. Bernard. Mines and Their Story. Illustrated. Cloth, pp. xviii–337. London: Sidgwick & Jackson, Ltd. Philadelphia: J. B. Lippincott Co. $3.75 net.

This is a popular treatment of mining history and methods affording much general information. The rather tame narrative is plainly told and concerns gold, silver, diamonds, coal, and iron. Much of the material and many of the numerous, but not remarkable, illustrations come from England and her colonies.

Furness, Horace Howard. A New Variorum Edition of Shakespeare. The Tragedies of Julius Cæsar. 8vo. Pp. 482. Philadelphia: J. B. Lippincott Co. $5.

The son of the famous Shakespearian scholar has produced in this volume a work which shows that he is following closely in the footsteps of his father. The play of "Julius Cæsar" used to be, with "Richard III.," the most popular of dramas in London and New York. It was later that "Hamlet," "Othello," and "King Lear" established their lofty places in the hearts of the Anglo-Saxon public. Mr. Furness has been successful in restoring the face of this magnificent play to its correct features. The First Folio has, of course, been the basis of his recension. He is happy in correcting a misquotation of Ben Jonson, who loved his joke better than his friend. The appendix contains the original material from which Shakespeare derived the matter and sometimes even the language used in his work. There is a completeness and finality about this volume which entitles it to be styled monumental. The small number of emendations of the Folio text made by the Cambridge editors, and now generally accepted, impress the reader with the purity of the original text. The publishers have spared nothing in making the work beautiful, and complete. The volume, like its predecessors, will be considered an indispensable addition to the libraries of the learned.

Keller, Helen. Out of the Dark. Pp. 282. New York: Doubleday, Page & Co. $1.

This is a small volume in which are collected all Miss Keller's magazine articles, letters, and addresses which seem worthy of preservation. Everything about Helen Keller's development seems marvelous, even tho we know she has had unusual opportunities for education. No one could express himself more clearly and convincingly than this young woman whose mental eyesight is so wonderfully keen. Inclined to socialistic tendencies and suffrage principles, she expresses herself decisively on many subjects of current interest. She has many intelligent suggestions to make for the betterment of the condition of the blind. Her great plea is for some work for the blind, something to take them out of their state of horrible inactivity and "that feeling" of uselessness. She expresses herself with facility and clarity of understanding. Miss Keller's diction is beautiful. She writes as tho her mind had gained greater seeing power because undistracted by aural and visual confusion. Her letters are unique and charming.

Heape, Walter. Sex Antagonism. 8vo. Pp. 217. New York: G. P. Putnam's Sons. $1.50 net.

Mr. Heape is a biologist of distinction, and at this time, when the equality of the sexes has become a burning question, he deals with his theme from a historical and biological point of view. He shows that the sexes have been to some degree in conflict from the earliest history of our race; that exogamy on the part of man was responded to by totemism as a feminine institution. He closes with a splendid chapter on "Primitive and Modern Sex Antagonism." The work must be profoundly interesting to every intelligent reader as expounding in clear and popular language principles which necessarily underlie the relations of the sexes and involve, both politically and socially, the phenomena of human existence. This volume is the latest number of the publishers' *Science Series*, and deserves to be widely circulated.

Hopkins, Tighe. Wards of the State: An Unofficial View of Prison and the Prisoner. Cloth, pp. viii–340. Boston: Little, Brown and Co. $3.

Under the title "Wards of the State," one whose connection with prisons and prisoners has been quite non-professional, but who has spent much time with the literature of the subject and has used such opportunities of observation as he could, presents a candid opinion of "imprisonment, its effects on the prisoner (in prison and after prison), and the prejudice it creates against him in the public mind." His verdict is that "imprisonment of the conventional and old-fashioned sort is a grand, unmitigated failure. Real and acceptable remedies or substitutes may be and are very difficult to arrive at; but the absolute defectiveness of the ancient method—imprisonment as imprisonment—is an outstanding fact." Mr. Hopkins's survey mainly concerns England, his own country, tho he finds in America a vast, chaotic, out-of-date confusion, with here and there—in Colorado, for example—shining evidence of the success of experiments ten years ahead of England. How much we need the activity of a well-advertised Elizabeth Fry or a John Howard! The discussion, tho serious, is not technical and should form a popular introduction to the subject for rapid reading.

Mann, Mary Ridpath. Royal Women. Pp. 216. Chicago: A. C. McClurg & Co. $1.25 net.

These lectures were written, not as school-room text-books, but to show how history could illustrate character. They present the fact that while royalty is hedged in and restricted by tradition and etiquette, royal women have hearts, desires, and sorrows. These are very human accounts of the private lives of such noted personages as Elizabeth, the last of the Tudors, Mary, Queen of Scots, Marie Antoinette, and Josephine, Empress of the French. They deal with romantic episodes in each life, viewed not as historical events, but as experiences in human lives. The author inherits a love of history from her father, John Clark Ridpath, and has made a readable book by combining historical knowledge with a fascinating power of

What a Dollar Bill can do

for your backyard and the high cost of living.

IF you have a backyard or a garden that is not working for you to the limit of its possible efficiency, here is the best investment you can make. The intensive culture of gardens can be so developed by the "Garden Profits" System that small plots will frequently produce as much as the average small farm does now.

In this book, by one of the Agricultural Editors of *Country Life in America*, the best stories of 1000 garden successes are gathered together, reduced to simple terms and systematized for your ready use. Every phase of gardening is discussed comprehensively and expertly. Fifty illustrations and scores of plans and planting tables point the way to as many economies of time, work and money. A carefully prepared index adds great value as a ready reference guide throughout the planting season.

THE GARDEN MAGAZINE

is the final authority on all things horticultural. It aims to interest people in gardening by showing them how to get results in the most attractive and practical way. It has helped to decrease the cost of living in hundreds of homes by encouraging the use of once-neglected backyards for truck gardens.
It has brought health and joy into households by bringing their members into closer touch with nature. Among the leading features for the next year are the following:

Efficiency in Backyard Gardening

By Adolph Kruhm. These articles will help you make your garden produce more. They deal with the following subjects: Preparation of the soil, sowing and seeds, the cultivation of crops, crop rotation and the keeping of records.

New and Better Plants for the Hardy Garden

A series of articles written by experts dealing with improved types, races and varieties of shrubs, herbaceous plants, etc.

The Home Fruit Garden

By J. R. Mattern. These articles will show you which orchard fruits are best suited to your soil, climate and needs and how to plant them.

The Months Reminder

What to do right now and why and how to do it in *your* garden. The timeliest practical advice, warnings and explanations.

$2.00 worth for $1.00

A well-printed, strongly bound book of over 200 pages. It retails at one dollar. And *eight* issues of the *Garden Magazine*.

REVIEWS OF NEW BOOKS

(*Continued from page 882*)

description. Well-known facts take on a new attraction in the retelling.

Lees, Frederic. Wanderings on the Italian Riviera. Illustrated. Cloth. Pp. xv.–349. Boston: Little, Brown & Co. $2.50 net.

To those travelers to whom the great cities, the great mountains, the great lakes are an old story and who seek some new, untrodden field of interest there may seem to be little left in Europe. Perhaps, then, instead of the great things, the gentle, the quiet, and the small may have an attraction if they are sought in a spirit becoming to their nature. The Italian Riviera has been a refuge to many a northerner in winter, and few perhaps have realized more than the delights of the climate and the landscape. That the old towns have literary and historic connections is often forgotten. Mr. Lees, an enthusiast about Liguria, has written a pleasant record of a walking trip from Ventimiglia to Spezzia, in which one becomes acquainted with many interesting bits of reminiscence of other days in this charming Italian countryside. An appendix contains some botanical notes on the province.

Benham, W. Gurney. Cassel's Book of Quotations. 8vo, pp. 1256. New York: The Funk & Wagnalls Company. $3.50.

This standard work appears in this revised edition with improvements and additions under the date 1912. All dictionaries of quotations are valuable in these days when facility of reference lifts such a burden from the memory, but all do not provide the same facility of reference as the present work. Overelaboration is a pitfall into which so many editors and compilers of such works have fallen by dividing the quotations under various topics that it is a relief to see the simplicity of the present work, which uses the index as a clue to the quotations required. In fact, there are two indexes, one of authors' names and another to the quotation itself. There are also blank pages appended for manuscript additions and notes. We commend this up-to-date volume for its copiousness, its convenience, and completeness as a collection of proverbs of all nations as well as literary gems of art, wisdom, and fancy.

Howe, E. W. Travel Letters from New Zealand, Australia, and Africa. 12mo, pp. 476. Topeka, Kans.: Crane & Co.

Readers of Mr. Howe's former books of travel will anticipate the interest with which he has dealt with new countries in these pages. Mr. Howe always gets at actual occurrences and vital objects. He describes them with a clearness and an understanding, with a facility in straightforward expression, that make every page readable. He attempts no elaborate pen pictures, but deals strictly with things as they are and as he saw and understood them. There is a kind of simple integrity about it all that gives to his travel letters an unusual value and evokes from the reader a peculiar liking for the man himself.

Patterson, Charles Brodie. What Is New Thought? Pp. 235. New York: Thomas Y. Crowell Company. $1.

So much is said in these modern times of "New Thought" that half the world should read this book out of curiosity, the other half from sympathy. Dr. Patterson is widely known as an exponent of the cult. He writes with a fluent and fervid pen and in a convincing style. The book has for its principal object "the throwing of light on the pathway of life in order to make it easier for people to overcome unrest of mind and body, and to show that, through inner knowledge, one may become harmoniously adjusted to outer environment." The author claims much when he says that perfection lies in the power of each one of us, and asserts that it depends on the inner man and his choice of right thoughts and habits, which regulate both mental and physical conditions. Some of his most appealing theories do not appear to belong exclusively to "New Thought." We seem to remember being told years ago that "cheerfulness is both contagious and healing"; also that "life is what we make it," and "we get what we give."

Roberts, Helen L. The Cyclopedia of Social Usage. Pp. 570. New York and London: G. P. Putnam's Sons. $2.50 net.

Unlike the old, stilted manuals of proper deportment, this complete and careful description of the proper manners and desirable customs of the twentieth century is quite adaptable to ordinary as well as unusual conditions. The rules for the proper presentation of friends, desirable details for dinner-giving from the suitable invitation to the satisfactory menu; the etiquette of calling, and the art of conversation and entertaining, are all treated in a perfectly rational way, giving a logical interpretation of the code that regulates social intercourse. Most well-bred people will find the rules and suggestions very familiar to them and quite consistent with their own conduct at home and abroad, but for any one who is not positive of the correct details for any function or custom this volume will be a valuable "treasury of information."

Adams, John Quincy, Writings of. Edited by Worthington C. Ford. Vols. I–II. 8vo, pp. 508–531. New York: The Macmillan Company. $3.50.

The works of John Quincy Adams are among the precious documents that elucidate the history of this country. Adams was born in the north parish of Braintree, Mass., on July 11, 1767. After completing an active life, he died in Washington, February 23, 1848. Much of his life, as an active member of the diplomatic service, was spent abroad. He did service for this country in Great Britain, Holland, Prussia, and Russia. He actively engaged himself in conciliatory measures between Congress and the different Governments of Europe during such trying times as the French Revolution and the activities of Napoleon I. As intelligencer to the Department of State he elucidated the events of that crucial time. He did this in a spirit of patriotism and thoroughness, which has made his writings a record somewhat parallel to that of the great Greek historian who said that what he wrote was not intended as a show-piece, but to be an eternal literary and political possession. These two volumes (others are to follow) contain the writings and correspondence of Mr. Adams from 1779 to 1801. The flawlessness and patriotism of his political life are reflected in the simplicity of his countenance, as well as in his actions as a private citizen and the head of a family. All this is beautifully mirrored in the portrait reproduced in this volume, which was painted by the then celebrated artist Oakley in 1795.

ELCAYA

Select your Toilet Aids as you would choose a friend, for a lovely complexion is a priceless heritage to the woman who possesses it.

The name, Elcaya, has a standard of honor, loyally upheld by every American dealer. Whether in a toilet cream, soap or powder, Elcaya represents the essence of purity and the acme of quality.

CURRENT POETRY

NOWADAYS, few books of verse are real literary events. It was different when the Brownings were writing, when Tennyson was in his prime, and when the young Swinburne was astonishing the world. We have more verse now; every week brings its little company of volumes—but we have little that seems of lasting importance. So we may well be grateful for Mr. Stephen Phillips. In spite of his youth, this poet is a link binding us to the days when poetry was more an art and less a trick.

Mr. Phillips's "Lyrics and Dramas" is a book worthy of the author of "Marpessa" and "Christ in Hades." The dramatic poems, "Nero's Mother" and "The King," are splendid poetry, and the lyrics are full of beautiful thoughts and beautiful phrases.

There have been many, many poems—most of them rather weak—in celebration of the "conquest of the air." Many of us will sympathize with Mr. Phillips in his regret at the profanation of nature's last stronghold.

The Aeroplane

By Stephen Phillips

Leave us the air, enough the jar
Of snorting engine, grinding car;
The very heavens ye now would mar.
Leave us the air!

The air where dreamy birds do sing
Under Aurora reddening,
And float on such a blissful wing.
Leave us the air!

Air doth the brow of age renew,
Darkly redeeming us with dew,
And lifting to a boundless blue.
Leave us the air!

The ancient silence hath but stirred
To solemn thunder and sweet bird.
There must the aeroplane be heard?
Leave us the air!

Air that is bosom of our pain,
That breathes on the besieged brain,
And murmurs mercy of the rain.
Leave us the air!

Hither and thither are we tossed.
Speed have we gained, but at the cost
Of faded calm and firmness lost.
Leave us the air!

Whate'er the silly crowd enjoys,
Our progress is but stench and noise;
We scream and shout and grasp but toys.
Leave us the air!

The earth is blackened from our eyes,
And filled with dismal hoots and cries,
Spare to profane the holier skies.
Leave us the air!

Perhaps the best poem which the game of cricket has inspired is that of Francis Thompson which begins "I go no more to the matches of the Southern folk." And surely the second best is this:

The Song of the "Ranji"

By Stephen Phillips

From a throne to the simple sward,
Sudden to pass!
From the aching Asian plains
To the English grass·

From the glitter fierce to the cool,
Over the billow;
From a crown to a cap, pale blue,
From cedar to willow!

From the stillness deep to the roar,
To the green from the waste,
From the howdah to hooting car,
From the hush to the haste!

From salaam to the friendly cheer,
From the prince to the guest,
From the shadowless to the shade,
From the East to the West!

And here is an example of Mr. Phillips's mastery over blank verse. It is a finely wrought poem, with a beautiful climax.

A Nightmare of London

By Stephen Phillips

I dreamed a dream, perhaps a prophecy!
That London over England spread herself;
Swallowed the green field and the waving plain.
Till all this island grew one hideous town.
And as I gazed in terror rooted, so
The City seemed to take a dreadful life,
To be a monster that desired and felt;
And still did she perceptibly advance,
Blacken and grasp and seize and wither up.
Northward she spread, and did assimilate
Her sister cities of the loom and wheel
That welcomed her with whirring ecstasies;
She made the sky a pall, and as she moved,
Blighted the breathing forests and the woods,
And where the flower grew, now her pavement lay.
And all the air grew dark, and there was heard,
In place of rippling wave and whispering wind,
Only the hoot of grinding car, the shriek
And fiery belch of engines to the cloud.
A human army from before her fled;
But swollen, spiderish, without shape or sleep,
She stole, till now opposed her but the sea;
Ocean preserved her sanctity of foam.

For so youthful a publishing house, the Devin-Adair Company has already issued a surprizingly large number of important works. It is pleasant to see that the list is now including verse. The poems of Sister M. Blanche, of the Sisters of the Holy Cross, were recently issued by this house in an attractive volume. Sister Blanche's work is thoughtful and musical; she is a keen and sympathetic observer of nature and she understands the technic of verse-making. Here is a charming picture. The last two lines are delightful.

Trees

By Sister M. Blanche

In serried rank or lonely state,
Like veterans they stand,
Through starry nights, through storm-swept days,
To sentinel the land.

I know not if I love them best
When fledged with springtime green,
Or when, with silvan vesture clad,
They deck the summer scene.

And yet when autumn touches them
With dyes unknown to art,
Beneath that gorgeous color-spell
I needs must yield my heart.

But, ah! I know I love them well
When, all white winter through,
With gray and lacelike tracery,
They etch the curving blue.

"Steero" can go on Every Day's Menu

When you plan the meals remember that "Steero" "fits in" everywhere. "Steero" answers the question, "What shall I give them today?" "Steero" Bouillon Cubes can be used in so many ways that you are able to prepare some dish that all will like.

"STEERO" Bouillon Cubes

(Reg. U. S. Pat. Off.)

Made by **American Kitchen Products Co.,** New York

The wonderfully delicate, delicious, appetizing flavor of "Steero" Bouillon appeals to all. Many housewives have discovered that "Steero" Cubes give zest and savor to many dishes and are a great aid in cooking. The many uses for "Steero" are published in our new cook book, written by an authority on cooking. It will be found a valuable help in the kitchen, containing, as it does, 150 recipes.

Trial Box of "Steero" Cubes and the New "Steero" Cook Book Mailed for 10c

(stamps or coin). We send enough "Steero" Cubes for four cups of "Steero" Bouillon. Prove the convenience of "Steero" Cubes and how quickly "Steero" Bouillon can be made. Just drop a "Steero" Cube into a cup and add boiling water.

"Steero" Bouillon Cubes are sold by druggists, grocers and delicatessen dealers in boxes of 12, 50 and 100 Cubes. Ask for "Steero" Bouillon at soda fountains, lunch rooms, etc. The word "Steero" is on the wrapper of every genuine "Steero" Cube. Look for it.

Don't fail to send 10c for the "Steero" Cook Book and the four Sample Cubes to

Schieffelin & Co., 217 William St., New York

Distributors of "Steero" Bouillon Cubes

CURRENT POETRY

(*Continued from page* 886)

There is something of Swinburne's passion for the sea in the following lines (from the London *Outlook*), and there is something, too, of his characteristic melody.

Sea Music

By Petronella O'Donnell

Softly heave, ocean of fire and of night,
Red in the sunset's glory lies thy might;
Even the winds, the amorous winds that blow
Breathless, expectant, pause in the afterglow.
Enraptured sing the stars, sing in low tones to me,
While every sound that was, that is, is in the sea.

Slowly heave, heaven's glory on thy breast,
Soft fold thy wings, love-laden winds of the West;
Even the emerald wave, the crested wave that rears,
Pauses spellbound, ere she dissolves in tears.
Sing, dancing waves, your secrets sing to me,
For every sound that was, that is, is in the sea.

Grandly heave, ocean of opal, of fire,
Sound diamond notes from the long-lost Orpheus' lyre;
Even the wild sea-bird, even the fishes that swim,
Know where that lost lyre lies, lies with its broken string.
From its deep-sea bed a note, a stray note, comes to me,
For every sound that was, that is, is in the sea.

We have come to mistrust poems that are sprinkled with Gaelic names. During the last ten years much lamentably weak verse has been produced by writers calling themselves "neo-Celts." But Father Dollard is not a "neo-Celt"; he is a genuine Irishman, and the poem which we give below is worthy of the land of singers and fighters. The description in the second stanza is splendid. We quote the Toronto *Catholic Register*.

Cnoc-An-Ar

(The Hill of Slaughter)

A Pagan-Irish Dirge

By James B. Dollard

My hero lies wounded and dying, 'mid thousands on red Cnoc-An-Ar,
Where the hosts of the High King are charging the Finians in tumult of war,
With Caoilite, and Diarmuid, and Oscar, he stood on the ridge of the slain,
And the hosts of the High King broke past like the tide 'gainst a rock in the main.

O, bright was his spear in the morning, and burnished his great shield of brass,
And pleasant his eyes that were blue as the harebell in dewy-wet grass;
But his spear and his shie d are now broken and crusted with carnage and gore,
His eyes bloody-smeared shall flame out with the joy of the battle no more.

The halls of the Finians shall ring with the glory and fame of this day,
And the bards clash loud harps to the ranns that the soul of proud Erin shall sway,
And Caoilite, and Diarmuid, and Oscar shall stand up like gods, proud and tall,
But the hero I weep will not harken, tho' greater his glory than all.

The Banshee is wailing o'er Desmond, I hear her wild caoine thro' the night,
And o'er the lone home of my fathers there hovers a pallid death-light;
I will raise him a Cairn full kingly on the mournful mountains afar,
And letter his praises in Ogham, my hero of dark Cnoc-An-Ar!

We take the following lyric from "The Toiler, and Other Poems" (William Briggs, Toronto), by William J. Fischer. The first stanza is pleasantly suggestive of Father Tabb's delicate art.

At Daybreak

By William J. Fischer

In the blue sky one little star
And in my soul a hope so young,
And white and starlike, trembling still,
By God upon my life-string hung.

In the high tree a cheerful bird
And in mine ear a burst of song,
To bring me joy and soft-eyed peace,
And make my pulses beat more strong.

On the far hills a crimson shines,
And in my heart a dawn of light—
To-day Love's roses will be red,
To-day my hours will be bright.

The English of this poem (from *The English Review*) is clumsy—to find the antecedent of "it" in the last line the reader must go back to "road" in the first line. But the spirit of the poem is delightful and some of the phrases—"wild pines rush headlong, tossing each his ragged plume," for instance—are picturesquely strong.

Via Vitae

By Ernest Blake

Do you see the road a-winding through the dear green fields below?
Hear the bridle-bells a-jingle on the horses as they go?
Then beside blue flashing rivers, where the tall reeds softly sing
Plaintive songs of weary autumn, lyric carolings of spring.
Down the slopes wild pines rush headlong, tossing each his ragged plume,
Plunging all its life and glory in a shadowland of gloom.
But the shadows—are but shadows— Hark, the bells are jingling still.
See, it ends the journey mounting where the sun light's on the hill.

The Evening Sun printed these beautiful stanzas, to which only initials were signed. The name is rather unfortunately chosen, but the poem itself, particularly in the first two stanzas, is exquisite.

"What's in a Name?"

By R. M. M.

Through poppy-blooming fields you come,
O Shape beneficent and fair!
Your steps subdued, your lips are dumb,
And sleeping flowers wreathe your hair.

Your silver wings along the land
Their tranquil shadows softly cast,
And peace within your quiet hand
Is close enfolded, sweet and fast.

What drowsy perfume is your breath:
What gentle shelter is your breast:
Some coward cries: "Beware—'tis Death!"
The answer rises: "Nay, 'tis Rest!"

Shampooing is the final touch of cleanliness

EVEN the most careful of people are apt to neglect their scalps. Yet no person can be considered absolutely clean whose scalp is clogged with dandruff, dust, or dirt.

In Packer's Tar Soap you will find a shampooing agent ideally adapted to the scalp's needs.

It is not only a perfect cleanser for the scalp, but also a promoter of the scalp's health and of hair vitality.

To help you get the full benefit from Packer's Tar Soap we have printed a manual, "The Hair and Scalp—Their Modern Care and Treatment." Sent postpaid on request.

Send 10c for a sample half-cake

Packer's Tar Soap

(Pure as the Pines)

If you prefer a liquid soap for shampooing, ask your druggist for our new high quality preparation—Packer's Liquid Tar Soap (perfumed), price 50c per bottle; or send us 10c additional to cover packing and postage and we will see that you get it promptly.

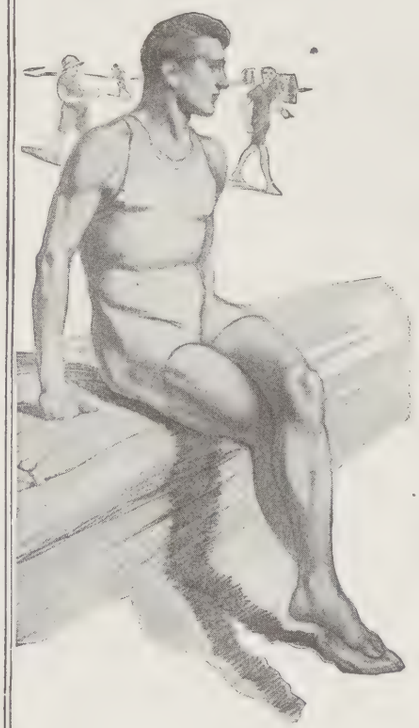
Your body was once like this



Youth is a tragic thing—for those who have wasted it. Youth is not a matter of years only. I know men of sixty who are younger than the average business or professional man of forty.

And premature old age is so criminally unnecessary. You are built exactly as you were at twenty—same organs—same muscles—same system of cell reconstruction. The only trouble with you is that, to use a plain word, you are flabby. Unused muscles—the really important, internal ones—have grown weak from disuse and, as a result, functioning muscular organs like your heart and intestines are working listlessly at irregular speed.

Now I, or rather you, can tone these vital, internal muscles up to normal strength. You can get back some of that insolent unconsciousness of body of your youth. You can stop those signals of distress which never let you forget your body.

I say you can do this, not as an abstract theory, but because hundreds of men have regained their health through my instruction. Frankly, they couldn't have done it alone. When you have got your insides out of kilter *it's an expert's job to put them right.*

My book, "Human Energy," will help you to find out what is the matter with you and will tell what assistance I can give you *to benefit yourself.* It is sent free.

PERSONAL GLIMPSES

S. S. McCLURE'S EARLY STRUGGLES

HARDLY anything in literature has so wide an appeal as the childhood stories of persons who have achieved distinction under difficulties. They inspire the young and cheer them to overcome difficulties that might otherwise be too much for them. That is perhaps the reason S. S. McClure, the publisher, decided to devote several chapters of his autobiography, now running serially in *McClure's Magazine*, to his early history.

About all the Widow McClure and her four little boys had when they came from Ireland to this country in 1866 were the clothes they wore and a fond hope of finding a place where they could lessen their handicap in the race with that ever-prevalent haunting thing figuratively known as the wolf. So long as the husband and father lived the family was in no danger of privation, for his industry and Scotch thrift provided them with the ordinary comforts. But when he died his widow, who was a descendant of a French Huguenot family, realized it would be almost impossible for her to support herself and children in Ulster, which had been their home since birth and the domicile of their ancestors for many generations. Mrs. McClure had relatives at Hebron, Indiana, a village not far from Valparaiso, and decided to make her home in the same locality. At that time Samuel S. McClure was only nine years old, but most of the important incidents stick out vividly in his memory. Mrs. McClure was practically without funds when she arrived at Hebron, and went to the home of her sister, a Mrs. Coleman. The Colemans had half a dozen children of their own and were struggling to make a living on a little rented farm. Two brothers of Mrs. McClure and Mrs. Coleman had come over a year before, and they too helped to overcrowd the house, which was a small story-and-a-half cottage. Very soon Samuel and his brother Robert were sent to live with another aunt, who lived north of Valparaiso, and their mother went to Valparaiso and got work as a servant in a household. The aunt's husband was having a hard time making a living, so he became tired of having extra children quartered upon him, and took the two boys to town and turned them over to their mother. Afraid to ask her employers to house the children, Mrs. McClure made a temporary home in a vacant room in a store building. She gave up her domestic position and did washing and ironing by the day four days a week at $1.75 per day. The wife of a prominent physician heard of the widow's heroic effort to get along, and let her have a room in her own house if Mrs. McClure

would do the family washing. It was there Samuel S. McClure made his acquaintance with books and his ambition was kindled. We read:

They were extremely considerate of my mother and of us children. Dr. Everts had a large library, and for the first time in my life I found myself in a house where there were plenty of books. I sometimes read two or three books a day. I lay on the carpet, face down, and read for hours at a time. It was then that I first read "Robinson Crusoe."

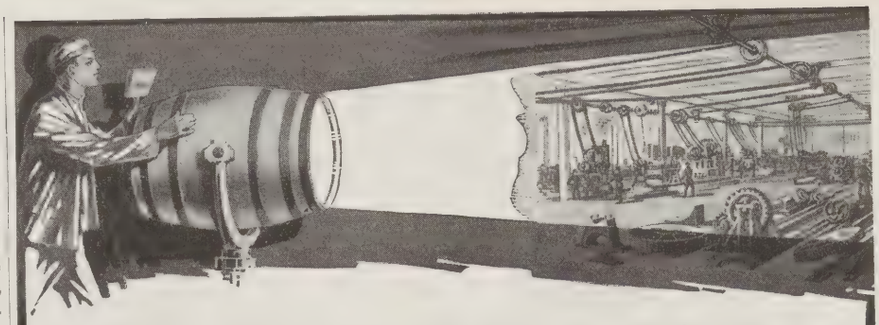
In that library there were some books about witches and witchcraft which I eagerly devoured. They took possession of my mind and made me so unhappy that I have always felt that such books should be kept away from children. I remember thinking that any one might be a witch in disguise, and wondering whether my own mother were not. I was so nervous that, when some children came in one evening with their faces blacked and grown people's clothes on, I ran screaming into the yard, and could not be quieted for a long while.

But these easy times, too, came to an end. The Everts family moved to Indianapolis, and then we found ourselves back in my uncle Coleman's overcrowded story-and-a-half house, fourteen miles south of Valparaiso, with winter coming on. My mother could always get work if it was to be had, and she obtained a place six miles away from the Coleman farm; but she received only two dollars a week, and this was the period immediately following the War, still remembered for the high cost of living. Brown sugar, I remember, went up to twenty-five cents a pound, and gold was at a high premium. I remember the great anxiety about getting shoes for the children. I had gone barefoot as late as possible, like all the other country boys, and delighted to do it; but the time came when shoes were a necessity. My mother managed to get them, somehow. I can remember when she bought me mine, and that they had brass toes. We had not very heavy clothing, and during that winter we children and the Coleman family lived very meagerly. I remember the hardship of having to eat frozen potatoes boiled into a kind of gray mush. I did not thrive on this nourishment. Before the winter was over I had become so weak that my hands were very unsteady and I could not carry a glass of water without spilling it.

Mrs. McClure married a farmer named Thomas Simpson, and Samuel and Robert were taken into the house, the other two children going to live for a while with Mr. Simpson's brother. Little John McClure returned to his mother in a few months, and he and Samuel did the morning and evening chores. One of their jobs was to saw and split wood for the stove and the fireplace. The second winter Samuel attended school for the first time in this country, and he was so fond of it that if he had to work at home part of the day, he would go to school even to get the last hour, from three to four. To continue:

The second winter I attended school for

(*Continued on page* 893)



Are you getting the maximum amount of daylight in your plant?

Or is a large percentage absorbed, swallowed up, *wasted*, in your ceilings and walls? The difference can be reduced to dollars and cents—in your lighting bills, in the efficiency of your employees, in the quality of your product.

You can get the full value of every ray of light that comes in through your windows and increase your present light **19 to 36 per cent** by painting your ceilings and walls with

RICE'S MILL WHITE

Rice's Mill White is an *oil* paint giving a *glossy*, tile-like finish without the use of varnish. It will not crack or craze under the jar of machinery, and remains white longer than any other gloss paint.

Rice's was the pioneer "Mill White" paint. It made the reputation of the name "Mill White." The special process by which it is made cannot be used by any other paint manufacturer.

Rice's Mill White is sold direct, in barrels containing sufficient paint to cover 20,000 square feet, one coat. If you have that area of ceiling and wall space to cover,

Rice's Granolith

A Tough and elastic permanent finish for concrete walls. Becomes a part of the cement to which it is applied. One coat sufficient unless a gloss is desired. Makes the best possible primer on inside concrete and brick for a second coat of Rice's Mill White Paint, giving a tile-like enamel finish at no more expense than lead and oil paint.

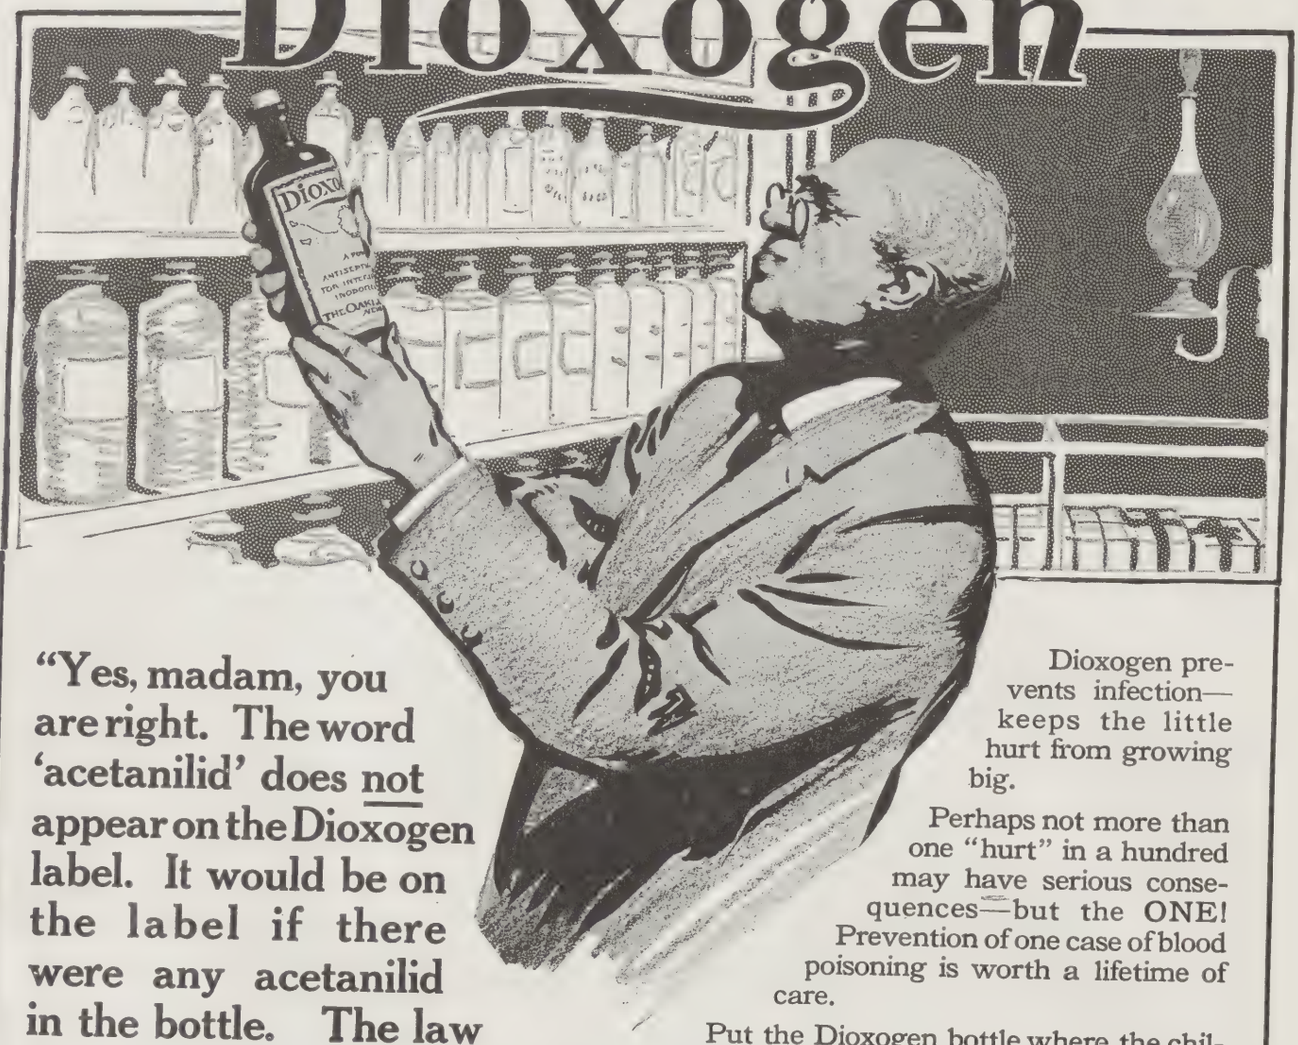
Dioxogen



"Yes, madam, you are right. The word 'acetanilid' does not appear on the Dioxogen label. It would be on the label if there were any acetanilid in the bottle. The law requires it."

Dioxogen contains no "acetanilid"—Dioxogen is the one pure Peroxide of Hydrogen. It does not spoil nor turn rank and it keeps indefinitely. It is purer and stronger than ordinary Peroxide.

Always ask for Dioxogen by name.

Look out when some one offers you a Peroxide "just as good" as Dioxogen.

Ask to see the label. If you see the word "acetanilid" on it you will know that the so-called "just as good" is impure and inferior because it requires this questionable drug to preserve it. Acetanilid is put in ordinary Peroxide to make it keep, but it also makes it rank, affects its color and gives it a disagreeable taste and smell. Without acetanilid, ordinary Peroxide would not keep long enough for the druggist to be able to sell it.

Dioxogen prevents infection—keeps the little hurt from growing big.

Perhaps not more than one "hurt" in a hundred may have serious consequences—but the ONE! Prevention of one case of blood poisoning is worth a lifetime of care.

Put the Dioxogen bottle where the children may use it for all their little "accidents." It does its purifying work by the liberation of oxygen—nature's great purifier.

As a Gargle **Dioxogen** cleanses the throat of secretions and accumulations—many serious throat disorders would not occur if the throat were cleansed regularly by a gargle of **Dioxogen**. **As a Mouth Wash**—**Dioxogen** foams and bubbles as it cleanses decaying food particles from crevices about the teeth, kills offending odors and destroys the germs which thrive in the mouth, and cause decay of the teeth.

For Wounds and Cuts **Dioxogen** is a reliable antiseptic, preventing blood poisoning and by its bubbling and foaming, aids in removing the dirt and other irritating substances. **For Burns and Scalds:**—**Dioxogen** serves the double purpose of relieving the pain and putting the flesh in condition to heal quickly.

For the Complexion **Dioxogen** works its own way into the pores, thoroughly cleansing them and removing the accumulations of decomposing wastes that cause disfigurements. **For Manicuring:**—**Dioxogen** prevents the development of infection in cuts, hang nails, etc. It removes stains and is most excellent for use on the orange stick in pushing back the cuticle.

After Shaving **Dioxogen** prevents infection from cuts or other causes, and relieves the irritation caused by "close shaving." **For Chapped Hands and Face:**—**Dioxogen** quickly heals the cracks and bleeding surfaces and soon restores the skin to healthy condition.

Don't wait until you need Dioxogen—Ask your druggist for a bottle today. See that it comes in a sealed container.

THE OAKLAND CHEMICAL CO., 98 Front St., New York

PERSONAL GLIMPSES

(*Continued from page* 891)

the first time since we came to America. I went to the Hickory Point School, and my Irish speech afforded the boys there a great deal of amusement. The snows were very deep there, and the crust was often so hard that we skated to school, over fields and fences. I was so fond of school that, if I had to work at home for part of the day, I would go all the way to school to get the last hour, from three to four, there.

When I was twelve years old and was still going to that school, I heard somewhere, for the first time in my life, that there was a kind of "arithmetic" in which letters were used instead of figures. I knew at once that I must somehow get hold of this. I asked the teacher, a young man who was then trying to work his way toward a medical school; but, tho he had heard of algebra, he had never studied it and had no text-book. There lived not far from us an ex-soldier named McGinley, and I had heard that his wife had been a school-teacher. I went to Mrs. McGinley to ask her advice, and she lent me an algebra. My brother John and I took up this book and went through it as fast as we could, working it out for ourselves and solving the problems as we came to them. We got so excited about it and talked about it so much that my stepfather said he thought he would like to study it, too. He would sit down with us in the evening and work at the problems. But after a little while his zeal flagged and he decided that he could get through the rest of his days without knowing algebra.

During these years the lack of reading-matter was one of the deprivations which I felt most keenly. We had no books at home but a bound volume of "Agricultural Reports," sent us by our congressman, and this I read over and over. Then I used to read, with the closest attention, the catalogs sent out by the companies that sold agricultural implements. They seemed absorbingly interesting, and I read them through like books. When I was about thirteen years old I first read, in the weekly edition of the Chicago *Tribune*, "The Luck of Roaring Camp." It seemed to me a fairly good story about an interesting kind of life. Petroleum V. Nasby, the famous dialect philosopher of that time, I read closely in the weekly paper. It was then I first began to hear of Mark Twain, and to see little extracts from him quoted in the newspapers. It was years before I saw even the outside of one of his books.

I remember some hunters once camped for the night on our place. I went over to their camp the next morning after they were gone, and found that they had left several old paper-backed novels and a few tattered magazines. These were a great find for me. Years afterward, the idea of forming a newspaper syndicate first came to me through my remembering my hunger, as a boy, for something to read. In the early eighties, when I was working for *The Century Magazine* in New York, and was going over the files of *The St. Nicholas Magazine*, I could not help feeling how much I had missed. Here were good stories of adventure, stories of poor boys who had got on, stories of boys who had made collections of insects and butterflies and learned all about them, or who had learned geology by collecting stones and fossils—things that I might have done, myself, if I had known how. It occurred to me that it would be an excellent plan to take a lot of these stories from the old volumes of *St. Nicholas* and syndicate them among the weekly country newspapers over the country, where they would reach thousands of country boys who would enjoy them as much as I would have if I had had them. I took this plan to Mr. Roswell Smith, of the Century Company. Mr. Smith did not carry out the plan, but the idea of such a syndicate was firmly fixt in my head, and later I was able to carry it out myself.

After I had started my newspaper syndicate, I did manage to get Stevenson and Kipling, Conan Doyle, Stanley Weyman, Quiller-Couch, Stephen Crane, the new writers and the young Idea, to the boys on the farm. I am always meeting young men in business who say: "Stevenson? Oh, yes! I first read 'Treasure Island' in some newspaper or other when I was a boy. It came out in instalments"; or "Why doesn't Quiller-Couch ever write anything as good as "Dead Man's Rock"? I read that story in the Omaha *Bee* when I was a kid, and I think it was the best adventure story I ever read. I never got the last chapter. Our paper didn't come that week, and it bothered me till I was a grown man. I finally had to get the book and find out what did happen to Simon Colliver." I believe that my newspaper syndicate did a good deal to awaken in the country boys everywhere an interest in the new writers of that time, and to create for those writers an appreciative audience, besides all the pleasure such stories gave to minds that would have been emptier without them.

The second summer I spent on my stepfather's farm—I was eleven years old—I did the same work as a man, except where my lack of height was against me. I built the hay on the wagon, for instance, instead of throwing it up from the field, and when the hay was forked from the wagon I built it up on the stack. John and I planted the corn by hand, dropping across the plowed furrows. We cultivated the corn twice, twice down the rows and twice across. When I was twelve and thirteen years old a part of my work was to break the young colts to being ridden.

We all worked hard, but it seemed to me that my mother worked hardest of all. She got up at five every morning and milked five or six cows. The North of Ireland people are the best butter-makers in the world, and when butter was bringing twelve and a half cents at the stores in Hebron, my mother's butter always brought twenty-five cents a pound and was sent to families in Chicago who had given a standing order for it. Besides milking and making butter for market, my mother did all the housework, the cooking and washing and ironing and caring for the children. During the seven years that my stepfather lived, my mother bore four children, of whom three died in infancy of enlargement of the spleen. I seem to remember that there was always a sick baby in the house. About the time the new baby was a few weeks old, the eighteen-months' old baby would fall sick, and then my mother would have a baby in her arms and a sick baby in the cradle. She did a great deal of her work with a baby in her arms, and often after being up half the night with the sick one. I used even then to wonder how she did it.

I Must Get Duofold!

When you make that decision — say goodbye to winter chills and underwear ills.

For — once clad in

Improved **Duofold** Health Underwear

you'll realize what it means to enjoy the *comfort* of softest *cotton with* the *warmth* of finest *wool.*

Bitter winds won't chill you —steam-heated air won't torture you. For *Duofold* is a *patented* combination of separate woolen and cotton fabrics, inseparably united in a single convenient, comfortable garment. Its *outer* woolen fabric is a perfect protection against winter cold, while the *inner* fabric of downy cotton is exceedingly soft and soothing to the sensitive skin.

Make up your mind to enjoy outdoor warmth and indoor comfort by trying *Duofold Underwear* today.

At your dealer's in Union Suits and Separate Garments, all sizes, many weights. A FREE SAMPLE OF DUOFOLD material and illustrated descriptive booklet, will be sent on YOUR request.

DUOFOLD HEALTH UNDERWEAR CO.

10-38 Elizabeth St., Mohawk, N. Y.

You Are Welcome

If we could induce every one of the hundred million persons in this country and Canada to visit "The Home of Shredded Wheat" and witness the process of making Shredded Wheat Biscuit and Triscuit we would not need to print this advertisement—or any other advertisement. Nearly one hundred thousand visitors from every habitable portion of the globe pass through this factory every year. They are impressed with the beauty and cleanliness of the factory. They are convinced of the wholesomeness, purity and nutritive value of

Shredded Wheat

It is the one universal staple cereal food, eaten in all lands, always clean, always pure, always the same. Deliciously wholesome and nourishing for breakfast with hot milk or cream or in combination with baked apples, stewed prunes, sliced bananas or other fresh or preserved fruits.

The only cereal breakfast food made in biscuit form

Made only by

THE SHREDDED WHEAT COMPANY
NIAGARA FALLS, N. Y.

Crack in your fingers. Nuts 2 inches long

KREG NUTS

Selected Paper-Shell Pecans

Not the small, brown nuts you buy at the store, but large, thin-shelled, selected pecans.

EACH MEAT MAKES A MOUTHFUL.

Kreg Nuts should become part of your diet. We have an interesting folder that explains their development and food value. The supply is limited and you should order early. The price, $1.00 per pound, gives you more nut meats than you can buy any other way.

Send $5.00 by P. O. money order, draft or check for 5-lb. package delivered by parcel post prepaid. No shipment less than 5 lbs. By mail only.

Order today or send 25 cents for sample package or write for free descriptive folder.

KREG PECAN CO., Williamsport, Pa.

Stepfather Simpson was as kind to the McClure boys as he knew how to be. He never whipt them, but he made them work too hard. He was a hard worker himself, and, like many other farmers of his day, believed in making children work at heavy tasks. Mr. McClure goes on:

One day in September, my mother called me to her and told me that she could not see any chance for me on the farm. If I wanted more education I must manage to get it for myself, and the best thing for me to do was to go away and try. At Valparaiso a new High School was to open that fall, and my mother said she thought I had better go there and see if I could work for my board and go to school. I followed her advice.

I carried with me no clothes except those I had on, and I don't think I took a package or a bundle of any kind. I had no capital but a dollar and the hopefulness and open-mindedness of fourteen years. When I came out on a little hill above Valparaiso and looked down at the white houses and the shady trees, bordered by young maple-trees, I had a lift of heart. It seemed to me the most beautiful place in the world.

I walked into Valparaiso as fast as I could, and began going from house to house, asking whether anybody wanted a boy to do chores and go to school. It was then late in the afternoon, and I had to get a place to sleep that night. The Everts family, for whom my mother had worked, were then living in Indianapolis; but I went to some of their neighbors. Some one told me that they thought Dr. Cass would take a chore-boy. I knew of Dr. Cass. Indeed, once, when he came to our farm to buy corn, I had computed in my head the cubic contents of a crib for him.

Dr. Cass was then the richest man in all that country. He owned several farms and a good many cattle, and was worth something like $100,000. He was reputed a hard man and was not very well liked. I went to his house and he took me in. There I was called at five every morning, made the fire in four stoves, took care of the cow and the horses, and did part of the marketing before school. In the afternoon I worked on the grounds and did chores until suppertime, and after supper I studied my lessons. Every Monday, however, I was called at one o'clock in the morning to help Ida and Bertha, the two daughters of the house, with the washing. By eight o'clock we would have the washing for the family on the line.

As I have said, there had been no High School in Valparaiso until that year. It was conducted in one large room of the new school building just completed.

After the new pupils were seated, Professor McFetrich came down the aisle, asking each boy to give his full name and say what studies he wanted to take. I was a little nervous, anyway, and it made me more nervous to hear each boy giving three names—John Henry Smith or Edward Thomas Jones. What bothered me was that I had but two names, Samuel McClure, and I didn't want to be conspicuous by having less than the other fellows. I began to rack my brain to supply the deficiency. I had read not long before a subscription history of the Civil War, and had greatly admired the figure of General Sherman. Professor McFetrich was still about six boys away from me, and before he came to my desk I had decided on a middle name. So, when he put his question to me, I replied that my name was Samuel Sherman McClure. Later I changed the Sherman to Sidney. I am usually known now as S. S. McClure, but there never was any S. S. McClure until that morning, and my becoming so was, like most things in my life, entirely accidental.

After he took down my name, the principal began to name over the studies, for me to say "yes" or "no": Arithmetic, history, Latin, geography, German, algebra, geometry. To his amusement, I said "yes" to every one of them. I did not know what else to do. There was certainly nothing in that list that I could afford to give up, and it didn't occur to me that I could save any of them and take them at a later date. During the morning, however, I began to get nervous about the number of studies I had agreed to take. At noon I went to the principal and told him that I was afraid I had registered for more subjects than I could do justice to. He smiled knowingly and said he thought I had. We compromised on a rational number.

I had come to Valparaiso run down and worn out with the hard summer on the farm, and the work at Dr. Cass's was not light for a boy of fourteen. Still, I got on pretty well except for the fact that I had no money. I had my board and lodging from Dr. Cass, but not a penny to buy clothes or books. Of course I had no overcoat. I didn't own an overcoat until I was nearly through college. When it was cold—and it was often bitterly cold—I ran. Speed was my overcoat.

I stayed with Dr. Cass through the first term of school, and then I went to spend Christmas with my uncle James Gaston, who had married and then lived four miles north of Valparaiso.

I was not supposed to be away from my chores for more than day or two, but I had not had a vacation for a long while, and I had such a good time at my uncle's that I overstayed my time. The snow was hard and firm. Sleighing was fine, and there were a lot of friendly young people about. There was one very pretty girl, Helen McCallister, with whom I thought I was very much in love. I certainly enjoyed that vacation. But when I went back to Valparaiso on the first day of January, Dr. Cass refused to take me in again, because I had overstayed my time.

My misfortune, however, was only temporary, and my loss proved to be my gain in the end. I soon heard that Mr. Kellogg wanted a chore-boy. John and Alfred Kellogg were brothers who lived in a double house in Valparaiso and, with a third brother, operated an iron-foundry. I went to live with the Alfred Kellogg family, and there I found a home indeed. I at first joyfully characterized the house to myself as a "place with only one cow and one stove." And Mrs. Kellogg was so merciful to the sleep of growing boys that she frequently got up and made that one fire herself. I regret to say that I can remember lying guiltily in bed on a cold morning and hearing her build it. I could never adequately describe the kindness of the Kelloggs.

I finished my first winter at the Valparaiso High School happily enough in the Kellogg family.

How Much Do You Know About The Springs That Are Under Your Car?

DO You Specify the Springs as Carefully as You Select the Tires, the Axles, the Magneto? Perhaps you have never fully realized that it is not so much cushions nor tires, nor smooth-rolling wheels under your car as it is springs that guarantee not only your comfort but the integrity of your car. That it is the springs, far more than tires or bearings, that shield the motor mechanism from road jolts and jars—that ease a car over the bumps and thumps of bad going, thus saving depreciation and repairs.

"Unhurriedly Made" By the Slow, Scientific Detroit Process

Forty-eight separate processes are used in the building of each Detroit Spring.

The basis of Detroit Springs super-quality is steel fabricated in an electric furnace according to formulas based on tests by D. S. P. engineers and chemists. This steel is not allowed to vary in chemical composition by one-half of one per cent of any element.

Our spring engineers first design the length, height, arch, number of leaves and capacity to which every set of Detroit Springs must be built. Each spring is built to order in our shops, specified in detail to accommodate line and load and type of car, so that the car owner is assured that he is riding on the right springs for his car.

"Eye-making," for example, is only one of the many vitally important processes of Detroit Spring work, which must be 100 per cent accurate. Each of the three operations of "scarfing," "curling the eye" and "truing" is a job for the skilled man only. Our "eye" men have done nothing else for years. Equal precision marks the "rolling" of each leaf to the taper that is right for that spring.

RESILIENT
Detroit Springs
SILENT—SELF-LUBRICATING

One of the Standard Tests that Insure Detroit Spring Serviceability

Under the "capacity test" every Detroit spring must carry a fixed load at a fixed height—never less. This machine sees to it that this infallible law of D. S. P. manufacture is never infringed.

Write for our new book, finely illustrated and printed, telling the fact-story of Detroit Springs.

Detroit Steel Products Co.
2252 E. Grand Blvd., Detroit, Mich.
Manufacturers of Fenestra Solid Steel Windows—"The Standard of Industrial Daylighting"

You Can Know Detroit Springs by the Lubricating Cup Near the End of Each Leaf and This Trade-mark

The wonderful resilience of Detroit Springs is more than mere "springiness." It represents a type of construction that is as sturdy for severe usage and long wear as it is comfortable for day-to-day travel.

A Two-Year Guarantee

We protect you for twice as long as usual. And we run no risk in doing so, because we make the springs to protect ourselves as well as you.

Our bushings are all of special bronze and are polished as satin smooth as a piano's finish. Careless spring-eye or bushing finishing often makes a difference of three years in the duration of silence in the spring.

And instead of the cheap, dirt-catching "lip" method of retaining spring leaves, Detroit Springs are slotted on one bearing and beaded on the other, near the ends. This prevents all chance of lateral movement of leaves when the spring is deflected.

Each leaf is triple-heated to insure scientifically correct temper, each heating being controlled by our special Thermo-Electric Pyrometers.

The Spring Without a Squeak

The Self-Lubricating Device consists of a distributing reservoir in each leaf, loaded with long-life lubricant. This lubricant enables the leaves to softly, silently slide one over the other with every movement of the spring, producing a velvety resilience not to be found in any other spring. **Therefore, specify these silent, self-lubricating springs on your next car.**

The Cowan
SOLID MAHOGANY
Tea Wagon
$20 SPECIALLY PRICED $20
TWENTY DOLLARS

This is one of the most artistic of all Tea Wagons and a perfect example of Cowan "Cabinet Work" — The World's Standard in Mahogany Period Furniture.

The Cowan Tea Wagon is the universal choice in fashion centers, where it is displacing the side table quite generally.

It is made of solid selected mahogany. All its joints are dovetailed or tenoned together instead of nailed and screwed, following the hand construction of "Old Colonial" Furniture.

A removable tray top, with a selected glass bottom, protects from heat or stain the natural beauty of the solid mahogany top without concealing its richness of grain.

The wheels with their narrow running edges assure quiet moving and are constructed to add staunchness to the entire piece.

A lower mahogany shelf, with beaded edge and graceful curve, gives the final touch of beauty and serviceability.

The Cowan Tea Wagon is of similar value to the Cowan Martha Washington Sewing Table which we advertised last month at $15.

Both these pieces (be sure you find this mark) COWAN trade marked can be had of the Cowan furniture dealer in your city. If there is no dealer in your locality carrying the Cowan lines we will have our nearest dealer supply you.

Old Fashioned Bayberry Dips

Two seven-inch, hand-dipped Bayberry Candles, full of the **spicy fragrance** of the **bayberries,** daintily attached to a **beautifully hand-illuminated** gift card bearing **"The Legend of the Bayberry Dip."** Exquisitely packed in a **craftbox** they possess a **quaint charm.** Send us **50 cents** for two postpaid. **Our book of Quaint New England Gifts** solves Christmas riddles.

POHLSON'S GIFT SHOP, PAWTUCKET, R. I., Dept. 7.

WORRIED ABOUT BABY? GET HOLSTEIN COWS' MILK.

How seldom the breast-fed baby causes any serious anxiety! But when it's necessary to find a substitute for Nature's food, trouble usually begins.

You can avoid all the worry and anxiety that usually accompanies the use of cow's milk, if you will take care to use Holstein milk, the very nearest thing to breast milk.

In Holstein milk, as in breast milk, there is only a moderate amount of cream (or butterfat) and it is in the form of small even globules that yield quickly to the action of the digestive fluids. The curds formed from Holstein milk are small, soft, flaky and easy to digest.

In common milk the average fat globule is twice the size of those found in Holstein milk and the curds formed are coarse, heavy, and likely to cling together in a solid mass.

You can easily see how much more suitable for infant feeding Holstein milk is and why the great specialists agree in recommending it.

Holstein milk costs no more than ordinary milk. If you have any difficulty in securing it, write us.

Send for our free booklet, "The Story of Holstein Milk."

SUCCESS WITH REGRETS

ALICE GEUBEL DE LA RUELLE became a convert to the feminist movement, abandoned a life of wealth, ease and high social position, worked prodigiously to prepare herself for a public career, got employment in the Government service in France, her native country, and won distinction, yet she is none too enthusiastic over non-domestic careers for women. Perhaps it is because she, like everybody else, merely has a longing for something she has missed. That may be what a good many women of this country will say. But instead of trying to analyze Madame de la Ruelle's case, let us quote part of her story, which appears in *The Outlook*, and give the reader his privilege of taking it for what it is worth. Madame de la Ruelle is now visiting the United States, commissioned by the French Government to study our methods of regulating factory labor, especially the State and national laws for the protection of women workers. Her article sheds some light upon the conditions with which ambitious Frenchwomen are confronted. We read:

Some years ago I had to choose between being a sort of prisoner in a gilded cage—being fed and housed and expected to move in a certain prescribed circle—and breaking away from this environment and making my own career in life. My mind was made up. I wanted to be free, and I determined to win this freedom. I knew that I had to look for my own food. I had been brought up in a family impregnated with the ideas and habits of the old régime; I had been carefully protected from certain kinds of knowledge, like a delicate flower—as, in fact, the *ingénue* of an old-established and recognized social order.

But still I had spent one year in England, having been sent there to learn the language and to get some general English education, and this experience gave me new views and a feeling of independence that I perhaps would not have had without it.

So I was sure that I wanted to be free, and yet at the same time I did not want, so to speak, to declass myself. I did not want to give the slightest offense to my family, to my friends, or to the members of the social circle to which I belonged. I knew, therefore, that I must achieve my freedom through some other avenue than trade or industrial work, because that would mean working for money, and if I did that I should have been lowered and should have put myself out of the class into which I had been born.

I could not be a college or *lycée* professor for two reasons: it would have taken too long to have completed the necessary studies, and I had passed the usual entrance age of eighteen for preparatory schools. There were therefore very few things open to me. I thought of being an inspector in a Government department. There were a few positions open to a woman where certain qualities of tact and of womanhood were as essential as technical education. But they were rare, and were usually given to the widows and daughters of men who had rendered some big public service. For instance, the *inspectrice de l'assistance publique* (corresponding to an American State charities board) is the widow of a great jurist.

My life was filled with the usual interests of what is known as a "charity woman." I was interested in charity, and at the time of the great Charity Bazaar fire in Paris I was busy in a similar bazaar, and had it not been for lack of space I might have been in the ill-fated Bazaar itself. So I had had my taste of that sort of life; but I did not appreciate it enough to feel willing to stick to it.

Then knowledge came to me of the position of Inspector of Labor—a position created in 1893, and filled by public competition. This office demanded certain capabilities and qualifications that I felt I could try to supply. For instance, such a position demanded a woman of force, dignity, and authority, but free from nervousness, because the duties are exacting. In such a position you must show power, strength, and tact, for you are called upon to face all kinds of people—sometimes mobs of people howling at you, saying you have denied them the right to work part of the night. Then there are the employers to face—some brutally rude, some cunningly rude, and even some too polite! So the position asked for moral fiber as well as intellectual qualifications and physical strength. It seemed to me that here was a position which would give me an independent and respected place in society, and at the same time afford me most interesting work; and, after I had set my mind firmly in that direction, it seemed to me that I should die if I did not succeed in acquiring it. I knew such positions were very rare. There are now exactly seventeen women inspectors for the whole of France, and only in case of death or resignation does a vacancy occur.

I remember we were living in the country at that time. I was returning home with my mother, and bought a newspaper to read, and I saw that the competition was open for three vacancies. This was to open the door for the restless bird struggling in the cage. I came home greatly excited—*complètement bouleversée*—and I could not sleep that night. I decided I would get that position or die. I was in a fearful state. The first thing in the morning I went to the Ministry to get information. They gave me a program of the examinations; I knew that the library of the Ministry would be open to me, and I also knew that two professors would aid me with courses, or lessons, and I went at once to them and began to study. There were two ways of preparing for the examination—taking the regular courses, and by means of private lessons. I took both. After the first course, in my eagerness to work, I saw that I could keep up with the others, but I decided to take private lessons too. I wanted to follow the others in their course, and I wanted to do more; so I arranged for private lessons. To try the examination at all was a bold decision for me to make, for I soon learned that more than four hundred women were

THERMOS

THERMOS—the GIFT

Appropriate for Man, Woman or Child of all Vocations, Ages and Stations in Life

If you are thinking of an appropriate remembrance for your old grandparents, or for an aged father or mother, nothing will add more to the comfort of their declining years than a THERMOS Carafe at $3.50 to $5.00.

Nothing will save them more steps, for a THERMOS Carafe will bring within arm's length any hour of the day or night their favorite hot or cold beverage.

For the husband at the office, store, or factory; for the son's or daughter's noonday luncheon at school or business; for Baby's milk supply, THERMOS provides a portable, convenient and perpetual refrigerator in which it is kept sweet and cold.

At the bedside of the invalid; for the whole family on its outings, away from home and food supply; in the automobile, yacht, canoe or motor-boat; for hunting and fishing; for everyone, everywhere, and at all times, THERMOS is the good servant.

Ask your dealer—he has all THERMOS articles—and remember THERMOS today at the greatly reduced prices is better and stronger than ever before. The new shock-absorber at the base reduces the possibility of breakage to a minimum.

Buy THERMOS *today*. Our factories in all principal countries have never yet been able to supply the demand at the holiday season, and this year there will be a greater demand than ever before.

For your protection, look for the name THERMOS stamped on the bottom of each piece.

PERSONAL GLIMPSES

(*Continued from page* 896)

competing for these three vacancies. I want all young girls to realize how hard a struggle it was. I had had a very good education, but it was not enough to compete with those widely read women—most of them having already earned a doctor's degree in philosophy, science, or letters, and, as I have said, it seemed bold in me to try to compete with those women.

But Madame de la Ruelle's chances were helped by a demand for information on subjects that were new to the other women as well as to herself. When it came to examination in industrial law and industrial hygiene, they were no better informed than she was. Madame de la Ruelle studied so hard for several months that she was frequently on the verge of a physical and mental collapse. Her story continues:

I knew of course that only three women could succeed out of the more than four hundred who were working for the vacancies, and I studied them to find out my most formidable rivals. I decided on three, two of them widows, of whom one was the sister of a Government Minister and very clever. She was the third one received at the examination. She has married since a big lawyer in Paris and has resigned her functions. I watched them, and they in turn watched me. We took lessons with the same professor. I made up my mind to change my way of studying, however; I no longer followed my professor—I made him follow me. He would sometimes say to me, "Now, in one lesson you have made me give you three lessons." I would come to him with a dozen or perhaps two dozen questions that had occurred to me during the night, and I would put these questions to him without his suspecting my real motive. I did not want to give him my ideas to use as material for his lessons to others. He was a functionary; he was doing this instructing outside of his regular work, and he naturally took material wherever he found it; and as the affair was a matter of life and death to me, I tried to get from him all I could without letting him know all that I got from other sources. When I wrote compositions that I thought were good, I did not show them, because I did not want him, and through him the others, to know just how fast I was getting on. A little sly, perhaps you think, but human. And I was alone in my fight. When I think of it, it seems fearful.

Well, the all-important day came at last, and about three hundred women appeared for the examinations. We were so many that the Minister of Commerce had to put us in the *Salle de Fêtes*. It was very funny to be sitting in that splended *Salle de Fêtes* with its tapestry, its beautiful decorations, and general air of luxury, and we poor women sitting in the Gobelin-upholstered armchairs, writing for our lives. One question asked was, "What are the laws, decrees, and regulations concerning women above eighteen years of age in industrial work?" It was a big question, and we had three hours in which to answer it. I wrote more than sixteen pages, and I could have written more if I had had time. In the afternoon we had the question, "What are the different deleterious gases produced in industrial work where women are employed; what are their dangers, and what are the remedies to apply?"

I felt that I had answered fairly well; and two days afterward I knew, non-officially, that I was among the three first. Almost directly after finishing my composition I went to see my professor in legislation, M. Alfred Duprat, who is now a Director in the Ministère des Colonies, and he said: "Now your face is happy, you are satisfied with yourself." I smiled and told him something of what I had written. He was bewildered, and exclaimed: "You have hidden your knowledge from me, but I suspected it!"

"Of course," I said, "you were not my private professor, and I did not want to give my information to the others." He laughed, and ever since has a knowing smile when we meet each other.

In the interval between the first and second examination we had to pass a medical inspection; only a strong, well-built woman could be eligible. Inspection work is arduous. Sometimes it requires ascending fifty stories in a day, and that means there must be good heart, good lungs, and good legs.

The second examination was oral, and public. Madame de la Ruelle was asked many difficult questions, but she passed with a high average. Soon after the examinations were over she received her appointment from the Government, a life job. She concludes:

I have fought my fight and I have succeeded, but I would advise no woman to undertake this struggle for a mere whim or passing fancy; it is only for one whose heart is in her work. Many women take up something just because they are restless and do not know just what to do, and by so doing they give wrong ideas to young girls; they make them almost disgusted with the plain and simple life—with the life that has no excitement in it; and that is a great mistake—a great wrong, in fact. It belongs to *une femme arrivée*, as I have been kindly called, to caution inexperienced girls. I would say to them: "Do not do as I have done, unless you are forced to it, or feel within you an overmastering impulse to succeed alone." If conditions are not very unfortunate, a woman, no matter how clever she may be, or how strong may be her desire to do something great in the world, can always find an outlet for her noble aspirations in being the helpmate of a husband—in helping him "to arrive"—and that is the ideal condition.

I recall a conversation I had with a friend of mine, Mademoiselle Vigneron, who is, in truth, *une femme arrivée*. She is Inspector-General of Technical Schools for all France, and a Chevalier of the Legion of Honor. She has a splendid salary; she has several times been sent on Government missions to Italy, and her position is more secure than even that of her Minister, because he is changed with the fluctuations of politics, but she stays. I was visiting her recently when a young woman came in; she was the wife of a young doctor who lived in the same house with Mademoiselle

INVESTMENTS AND FINANCE

NOT SO BAD FOR THE RAILROADS

THAT the value of most railroad securities is "greater than is generally believed" and that their position, present and prospective, is "better than ever before," is the contention of Thomas Gibson and C. F. McElroy in the first of a series of articles they have undertaken for *Moody's Magazine*. These writers aim to show that the railroads, "instead of being on the verge of bankruptcy, because of the great increase in wages, the difficulty of obtaining funds at reasonable rates, and the increased cost of materials, have never been earning more money than they are to-day." These writers contend that they are in no sense making an attack on railroads and their securities, but rather are giving a presentation of "exact facts from all angles," supported by statistics and argument. Following are three tables accompanying their first article. Table I shows the record of fifteen prominent railroad systems in paying dividends from 1900 to 1912. Table II shows, for the same roads and the same series of years, the earnings applicable to dividends on the common stocks. Table III shows the returns to date in money to investors on one share in the stock of each of these roads, the investment having been made in 1900 and the returns including dividends, "rights," and stock distributions.

P—Profit L—Loss

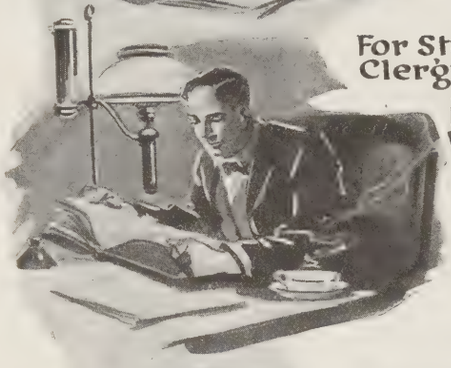
The writers contend that, while much has been heard by the public of increases in wages, and the high cost of money and materials, without any advances in rates, little or nothing has been said of the larger car and train loads which the roads have been able to carry; of the reductions they have brought about in the cost of conducting transportation, through tunnels and reduced grades; of the advantages of double-tracking, "one of the most profitable

(*Continued on page* 903)

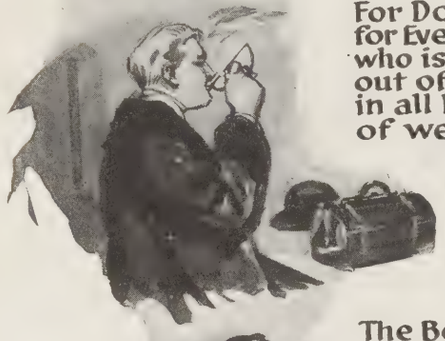
100% Efficiency

For the Man who is in a Hurry

For Business Men—Lawyers and Thinkers



For Students—Clergymen and all Brain Workers



For Doctors—for Everybody who is in and out of doors in all kinds of weather

The Best Hot Drink for Colds—Good for Convalescents and the Best "Pick-Me-Up" for "The Morning After"

"a cube"

FOR THINKERS. For people who think and whose brain is their best asset. For busy people who must always be keen on the job and keep their efficiency up to 100%, a cup of bouillon made from ARMOUR'S BOUILLON CUBES refreshes, invigorates and stimulates *without reaction*. Doctors will tell you of the beneficial action of hot water on the human system. Here you have the medical benefits plus the wholesome, delicious flavor of beef, fresh vegetables and seasoning.

"a cup"

KEEP your blood going all day as lively as when you started in the morning. "Ginger up." That is the secret of 100% efficiency. About four o'clock, when your "pep" seems to sort of give out and you feel the need of a quiet bracer, take a cup of Armour's Bouillon. It will send the blood tingling through your veins with fresh vigor that will make work a pleasure. Try it. Keep a box of these little cubes on your desk or in your grip, and when the "all in" feeling comes you are ready for it.

"hot water"

ARMOUR'S BOUILLON CUBES are the most convenient form of refreshment imaginable. Compact in form, attractive in appearance (wrapped in paraffin paper) and convenient, they are a boon to all who need a wholesome refreshment at any hour of the day or night. Beef and chicken flavor. Prepared in an instant. Simply drop a cube in a cup of hot water and it is ready, seasoning and all.

At Grocers, Druggists and Buffets Everywhere

FOR FREE SAMPLES, ADDRESS ARMOUR AND COMPANY, CHICAGO

Armour's Bouillon Cubes

$250 to $10,000
Will Be Paid

THE A. D. S., a National Co-operative Association of 17,285 Druggists and Physicians and with Two and a Half Million Dollars Capital, offers this reward to all experts in the pharmaceutical world for discoveries that will improve (for the purpose intended) the contents of any of the following A. D. S. Packages:

A. D. S. Shaving Cream
A. D. S. Peroxide Cream
A. D. S. Malted Milk
A. D. S. Peroxide Tooth Powder
A. P. C. Joy Walk Corn Plasters
A. D. S. Foot Soap
A. D. S. Foot Tablets

Each now is as perfect as 17,285 druggists and physicians (aided by the finest Laboratory equipment) know how to make it.

If there is an improvement possible, this co-operative society is ready to reward **the genius who discovers it.**

The cash value of all formulas submitted will be appraised by our National Formula Committee, headed by Dr. William C. Anderson, Dean of Brooklyn College of Pharmacy, and including one leading druggist from each state.

This offer is open to all—

Manufacturing Chemists and their Employees
College Professors and Students
Technical Chemists, Nurses
Physicians, Druggists and their Clerks

Let us consider one of the foregoing—*viz.:*

You'll Think Someone Has Sharpened Your Razor "On the Sly" the First Morning You Use A. D. S. Shaving Cream—So Soft Does it Make the Toughest Beard—So Easy Does it Make the Work of the Razor.

A. D. S. Shaving Cream

now represents the combined skill of 17,200 leading chemists and physicians of America, who comprise the A. D. S. This is by far the largest successful co-operative manufacturing society in America (like the great co-operative societies of Europe).

To begin with A. D. S. Shaving Cream is so nearly neutral that it cannot irritate the tenderest skin—it is soothing and antiseptic alike.

A little of the Cream on your shaving brush works up into a firm tenacious lather, that softens and holds every hair of the beard on end, against the edge of the razor.

The razor goes through for a "close shave" without jump or scrape and the Cream and razor leave your face without that awful "after-shaving feeling" which lasts for an hour when a poor shaving preparation has been used.

A. D. S. SHAVING CREAM is sold only under ironclad guarantee. You are the judge of its goodness. Take a tube home.

You'll agree it's the best shaving Cream 25c ever bought or you can have your money back at the A. D. S. drugstore, where you bought it. In fact, all A. D. S. Preparations are sold under this same guarantee.

DISTRIBUTED BY 17,285 CO-OPERATIVE STORES

Every third drug store in America is now an A.D.S. Co-operative store selling A. D. S. Shaving Cream and other A.D.S. Preparations, but if you can find no A. D. S. store in your town you will be enabled to get a tube by sending 25c to the A. D. S.

but you can't enjoy more luxury in a shaving Cream than the humblest 25c will buy.

INVESTMENTS AND FINANCE

(*Continued from page* 900)

forms of railway construction," and of the benefits which have come to the roads from the cessation of rate wars, rebating, and granting passes. The writers insist that, in many published statements as to the condition of railway operations, there lies a "joker" unknown to most readers.

This "joker" may be found in "the concealed, or submerged, fact that, while the cost of labor and materials has advanced, profit has also advanced." This fact may not show itself plainly in railroad reports, since "not one man in ten thousand knows how to read such a report," but it is nevertheless true that railroad reports are often so constructed as to conceal the real progress made by the road. Cheap and light rails, for example, may be replaced with high-grade, heavy rails capable of outlasting the old ones many years, and be charged to "maintenance," altho more properly this work should be called an improvement. So also with improvements made in grades; they may be charged to maintenance or to new construction at will. Any railroad wishing to make a poor showing in net could improve the road in important ways and charge the cost to earnings. Only the expert statistician having a clear understanding of a railroad report can detect all this.

Facts such as these have often been submerged, at the expense of net earnings, but it remains true, according to these writers, that the railroads are now "making and paying in dividends more than they were paying ten years ago, and much more than they were fifteen years ago." In fact, the returns they make on invested capital are "practically as large now as at any time in their history." The above tables give proof of the statement. The fifteen roads represented have good dividend records and constitute a majority of the high-class roads.

The first table shows what has been paid to stockholders year by year, the second what has been earned and is still earned. The money actually earned above fixt charges and operating expenses is what is known as the sum "applicable to dividends." Part of this sum may be paid out in dividends or the entire amount may be turned back into the property, "plowed in," as the expression is. Sometimes, it is paid out in dividends, sometimes "plowed in," and sometimes held as a surplus in cash, or parts of it may be used for any one or for all of these purposes. In any case, the amount which a road earns applicable to dividends means for the stockholder evidences as to the value in his property.

The third table shows, not only the returns which stockholders have had in the form of dividends, but the increase that has taken place in the market price of their stock, and the amount they have received as cash dividends, rights to subscribe, and for new stock. The last column summarizes all these advantages, and thus indicates the percentum per annum that has been received by investors, including the increase in the market value of the stock. It will be seen that, in the case of the Atchison, an investor who bought stock in 1900 and still holds it, has had 33 per cent. on his money; an investor in Baltimore & Ohio 10.7 per cent.; in Great Northern, 10.7 per cent.; in Lehigh Valley, 36.1; in Northern Pacific, 16.5; in Reading, 17.9; and Southern Pacific, 31.2; in Union Pacific, 23.8.

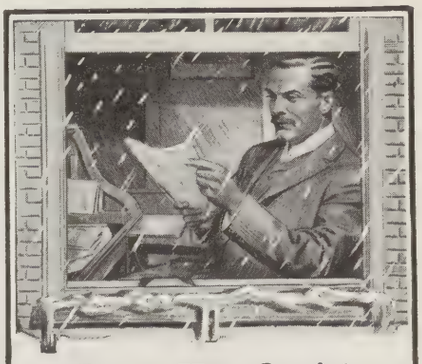
WILL BEEF BE CHEAPER?

Heavy importations of beef from Argentina are expected to take place soon, and much interest exists in beef-trade circles as to the effect they may have on supply and prices. The result, for one thing, should demonstrate clearly how much basis there may be for the defensive statement often made by the big Chicago packers, that the recent high prices have been due solely to the law of supply and demand. These big packers are themselves now bringing in large quantities of Argentine beef. It was understood by *The Journal of Commerce* two weeks ago that shipments for them then under way amounted to between 1,200 and 1,500 sides of beef. These importations have not been undertaken as a mere experiment. A continuous supply may now be looked for from South America, some of it being brought in by the Chicago men and other quantities by packers not so well known. Dr. Melvin, Chief of the Bureau of Animal Industry in Washington, returned recently from a tour of South America, where he inspected beef cattle. He found them for the most part high grade. Argentine beef now sells in England for from 8 to 9 cents a pound wholesale. England for many years has been importing cattle from Argentina, which to-day produces some of the finest in the world.

Meanwhile, reports have reached London of "a vast undertaking, whereby Rhodesia will become a new beef-producing region." *The Evening News* of London declares this project to be one of "great importance for the world's cattle-raising industry." Plans have been made for turning "millions of acres of excellent grazing land into vast ranches." Beef could be sent from South Africa to England by way of Cairo and the Mediterranean seven days quicker than from Argentina. The proposed South African ranches will be conducted after plans successfully employed in our own Western States. A ranch manager from Texas, named Richard Walsh, has been secured. The company having this enterprise under way is a South African one, but it is understood in London that Chicago packers intend to buy up South African lands for use as beef ranches.

James M. Pickens, of the Department of Agriculture at Washington, in a survey of the beef situation, recently said the per capita consumption of meat in this country has fallen off ten pounds in four years—that is, from 162 pounds in 1909 to 152 in 1913. As to importations, Mr. Pickens believes "too much reliance should not be placed upon this source of supply." He thinks England could take all the foreign beef that may be available for export. In any case, we shall have to bid against England and other foreign purchasers, and "this competition will tend to keep up prices."

Other men connected with the Department of Agriculture recently discussed the present organized movement in the Middle West for larger production per acre. Should this movement lead to increased yields, the raising of beef cattle on grain farms "will come as a profitable side line," using up excess grain that would otherwise be classed as overproduction. In the North-



Have Fresh Air without Fear of Chill

A Concise Digest of the New Banking and Currency Bill

The new banking and currency bill known as the Federal Reserve Act, now under consideration in Congress, is of vital interest to every American citizen.

It is necessarily technical in its nature and therefore hard to understand.

We have prepared a Digest of the bill, concise, compact, and so arranged as to enable the busy man to grasp its essential features in a few minutes. A copy of this Digest will be sent to anyone on request.

west, the better farming movement, now well under way, includes this idea of raising cattle on farms, in order to use up farm products that otherwise would be wasted. The hope, therefore, for lower-priced meat from our own enlarged production lies in the all-round scientific farm of the future. It is pointed out that a good accession to the beef supply could be made by farmers in the South:

"The South, with her short, mild winters and her abundance of good grasses, can grow young cattle cheaper than the North, tho she can not fatten them so cheaply as can the corn-belt States. With the tick eliminated, the South could thus produce millions of feeders which could be fattened in the North, to the profit of the Southern farmer and the advantage of the Northern corn-grower and the consumer of beef as well. The eradication of the cattle tick thus rises to the dignity of an important national problem. Already more than one-fourth of the infested area has been cleared, and the work is progressing rapidly under the joint auspices of the nation and the States concerned."

The importations now coming from Argentina have produced some alarm among Southwestern cattle men. Combined with the rush of cattle from Canada into this country, they have resulted in Kansas City in declines of from 50 cents to $1 per hundredweight. Farmers and feeders of cattle are therefore taking on cattle with hesitation, and it is a question whether feeding operations previously planned may not be abandoned.

The high price of beef continues to be reflected in the high price of leather. Tanners and shoemakers in New England declare that any trade boom would mean much higher prices in leather goods. In the last thirteen years, the supply of domestic hides has decreased 29 per cent., while the population has increased 26 per cent. This means that in 1900 there were 62 beef cattle for every 100 persons in the United States, whereas in 1913 there were only 37 cattle for every 100 persons. In Texas, the greatest of cattle States, herds have declined in these thirteen years 41 per cent.

THE RAPID INCREASE IN SHAREHOLDERS

Further details are at hand from *The Wall Street Journal's* inquiry as to the steady increase in the distribution of shares among investors. Thus far fifty-nine companies have been heard from. The data cover, as far as possible, the years 1901, 1906, 1911, 1912, and 1913, and amply demonstrate what it was the purpose of the inquiry to show, viz., "the tremendous widening over the last decade of the distribution of stocks among investors." The returns also show the existence of "an enormous aggregate of capital for investment." Each year the amount actually going into investments is increasing. The comparative figures for the fifty-nine companies for the years 1912 and 1913 are as follows:

	1913	1912
Share capitalization	$3,379,746,938	$3,263,687,988
*Shares	33,797,469	32,636,879
Shareholders	361,220	323,564
Aver. holdings (shares)	93.5	100.8
Par value of average holdings	$9,350	$10,080

* Of $100 par value.

These figures show that capitalization increased in this one year 3.5 per cent., the number of shareholders 11.6 per cent., and the average share per holder 7.3 per cent.

It is well to remember here that the figures do not mean that these fifty-nine companies have 361,220 separate stockholders, since many persons are certainly interested in more than one company.

The statistics as to three prominent railroads are particularly interesting. The Pennsylvania, on September 30 last, had 86,212 stockholders, as compared with 85,310 at the last previous dividend period this year. Of these stockholders 28,770 live in Pennsylvania, 14,715 in New York, 11,442 in foreign countries, 16,552 in New England, and 14,732 elsewhere in this country.

The New York Central, next to the Pennsylvania, has among railroads the greatest number of stockholders, but the number is far less than the Pennsylvania's, viz., 23,642. It is to be remembered, however, that the Pennsylvania's share capital outstanding is more than double that of the New York Central, the capital of the New York Central being more largely represented by bonds. During the past twelve years, the shareholders in New York Central increased 124.5 per cent., and the amount of its outstanding share capital 95 per cent. In 1901 the number of New York Central shareholders was only 9,766. In 1906 the number was still smaller by 765, an interesting circumstance brought about by the movement then under way for acquiring New York Central shares in the interest of the Union Pacific. The Union Pacific at the present time owns $17,857,100 of New York Central stock.

President Elliot, of the New Haven road, recently stated that 43 per cent. of that road's stockholders owned only from 1 to 10 shares each, and that 38 per cent. owned from 11 to 50 shares only. Even more striking is the proportion of holdings in the Boston & Maine. The number of stockholders in that road who have from 1 to 10 shares comprize 60 per cent. of the total; those holding from 10 to 50 shares comprize 31 per cent. Only 9 per cent. of the stockholders in the Boston & Maine therefore have holdings in excess of 50 shares each. Of the New Haven stock, 44 per cent. is held by women and 15 per cent. by trustees and guardians; of Boston & Maine, 49 per cent. by women and 14 per cent. by trustees and guardians.

The same paper has articles showing the distribution of capital in industrial and public utility companies. Ten industrials report 49,346 stockholders, with an average of 87.5 shares each. The following table shows the number of stockholders in these companies at different periods since 1901. It will be seen from it that the total number in 1913 showed an increase over 1906 of about 90 per cent., and over 1901 (so far as the figures are available) an increase of 269 per cent. Even with the omissions for 1901, filled in with the figures for 1906, there would still be a gain of 150 per cent. since 1901. The average holding in 1901 was 216 shares, whereas in 1913 the average was only 87.5 shares:

	1913	1912	1911	1906	1901

A New Howard Watch

THE E. HOWARD WATCH WORKS begs to announce for limited sale, a new watch—the HOWARD 12-size Carvel, 17-jewel, extra-thin, open face, solid gold, at fifty-five dollars. This new watch is *thinner by one and one-third millimeters* than the regular 12-size extra-thin HOWARD. The movement is adjusted to three positions, temperature, and isochronism; cased in a single-joint solid gold case of special design, exceedingly flat and compact.

Selling complete in 14K solid gold case at $55—it is the only gold cased, 12-size HOWARD that you can buy for less than $75.

The small number that we are able to offer this year is due to the time and care given to all HOWARD movements and the necessarily limited output of an organization devoted to fine watches exclusively.

Your representative jeweler will doubtless have a few of these watches on exhibition during the next thirty days.

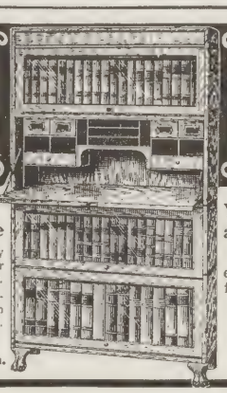
If you are interested in a reliable watch of the new thin-model type and possessing elements of the distinguished and the unusual, we advise you to make inquiry at an early date. It is an opportunity to own a 17-jewel HOWARD cased in solid gold at the very moderate price of $55.

A Howard Watch is always worth what you pay for it.
The price of each Watch is *fixed* at the factory and a printed ticket attached—from the 17-jewel (*double roller*) in a Crescent *Extra* or Boss *Extra* gold-filled case at $40, to the 23-jewel at $150—and the EDWARD HOWARD model at $350.

Not every jeweler can sell you a HOWARD WATCH.
The jeweler who can is a good man to know.

E. HOWARD WATCH WORKS, Boston, Mass.

GUNN SECTIONAL BOOKCASES



And How You Will Save Money by Placing Them in Your Home

WRITE FOR OUR "BOOK OF DESIGNS"—Beautifully illustrated in colors (*mailed free*), showing our Sanitary, Mission, Colonial and Standard Bookcases.

The handsome designs, the rich finish, the removable, non-binding doors, the absence of disfiguring iron bands make them far better than the old-fashioned kind.

We have agencies in every city in this and foreign countries.

Our Prices are Lower than Others

"GUNN" Guaranteed Quality
Sold by dealers or direct

What Would You Do?

—if your car should stop 10 miles from a garage without the slightest warning—and nobody in sight to help you?

—if your ignition system refused to spark?

—if your carburetor needed adjusting?

—if your engine commenced to knock?

—if your piston stuck in the cylinders?

—if your radiator sprung a leak?

—if your clutch began to slip?

Hundreds of cars are ruined—thousands of dollars are wasted annually, through neglect in making little adjustments in time.

The questions above are but a few of hundreds asked by motorists and answered by motor car experts from week to week in

MOTOR AGE

"The Car Owners' Weekly"

Or, perhaps you are thinking of buying a new car for 1914. You have some idea of how much you care to pay for it. You will have some 200 different makes and about 400 models, ranging in price from $500 to $7000, to choose from. You naturally want from among this great number the best car obtainable at your price.

Then you should have a complete, concise, accurate car guide to assist you in your choice. MOTOR AGE will act as such a guide in its

Five Big Show Issues in January, 1914

One of these issues will contain complete specifications, prices and illustrations of every 1914 American-made car. The other four show issues will be devoted to the motor cars and accessories exhibited at the New York and Chicago Shows.

These five issues on the news-stands sell at 25c a piece. Send us a $1.00 bill and the attached coupon, and we will send you MOTOR AGE for 17 weeks—including the five Show Issues.

$2.45 Worth of MOTOR AGE for $1.00

Coupon Worth $1.45

MOTOR AGE, L. D. 11-8.
910 South Michigan Ave., Chicago

Gentlemen:—For this coupon and the enclosed $1.00, please send me MOTOR AGE for 17 weeks beginning with December 4th issue.

Name.....

Address.....

For foreign and Canadian enclose $1.65.

As to public utility companies, the showing again indicates a wide distribution of shares. Thirteen companies are represented in a table. On June 30 of this year these companies had 15,315 shareholders; in 1911 they had 7,624. The average holding this year was 95.2 shares. Following is the table. It shows figures for five periods, in so far as they have been obtainable:

	1913	1912	1911	1906	1901

HOW RICH WE ARE—JUDGE GARY'S OPTIMISM.

That the country's industrial and commercial condition is now one of hesitation, coupled with "an eagerness to go ahead," was the contention of Judge Elbert H. Gary, of the Steel Corporation, in an address at a recent meeting of the American Iron and Steel Institute, of which he is president. While unreasonable agitation and attack in recent years have shaken confidence and caused capital timidity, conditions otherwise are now favorable as they never were before. Judge Gary saw a disposition on the part of leading statesmen in all parties to bring about a condition of industrial peace and progress, and he believed that, in consequence, the country is approaching "the time of its greatest prosperity." Once a condition of peace has been obtained, the country, as never before, will have an opportunity to achieve great commercial progress. The American people have advantages over those of every other country, provided they make the most of them. The country itself is "the richest of all countries and the greatest in productive capacity." Judge Gary presented comparative figures as to national wealth in Europe as compiled by a director of the Deutsche Bank for a report made to the Emperor and added figures for the United States, taken from the "Statesman's Year Book," as follows:

TOTAL WEALTH

United States	$130,000,000,000
England	80,000,000,000
France	65,000,000,000
Germany	60,500,000,000

WEALTH PER CAPITA

United States	$1,415
France	1,425
England	1,250 to 1,385
Germany	1,100 to 1,200

In the matter of money alone—that is, gold, silver, and "uncovered paper"—this country far outranks both the United Kingdom and Germany, figures for France being unobtainable. Indeed, it far outranks the two combined, and may equal all three. Following are the figures:

United States	$3,500,000,000
United Kingdom	1,000,000,000
Germany	1,500,000,000

An even more impressive showing is made when railway mileage is considered. In 1911, the date of the last returns accessible, totals for the four leading countries were as follows:

United States	246,573
Great Britain	23,417
France	31,391
Germany	38,747

Even when allowance is made for the larger population in this country, the American mileage will be seen to be far in excess of that for any other of these countries, if indeed it be not double the mileage of all three combined. Judge Gary said further as to our national wealth and productive power:

"As to the production of wealth in 1912, this country produced in agricultural products alone $9,299,000,000, of which at least 80 per cent. was in crops. The other 20 per cent., it is estimated, was fed to animals on the farms. In minerals it produced in value $1,918,326,253. While the figures relating to other countries have not been secured, it is universally recognized that the United States is far in the lead in the production of corn, wheat, oats, tobacco, petroleum, pig iron, steel, and copper; and the location of the United States in a temperate zone, together with the richness of its soil, insures an ever-increasing production of crops on the average; and they are the real basis for expecting the greatest material growth and progress. Another fact worthy of mention is that the balance of trade between this country and all other countries for the fiscal year ending June 30 amounted to $653,000,000 in our favor.

"As a result of our great wealth and material progress the people, generally, are better supplied with the necessities of life than those of any other country. There are exceptions, depending upon local causes, but, generally speaking, the people are better fed, clothed, and housed; and what is all important, the wages received by the laborer in comparison with the cost of living are far in excess of those of other countries. It is for this reason that immigrants from all parts of the world are coming in by the thousands.

"We have been passing through a period of transition. The subject is too large to admit of detailed reference at this time, but it is sufficient to say the business world has adjusted or is adjusting itself to new and changed conditions resulting from the great wealth and progress of the country.

"This country, tho hesitating, is eager to do business. The volume of business at this time, altho large because the country is so vast, is not half so great as it ought to be or as it could be. It is high time for all of us to wake up to a realization of the fact that we are in competition with other countries, which, by every means in their power, are striving for supremacy; that it is not difficult for us, by good management, to reach the greatest measure of success in competition with other nations of the world, and yet that it is just as easy to fail if our vision is narrow or if we act without due regard to the results.

"What I have said has not been uttered with any feeling of despondency. On the contrary, there is ground for optimism. We have, perhaps, been more or less enveloped in clouds of doubt and distrust and hesitancy, but I think we are arriving at a better understanding; that we are approaching the dawn of the greatest prosperity. Apparently, the leading, most thoughtful, and fairest-minded statesmen of the country of all political parties are at present showing a disposition to bring about and to maintain industrial peace and progress. Therein lies reason for hope."

IF CENTRAL PACIFIC SHOULD BE SOLD

The outcome of a Government suit to compel the Southern Pacific to sell the Central Pacific is a long way off, but discussion is common in financial circles as to what the result of such a sale might be to Southern Pacific. While the present low

(*Continued on page* 908)

BY authority, custom and general consent, the Detroit Electric is the *standard* by which electric car values are measured and tested—the criterion by which they must be judged.

The best *authority* is that organization composed of the greatest number of experts, devoting their entire energies to the building of electric automobiles of the highest type, in the largest numbers. Such an organization makes the Detroit Electric.

Automobile registrations throughout the United States show that Detroit Electric pleasure cars sell two to one over any other electric.

In "the trade" the Detroit Electric is recognized as "the leader" in the electric field.

The price of the Detroit Electric is *standard*, universally known and one price to everybody, which means an *established* value even after years of use, because the *original* purchase price was *known* and represented 100 cents on the dollar.

Our price, quality considered, is much less than prices asked elsewhere, because we manufacture and sell a sufficient volume of cars to reduce manufacturing costs and selling expenses *several hundred dollars on each car.*

No amount of money will, today, buy an electric—other than the 1914 Detroit Electric—that offers such high value in material and workmanship.

Even should you get a so-called discount of 25% on the *first* price of some cars you would be paying a fancy price.

Over-pricing of cars for the purpose of giving "confidential discounts" and large allowances on used cars, belongs in the age of "let the buyer beware." Such deceptive selling methods are the outward evidence of the same kind of manufacturing methods invariably.

Then why not buy a car of known value and price?

Prices on 1914 enclosed cars—four and five-passenger capacity—range from $2550 to $3000, f. o. b. Detroit. Your choice of worm or bevel gear axles, front seat drive, rear seat drive, or the Detroit Duplex Drive—driven from either front or rear seat.

Our line is represented in 175 cities. You will find our representatives courteous, substantial business men, well worth your confidence on automobile matters.

Our new catalog for 1914, illustrating 7 models in full colors, sent upon request.

A Happy Marriage

Depends largely on a knowledge of the whole truth about self and sex and their relation to life and health. This knowledge does not come intelligently of itself, nor correctly from ordinary everyday sources.

Sexology

(Illustrated)

By William H. Walling, A.M., M.D., imparts in a clear, wholesome way, in one volume:

Knowledge a Young Man Should Have.
Knowledge a Young Husband Should Have.
Knowledge a Father Should Have.
Knowledge a Father Should Impart to His Son.
Medical Knowledge a Husband Should Have.
Knowledge a Young Woman Should Have.
Knowledge a Young Wife Should Have.
Knowledge a Mother Should Have.
Knowledge a Mother Should Impart to Her Daughter.
Medical Knowledge a Wife Should Have.

All in one volume. Illustrated. $2.00, postpaid.

Write for "Other People's Opinions" and Table of Contents.

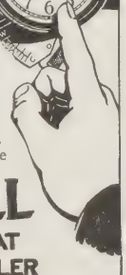
Puritan Pub. Co., 777 Perry Bldg., Phila., Pa.

Forget The Heater and Set The Clock

Don't let the heater run you, make you arise an hour earlier in a cold room, continuously feed coal into it—and give it other bothersome attention from morning till night.

Why not attach a Jewell Heat Controller to your heating plant and secure any temperature desired—day or night—without attention to drafts, or dampers, your only duty being to set the clock and occasionally put on a little coal.

The **Clock Attachment** assures a warm house in the morning, but keeps it cool through the night.



THE JEWELL HEAT CONTROLLER

The Jewell Heat Controller is a simple, economical device that abolishes all heating troubles and worries—a device that never allows coal to be wasted, prevents the house becoming overheated or underheated—a device that, in fact, acts as an efficient servant or janitor, continuously taking care of the furnace to suit your wishes regardless of outside temperature.

To double your heating comfort, to release you from heater slavery, to cut down your fuel bill—install the "Jewell." Works equally well with **any heating system.**

Send for Facts, Figures, Booklets—FREE

and we'll tell you where in your town you may see the "Jewell" in operation, also give you the name of dealer. Write today and learn how to forget the heater and its troubles.

Jewell Mfg. Co., 22 Green St., Auburn, N. Y.

INVESTMENTS AND FINANCE

(*Continued from page* 906)

price of Southern Pacific stock (about 88) is largely due to the placing on the market of much of the $120,000,000 of its stock formerly owned by the Union Pacific, it is believed that this quotation (the lowest since the panic of 1907) is in part due to the possibility of an enforced sale of the Central Pacific. What then might be the earnings of Southern Pacific is a question now often under discussion, since Central Pacific is known to be an extremely profitable part of the Southern Pacific system. When the Union Pacific-Southern Pacific dissolution plan was first presented, the price agreed upon for the Central Pacific was $104,000,000. Somewhere near that sum (tho perhaps a few millions less) would be the probable price at which Southern Pacific would now have to part with the road, in case a Government suit should ultimately succeed.

While the income from Central Pacific to Southern Pacific has been large, Southern Pacific has not in recent years been dependent on that income in paying 6 per cent. dividends on its common stock. Without that income, average earnings, applicable to dividends for five years, have been close to 7 per cent.—in exact figures, 6.95 per cent. Should the road be compelled to part with this valuable subsidiary, the round hundred millions or so which it would receive for it would, of course, still produce an income that would be applicable to dividends. Even at 4 per cent., the return on $100,000,000 would be $4,000,000 a year. This, as a writer in *The Wall Street Journal* remarks, "would compensate in large measure for loss of the Central Pacific."

HOW MONEY MULTIPLIES AT SIX PER CENT.

Under the above title an old, old story is newly presented in a recent number of *The Investor's Magazine*. Money invested and reinvested "multiplies itself with wonderful rapidity," says the writer. In ten years the sum of $10,000 invested in 6 per cent. first mortgage real-estate bonds becomes $17,906.80, in twenty years it becomes $43,972.50, and in fifty-one years $200,023.50. Similarly the sum of $1,000 invested and reinvested would become in fifty-one years $20,103, and the sum of $100,000, under similar conditions, would become $2,335,000. Following is a table which shows the increase in $10,000 invested and the interest reinvested year by year for fifty-one years:

Year	*Amount*	*Year*	*Amount*
0	$10,000.00	26	$46,610.70
1	10,600.00	27	49,407.30
2	11,236.00	28	52,371.40
3	11,910.10	29	55,513.70
4	12,624.70	30	58,844.30
5	13,382.00	31	62,374.70
6	14,184.80	32	66,116.90
7	15,035.70	33	70,083.50
8	15,937.50	34	74,288.40
9	16,893.40	35	78,745.30
10	17,906.80	36	83,469.70
		37	88,477.40
11	18,980.80	38	93,785.60

POSTAL SAVINGS-BANKS NOW APPROVED BY OLD-TIME BANKERS

That the bankers of this country "are the most unanimous body of men of anything like their size in the world" has not infrequently been remarked, says the New York *Times Annalist*. This oneness of mind, however, has not meant that the same opinion about anything has continued "unchanged forever." Whenever the American Bankers' Association has changed its mind "it has done so handsomely." In fact, it "can be just as unanimous in doing that as in making up its mind in the first instance."

These comments were drawn from *The Annalist* by the hostile attitude taken by bankers toward the Currency Bill at their recent meeting in Boston. That paper recalls the stern opposition set up by the same bankers to the Postal Savings-Bank Bill when it was under discussion. At their Denver meeting in 1906, they declared, "without a dissenting voice," that all propositions to establish postal savings-banks were "unwise and hurtful." A year later a committee reported to the Association that they had called upon individual banks for an expression of opinion on establishing a postal savings-bank, and found that "more than 98 per cent. of the bankers of the country were opposed to such laws." On this report the convention unanimously resolved to "condemn in unqualified terms postal savings-banks, or any other system by which the Government enters directly into banking relations with the people."

The attitude of the banks to-day is quite contrary to all this. *The Annalist* finds bankers are now in favor of postal-savings banks and regard them "not only as good for the country, but as of considerable usefulness to the banks." Six months after they were established, one of the largest New York banks declared that they were "bringing out hoarded money, and instead of competing with the privately managed banks, were proving an additional source of deposits." At last year's convention an almost complete change of opinion was found to have taken place among bankers. A proposal that Congress be urged to remove the $1,000 limit on deposits in postal savings-banks was "listened to favorably," and "case after case of hoarded sums too large to be lawfully accepted, the owners of which would not deposit them elsewhere, had come to light." Thus was demonstrated the fact that "millions were hidden away that could be coaxed out into banking uses through the medium of this new system." Addresses made in this convention, stating how well the postal savings-banks were working, were "enthusiastically applauded."

THE HOARDING OF GOLD IN INDIA

In times of financial stringency all over the world an injurious factor commonly cited is the habit of hoarding gold. Something of its bad effects was seen in this country after the panic of 1893. They have recently been seen conspicuously in Europe, and especially in France. Perhaps the custom is more common in India than in Europe or anywhere else. In India it prevails in prosperous times as well as in times of depression. There are special causes for this quite apart from depression. They spring from social and other conditions peculiar to India and were recently

The women of tomorrow will know of the broom and the duster only as implements of an unenlightened generation.
Make yours one of the homes where the drudgery and inefficiency of the broom are no longer known, and where the ultra of convenience is enjoyed through the possession of a Western Electric Sturtevant Vacuum Cleaner.
The model shown here is so light it can be easily carried anywhere about the house. Weighs but 13 pounds. Costs $47.50. And yet it does the character of work of the big, expensive kind that you see in hotels and public buildings.
Portable machines up to $175. Stationary cleaners $250 up.
Send for new booklet, No. 10-D. "The Clean way to Clean." Tells you all about the care of carpets, rugs, walls, upholsteries, etc.

Whether you operate motor trucks or horse wagons—"WASTED TIME" is costing you more money than you realize.

Eliminate this waste of time and your equipment will return you a handsome profit—Cost sheets and checking systems are good as far as they go, but they don't go far enough. The

SERVIS RECORDER

will give you accurate, impartial, mechanical supervision over your equipment at all times. It will show you clearly the time a vehicle is in use—the time spent on the road—the time spent in loading and unloading—It will demonstrate whether the cost is out of proportion to the work performed—whether you need more or fewer vehicles—which is best adapted for your needs, motor trucks or horse vehicles.

The Servis Recorder has no gears or outside connections—it is tamper-proof and works equally well on all vehicles—It will expose instantly any unlicensed use of a vehicle. Without cost to you we would like to demonstrate on your own vehicles how the Servis Recorder will save you money.

The Service Recorder Co.
4115 E. 105th St., Cleveland, O.,
BRANCHES IN TWENTY-TWO CITIES

explained in England by Mr. Sundaran Aiyar, of Madras. His statement is summarized in the London *Statist* as follows:

"Hoarding in India is to be traced to the peculiar social conditions and the laws that govern the people, and not merely to a barbarous instinct to hoard. First, under Hindu law and under existing conditions it is not possible to make any provision for the female members of one's family, either for one's wife, daughters, or sisters. The widow, who enjoys all the privileges of the house so long as her husband is alive, is entitled to only seven and a half rupees per month or to her board and residence in the family house. Were she to claim a greater sum the members of her husband's family would object, and the court would not allow more. She is entitled to live in the house or receive ten shillings per month. Then, if one wants to make provision for one's daughter during her married life one can not bequeath to her any landed property for her use. Any alienation made by the father to his wife or to his daughter can be impeached in a court of law even twenty or thirty years after the alienation. This rule applies only to ancestral property, but the distinction between ancestral and self-acquired property is very delicate. Even a small nucleus of ancestral property converts the whole savings into ancestral property, and the decisions of the courts are so conflicting that every alienation is dragged into a court of law. The only way by which the strictness of the law is at present evaded is through the presentation of a very large number of ornaments to the wife and to the daughters. One hundred sovereigns strung on a gold thread become the personal property of the wife, over which the son has no control, while 100 sovereigns presented in pieces or its worth of immovable property will be impeached as a void alienation. So that in every household, poor or rich, the girls of the family are being presented with sovereigns, and they store them up until a sufficient quantity is collected for making them into ornaments. The jewels can not be sold for the husband's debts. When the husband dies the Hindu widow can neither remarry nor wear any kind of ornament, and the jewels are then sold and invested for her use.

"Personal credit is almost unknown in India. Borrowing is either by mortgage or immovable property, or by the pledge of jewels. Eighty per cent. of the population are agriculturists, and the land revenue is collected before the harvest is over, and every agriculturist to pay his land revenue has to borrow until his grain is sold. The mortgage of immovable property for raising a loan is rather cumbrous. The only way that is open to the agriculturist is to go secretly to the next village and pledge his wife's or daughter's jewels to raise the necessary sum, which can be returned in a month. There is no writing, no registration, or any of the formalities prescribed by law. Every agriculturist, whenever he saves any money, invests it in jewels, as it often results in peace and comfort at home, and satisfies the vanity of the ladies, and also can be relied upon as a means for raising money whenever he wants it.

"The Presidency banks do not finance Indian trade as they ought to do, and Indian banks started by Indians do not venture to lend large sums to business men. The result of this is that in many cases when the business fails the only provision which the trader is able to make for his family is the jewels purchased with his savings. It happened in two cases within my own knowledge that where the properties went into the hands of an official receiver a lac of rupees worth of jewels was claimed as the property of the house."

PERSONAL GLIMPSES

(*Continued from page* 899)

Vigneron, perhaps twenty-five years of ago, and was nursing her first baby. She made a little call, and as she disappeared, Mademoiselle Vigneron said, pointing to her, "*Voilà la vérité!*"—This is the real thing!

Thus it is that I would never encourage a young girl who is in happy conditions and who enjoys a happy family life to try to be independent, or ever to think of being *une femme arrivée*. A woman who arrives must do so by herself; it means loneliness. I would rather advise her to be, in the true and noble sense of the word, the wife of *un homme arrivé*.

NEGROES WHO WIN

ALONG with the general crusade for better methods in farming there has started among the negroes a vigorous movement to show colored people the surest and quickest way out of poverty and ignorance. The leaders of this movement are not white "uplifters," but level-headed men and women of the better class of Southern negroes. They are following in a general way the advice given several years ago by Booker T. Washington—that, altho a few negroes may be capable of winning distinction in the professions, the average colored man's road to success is through hard work and thrift, and the sooner he begins the quicker he will attain economic independence and a higher degree of respectability. And in order to drive the lesson home, so to say, the leaders of the movement are pointing specific instances of negro success, simple stories of progess which show how easy it is for the ambitious to get on. They found this to be the most effective propaganda. At a recent meeting of the National Negro Business League, Dr. Washington told of what several enterprising negroes have done for themselves. His address was reported for *The Southern Workman*, the Hampton Institute's periodical, by William Anthony Avery, whom we quote in part:

Henry Kelley, of Belen, Mississippi, began his uphill climb as a good farmer in 1875, when his father bought 40 acres. In 1886 Kelley started out independently with 520 acres of unpromising land, only 30 acres of which were under cultivation. He cleared this wild land as fast as he could with his bare hands and a few poor farming implements. He did not wait until he could buy up-to-date machinery; he just worked hard with the crude tools he had. One of his first tasks was to build a house and establish himself in a home. When he married a thrifty wife he realized that he now had two thinking heads, as well as two sets of hard-working hands, in his farming enterprise. By degrees he branched out into cotton-ginning, saw-milling, and flour-making, thereby adding materially to his income.

Kelley built tenant houses on some of

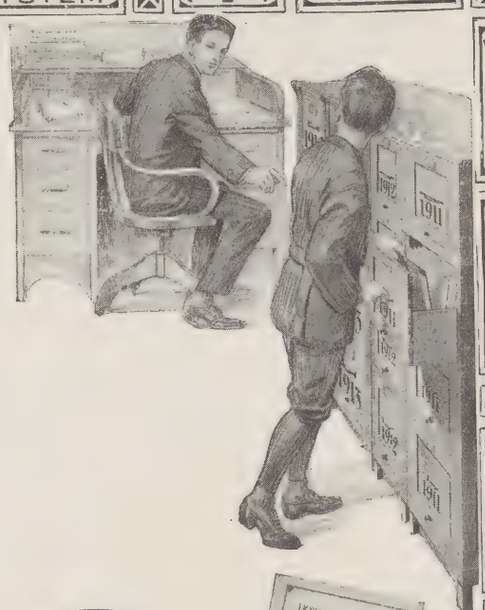
Y AND E SYSTEM

Find Any Letter of Any Year at Any Moment



You transfer once or twice a year, but the effect of your transferring method is felt every business day. There is no reason why your 1912 letters should not be as easily and quickly findable as those in your current files. The proper "Y and E" transfer method makes this certain.

In our book, "How to Transfer Papers and Records," you will find among the "Y and E" transfer methods the one best suited to your business.

You will see how easily, simply and quickly transferring can be done and how get-at-able every letter is, even if it be ten years old. No letter can be "buried"; no letter can be filed so it cannot be produced in three minutes.

"Y and E" methods are not complicated, nor difficult to understand or carry out. On the contrary, their success is due to their simplicity.

Write for the Book NOW

Costs you nothing when requested on your business letterhead.

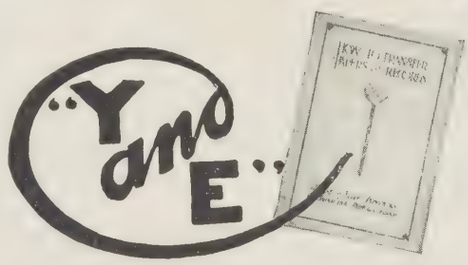
"Leaders of the World" in Filing Systems and Business Equipment



Transferring Time Supplies

for all kinds of records

We make Filing Systems for All Purposes

Money Makers

There exists in Chicago an organization of expert money-makers.

It consists of men who have made money themselves, so it isn't a theory factory. The men at its head started at $10 per week.

It is filled with men of proven calibre — conspicuous successes. Men who command the largest incomes this field ever offered.

Its entire business—its sole source of income — lies in helping other men make money.

The concern is Lord & Thomas.

The business is called an Advertising Agency for lack of a broader nomen.

It deals with salesmanship-in-print. In that way lie the vastest modern money-making possibilities, through multiplying outputs and reducing selling cost.

Its efficiency has made it the largest concern of its kind.

A Stern Policy

In all its dealings, this concern relies entirely on the judgment of results.

It gets business by showing its remarkable sales records. It keeps business by outselling all expectations.

Its largest accounts grew from petty beginnings without ever increasing the cost per sale.

All folderol is forbidden. No favors are asked or accepted. Actual profit to clients is the only influence it courts.

It deals with its own men likewise. No contracts are made with them. On their daily success depend their place and their pay. And success consists solely in selling for clients all that salesmanship can sell.

Men who want sales at a profit—who seek growth and security—will find this concern to their liking.

Few Mistakes

Behind this concern lies a matchless experience. It has dealt for decades with hundreds of big affairs.

It has stood with the pilots in countless vast undertakings, and seen all the rocks and shoals. Its intimates have been successful.

It knows cause and effect, the possible and the impossible, the wise and unwise. The ablest of men seek its counsel. Its business advice has saved many an error and led to many a master-stroke.

Then it is ultra-cautious. It investigates markets, measures up competition, weighs the demand.

It moves slowly. Months are often spent, and hundreds employed, to gain knowledge of the ground.

Homes are canvassed, prospects interviewed, dealers consulted — all to make sure of the road to success.

So mistakes are rare, and those mistakes are not costly. Nine times in ten the first attempt sounds the major note.

Master Men

There are many sides to advertising. This concern for years has aimed to get the masters in them all.

It watches for them — outbids all to get them. Then this vortex of advertising soon develops the fullness of their powers.

It has experts in merchandising, in art work, in copy. It has men of ideas, men who know human nature.

There are nine men on its pay-roll whose aggregate salary is $227,000 per year.

Nowhere else in the world is there such a corps of all-round experts in salesmanship-in-print. And they work together — mass their abilities — on each undertaking.

No Extra Cost

This service is rendered for the usual agent's commission. The rate is the same and the service the same on small accounts as large. For the business is built by making small accounts grow.

So this maximum salesmanship costs no more than mediocrity.

It appeals to shrewd men — men who know that success demands big men behind them. Men who are swayed by no inconsequentials. Men who look facts in the face.

It seeks clients who are out to make money. Men who measure business service by the dollar gauge only. Men who abhor pretensions.

It invites correspondence from men of that class. Invites a chance to prove its powers by its records of success — by the testimony of those it helped.

And it feels that any advertiser seeking the light must accept that invitation.

PERSONAL GLIMPSES

(*Continued from page* 911)

his cleared land, opened a general store, and, best of all, applied the Golden Rule with profit and satisfaction to himself and his tenants. He now has on his large farm 50 tenants working from "sun to sun," who help him cultivate most profitably some 1,750 acres. His pay-roll ranges from $800 to $1,000 a month, and he has employment for all his hands "from January through December." His formula for success in farming is—"Industry, economy, education."

Beginning in 1886 with $450, which he had laboriously saved during 13 years as a farm-hand, this same Kelley, of Belen, Mississippi, is to-day worth $50,000, and he has the respect of his white and black neighbors. He encounters no trouble on account of his color in doing business in this Mississippi town. In fact, his white friends have always encouraged and helped him. He has amply "made good." He is unaffected and unspoiled in spite of his prosperity.

Down in Marlborough County, S. C., at Bennettsville, Jonas W. Thomas is a "big farmer"—big physically; big, so far as his credit at the local bank is concerned. Thomas runs a 52-plow farm and works it on the "can't-to-can't system." This means that Thomas and his coworkers begin farming operations before the break of day and labor in the cotton and corn fields until they can scarcely see how to put in their mules at night. During the hot season, of course, the noon recess may last from one to three hours. A hard life this is for the South Carolina negro farmer; but listen to other facts concerning this man who is setting a hard pace for younger negroes.

Twenty-two years ago, Thomas began his career as a farmer by buying an old horse for $40.75, and by renting 30 acres of ordinary South Carolina land for 1,400 pounds of lint cotton. After four years of hard work and close saving he was able to buy a mule for $69 and also seven acres of land. Then he began renting and working farms which belonged to other men. Gradually he was able to buy the land he had been renting. He also found it worth his while to open a "grab," or commissary.

Now Thomas lives in a 12-room house and employs, on his $40,000 plantation, 39 families, consisting of 189 men, women, and children. He grows a variety of crops, including cotton, corn, and some garden truck, and raises his own horses, mules, cows, and hogs. He has received as much as $31,000 for his cotton crop alone—400 bales of long staple. On an average he has saved $3,000 a year for 22 years. All that he now has on his farm is his own, "directly and indirectly," he affirms with justifiable pride. In a single year he has borrowed of one local bank, and repaid, $23,000. "Good credit explains a fair share of my success."

Here is a black man, yes, a very dark-skinned man, who has won the good will of his white neighbors in South Carolina by doing well his tasks as a reliable farmer and by maintaining law and order on his plantation—a community for which he has been morally as well as financially responsible. Thomas, of Marlborough County, S. C., should be an inspiration to negro youth. He did not wait for somebody to

die and leave him a little money. He went ahead on his own initiative and with his own good sense. He commands respect; he does not demand anything.

B. L. Windham, of the contracting firm of Windham Brothers, Birmingham, Alabama, started as a carpenter in 1887. In those days it was very hard for a negro to make any progress in competition with white men, and Windham had his ups and downs. He did not succeed as quickly as he expected, and tried farming from 1897 to 1902. But being set back did not make Windham give up his ambition. In 1903, in partnership with his brothers, he went back into the building business. The writer goes on:

The Windham brothers did their first important building, a job worth $35,000, for a white citizen living in Monroe, La. In 1903 their contracts ran up to $50,000; 1904, $90,000; 1905, $150,000; seven months of 1913, $265,000. They have handled many difficult building problems from the Mason and Dixon line to the Gulf of Mexico. They built the six-story, steel-frame Penny Savings Bank Building, Birmingham, Alabama; a $100,000 apartment house for white people in Birmingham; the $75,000 Mosaic Templars' Building, Little Rock, Arkansas; and churches ranging in value from a few thousand dollars to costly and elaborate structures. They now employ 100 men—all negroes—throughout the year and have almost no difficulty (to speak of) with the labor unions. Efficiency brings work to this firm of negro contractors.

A most interesting story centers in J. H. Blodgett, a colored man of Jacksonville, Fla., who has struggled from poverty to wealth. Nineteen or twenty years ago Blodgett worked for the railroad as a window-washer at $1.05 a day. When he first struck Jacksonville he had just $1.10 in his pocket and a suit of underwear in a paper bag. He was, indeed, poor but ambitious. He received his first shock in this promising city by being arrested as a tramp for wearing a straw hat in winter. Truth to tell, he wore the best and the only head-covering he had. Blodgett, however, had some grit, and rose after his first downfall in pride.

A little later, while Blodgett was laying brick at $1.25 a day, Dr. Washington came to Jacksonville and was most cordially received by the "big" negroes—men who had money in the bank, owned property, or had pulled themselves through work from the common ranks. Blodgett wished to be introduced to the great educator, but he was too modest to push his way through the crowd and seek the hand of Dr. Washington. Nobody saw fit to bring forward "Blodgett, the bricklayer," who thus found keen humiliation through the lack of money and standing in the community. Blodgett straightaway made up his mind that he would increase his earning power and do something worth while that would win for him, eventually, the respect of his colored neighbors and, at the same time, entitle him to the friendship of Dr. Washington, for whom he had the highest respect. Blodgett and his wife worked diligently, wasting no time in frivolity. They were thrifty, too. Their savings grew apace and the rewards began to come. Blodgett bought Florida property that was bound to rise in value. First, he built his own house in 1902. Since then he has constructed 208 houses, many of which he has sold at a good profit.

From being an ordinary workman on the railroad, Blodgett has pulled himself into the wealthy class. In Jacksonville, Florida, he owns 121 houses having a combined rental value of $2,500 a month. His own house is well furnished, and he has a fine Packard car which is driven by a colored chauffeur. With all his means he has one very precious possession—real good common sense. In his addresses during the Philadelphia meeting of the Negro Business League, he displayed tact, wisdom, and knowledge of men which must have made an impression on some city-bred negroes. His injunction to negro youth is worth repeating: "Remember, white folk have weaned the negro. They are saying to you now, 'Go and do what Booker Washington says you can do.'"

Blodgett declares emphatically that there is no excuse for any able-bodied young negro wasting his time doing ordinary hotel work at $20 or $30 a month and tips when he can grow tomatoes at $1,000 an acre in Florida. To a so-called educated negro waiter who was once criticizing some negroes because they showed that they had little book learning, Blodgett said: "See here, young fellow, those eleven men together are worth at least one million dollars, and not one of them has even seen the inside of a college. If you can fool one of them out of ten cents, then I'll give you ten dollars." The smart waiter never got the ten dollars. Blodgett knows life at first hand.

CHARITY AND POLITICS

THE late "Big Tim" Sullivan's methods were not original, but "Big Tim" worked on a larger scale and went further than other men of his type. His field of operations was peculiarly suited to his methods, and he had seemingly unlimited means with which to dispense charity to the suffering poor whose votes he controlled. But of course it would be unfair to say that Sullivan did not have an unusual passion for helping the needy; he probably enjoyed that as much as the political power he wielded. And many are saying that New York's lower East Side will never have another Tim Sullivan or be controlled as it was controlled in his day, not only because there will not be a man able and wealthy enough to handle the job, but because the East Side itself is changing. A story of Sullivan's career is told by Roy Crandall in *Harper's Weekly*, from which we quote:

When the political battles were hottest and votes were needed, criminals were employed to see that the votes were secured; repeaters were shipped by train-loads from Philadelphia, housed in the lodging-houses along the Bowery, and on the day of the election they voted; not once, but often, and they voted as "Dry Dollar" wanted them to vote. He made possible those criminal violations of the election laws, and

Two-Sash Frame

Winter Gardening for Profit

A market gardener who grows lettuce extensively in cold frames once remarked—"You see those frames? Every eight inches square of their space has six five-cent nickels in a little pile in the ground. I rake them out each season."

In the two-sash frame illustrated, there are 36 sq. ft. or 81 eight-inch squares from which you can reap your own harvest of 486 "five-cent nickels." Lettuce grown in cold frames is of better quality than if grown in the open.

Radishes, small onions, parsley and such flowers as violets and pansies may also be grown. Start seedlings early and have vigorous plants for setting out when the weather permits.

Lutton Sash Frames made in 2, 3 and 4 sash sizes. Any size pays for itself the first season and gives years of service. Carefully crated and shipped ready for use. Write for pamphlet D, describing these frames and how to use them.

WILLIAM H. LUTTON

PERSONAL GLIMPSES

(*Continued from page* 914)

he and his clan profited from them. He profited from gambling, and money flowed into his hands in an unending stream. But he spent freely. As one man said, "To see 'Dry Dollar' playing poker one would think that money was worth ten cents a pound and that he had tons of it."

As has been said, he politically ruled nearly six hundred thousand men, women, and children. And he didn't rule them with a rod of iron. He ruled through love and kindness and a prodigal generosity. Murphy rules to-day through the power of his great organization and through the power that organization gives him. Men obey him because they must obey or sink into political nothingness. No man loves Murphy, ever did or ever will. No more did any man ever love Croker. The present boss of the Hall is a cold, silent man—a shrewd, cold, calculating machine with a marvelous grasp on affairs and a most thorough understanding of the weakness of human nature. Croker was even colder. He was a dominating czar. He ruled through fear. No man dared place himself in opposition to the will of Croker and hope to escape punishment or political ruin.

Not so with Timothy Sullivan. Power he had, and power he could wield, but the power that kept him where he was for many years was obtained through the affectionate regard of the legion of lowly ones who looked up to him as a sort of demi-god. He was their idol; their hope of success. He secured positions for thousands, and thus commanded their loyalty, but for thousands who had no positions he did much. Tho his power came through the loving regard of his subjects, his political acumen worked ever in conjunction with his warm heart, to the end that he could continue in power. To that end he made the people love him. Some may say that he was wicked so to do, especially as he used for base political purposes the affections thus created, but the people who were placed back in tenement-houses after landlords had dispossest them probably never stopt to discuss the ethics of the case, nor the ulterior motive of the man who had given them a sheltering roof, fuel, and food. When the youthful swain from the sweat-shop wanted to marry and had no funds Sullivan paid the fee to the rabbi and sent presents to the bride and groom. Did the bridegroom stop to ponder on the uprightness of political problems when a ward captain whispered to him the fact that "The Big Fellow" wanted him to vote for his friend?

No man ever lived with sufficient intellect to play that sort of politics day after day, and year after year, unless his heart was in it. And that's why Sullivan made so profound a success of the system. He made men and women love him and do his bidding because he loved his fellow man and because he was willing to do all that he could to redress the pitiful conditions of the poor and the unfortunate. Crime didn't seem to impress him as unusual, and it is not recorded that he ever took any advanced steps to stamp crime out; but poverty and hunger he did deplore, and he spent vast sums of money to relieve both.

Xmas 1913

Shirley President Suspenders

50¢

"A pair for every suit"

makes a man's whole year merry'—saves time and temper every day. Try it and see! Choice of 12 beautifully designed gift boxes. At stores or postpaid, 50c.

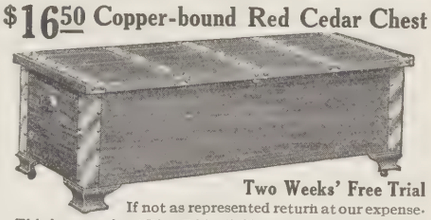
E. Roberts, Suite 23, 160 W. 119th St., New York

$16.50 Copper-bound Red Cedar Chest



Two Weeks' Free Trial

If not as represented return at our expense.

This is a genuine "Blue Ridge" Chest, made of real North Carolina Red Cedar and bound with 2-inch copper bands studded with round head colonial copper rivets. It is finished in the natural color, hand rubbed and polished. It will protect your furs and other garments from moths, mice, and insects and impart a fragrant sweet perfume to them, instead of the horrible smell of moth balls or camphor. It is also a very handsome piece of furniture. Size 40 x 19½ x 15. Shipped direct to you from the factory. Catalog free.

BLUE RIDGE RED CEDAR CO., Dept. T, Reidsville, N. C.
And 1654-1656 Long Beach Avenue, Los Angeles, Cal.

Sullivan maintained a wonderful system for the relief of the lowly and the suffering ones of his region. Four lawyers were on call day and night to look after the troubles of tenants dispossest for non-payment of rent. In the slums of the metropolis there are thousands of such cases each year. Sullivan's lieutenants made a business of seeing that justice was done in every case, and when landlords were found to be blameless the evicted tenants' rents were paid and they were assured of shelter and food until they were able to help themselves. But that is only a part of the system. Mr. Crandall goes on:

Well do I recall a visit I made with the late Florence Sullivan, a cousin of the deceased "Big Fellow," to a room in the Bowery, which more than all other things proved to me the far-seeing, almost ironic political wisdom of the man whose remains were followed to the grave the other day by nearly one hundred thousand men, women, and children. This was a Jewish synagog, and here was the reason for its existence: Sullivan was Irish. In the early days the Bowery was Irish. But within the past twenty years the Jews from Russia and Poland have been coming in. The Jews are a clannish lot and along the Bowery they have settled, in enormous numbers. Also where are large numbers of men there votes are to be found, and in the ballot-box a Jewish vote weighs as much as does that cast by an Irishman. Sullivan wanted votes in the ballot-box and he was too far-seeing a politician to quarrel with any race or any faction to his own political undoing.

In this room in the Bowery, some tough young Irishmen maintained a club-room. That club-room was the festering spot. It made crooks, thieves, and ruffians. The membership was in excess of one hundred, and that membership was largely Irish. *Ergo*, the Jews in the neighborhood suffered from assaults and insults. The club members, in coming and going from the room, thought it fine sport to seize the ancient Jews by their flowing beards and haul them about the street; to punch the younger ones who were as yet beardless, and to insult the Jewish girls. Word was brought to Senator Sullivan. He caused one of his shrewd lieutenants to look into the matter. Then he sent word to many of the leading Jewish men in the neighborhood that he would see that they were no longer molested by the members of that club. He sent police to arrest the club members until the club was fairly shattered. Then he caused the landlord to drive them from the premises. Then he rented the room himself and sent furnishers to have it entirely refitted as a fine branch synagog. That done, he gave it to the scores of thousands of Jews in that vicinity as a place of worship. "Florry" Sullivan had succeeded Martin Engel as district leader at the time, and a few who were ignorant of the real state of affairs thought that "Florry" was the donor of that synagog and the political gainer. The plan was the plan of "Big Tim" and "Florry" gained because Tim allowed him to gain and only to the extent that vicegerent gains as his ruler gains.

INVESTMENTS

THE Printing of the Financial Department every week in The Literary Digest is a move for better service to the investing public as represented among the Digest's 265,000 subscribers.

The advertising columns will give the investor news of investment offerings almost as quickly as the daily papers. It will be possible for the bond houses to offer to Digest subscribers many of the attractive issues that are so quickly subscribed for that it has been practical heretofore to advertise them only in the dailies.

We tend towards better service to the subscriber and to the advertiser and we respectfully call your attention to the every week insertion of the department "Investments and Finance." In this issue beginning on page 900.

The Literary Digest

SOCIALISM

Dr. John A. Ryan

vs.

Mr. Morris Hillquit

The Big Contest is On!

The second debate of this stirring series is in the November

Everybody's Magazine

Mr. Hillquit says that *"The press, the school and the church have failed to achieve anything worth while toward remedying social evils."* Dr. Ryan retorts: *"Let Mr. Hillquit eliminate from social progress the contributions of these three agencies, and then tell us what remains."*

You don't want to miss this vigorous combat now being fought in *Everybody's* by these two eminent authorities.

Send us $1.50 with your name and address and we'll mail you *Everybody's Magazine,* including this entire series, for one year.

The Ridgway Company
NEW YORK

"Florry" ruled simply because Tim willed that he should, and his rule was ever under a stronger ruler from whom he drew inspiration and direction.

The driving out of the men who formed that club solidified the Jewish vote for Sullivan and it did not lose for him a single Irish vote, for the men he drove from their rooms were ruffians who dared not revolt against his rule. They would be found at the election district voting places on the following election working for the Tammany ticket, especially for that in which Tim was interested, because the very livelihood of such men depended upon the good will of "The Big Fellow," and they knew that he would place no stones in their pathway as long as they did the things that he wished done. The law-abiding men of the race, of course, had no sympathy for them. The crooks, down-and-out, might be thugs or thieves, short-card gamblers, or even gunmen, but they were all units to be handled for the general betterment of the political fortunes of the clan of Sullivan, and their shortcomings made them in nowise unavailable. In fact, in many instances their criminal shortcomings were assets; now and then desperate men were needed to carry an election district that was being especially assailed by the reformers, who frequently made unavailing efforts to find a crevice in the citadel of Tammany supremacy—the lower East Side wherein Sullivan and his underlings ruled. In such instances, it has been charged, obliging authorities at Blackwell's Island, and even, it is said, at Sing Sing, have temporarily released efficient political blacklegs or sling-shot artists who were needed by the Senator for the holding together of his forces. In needful and stormy times some of these prison birds have been promptly sworn in as deputy sheriffs, and, with the badge of authority pinned to their coat lapels, and the revolver and "spring billy" of officialdom in their hip pockets, have worked all day at the polls along the Bowery and in the election districts of the lower East Side Assembly districts, voting occasionally when the voting was good, and preventing many from voting who were suspected of a desire to vote against the supreme will of the political czar.

Also, such as they were of great usefulness on those occasions when it was needful that the Bowery pile up a big plurality; when, in fact, New York wanted to "go to the Bronx with 165,000." In the good old days that were bad, it was sometimes needful to bring to New York more criminal voters than it housed. The slum section of Philadelphia was drawn on in such instances. Train-loads of Pennsylvania repeaters have been brought to New York a day or so before election on more than one occasion, packed into the low lodging-houses of the section, and on election day brought forth and voted in the names of dead men, and of men who had moved from the city, and of men who were in prison. The claim was made that when William Randolph Hearst vainly sought to elect one of his editors, Max Ihmsen, sheriff against Tom Foley, the lifelong friend of the deceased Bowery king, there were Philadelphia repeaters in plenty sent from the hotbed of Pennsylvania's rascality, and that they voted with right good will and with appreciable effect on the Foley plurality. But they weren't needed. Also it is remembered that one lowly follower of Sullivan raised a laugh that day by voicing the following bit of philosophy, the foresight embraced within it having been credited to Big Tim.

"'Dry Dollar' would be sore if he saw that bunch," said this political Jack Cade. "They're all smooth-faced."

"Well, can't a smooth-faced guy vote as well as one with lilacs?" sneered a listener.

"Vote just as well, one't," was the answer; "but one vote lets him out, if the inspectors are inclined to make trouble. 'Dry Dollar' said once that when you were getting repeaters in the district always get guys with whiskers. When you've voted 'em with their whiskers on you take 'em to a barber and scrape off the chin fringe. Then you vote 'em again with side lilacs and a mustache. Then to a barber again, off comes the siders, and you vote 'em a third time with the mustache. It that ain't enough and the box can stand a few more ballots, clean off the mustache and vote 'em plain face. That makes every one of 'em good for four votes."

WHY TELLIER WAS POOR

POVERTY and obscurity were the rewards that Charles Tellier received for his great benefaction to the human race. Most of the honor due him for inventing cold storage for the preservation of perishable food seems to be coming to him after his death. Tellier died the other day in the little back-stair apartment of two rooms in a suburb of Paris which served as his home. He was the son of an Amiens miller, and lived to be eighty-five years old. Financial misfortunes removed him from a business that has now developed to colossal dimensions and he turned his attention to other plans. He was long forgotten, but the history of refrigeration was delved into some time ago for the International Refrigeration Congress, his poverty was made known, and a fund of $20,000 was subscribed. But the dauntless old man declined the gift, saying he was able to make his own living. He did, however, agree to let his invalid son inherit the money. Last year Tellier related something of his life to a caller, who is quoted by the Knoxville *Sentinel.* After telling how he came to be interested in the preservation of foodstuffs, he said:

Gradually I drifted into making it my life-work. I experimented with the preservation of meat by means of vacuum. That was the tendency in those days. We expected all sorts of wonders from the new principle of the vacuum, which scientists tried to apply in all directions. I found that during the cool season I could easily preserve meat indefinitely, but the moment the warm weather came all the processes based on vacuum failed. The meat disintegrated in spite of the vacuum, and was lost. I gave up my researches in that

SEASICKNESS

TRAINSICKNESS

Prevented—Stopped

MOTHERSILL'S SEASICK REMEDY, after thorough tests, is now officially adopted by practically all the Great Lakes and New York Steamship Companies running south, and many Transatlantic lines.

Four years ago Mr. Mothersill gave a personal demonstration of his remedy on the English Channel, Irish Sea, and the Baltic, and received unqualified endorsement from leading papers and such well-known people as Bishop Taylor Smith, Lord Northcliffe, and hosts of doctors, bankers and professional men.

Mothersill's is guaranteed free from cocaine, morphine, opium, chloral, acetanilid, or any of their derivatives. A 50 cent box is sufficient for twenty-four hours, $1.00 box for a transatlantic voyage. Your druggist keeps Mothersill's, or will obtain it for you. If you experience any difficulty getting the genuine, send direct to our Detroit laboratories and we will see that you are supplied.

Letters from personages of international renown—people we all know—Cy Warman, Ex-Governor Jennings, Honorable Mrs. Lowther, Justice Emerson, Sarah Grand, Cook's Tourists, Mystic Shriners and numbers of others are contained in

Mothersill's Travel Book

It Is Just Off the Press

and will be sent entirely free upon request.

This very interesting book TELLS YOU WHAT TO TAKE ON A JOURNEY AND WHAT NOT TO TAKE—HOW TO PACK AND HOW TO BEST CARE FOR YOUR BAGGAGE—GIVES EXACT INFORMATION AS TO CHECKING FACILITIES, WEIGHTS, ETC., IN FOREIGN COUNTRIES—TABLES OF MONEY VALUES—DISTANCES FROM NEW YORK—TELLS WHEN, WHO, AND HOW MUCH TO "TIP"—in fact this book will be found invaluable to all who travel or are contemplating taking a trip in this country or abroad.

This edition is limited, so we suggest that you send your name and address at once—either on a postal or on the attached coupon—and receive your copy. It is entirely free, with our compliments. (Please address our Detroit Office for this book.)

PERSONAL GLIMPSES

(*Continued from page* 918)

direction about 1862, and turned to a new set of ideas. This was suggested to me by Pasteur's first discoveries about microbes. We did not speak of microbes then; Pasteur himself did not use the word; but he spoke of air germs or atmospheric germs. It was the atmospheric germs which, as we understood it in those days, caused the disintegration of animal tissues, such as meat, and no amount of vacuum could prevent it. Frost was the only natural principle which we knew indefinitely conserved such substances, and I therefore turned my attention to producing frost by means of comprest air. In time I was able to invent a machine which gave results, and in which I used a solution of ammonia.

This was about 1866, and my apparatus was adapted even to sea-water. This seemed a novelty at the time, and two prominent men from Uruguay, Francisco Lecoq and Frederico Nino Reyes, came to see me, and they agreed to pay the expenses of installing the apparatus on board an English steamer, the *City of Rio de Janeiro*, in 1868. . . . The steamer was to make a trip to Brazil and the Rio de la Plata to carry a quantity of stored meat. But the result was only partly successful. The meat was preserved fresh for only twenty-two days, and at the end of that time it began to disintegrate. My friends from Uruguay were disappointed. I had some difficulty then to get further support, but, having improved the machinery so as to use comprest ammonia, I was confident of success.

Comte de Germiny, who had been governor of the Bank of France, came to see me and took an interest in my researches. He urged me to establish laboratories at Auteuil and at Saint-Ouen further to improve the process, and he said that he would, when my process was completed, back me with any amount of money. I established the workshops, and the Emperor Napoleon III. personally became interested. But two years afterward the war broke out; Comte de Germiny was busy in negotiating the government loans, and he finally died while abroad, leaving all the expenses of my laboratories to me. This was a hard blow, especially as the Imperial Government also was overthrown, and the Emperor, who had promised his support, was in exile, and, finally, he also died without having been able to help me.

I had now invented a still better process by means of methylic ether, but it took me several years before I obtained the ear of a number of capitalists and was able to equip an entire steamer. At last in 1875 I succeeded, and the steamer *Frigorifique* was fitted out. The Academy of Sciences meanwhile had considered my communications on the subject of cold storage, and had warmly indorsed my process. The report was read at a public meeting in 1873. The fitting out of the *Frigorifique* with all the subsequent expenses of its trip to the Rio de la Plata cost something like $20,000.

She sailed from Rouen in 1876, and I went on board with a number of shareholders in the company that had been formed. But from the very start I found that the shareholders disagreed among themselves, and they also wished me to

You, Too, Can Learn Efficiency

HARRINGTON EMERSON, the famous Efficiency Expert, has consented to Teach a Class of Men and Women by Mail.

This great step in Educational Progress means that the Principles of Efficiency will now be applied to INDIVIDUALS, as well as to Factories and Corporations.

Until now, EFFICIENCY has been too Technical and too Expensive to Benefit the Average Man or Woman.

It has been applied Scientifically only to the Great Organizations of the Business World.

But through the Genius of Mr Emerson, anybody can now learn Efficiency and receive its Benefits in his own Personal work or play.

The Sixth Lesson alone is worth the whole cost. Write today and get the full details of this remarkable offer.

Direct From Harrington Emerson To You

After 20 years of experience as a professional expert, receiving fees of hundreds of thousands from the shrewdest business men in the world, Mr. Emerson has completed his Lessons on Personal Efficiency, for YOU.

These Lessons are simple, practical, unique. They fit every sort of person and every sort of job. You can apply them to YOUR work, YOUR play, YOUR life.

They are for either men or women, for anybody over 18 years of age.

They point out the best, easiest and quickest ways of obtaining the desirable things of life.

Fascinating and Profitable

This new course of Lessons is not only profitable, but fascinating.

It comprises the highest instruction from Mr. Emerson himself, by whose advice the Santa Fe Railroad saved $1,500,000 a year.

Mr. Emerson's purpose is to train you so that you can make the best use of what you know. He proposes to give you skill as well as knowledge, in making the best of your profession, your business, your job, your life.

Remember you cannot get this kind of instruction from any University or from any book.

Send your name at once and get free booklet.

Life and Times of the PATRIARCHS

Abraham, Isaac and Jacob

By WM. HANNA THOMSON, M.D., LL.D.

"Rich in valuable historical and geographical details. The author is strong in his convictions as to the historicity of the Genesis narratives of the lives of the patriarchs, and has gathered an abundance of material to confirm his view." *Christian World*, Cleveland, O.

"In the pleasant papers he has gathered here he describes personal experiences in visiting the sites of *various* Bible episodes, not merely those relating to the patriarchs, and he endeavors to reconstruct from the life and customs of to-day a picture of conditions in early Biblical times. The book is very interesting to the student of the Bible, and to the visitor to Palestine." *The Sun*, New York.

"It is interesting to read the story of the patriarchs in the setting of the conditions in which they lived and moved. The book is a practical commentary on many points of Old Testament life and history otherwise not easily understood." *Zion's Advocate*, Portland, Me.

More than a Strong Safe

An ALLSTEEL safe offers many advantages over the old-style cumbersome type. Far more easily moved from place to place, yet gives valuable records a protection against fire and water. *More* than this, the interior of any

Allsteel **SAFE**

can be equipped with any of the ALLSTEEL Filing Units to meet the changing needs of any business. Units interchanged at will. They give a "greater-capacity" value not possible with the "built-once-and-for-all" kind. ALLSTEEL Safe is a fire-resisting container that absolutely safeguards insurance policies, contracts, etc., which cannot be insured.

Reg. U.S. Pat. Off.

We make the most complete line of ready-to-ship steel office equipment in the country. Write today for our free catalog in colors.

Branches, New York and Chicago. Agencies everywhere. (14)

subscribe to certain things to which I objected, so that when the steamer called at Lisbon, I left her, and came back to France. She continued her voyage to Buenos Aires, and a great banquet was given there, at which the meat that had been shipped from Rouen and which had been preserved for three months was served up, together with fresh meat from the country, and the guests were unable to tell the difference.

THE SPICE OF LIFE

An Exception.—"All scientists are minus a sense of humor."

"Nonsense! Didn't they call this the temperate zone?"—*Judge.*

Self-Admiration.—MR. HOYLE—"I admire a good liar!"

MRS. HOYLE—"You egotist!"—*Town Topics.*

He Had Not.—PROF.—"Have you read Lamb's Tales?"

SHORT AG.—"Nope. We have a few black sheep, but I dunno as I ever seen a red un."—*Ohio Sun Dial.*

She Knew.—"If there were four flies on a table and I killed one, how many would be left?" inquired the teacher.

"One," answered a bright little girl—"the dead one."—*Sacred Heart Review.*

A Hint to Husbands.—KNICKER—"Is Smith an optimist?"

BOCKER—"Yes; as soon as the Tariff Bill was signed he cut his wife's allowance because the cost of living is coming down."—*New York Sun.*

How They Do It.—"I have invented a new dance."

"What do you call it?"

"'The Wall Street Wallop.' You swing corners, change partners, and sidestep."—*Washington Star.*

Very Different.—"Thirty cents a word for this stuff?" exclaimed the editor. "I wouldn't think of it."

"Sir, I am a famous author."

"That's just it. You are a famous author, not a famous pugilist or a successful spitball pitcher."—*Washington Herald.*

A Mere Film.—"I suppose you are mama's darling?"

"No, ma'am, I am my mama's moving picture."

"Your mama's moving picture?"

"Yessum, she is always telling me that I should be seen and not heard."—*Houston Post.*

Vacuum Theology.—A colored Baptist was exhorting. "Now, breddren and sistern, come up to de altar an hab yo' sins washed away."

All came but one man.

"Why, Brudder Jones, don' yo' want yo' sins washed away?"

"I done had my sins washed away."

"Yo' has! Where yo' had yo' sins washed away?"

"Ober at de Methodist Church."

"Ah, Brudder Jones, yo' ain't been washed; yo' jes' been dry cleaned."—*Lippincott's Magazine.*

A Bit Confused.—NERVOUS ASSISTANT (to purchaser of grand piano): "Can we send it for you?"—*Punch.*

Too Girly Now.—"Why have you given up smoking?"

"I consider it effeminate."—*Harper's Weekly.*

Fashion Note.—Personally we think it is all right for a man to wear a wrist watch in warm weather, but in winter we think he looks better carrying a muff.—*Dallas News.*

Rather Cramped.—MISS ETHEL—"Kate says she's weary of living in a small apartment."

JACK CARR—"A case of flat tire, eh!"—*Boston Transcript.*

Fishy.—KNICKER—"Was your house robbed?"

BOCKER—"Yes; burglars stole the plants, cat, and canary just before my wife came home."—*Brooklyn Life.*

Who was Sick?—"I called a doctor last night."

"Was anybody sick?"

"Yes; he was when he saw the hand I held."—*Birmingham Age-Herald.*

A Leading Question.—D. A. R.—"I have the drum that my great-great-grandfather carried all through the Revolution."

THE FLIPPANT ONE—"And when he saw the enemy, did he beat it?"—*Puck.*

No Extra Charge.—LADY OF THE HOUSE—"Half the things you wash are torn to pieces."

WASHERWOMAN—"Yes, mum; but when a thing is torn in two or more pieces, mum, I only charge for them as one piece, mum."—*New York Mail.*

None Needed.—TOURIST—"You have an unusually large acreage of corn under cultivation; don't the crows annoy you a great deal?"

FARMER—"Oh, not to any extent."

TOURIST—"That's peculiar, considering you have no scarecrows."

FARMER—"Oh, well, you see, I'm out here a good part of the time myself."—*New York Mail.*

Seeing Them All.—Col. Thomas D. Osborne, who resigned from the Board of Managers, to become Secretary of the Hospital Commission, allowed a remark to escape him for which the good Baptists of this city may take him to task.

Colonel Osborne is an ex-Confederate. He is also an ardent Baptist. Both come close to his heart.

A friend stopt Colonel Osborne and inquired whether he was going to the Confederate reunion at Chattanooga.

"I'm sorry I can not," said Colonel Osborne. "Gen. Bennett H. Young is urging me to attend the reunion to meet my old comrades because I may never see them again. But I have a Baptist convention to attend just at the time the reunion will be held. I told General Young I was sure to meet all Confederates in heaven, but I must meet my Baptist friends while I can."—*Louisville Masonic Home Journal.*

Three thrilling days at the
Grand Canyon
of Arizona
for only $35

You ride along the sky-high edge of a mile-deep abyss. You venture mule-back through earth's cracked crust, on trails that tip. And camp out down below, under the stars.

Amount named includes round-trip railroad fare, Williams, Ariz., to Grand Canyon; three days at El Tovar hotel, managed by Fred Harvey; a jaunt down Bright Angel trail; a carriage ride along Hermit Rim Road; also the trip to Grand View.

Stop at Bright Angel Camp, instead of El Tovar, and it will cost less. Take a room *with bath*, at El Tovar, and the expense will be a little more. Hermit Trail camping trip also will add a few dollars. It is easy to finance a week's stay or longer.

Besides being a scenic spectacle, you may here enjoy an unique outing.

In midwinter, snow may fall on the rim, yet coach and trail parties go about just the same. In midwinter, too, while the nights are cold, up top, in the sun and down below the weather generally is mild.

If you enjoy camping, hire a mule and a guide and lose yourself in the wilderness.

On request, will gladly send you our two copiously illustrated travel books, "Titan of Chasms—Grand Canyon" and "To California over the Santa Fe Trail." Address

W. J. Black, Passenger Traffic Manager, A. T. & S. F. Ry. System
1064 Railway Exchange, Chicago

Are you interested in Indians—not the cigar-store kind? Take your choice of the home-loving Hopis or nomadic Navajos.

The trail trips are unlike any mountaineering you ever have tried.

A word regarding the Santa Fe's through California trains:

The **California Limited** is the king of the limiteds—an all-steel train, daily the year 'round—between Chicago, Kansas City, Los Angeles, San Diego and San Francisco—exclusively for first-class travel—has a sleeper for Grand Canyon.

The **Santa Fe de Luxe**—once a week in winter season—extra fast, extra fine, extra fare—between Chicago and Los Angeles.

Three other daily trains—all classes of tickets honored—they carry standard and tourist sleepers and chair cars.

The Santa Fe meal service is managed by **Fred Harvey.**

CURRENT EVENTS

Foreign

October 23.—Forty-four sailors and passengers are drowned when the Finnish steamship *Westkusten* strikes a reef in the Gulf of Bothnia and sinks.

Cuba's sugar crop for the present year is estimated at 2,429,240 tons, 500,000 tons higher than any crop so far.

October 26.—No Mexican candidate for President receives votes enough to elect, and Provisional President Huerta continues in office.

The Liberal party wins a large majority of the seats in the Italian Parliament. Premier Giolitti is reelected.

The Spanish Cabinet, headed by Count Romanones, resigns when refused a vote of confidence on the opening of Parliament.

October 27.—The British Foreign Office announces that it will take no steps in the Mexican situation without consulting the United States.

James Larkin, leader of the Irish transport strikers, is convicted in Dublin of sedition and incitement to riot and sentenced to prison for seven months.

Edward Dato, a Conservative with Liberal tendencies, accepts office as Spanish Premier in succession to Count Romanones, and forms a Cabinet.

The Bavarian Senate votes to support a measure dethroning the mad King Otto, and the Ministry consents to introduce such a bill, which is assured a majority in both houses.

The Federal Council of the German Empire votes unanimously to place Prince Ernst August of Cumberland on the throne of the duchy of Brunswick.

Domestic

WASHINGTON

October 23.—The La Follette substitute for the Seaman's Servitude Bill is passed by the Senate.

The new Federal Industrial Commission organizes by electing Frank P. Walsh, of Kansas City, permanent chairman.

October 25.—The Senate Committee on Banking and Currency ends its hearings on the Currency Bill. Chairman Owen expresses his unalterable opposition to the Vanderlip central-bank plan.

October 26.—Chairman Carter Glass, of the House Banking and Currency Committee, issues a statement declaring the Vanderlip currency plan would delay and frustrate legislation.

GENERAL

October 24.—Hope for the rescue of 209 miners entrapt by an explosion in a coal-mine at Dawson, New Mexico, is abandoned. Fifty-four bodies have been recovered, the total death list amounting to 264.

The General Education Board announces donations of $1,500,000 to Johns Hopkins Medical School, $200,000 each to Barnard and Wellesley Colleges, and $50,000 to Ripon College.

The first complete passage of the Pacific locks of the Panama Canal by any vessel is made by a dredge.

October 25.—Nine American battle-ships, the picked fleet of the Navy, start from Hampton Roads for the Mediterranean cruise.

October 26.—Ten firemen are killed and 18 others seriously injured in a fire that destroys the main store of the Goodyear Rubber Company, in Milwaukee.

October 27.—The battle-ship *Texas* at her builders' trial makes 21.128 knots an hour, the fastest time of any dreadnought afloat.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"H. B.," Houston, Texas.—"Please distinguish between the use of (1) *convention* and *conventionality*, also between (2) *tolerance* and *toleration*."

(1) The words *convention* and *conventionality* are synonymous only in the sense fixt by the sixth definition of the former word on page 572 of the NEW STANDARD DICTIONARY: "general or tacit consent, or *something* regarded as *established by it*." The difference between the words in this sense lies in the fact that *convention* suggests more distinctly than *conventionality* the conscious agreement of society upon the thing in question, and that *conventionality* emphasizes the absence from the thing of individual or personal character. There is less of the *human* element in social *conventionalities* than in social *conventions*.

(2) *Tolerance* is a trait of character; *toleration* is the act that such a trait leads to. "His tolerance of the opinions of others" means his "attitude of tolerating or disposition to tolerate"; "his *toleration* of the opinions of others" means his specific "act of tolerating."

"W. H. B.," Toronto, Canada.—"Is 'are' correctly used in the following sentences? 'This firm *are* unable . . . '; 'The So-and-so Railway Co. *are* responsible . . . '"

One may use *are* with the noun *firm* unless some other word is associated with the noun which conveys distinctly the idea of singularity. That is the case with "this firm." *This* is too distinctly singular for one to say "This firm *are*." But one may say "*The* firm *are*" and "The . . . Company *are*," when one means to refer to the different members of a firm or a company distributively.

"G. W. N.," Omaha, Neb.—"Is the word 'often' ever compared 'oftener' and 'oftenest'? I am positive that I have seen these forms, but am unable to find authority."

The word *often* may be compared in either way: (1) by adding *-er* and *-est*, or (2) by prefixing *more* and *most*. The latter is the more frequently used.

"M. J. C.," Jeffersonville, Ga.—"Kindly tell me the origin and exact meaning of the expression 'the fine Italian hand.'"

We have seen no account of the origin of the phrase, "fine Italian hand," but have supposed that its first reference was to the Italian style of handwriting now in common use. The former English (or Gothic) style is still seen in German script. The phrase connotes also the deftness and skill of earlier Italian diplomacy, and implies a spirit and a kind of unscrupulousness and underhand dealing characteristic of the earlier, and even of much modern, diplomacy.

"M. M. B.," South St. Paul, Minn.—"Kindly give me the pronunciation of Madison *Cawein's* name."

The name *Cawein* is pronounced kay-wine (*ay* as in *day*, and *wein* like the English word *wine;* accent on the last syllable.

"J. O.," New York, N. Y.—"What is the proper pronunciation of 'Ade'?"

Ade is pronounced like the English word *aid*.

"W. W. IV.," Coweta, Okla.—"Is it correct to say 'Rev. Beecher preached there once,' or should one say 'Rev. Mr. Beecher preached there once?'"

The title of a clergyman is "*The* Reverend," not "Reverend." If a name be used without the given name or initials, the title "Mr." should be used in addition; as, "*The* Reverend Mr. Beecher."

"S. J.," New York, N. Y.—"Which of the following phrases is right? 'Everybody *has his* own ideas about it' or 'Everybody *have their* own ideas about it.'"

The correct form is, "Everybody *has his* own ideas about it."

Five hundred feet of porches at Grove Park Inn.

The finest Resort Hotel in the world has been built at Sunset Mountain, Asheville, N. C.

Open all the year
Absolutely Fireproof

Mr. E. W. Grove, of St. Louis, Mo., has built at Asheville, N. C., the finest resort hotel in the world—Grove Park Inn. Built by hand of the great boulders of Sunset Mountain, it is full of rest and comfort and wholesomeness. The front lawn is the hundred-acre eighteen-hole golf links of the Asheville Country Club, and with it sixty acres belonging to the hotel.

The purest water obtainable is piped seventeen miles from the slopes of Mount Mitchell, over 6000 feet altitude.

Biltmore milk and cream exclusively supplied from 200 registered Jerseys on the estate of Mr. Geo. W. Vanderbilt. It is doubtful if this famous dairy is equaled in the world.

Four hundred one-piece rugs were made at Aubusson, France. Seven hundred pieces of furniture and over 600 lighting fixtures of solid copper made by hand by the Roycrofters.

The plumbing material is the finest that has ever been placed in any hotel in the world. Bath tubs and fixtures all solid porcelain. No pipes visible anywhere. No radiators to be seen—all placed in recesses under windows. No electric bulbs visible.

The "Big Room" or what some call the lobby, is 80 by 120 feet, and is probably the most unique public room in the country. Two great fireplaces in it will burn twelve-foot logs.

For the golfers there are lockers and shower bath rooms with a forty-foot swimming pool not excelled by the finest clubs in existence and the players are less than 100 yards distant on the links.

Situated amid the most inspiring mountain scenery, Grove Park Inn offers the finest combination of climate, comfort and happiness that we believe has ever been made possible.

Especially available for northern guests in the Spring, Fall and Winter, going and returning from farther southern resorts, or for an all Winter resort. Persons with any form of tubercular trouble will not be received at the Inn.

Rates—American Plan—$5.00 a day upward. Reached by the Southern Railway

WINTER TRAVEL

We know that thousands of Literary Digest readers indulge in winter trips and winter vacations.

Plans are being already made for sojourns in the favorite winter resorts here and abroad.

We invite our readers' attention to the many attractive winter transportation and hotel announcements appearing in our current issues.

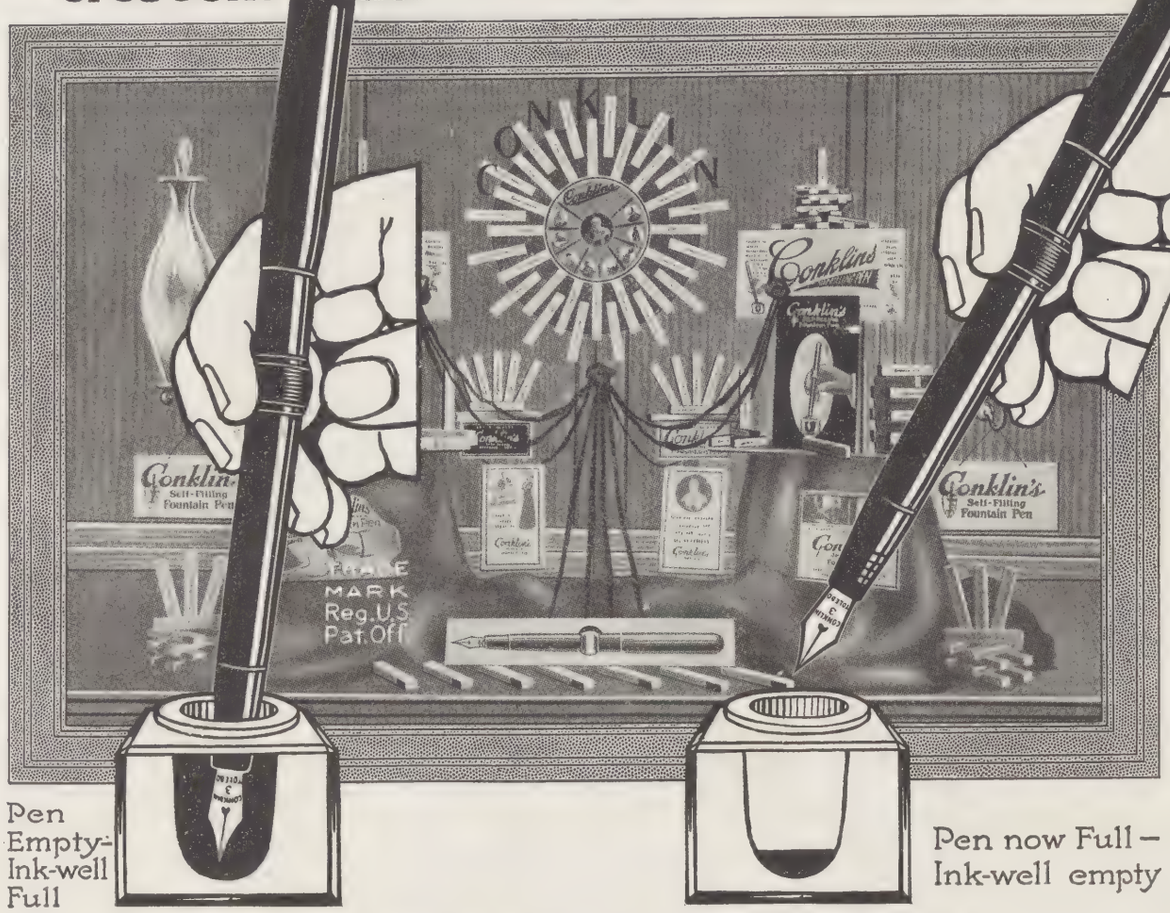
For years The Literary Digest has received recognition as the greatest travel magazine.

Winter Travel Advertising will be featured in our Travel and Resort columns through the months of November and December.

Following our custom of the past five years, we shall print in the December 20th issue a series of comprehensive articles on Winter Travel.

The Literary Digest

One pressure on the "Crescent-Filler" *and* The Conklin Pen is filled



Pen Empty-Ink-well Full

Pen now Full—Ink-well empty

it fills itself

The Conklin pen fills itself in 4 seconds—from any inkwell. Just dip the pen, press the Crescent-Filler and start writing. This feature makes an irresistible appeal to practical men.

Conklin's
Self-Filling Fountain Pen

The fame of the Conklin does not rest upon its self-filling feature alone—the Conklin is the greatest writing instrument in the world.

It never clogs—never scratches; but writes as smoothly as your finger glides over velvet.

Prices—$2.50, $3.00, $3.50, $4.00, $5.00 and up. At Stationers', Druggists' and Jewelers'. Write today for catalogue and two breezy little pen stories—all free.

Why the Pro-phy-lac-tic Tooth Brush is Known as the World's Standard Tooth Brush

A tooth brush is a small thing—with a big purpose. Tooth cleanliness—and therefore tooth preservation—are acknowledged prime essentials to good looks, good health and happiness. We believe, therefore, that we have served mankind well in giving the world the

Pro-phy-lac-tic Tooth Brush

"A Clean Tooth Never Decays"

We list here the features *originated* by the *Pro-phy-lac-tic Tooth Brush.* Perhaps you have noticed how imitators have tried to copy them point by point. Why? Because they realize that the Pro-phy-lac-tic has proved that no tooth brush can claim really to clean the teeth if it does not appear to be made the Pro-phy-lac-tic way.

If these features appeal to you, demand the original and spurn the imitation. If the only consideration were *service,* you would not need to ask for the Pro-phy-lac-tic by *name*—it would always be handed you when you ask for a "tooth brush."

Larger profits often influence some dealers to offer others "just-as-good." A little insistence, however, will always get you the "world's standard tooth brush" in its yellow box. You should insist—for the preservation of *your* teeth is worth the effort.

Every Pro-phy-lac-tic is Fully Guaranteed If Defective, we will replace it

Adult's size—Flexible, Rigid or DeLuxe Handles. Youth's size—Flexible or Rigid Handles. Child's size—Flexible or Rigid Handles. Four-Row, Adult's size only—Rigid Handle. Dental Plate Brush, for proper cleansing of Artificial Teeth. All styles (excepting Dental Plate) made in hard, medium or soft textures.

Send for Your Portrait of Miss Florence

We have a beautiful portrait of Miss Florence, the Pro-phy-lac-tic Tooth Brush Girl, size 12 x 16 inches, reproduced in full color from her original portrait in oil. Bears no advertising. We will send you a copy on request for 10c in stamps and will include an interesting book on the care of the teeth. Send for them.

FLORENCE MFG. CO., 14 Pine Street, Florence (Northampton), Mass.

Tooth Brush features originated by the Pro-phy-lac-tic Tooth Brush

(1) The hole in the handle and the hook on which to hang the brush are improvements *originated by the Pro-phy-lac-tic Tooth Brush.*

(2) The use of symbols to mark individual brushes so that each person may always recognize his own is a tooth brush improvement *originated by the Pro-phy-lac-tic Tooth Brush.*

(3) The curved handle with the tapered and beveled head which enables the brush to get behind and clean all the teeth—*originated by the Pro-phy-lac-tic Tooth Brush.*

(4) *Dependable* markings of bristles as hard, medium, soft—so you may absolutely rely on getting the kind you like. *Originated by the Pro-phy-lac-tic Tooth Brush.*

(5) Serrated bristle tufts arranged to fit the shape of the jaw—known as the Pro-phy-lac-tic Shape — the big step in advance in tooth brush manufacture. *Originated, of course, by the Pro-phy-lac-tic Tooth Brush.*

(6) The big end tuft—that goes where a tooth brush ought to go—*originated by the Pro-phy-lac-tic Tooth Brush.*

(7) The sanitary yellow box that brings your tooth brush *clean,* untouched by any hand since it left our sanitary factory—another big step in advance — *originated by the Pro-phy-lac-tic Tooth Brush.*

Waltham Watches
Riverside Series

It is not over-subtle to say that there is a relation between the character of a man and that of his watch. Anything which you consult fifty times a day, which directs your very life, is bound to react on ***you.***

All Waltham Watches have a structural perfection, a downright precision and upright character, that make them superior associates. The Riverside Walthams in particular are recommended for those who appreciate a watch which is a little better than necessary, but not purse-squeezing in price.

There are Riversides in several styles for men and women. Most jewelers have them and will testify to their excellence.

Will you look over our Riverside Book? It will be sent you with pleasure—and our compliments.

Waltham Watch Company
Waltham, Mass.

The Locomobile Limousine

The carefully restricted output of the Locomobile Company is an important aid to quality. A large and experienced organization concentrates its strength on a small output—not more than Four Cars a Day. Each Locomobile is personally and intimately supervised.

The Locomobile owner is proud of his car, not merely because of its style, its comfort or its reliability, but because of the knowledge that his car has been watched and worked over with the greatest possible care at all stages of its construction.

Numbers always destroy distinction. Thus, through its limited output, the Locomobile has an added preciousness in the mind of the owner.

"I know a College Graduate who is a Dunce"

Elbert Hubbard

"I know a man who is fifty-five years old. He is a student. He is a graduate of three colleges and he carries more letters after his name than I care to mention, but this man is neither bright, witty, clever, interesting, learned nor profound. HE'S A DUNCE! And the reason is that **he cannot remember.** Without his notes and reference literature he is helpless," writes Elbert Hubbard.

A Perfect Memory Is The Key To Success

Thousands of intelligent men and women remain obscure because they cannot remember important things. The demands of commercial and professional life are becoming so exacting in their details of facts and figures to be remembered, that to succeed or even hold your own you simply **must** possess a good memory.

For over 20 years I have been training people to STOP FORGETTING—aiding them to greater business and social success—and I have **seen** enough and **learned** enough to **know** positively that the person with a strong, tenacious memory, though he be far behind at the beginning of the race for success, advances and soon out-distances his forgetful rival.

I prove every day that the great secret of business and social success is the ability to instantly remember experiences and facts.

Stop Forgetting!

I Can Show You How

Easily, quickly, in your spare time, at home by mail.

Spend **10 minutes daily** and I will make your mind an infallible classified index system from which you can instantly select thoughts, experiences, facts, figures and arguments. I will enable you to concentrate your mind on any one subject to the exclusion of others—I will enable you to absorb, weigh, reject and classify ideas, names and faces for instant reference—I will enable you to **think rapidly on your feet, to** address an audience without hesitating, with that confident, forceful conviction that wins success.

My System Is Easy, Infallible

A good memory is not a gift—it must be **acquired** like muscle, by training. The capacity of the brain is unlimited. The weakest mind instantly becomes interested in and susceptible to my clear, comprehensive method—there are **no difficult exercises** to memorize.

For 20 Years I Have Trained People To Stop Forgetting

These Notables Endorse My System: Many of the most intellectual men of the day are troubled with mind wandering and have availed themselves of memory training. **My method is heartily endorsed by such notables as Elbert Hubbard, Prof. David Swing, Dr. Latson** and thousands of others.

Every Woman as Well as Every Man should have my course—I give her command of a well-stocked and well-selected vocabulary—I will enable her to adapt herself quickly to the moods of an audience or meet any emergency.

How To Get Free Copy of "How to Speak In Public"

If you wish to be able to **think on your feet**—to meet emergencies—to express yourself clearly, logically and convincingly whether talking to one person or to a thousand, my book **"How to Speak in Public"** will explain how. This is my 1913 De Luxe edition handsomely illustrated, richly bound. Price is $2.00, but I will present a copy absolutely FREE to every student.

Let Me Send You a Free Copy "How to Remember"

Send the coupon at once for your free copy of "HOW TO REMEMBER." Don't hesitate—education, vocation, age or residence makes no difference.

WHY The American Standard Bible

(Edited by the American Revision Committee)

IS BEST FOR HOME AND STUDY

All scholars are agreed that this is the most accurate translation of the Scriptures, as it embodies the results of Biblical research in the last 300 years, during which time a greater number of authentic manuscripts have been brought to light than in the thousand of years preceding.

Those who cling to the old version voluntarily deprive themselves of all that Christian Scholarship has gained in exact knowledge of the Bible during the last 300 years.

Then, too, the exact thought of the sacred writers is given in readily understandable language in this version—hence its readings are much more interesting and instructive to the entire family.

The American Standard Bible is made in several editions especially suitable for home and study use, combining large type and compact size. Over 200 styles to meet every requirement. Prices, 35 cents to $50.00.

Just let us send you sample pages and price list, that you, yourself, may see what a wonderful Book it really is.

REVELL'S NEW BOOKS
AT ALL BOOKSELLERS

By the Author of "The Master of the Oaks"

The Keeper of the Vineyard

A Tale of the Ozarks *By CAROLINE ABBOT STANLEY*

This story of a "return to nature," like the author's "Master of the Oaks," pulsates with real life. The scene lies in the Missouri Ozarks, a melting pot wherein those who seek the solace of nature and a living from the soil fuse their lives with the natives of the Hills in the common quest for liberty and education, love and life. **Illustrated. $1.25 net.**

Doc Williams

A Tale of the Middle West
By CHAS. H. LERRIGO

"The homely humor of the old doctor and his child-like faith in 'the cure' is so intensely human that he captures the sympathy at once—a sympathy that becomes the deepest sort of interest."—*The Topeka Capital.*

Illustrated. $1.25 net.

By the Author of "The Story-Life of Lincoln," "Washington," etc.

The Story-Life of the Son of Man

By WAYNE WHIPPLE

A Living Panorama of the Life of Christ

Nearly a thousand stories woven into a continuous and complete chronicle of the life of the Saviour. Story by story, the author has built up from the best that has been written, a vivid and attractive narrative of the life of lives. **Illustrated. $2.50 net**

Anthony Comstock Fighter

By CHARLES G. TRUMBULL

An authorized biography of this great fighter for purity. The story is one of life-and-death adventure, moral and physical heroism, and incomparable achievement. The detailed account of how all this was done is a most thrilling and remarkable story. **Illus. $1.25 net**

Ex-Senator Cannon's Book

Brigham Young and His Mormon Empire

By FRANK J. CANNON and Dr. GEORGE L. KNAPP

The life story of a man who founded a Mohammedan kingdom in a Puritan republic. The real inside facts about one of the most romantic and interesting characters in American history. **Illustrated. $1.50 net**

Can You Carry on a Conversation in French, German, Spanish, Italian?

The other day the father of a young lady of our acquaintance promised her a summer in Europe if she would for three minutes carry on a conversation in *French*. This girl had studied the language two winters, and for six months had been a pupil of the most fashionable "French and English boarding-school" for young ladies in New York. Her reports showed that she had studied well, and in French grammar she stood high in her class. *She failed utterly to carry on for three minutes only a simple conversation on a general topic.*

In THOUSANDS of "Digest" readers' homes a similar test would have a like result. If you really want to *speak* and *understand* one of these common foreign languages, use the *ROSENTHAL METHOD* for private study, or organize a *ROSENTHAL CLUB* among your friends. By the

ROSENTHAL METHOD of PRACTICAL LINGUISTRY

you can learn to converse in a new language as naturally and easily as a child learns to speak. Like the child—or like a foreigner learning English here—*you learn first the most necessary and most useful words and sentences.* You quickly get a mastery of ordinary, necessary, conversation and correspondence in the new language you wish to USE.

The *ROSENTHAL METHOD* is for BUSY men and women—ten minutes three times a day will lead within a marvelously short time to complete mastery of every-day business and social conversation. The study is a pleasure—never a task.

If you want to learn to *think* and *talk* in idiomatic French, German, Spanish or Italian quickly, pleasurably, and FOR PRACTICAL USE, send a postal for *DR. RICHARD S. ROSENTHAL'S* **Free booklet, "Revolution in the Study and Teaching of Foreign Languages."**

FUNK & WAGNALLS CO., Language Dept., New York

9,059-Word Business Book Free

Simply send us a postal and ask for our free illustrated 9,059-word Business Book which tells how priceless Business Experience, squeezed from the lives of 112 big, broad, brainy business men may be made yours—yours to boost your salary, to increase your profits. This free book deals with

—How to manage a business
—How to sell goods
—How to get money by mail
—How to buy at rock-bottom
—How to collect money
—How to stop cost leaks
—How to train and handle men
—How to get and hold a position
—How to advertise a business
—How to devise office methods

Sending for this free book binds you to nothing, involves you in no obligation, yet it may be the means of starting you on a broader career. Surely you will not deny yourself this privilege, when it involves only the risk of a postal—a penny! Simply say, "Send on your 9,059-word Book." Send to

SYSTEM, Dept. 5, Wabash Ave. and Madison St., Chicago

What 15c Will Do

The little matter of **15c** in stamps will bring you the **Pathfinder** for **13** weeks on trial. The **Pathfinder** is an illustrated weekly, published at the Nation's Capital, for the Nation; now in its **21st** year of increasing success. The paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send the **Pathfinder** on probation **13** weeks. The 15c does not repay us, but we are glad to invest in New Friends. **Or send $1 for full year; money back any time if not satisfied.** Address **Pathfinder, Box L, Washington, D. C.**

Like Hearing the Greatest Speeches Ever Made

—without stirring from your chair.

The brightest thoughts of the world's most famous orators—the wittiest sayings of the wittiest men of the Nineteenth Century—epoch-making speeches that moved not only audiences but Nations. They are all here just as they were delivered by these distinguished speakers, and gathered in such form as to instruct and entertain you where and when you will.

Modern Eloquence

Consists of Ten Beautiful, Richly Bound Volumes, elaborately indexed, beautifully illustrated with over 80 photogravures on Japanese vellum; paper, presswork and bindings of very highest quality. Having recently purchased the plates of this work, and with them a limited number of sets, we are able to offer you

A Wonderful Bargain

Send us the attached coupon *at once*, and we will tell you how to get the Library on **Easy Monthly Payments**, and with our terms we will also mail you Henry W. Grady's Great Lecture, **"The Race Problem"—FREE.** Reprinted from the work itself. Champ Clark says—**"The most famous after-dinner speech within the memory of any living man."** Sending the coupon places you under no obligation to buy. If you are interested, tear it off and send in NOW. Don't wait. The offer is limited.

300 After Dinner Speeches
by Joseph H. Choate, Benjamin Disraeli, James G. Blaine, Wm. M. Evarts, John Hay, Oliver Wendell Holmes, Sir Henry Irving, Chauncey M. Depew; Henry Ward Beecher, Mark Twain, Henry W. Grady, Joseph Jefferson, Robt. G. Ingersoll, Seth Low, Albert J. Beveridge, Woodrow Wilson, etc.

150 Great Addresses
by Lyman Abbot, Charles Dudley Warner, William Cullen Bryant, Rufus Choate, Theodore Roosevelt, Arthur J. Balfour, Jonathan P. Dolliver, Edward Eggleston, William E. Gladstone, Charles Francis Adams, John L. Spalding, Joseph Chamberlain, Grover Cleveland, Fisher Ames, Lawrence Barrett, Henry Drummond, James A. Garfield, Hamilton Wright Mabie, William Jennings Bryan, etc.

60 Classics and Popular Lectures
by Charles A. Dana, Robt. J. Burdette, Russell H. Conwell Cannon Farrar, John B. Gough, Andrew Lang, Wendell Phillips, Josh Billings, John Tyndall, Geo. William Curtis, Artemus Ward, Paul DuChaillu, John B. Gordon, Newell Dwight Hillis, John Morley, John Ruskin, Henry M. Stanley, Wu Ting Fang, etc.

2000 Short Stories and Anecdotes
by Mark Twain, Chauncey M. Depew, Horace Porter, Champ Clark, Joseph H. Choate, John M. Allen, etc.

Are YOU ever asked to respond to a Toast, to Write an Address or to make a Speech?

If so, you will find these volumes the greatest help imaginable, because they contain nearly every variety of good pattern for the various classes of oratory. And many an inexperienced banquet chairman, toastmaster or honored guest, casting helplessly about him for a good story or appropriate remarks, has found here just the inspiration needed.

This Great Work is Sole Occupant of a New Field

It has neither predecessor nor competitor. The most brilliant men of the world endorse it unqualifiedly. To read it is a liberal education—a treasure trove of information accessible in no other form. No intelligent man or woman can fail to be moved by the words gathered here—words which have brought men to tears or laughter, to pity or scorn, to indignation or repentance. Each address is a separate gem and from the standpoint of inspiration alone is priceless.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 354–360 Fourth Ave., New York

VOL. XLVII., No. 20 NEW YORK, NOVEMBER 15, 1913 WHOLE NUMBER 1230

TOPICS OF THE DAY

TAMMANY'S WATERLOO

WHEN the greatest Democratic city of the nation snows under the organization candidate for Mayor by 120,000 plurality, while in near-by States the voters are indorsing the national Administration by electing Democratic State and local tickets, explanations are in order. "The result speaks for itself," was Tammany Leader Charles F. Murphy's laconic reply to the newspaper men who tried to get some interesting comment from "the Chief" of the defeated forces. The result does speak for itself, agree the papers which backed the victorious Fusion movement in New York. Tammany, which has been defeated in previous years, this time "was slaughtered," *The Press* (Prog.) has it. Mr. Murphy, as the *Tribune* (Rep.) observes, "so far overreached himself that he to-day lies sprawling in the most abject defeat that ever befell a Tammany boss." If we reduce this statement to figures, it means that John Purroy Mitchel defeats Edward E. McCall for the mayoralty by a plurality of 121,209. It means that Tammany controls but one vote out of sixteen in the nearly all-powerful Board of Estimate, that it loses control of the Board of Aldermen, and that practically all its nominees for county and judicial offices go down to defeat.

Copyrighted by the Campbell Studio.

JOHN PURROY MITCHEL, NEW YORK'S NEXT MAYOR.

Putting these facts into the still more practical form of dollars and cents, it means "four lean years for the Tiger." For, according to *The Evening Mail's* estimate, Tammany has "missed" elective and appointive offices worth about $1,073,600 a year. The result speaks for itself no less clearly in Albany, add the anti-Tammany papers. Tammany representation in the city's delegation to the State Assembly is cut in half. The control of that body passes to the Republicans. Just 17 of the 79 Assemblymen who voted to impeach Governor Sulzer are returned by their constituents, and the deposed Governor is triumphantly elected to the Assembly, "with a vote that adds whiz to the resounding slap that his election plants upon both the cheeks of his accusers." But no election returns are allowed to speak for themselves, at least without generous assistance from the press in the way of explanation and presage.

If we are to credit an observant daily in another city, the Pittsburg *Dispatch* (Rep.), Tammany

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 354–360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

"was doomed to defeat from the day when the exposures of the police alliance with crime became indisputable." According to the Providence *Journal* (Ind.), "it was fairly obvious early in the campaign that Murphy made a mistake in selecting Mr. McCall as nominee for Mayor." Yet New Yorkers will remember the early strength of McCall as a "conservative" candidate, which was reflected in the betting odds. The New York *Evening Post* points to a "slow but steady awakening of the people" through many years of anti-Tammany campaigning, with last week's victory "the culmination of all the fights of the past quarter century against the domination of Fourteenth Street." But whatever of truth there may be in this, popular opinion is more in line with the assertion of Mr. Kline, New York's *ad interim* Mayor, that two things brought about the overthrow of Tammany—"the refusal of a renomination to Mayor Gaynor

THERE'S GOING TO BE ANOTHER WAR.
—Robinson in the New York *Tribune.*

by Tammany Hall, and the unfortunate Sulzer incident." Mayor Gaynor's rejection was followed, as our readers will recall, by his nomination as an independent anti-Tammany candidate. His sudden death at sea, after he had defied Tammany and all its works with his characteristic vigor of utterance, threw his following into the Fusion camp. This united the forces arrayed against Tammany, gave them new ammunition, and strengthened their zeal and determination.

But the most obvious explanation of the record-breaking 121,000 Mitchel plurality is found by the press in the protest awakened by the impeachment of Governor Sulzer, followed, as it was, by what the St. Louis *Globe Democrat* (Rep.) calls "the most detailed exposure of the Democratic organization's corruption known since the days of Tweed." "The history of William Sulzer, and the incidents, real or apocryphal, ascribed to Tammany rule at Albany," says the New York *Evening Sun*, a McCall supporter, roused a "tremendous and irresistible wave of popular wrath, indignation, destructive fury." Within forty-eight hours after the first Sulzer broadside against Murphy appeared in *The Evening Mail* (Prog.), declares that paper editorially, "the whole situation had changed, and from that time the defeat of Tammany was certain."

The startling allegations made on the stump by Mr. Hennessy have yet to be proved before the proper magistrates, but, coming at the time they did, they added fuel to the flames. William Sulzer's "immolation probably led to Tammany's undoing," remarks the Chicago *Inter Ocean* (Rep.). And the ex-Governor and Assemblyman-elect has no doubt that it was his doing—"before I came down from Albany the odds were 1 to 2 against Mitchel." To quote a Sulzer statement appearing in the New York papers:

"From Mr. Murphy's High Court of Infamy I appealed to the higher court of public opinion.

"My vindication for having been true to my oath of office and for refusing to betray the people of the State is complete. I am content to let the matter rest on the verdict at the polls.

"If my removal from the Governorship by an ignorant and a corrupt and an arrogant boss whose dictates to do wrong I defied has been the means of destroying bossism in the State of New York, I can console myself with the reflection that I was able to accomplish more out of office than all the Governors in the last decade could accomplish in office.

"Tammany is tottering under the weight of Murphyism, and I have the satisfaction of knowing that I struck the abhorrent thing, and the threatening menace, the hardest blow it has received since the days of Tweed."

The people have "determined correctly," in the judgment of the Springfield *Republican*, "that, while Sulzer may be morally unfit to be Governor, they will not stand for impeachment trials inspired solely by motives of personal and political vengeance on the part of a political boss embodying all the qualities most dangerous to a democratic form of government." The New York *Globe*, one of the papers which remained friendly to Sulzer, believes that the people of "The Sixth" were right in returning their emphatic affirmative answer to the ethical question thus put by one of the rabbis of the district:

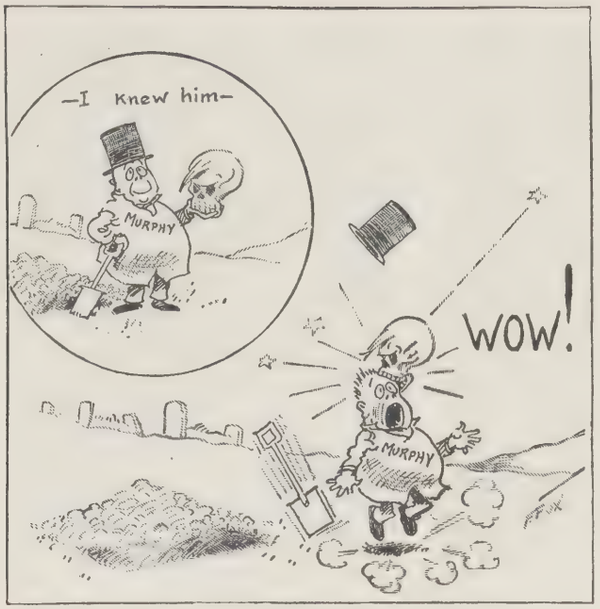
"Suppose a boy had been in bad company and had done things he should not have done; then suppose this boy broke away from the bad company and began to do good things and resisted all inducements to him to return to his evil practises; suppose then his vicious former companions should fall on him and begin to stone him, would I be justified in holding their garments as they destroyed him?"

While Mr. Sulzer thus begins his political life anew, the man whom he holds responsible for the whole impeachment "plot" remains leader of the Democratic organization in State and city. But he "finds himself in an extremely embarrassing position," we read in the New York *Herald* (Ind.), for "he faces four years of famine, and it is in such times that rebellion grows within the ranks of Tammany." At present, according to the reporters who have asked him about it, Mr. Murphy has not the least idea of resigning from the leadership of Tammany Hall. But, says *The Evening Post*, "the immense *débâcle* in which he has gone down puts his next step beyond his own volition." "If political fights are made for offices, what's the use of fighting with a leader and an organization that in city campaigns make elaborate and entirely successful preparations to give every least morsel of patronage to the opposition?" This is a question that is going to be asked by those who take the lower view of political duty and interest, according to *The Times*. A former Tammany politician who supported Mitchel is quoted as declaring that Murphy's "stupid leadership, his forcing the impeachment of Sulzer, have split his party in this State and have destroyed his ticket in this city."

The Brooklyn *Citizen*, an organization paper which supported the McCall ticket, voices the same discontent. The results of the election, it says, "are not misinterpreted when they are held to show that a change in the leadership of Tammany is indispensable to the recovery of the confidence of the Democratic masses."

But a mere change of leadership will simply mean "a new leader with the same old tiger," replies the New York *Globe*, and it continues:

"Attack must be made not on men, but on the institution. The Democratic party of New York must be organized on a new basis—on the basis that is recognized elsewhere throughout the country. No reason now exists or has ever existed why in the metropolis of this country the local branch of the Democratic party should be under the control of a plutocratic oligarchy.



"ALAS, POOR SULZER—"

—Fox in the Chicago *Post.*

HAUNTED.

—Harding in the Brooklyn *Eagle.*

MURPHY'S BANSHEE.

"Do the Democrats of New York City mean business this time or will they piffle along in the old way by accepting Murphy's abdication as sufficient indication of a change of heart?"

The Democratic, but anti-Tammany, New York *World* takes the same view of the situation. Tammany has indeed been beaten, it adds, but "when a quarter of a million voters cast their ballots for Tammany's candidates, these ballots are a shocking manifestation of popular indifference to honesty and decency in government." And it shows, according to *The World:*

"That the battle for honest government is only half won in New York, and that all talk hereafter of compromising with Tammany means compromise with organized, systematized infamy, which will menace the city as long as it is permitted to live. . . . . .

"Tammany can not be reformed. It must be destroyed!"

Nor are the Sulzer-Hennessy revelations forgotten. It is Governor Glynn's duty to do his share of the great Democratic house-cleaning by investigating all these "charges of corrupt dealing in matters of State expenditure," says *The Times.* "Let there be still more light" is *The American's* cry, as it is that of *The Evening Mail*, in whose columns we read:

"The facts so far disclosed clearly indicate an appalling condition of corruption, extravagance, and inefficiency in practically every State department, revealing the Republican State machine as the secret ally of the Tammany machine, and part beneficiary in its plunder. . . . . .

"The real conditions must be made known—must be revealed without fear or favor. The whole power of the State must be centered on a relentless uncovering of wrong-doing and an exposure of the 'invisible government' that thwarts the efforts of those it can not rule, and cries vengeance on them."

But whatever the effect of this election upon the Democratic party in city, State, and nation, whatever political changes it may portend, the press of the city substantially agree that the city of New York may now look forward to four years of good government. The newly elected Mayor declares that he has "but one ambition, and that is to make New York City the best-governed municipality in America." "His opponents join in the wish that he may have a successful administration, and hope that it will be of substantial benefit to our city." These words from the lips of Mr. C. F. Murphy brought from the successful candidate the acknowledgment that the Tammany leader was a "good loser." So, apparently, are the papers which opposed Mr. Mitchel. They say little about the defeat of the McCall ticket and have the kindest words for the new Mayor and his principal associates. There were two great objects in the campaign just closed, the Brooklyn *Eagle* says:

"One was to keep Tammany out of the City Hall and from the commissionerships which the Mayor will appoint, and the other was to keep it from the city funds in the control of the Board of Estimate. Both of those objects have been accomplished, a result for which the taxpayers will have repeated occasions for gratitude before the next four years have passed."

Mayor Mitchel, Controller Prendergast, and President McAneny, of the Board of Aldermen, will have 9 of the 16 votes in the Board of Estimate. These experienced officials, thinks the New York *Globe*, "constitute a governing board about as excellent as any one has a right to expect in a faulty world." They are likely, adds *The Journal of Commerce*, "to have the new borough presidents with them in their efforts, and are sure of the co-operation of the law officers of the city and of the counties of New York and Kings." It means, says District Attorney Whitman, who was reelected without opposition, "that New York during the next four years will be the best-governed city in the world." These faithful public servants have not only been indorsed, observes *The Evening Post;* "they have been commissioned to proceed for four years with their great constructive plans for the welfare of the city. . . . Never has New York had such a prospect of fundamental administrative reform in the hands of such worthy men." It is, concludes *The Evening Post*, "indeed an hour for unrestrained rejoicing," and "not only in this city, but everywhere," will the "hip-and-thigh slaughter of Tammany be hailed as the full dawning of a new day for municipal government in the United States."

A significant feature of the election, note several dailies, is the increase in the Socialist vote. Charles E. Russell received 32,109 votes in the greater city, which is an increase of 300 per cent. over the vote polled by the Socialist mayoralty candidate in 1909, and which exceeds the New York City vote for Russell for Governor last year, and comes within a thousand of the vote cast for Eugene V. Debs for President. So that *The Evening Post* is inclined to believe that "there are signs of that steady advance which the Socialists profess to accept as indicative of ultimate success." That consummation, however, the "capitalist" daily is constrained to add, "would seem to be distant, with a Socialist poll of about 5 per cent. of the total vote cast in New York City."

DEMOCRACY HOLDING ITS OWN

ANY FEARS that may have been entertained in Washington of a popular reaction against the Administration because of the new tariff or the Wilson policies were shown to be unfounded or premature by last week's election returns, if we are to believe the press correspondents stationed in the capital. In the President's own State, James F. Fielder had the open support of the Administration and won. In Massachusetts, David I. Walsh, the Democratic candidate, easily defeated his three formidable opponents. Most important of all, "from the practical standpoint," so we read in the New York *Herald*, "is the election of Blair Lee as Senator from Maryland, which gives the Democrats a majority of eight in the Senate instead of six." This, "with the election of three out of four Democratic candidates for Congress," is said to be regarded by the President and the Democratic leaders as "an indication that the Underwood Tariff Bill satisfies the people." On the other hand, we find the New York *Sun* reminding the President that while the Democratic vote increased slightly in both Massachusetts and New Jersey, the party in these States is still in a minority, and is in power only because "face to face with Republican disunity." And papers like Mr. Munsey's New York *Press* take the occasion to renew their plea for "amalgamation."

JAMES F. FIELDER.

His election as Governor continues New Jersey as the "key-note Wilson State."

The expectation that this election would give some idea of the staying powers of the Progressives is balked by the fact that the results in New Jersey and in Massachusetts seem to point in opposite directions. In New Jersey, Everett Colby, the Progressive nominee, ran a bad third, receiving about 40,000 votes as compared with the Roosevelt Presidential vote of 145,000 last year. In this the Republicans see a sign that the Progressives are drifting back to their old allegiance. But in Massachusetts, Charles Sumner Bird ran second, leading his Republican opponent, Congressman Gardner, by about 10,000 votes, relegating the Republican party to third place in the State for the first time since the Civil War. This is, of course, encouraging to Progressives, who declare that now "it's up to the Republican party to come over to us."

The people at last week's elections clearly voted to sustain the President, in the opinion of the New York *World* (Dem.), *Evening Post* (Ind.), and *Journal of Commerce*, Jersey City *Journal*, and Newark *News* (Ind.). Even in New York, thinks *The World*, the triumph of Mitchel "is due to the fact that in his character and purposes he represented the Wilson idea in municipal government as opposed to the system of Tammany." No other President, declares this Democratic daily, "ever had a more impressive indorsement in an off year." Nor, in the opinion of the New York *Herald's* Washington correspondent, is the triumph to end in gratification and congratulations. After this apparent indorsement of the Administration's policies, these developments are put down as "imminent":

"Renewed pressure on the Senate for speedy passage of the Currency Bill in the form desired by the President.

"Formulation of an aggressive program of antitrust legislation.

"Encouragement of the reorganization of the Democratic party in New York State so that the Wilson Administration may be aided by a friendly State leader to retain a Democratic delegation from New York in the next House of Representatives, elect a Democrat to succeed United States Senator Elihu Root in 1915, a Democratic Governor in 1914, and New York's electoral vote to the Democratic national ticket in 1916."

The decisive victory of Mr. Fielder in New Jersey is "easily explained" by the Republican New York *Tribune*, "on three grounds":

"One is, that Jerseymen were proud to have a man from their State in the Presidency, and were therefore inclined to support his administration at the polls and to elect his chosen candidate.

"Another is that many Progressives . . . were more intent upon defeating the Republican candidate than upon electing their own, and therefore voted for Mr. Fielder as the surest way to defeat Mr. Stokes. . . . . .

"The third is that in New Jersey the Democratic party, under Mr. Wilson and his successor, has been a party of progress and enlightenment."

For the "humiliating failure of the Republicans" in Massachusetts, the Springfield *Republican* (Ind.) finds Mr. Gardner, the candidate for Governor, "largely to blame." Yet it acknowledges that the Progressive campaign was "clean, honorable, and shrewd," and "Mr. Bird at least has the satisfaction of knowing that he has given the Progressive party in the country, probably, a fresh lease of life."

Copyrighted by International News Service.

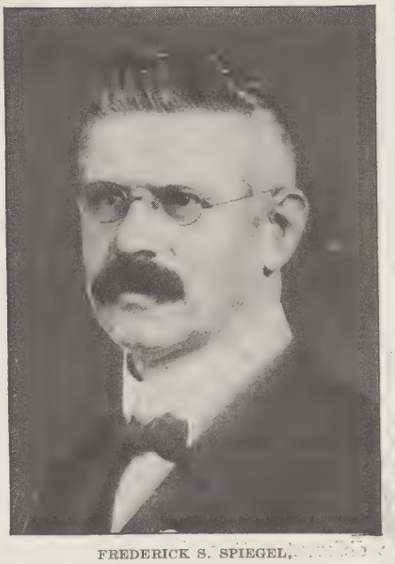
DAVID I. WALSH,

Whose election marks the fourth successive year of Democratic success in Massachusetts.

The lesson for the Republicans is plain, says the Lowell *Courier-Citizen* (Ind).—"the Republican party must 'progressivize' itself to the satisfaction of the Progressives, under what name the two shall hereafter act in concert making no difference whatever." And Governor Johnson, of California, Colonel Roosevelt's running mate last year, who helped the Bird campaign, declares that to the question, "Which party shall survive, the Republican or Progressive?—Massachusetts has answered in no uncertain tone." Yet Republican leaders point to Colby's small vote in New Jersey, and to Maryland, where "George L. Wellington, Progressive, in the election of a United States Senator by direct vote of the people, received less than ten per cent. of the vote given Roosevelt." In local elections elsewhere the Progressives merely assisted the Democrats into office, the Republicans assert. In Massachusetts and New York the Progressives made gains in the State legislatures. Yet the New York *World* observes that "in the elections in Massachusetts,

NEWTON D. BAKER,
Cleveland's reform mayor, elected for a second term.

HENRY T. HUNT,
A reformer who lost his fight for reelection in Cincinnati.



FREDERICK S. SPIEGEL,
Who defeated Mayor Hunt and recaptured Cincinnati for the Republicans.

OHIO MAYORS IN TRANSITION.

Maryland, and in this city to fill vacancies in the House of Representatives, the Progressive candidates ran uniformly third." And it concludes that,

"Viewed broadly, the election results the country over go to show that the Progressive party is disintegrating and that the Progressive voters are rapidly drifting back to the Republican party."

CLEVELAND AND CINCINNATI

THE NATIONAL PROMINENCE of the reform mayors of Cleveland and Cincinnati gives special importance to the elections there. In Cleveland, Mayor Newton D. Baker was considered the successor of Tom L. Johnson. In Cincinnati, Mayor Henry T. Hunt had carried on a fight against the old Cox machine that has been made famous in many newspaper and magazine articles. Cleveland reelected Mayor Baker; Cincinnati defeated Mayor Hunt. Taking up the Cleveland election first, we read in the Cleveland *Plain Dealer* that almost every one of the men supporting Mr. Baker's Republican opponent was identified in past fights with "interests seeking to block the wheels of progress." It is interesting, too, to recall Mark Hanna's great battle with Tom L. Johnson and to note that Dan R. Hanna's paper, the Cleveland *Leader*, opposed Johnson's political successor. *The Plain Dealer* accounts for Mayor Baker's success by saying that "he has borne the brunt and endured the heat of the battle, always as the people's champion." It reviews the campaign thus:

"Tho Mayor Baker received a clear plurality of first-choice votes, he did not get a majority, as the charter requires, and it is necessary to count second-choice ballots to determine the result. By this method the Mayor receives an ample majority. His appeal for a popular indorsement on the strength of his record is thus answered favorably.

"The fight waged against the administration during the closing weeks of the campaign assumed a character which the friends of the Mayor had not anticipated. The Mayor's record of constructive accomplishment was assailed by opponents who urged a variety of complaints, many of them of minor consequence when taken singly, but the cumulative effects of which are reflected in the returns. They combined into a fighting opposition a heterogeneous aggregation of elements which had nothing in common except the desire to defeat the administration."

The Cleveland *Press*, one of the many Scripps-McRae papers in Ohio which have been backing the forward movement in State affairs led by Mr. Bigelow, and a champion of the ultra-democratic charter that was adopted by the city some time ago, has this to say about Mayor Baker:

"It is the progress of the people of Cleveland toward better things for the weak and the poor, toward a deeper insight into the needs of common men and women, and toward a complete control of government by the people, that made the new charter possible, and that helped make Cleveland a city on a hill.

"In the whole movement from its beginning Newton Baker has been the leader, next only to Tom L. Johnson."

Turning to the Cincinnati election, it is said that Mayor Hunt's defeat was due largely to a lack of support from a considerable camp of radicals under the leadership of Herbert S. Bigelow, a well-known liberal clergyman, who have been backing ultrademocratic measures not only in their own city, but throughout the State. Mayor Hunt seems to have alienated the political affections of the Bigelow element by agreeing to a compromise between the city government and the street-railway interests in a franchise controversy. He was opposed, too, by the remnants of the old George B. Cox Republican machine. He had risen to power over the wreckage of that organization, and the enemies he made two years ago had not forgotten him. But his defeat, we are told, does not necessarily mean that Cincinnati has gone back to evil ways. *The Enquirer*, which, with Governor James M. Cox's State Democratic organization, backed Hunt, says that "Cincinnati is no longer the boss-ridden, gang-laden, combine-plundered city that it was for so many years in the recent past." Concerning the result, Mr. Hunt himself says:

"I ascribe my defeat to three causes. In the first place, the public did not understand my attitude on the traction question.

"I lost the support of the Bigelow people and Democrats who are opposed to Civil Service."

The Commercial Tribune, a Cincinnati Republican paper, explains the result of the election and pays a high tribute to Judge Frederick S. Spiegel, the successful candidate:

"Cincinnati is, under normal conditions, a Republican city, therefore there should be no expression of astonishment that the Republican organization carried the day. . . . . .

"Judge Spiegel goes into office with advantage accruing from many years in public duties.

"He has had ample opportunity to know men and matters. He is a clean man."

HARVESTING THE "HARVESTER TRUST"

THE HARVEST of "busted" trusts which has been in progress for some years now threatens to include the "Harvester Trust" itself, an event that is ranked by the Indianapolis *News* and other papers with the Oil, Tobacco, and Steel Trust cases. The Harvester concern was given the chance by Attorney-General Wickersham to dissolve voluntarily, but it failed to share his views about its iniquity, and in a spirit of conscious rectitude defied the Government to prove its guilt, which the Government will now try to do. The result of the suit is awaited with varied feelings. Remembering that "gasoline went up from 11 to 19 cents a gallon as the immediate and glorious result of the oil dissolution," the New York *Sun* (Ind.) suggests that "the farmers must await with suspicion, not to say alarm," the issue of this latest dissolution suit under the Sherman Antitrust Law. "Will the price of reapers and other tools of the farmer's trade be screwed up as the price of oil was?" it asks. But it seems that the dissolution sought in this case is of a different pattern from that applied to the Standard Oil Trust and the Tobacco Trust. Thus, from the Government's brief prepared by the Attorney-General himself, we learn that the aim of this suit is to bring about a dissolution in fact as well as in theory. On this point the Attorney-General says:

"In order that the plan may establish a condition in honest harmony with the law, it is imperative that it shall disintegrate the business of the principal defendant in such a manner that no two of the disintegrated parts shall be acquired by or come under the control of companies having common stockholders or companies otherwise under common control or influence."

Of the Government's reasons for regarding the International Harvester Company as a combination in restraint of trade, the Attorney-General goes on to say in his brief:

"Under the undisputed facts, the formation of the International Harvester Company was not a normal and natural development of the commerce in harvesting-machines. It was the child of one not theretofore interested in the business, George W. Perkins, a banker and insurance man, who stept in at an opportune time to bring the rival manufacturers together.

"He and others, by means of a combination in corporate form, destroyed competition and entrenched monopoly.

"The organization of the International Harvester Company in 1902 has been followed since that time by a course of conduct on the part of the defendants clearly demonstrating an intent not only to perpetuate their monopoly of the harvesting business, but also to build up by means of and upon their harvesting monopoly a monopoly of all the business in agricultural implements in the United States."

And in his final summing up of the case for dissolution, Mr. McReynolds presents the following interesting figures:

"Take the finances of this concern in 1903 and take them now, and what have we? In 1903 the total business done by the International Harvester Company was $53,000,000; in 1912 it had increased to $125,000,000; in the same length of time its capitalization had increased from $120,000,000 to $163,000,000, and between 1903 and 1911, the latest figures available, the assets of this concern had increased from $130,000,000 to $223,000,000.

"Those figures, in terse form, tell the story of the rapid growth of the power of this concern. This expansion has been so enormous that the word of this corporation has become absolute law to thousands and thousands.

"When the McCormick, the Deering, the Plano, the Champion, the Milwaukee, and the Osborne companies entered this organization, this monopoly automatically was born. The existing competition was wiped out.

"The International Harvester Company in its first year held the following percentages of the nation's business in the varied lines: 98 per cent. of the binders, 95 per cent. of the corn-binders, 92 per cent. of the mowers, 85 per cent. of the rakes, and 40 per cent. of the twine.

"And there is nothing in the evidence to show that this situation has changed in ten years. Of course, there has been some competition. We got that story in the Tobacco case and in numerous other trust cases. But the fact stands out that we have more than 90 per cent. of the great harvesting companies of the country put under one company.

"No man who looks upon that picture can fail to see that this concern had the absolute power to fix prices. Of course, there existed no desire to get 100 per cent. of the business. A certain amount of competition keeps down public sentiment and helps in other ways.

"Intent is wholly immaterial. Philanthropic purpose can not be pleaded as justification for the result. When these defendants purposely entered into this organization, into this conspiracy, they laid themselves liable to be charged with guilt for the result."

The defense, on the other hand, denies the charges of monopoly, and argues that the size of a business concern is no proof of lawlessness. It asserts that none of the ordinary results of unlawful combination in restraint of trade has followed the company's organization—"no unreasonable prices; no reduction of wages; no overcapitalization; no excessive profits; no oppressive trade methods; no plant closed; no limitation of production of raw materials; and no deterioration of quality." Judge William D. McHugh, of counsel for the Harvester Company, even pictures this alleged trust as "one of the greatest educational and beneficial forces in this country," according to dispatches from St. Paul, where the case is being tried. The company, says Judge McHugh, would welcome the Biblical text—"By their fruits shall ye know them."

The issue raised by this suit, in the opinion of the New York *Times* (Ind. Dem.), is whether there can be any good trust, or whether every combination in restraint of trade is bad. On this point it says:

"Admitting, for argument, the allegation of power to do wrong, is it possible to admit in justification good done through the possession of the power? The Harvester Trust claims that its resources enable it to build better machines than before it was formed, and to sell them throughout the world at a smaller advance of cost than its competitors. It has advanced wages 27 per cent., has paid 25 per cent. more for materials, and has raised prices 2 per cent. It has sold abroad $159,000,000 worth of goods, and has expended it in labor and materials in the United States, except its margin of profit, which is large in total but moderate in percentage. Now, is it unlawful to restrain trade in this way? Are the energy and efficiency which accumulate an alleged 80 or 90 per cent. of trade punishable for that fact, without regard to the manner in which it is done, and altho there is proof of conduct conforming to the best trade standards? It would seem that the application of the light of reason would prevent an affirmative reply. If the light of reason has ceased to burn, or if it can not be applied to such facts, then there is an end of big private business, and all operations on an American scale must be done by the Government or not at all."

While the prosecution of the Harvester Trust was actually begun by President Taft, remarks the Indianapolis *News*, "that it has been taken up by President Wilson thus early in his administration indicates that there is to be no cessation in the enforcement of the Sherman Antitrust Law." At the same time we are reminded by the New York *World* that the Wilson antitrust campaign is not going to rest content with the enforcement of existing laws. We read:

"While it is the purpose of the Wilson Administration to follow for the present the course of action indicated to the Department of Justice by the United States Supreme Court in the Tobacco Trust case, it is planning more effective measures. In the last fifteen years, according to Commissioner Davies, of the Bureau of Corporations, two hundred corporations have come into possession of property worth more than $22,000,000,000. This is a condition that can not be met by occasional actions at law against a few offenders that conspire in restraint of trade. It calls for a more thoroughgoing remedy, which Commissioner Davies says that President Wilson is preparing to submit to Congress."

HIGHER RAILROAD RATES

MANY INDICATIONS seem to convince editorial observers that the iron horse will soon be permitted a more liberal supply of fodder than it has enjoyed since the Interstate Commerce Commission laid a restricting hand on the source of supplies in 1910. Not the least significant of these indications are certain remarks made by Chairman Edgar E. Clark, of the Interstate Commerce Commission, before the National Association of Railway Commissioners during its recent convention in Washington—remarks which, in the opinion of the New York *Evening Sun*, "foreshadow that the Commission is likely to give an exceedingly open mind to freight advances in the near future." Higher rates will give the roads millions of dollars to spend on improvements, and the editors seem to think that the prosperity following this expenditure will outweigh the advance in prices due to increased freight rates. Warning against the continuance of a hostile attitude toward the railroads because of their past errors, Mr. Clark said in part:

"Even if it be true that the present financial condition of transportation agencies is due to reckless, improvident, or even dishonest financing in the past, it would be a mistake to correct it by a policy of reprisal, which will impair the usefulness or efficiency of the carriers, upon which the welfare, the very life, of the commerce of the country depends. That commerce grows continually, and we have seen each year periods during which the available facilities were sadly lacking in capacity and efficiency to properly furnish the transportation demanded.

"This is in part due to the failure of carriers to provide themselves with facilities, in part to inefficient handling and movement of equipment, in part to failure of shippers and receivers to provide room and facilities of their own sufficient for their needs, and in part to customs that have grown up in some lines of business that necessarily cause serious delay to cars and congestion of terminals.

"Of course the ideal situation would be one in which the carriers were ready to provide all the equipment needed and promptly transport all the traffic ordered at the time of the maximum demand, but that situation can be attained only by large additions to the facilities and great improvement in methods. The added facilities can be secured only through expenditures from surplus earnings or from expansion of credit. In either way the total cost to purchasers of transportation would be increased."

Copyrighted by Harris & Ewing.

ONCE A RAILROAD CONDUCTOR.

Now Chairman of the Interstate Commerce Commission at $10,000 a year, Mr. Edgar E. Clark gives a crumb of comfort to the railroads by remarking that "an ideal transportation situation" can not be achieved without increasing "the total cost to purchasers of transportation."

Behind these words, thinks the Washington correspondent of the New York *Herald*, lies a recognition of the fact that "the railroads of the country are in a serious predicament, ground as they are between the upper and nether millstones of Federal and State regulation and subject to constant demands for wage increases." And behind Mr. Clark's attitude again, remarks *The Herald* editorially, is an awakening of communities generally to the fact that "their own prosperity is largely dependent upon the prosperity of the railway systems by which they are served." In the present situation, the railroads insist, higher freight rates are the first essential if the lines are to prosper. The reasons for this point of view are strikingly set forth by President Daniel Willard, of the Baltimore and Ohio Railroad, in a speech before the Merchants' Association in New York. Making his plea direct to this gathering of leading Eastern shippers, Mr. Willard reviewed the numerous steps taken by the Eastern roads to effect economies and increase efficiency since the Commission denied them an advance in freight rates in 1910, and showed how no further alleviation was possible by these methods alone. He went on to say:

"At the present time railroad development and extension, particularly in the Eastern territory, is practically at a standstill, and personally I am quite unable to see how it can be otherwise until something happens to increase the net earnings of these carriers.

"I do not believe we can expect to accomplish the relief necessary by reducing wages, or by reducing materially the number of men employed, or by economies generally. Something, of course, may be accomplished in that direction. I do not believe that the relief required will be gained through increased business, because many of the roads are already handling as much, if not more, business than can be done economically with the present facilities, and before any greatly increased volume can be handled large expenditures must be made for additional facilities.

"The railroads could probably mark time for a while, if permitted to do so, and by enforced economies they would undoubtedly be able to maintain their present payments upon capital invested. In the meantime, however, the industrial capacity would very soon overtake, if it did not overwhelm, the capacity of the railroads, and then further commercial development of necessity would cease."

In full accord with this view is the Philadelphia *Inquirer*, in which we read:

"Experience within the past few years has abundantly demonstrated that in the great majority of cases the operating revenues of the railroads of the United States are so far unequal to their needs as to preclude any such betterment of the service as the public requires, desires, and is entitled to receive. . . . . .

"Every fair-minded man who is competent to form an intelligent and unbiased opinion must see that this is an anomalous, an unsatisfactory, even a dangerous condition of affairs which, from the viewpoint of the national welfare no less than from that of the railroads themselves, demands an early remedy. Surely it may with much confidence be expected that the extremely moderate advance which the railroads have asked permission to make will in due course be sanctioned."

So, too, thinks the Washington *Post*, which sums up the situation in the following assertion:

"If the railroads are to provide all-steel cars to reduce the loss of life in wrecks, if they are to abolish grade crossings, supply the money necessary for the physical valuation of the roads ordered by Congress, and are to provide comfort and convenience for the passengers, they must have more revenue."

Touching on still further details of the railroads' predicament, the St. Louis *Republic* says:

"The situation is simple. The roads have faced, in the past few years, the general rise in price of railway supplies, the steady increase in wages which has resulted from 'collective bargaining' of the roads with federations of railway employees, the increase in expense through legislation concerning the size of crews and the use of special safety equipment, the increase in expense owing to the rise of interest rates throughout the financial world. Within the past two years vast losses by storm and flood have been added to the other negative items. With all this, revenues, both passenger and freight, have had a general downward tendency.

"As we write the danger of grave impairment of railway service is acute."

If the railroads were free to secure the money they need for extension and improvements, remarks the Atlanta *Constitution*,

"the prosperity that now lacks a finishing touch because the railroads have, perforce, stayed out of the purchasing market, would mount into unprecedented proportions," and "the country in general would begin to enjoy one of the most opulent eras in its history." The Atlanta paper goes on to say:

"The public would not object to a modest increase in rates, if the increase were made uniform and if there were no indications of discrimination. The American people are not slow to recognize a crisis when they meet one, and they are beginning to understand the folly of attempting to wreak punishment upon the railroad of to-day for the offenses of the railroad of yesterday.

"Any hesitancy on the part of public sentiment is to be found in fear that these ancient sins may be repeated. The public wants to know that the huge treasure imperatively needed by the railroads will go to the laying of tracks, the purchasing of supplies, and the replacement of equipment, and not to thimblerigging purposes, crushing competitors, and huge 'melon' dish-outs. The people do not grudge the railroads honest dividends. But they do not expect again to tolerate the distribution of what used to be the equivalent of piratical prize-money."

While "disposed to think that the railroads are not in so desperate a condition as some of their spokesmen would have us believe," the Philadelphia *Record* admits that "if they do not absolutely need an increase now, they certainly will in a short time if the ratio of operating expenses to revenue increases as it has been doing."

In the meantime fifty-two Eastern railroads have petitioned the Commission to be permitted a horizontal increase of 5 per cent. in freight rates, and the Commission is preparing for an exhaustive investigation before taking final action on this petition. In a Washington dispatch to the New York *Sun* we read:

"The so-called 5 per cent. horizontal increases in freight rates were to have become effective November 15, but the decision of the Commission means that all of these schedules will be held in abeyance until the Commission can take testimony and hold hearings. This decision foreshadows one of the most comprehensive investigations ever undertaken by the Commission in connection with freight rates.

"While the railroads did not expect the Commission to accept all of their schedules without a thorough inquiry they did hope that the need for increased revenues would be so apparent that certain of the advances would be allowed without suspension and the necessity of prolonged hearings, which may drag on till spring.

"The Commission's experts who have been comparing the proposed advances with the old rates are said to have discovered that while the plan of the railroads was for a 5 per cent. advance, many of the increases amount to as much as 16 per cent., while some are as high as 40 per cent. It is understood that it is this comparison which has led to the suspension."

FOREIGN COMMENT

"BIG BUSINESS" BEHIND THE MEXICAN MUDDLE

MANY leading European papers think that the struggle between Huerta and Carranza is a struggle between the capitalists of Europe and those of the United States. We are said to be backing and financing Carranza because under the rule of Huerta North American interests are not sufficiently favored and promoted. We are disgruntled because our manufactured goods are not suffered to supplant those of England, France, and Germany. It is charged more specifically that the battle is being fought for the immensely rich oil-fields of Mexico, and the combatants are the Standard Oil Company and the British Aguila Company, controlled by the Pearson interests. The London *Outlook*, speaking of "the sordid squabbles which usually attend rumors of Washington intervention in South American disputes," and "the well-founded fears of capitalist investors in the United States," adds, "There is certainly an immense effort at work to necessitate intervention in Mexico." Even more specifically a journalist in the London *Morning Post* dwells thus on the fight between the Standard and the Aguila:

"The fact must not be lost sight of that Mexico at the present time is the scene of two conflicts. There is a revolution against General Huerta and there is also a war of the rival oil interests.

"In the time of President Diaz all foreigners, Americans and Europeans, were treated on an equality, as President Diaz welcomed foreign capital and accorded equal privileges to concessionaires. The American oil monopoly had long planned to extend its operations to Mexico, and was greatly disturbed when English capitalists invaded the Mexican oil-fields.

"If reports based on something more than mere rumor are reliable, the American oil monopoly had no small share in the events that led to the expulsion of President Diaz and the success of Señor Madero.

"It is a fact, and not a mere rumor, that Americans enjoyed the favor of Señor Madero and intrigued against British interests, and it is also a fact that since General Huerta came into power the Americans have lost their advantage and the English are in a better position than they were.

"Rumor has it that the Americans, convinced that there is nothing to be hoped for from General Huerta, are financing General Carranza, and will look for their reward if he comes into power.

"The oil-fields of Mexico are so enormously rich, and assure such great wealth to their possessors, that it is not surprizing there should be keen rivalry on the part of great financiers to secure their control, or that both sides should use the disturbed political condition of the country to their advantage."

LORD COWDRAY,

Head of the Pearson oil interests. Some of the British press regard the Mexican muddle as a conflict between the Pearsons and Standard Oil for the Mexican oil-fields.

So high an authority as Dr. Emile Joseph Dillon avers in *The Contemporary Review* (London) that we are disgruntled because Europe has got the best of us in the Mexican markets, and hence we oppose every Mexican Government that refuses to give us special favors. He writes:

"Of late years every stone has been turned by Americans for the purpose of obtaining a firm economic hold of Mexico. Industrial companies and commercial firms have set themselves to bring about a so-called 'reciprocity' treaty with Mexico, whereby Mexican raw materials would be admitted into the United States in return for the admission of American manufactured wares into Mexico. For, strange tho it may appear, American manufactured goods have not yet been able to displace those of British, German, and French workmanship, in spite of the juxtaposition of the two countries and of the cheap railway communication they enjoy. The 'reciprocity' arrangement would, it was hoped, turn the scale in favor of American exports, and oust those of European origin from Mexican markets. But the Mexican Government has never swerved from the principle of giving equal opportunity to all foreign countries in the shape of the most-favored-nation treatment, with no privileges to any neighbor. And this attitude was calculated to turn Americans with an ax to grind against the Mexican Government, by whatever patriotic party it may be carried on. Mexico's statesmen held that the least they had a right to expect from European States in return for this policy of 'equal opportunity to all' would be friendly neutrality in the diplomatic struggle which it must of necessity precipitate between the two Republics. And they now complain that this modest hope has not been realized."

Of railway and oil rivalries this well-informed and authoritative writer continues as follows:

"The railway policy of the Mexican Government likewise engendered bitterness in the minds of patriotic Yankees. At a cost of hundreds of millions of pesos the Ministers of General Diaz, and in particular his Finance Minister, Señor Liamantour, bought back over 12,000 kilometers of railways, retained over half the shares for the State, and sold the remainder to a Mexican company. This patriotic and statesmanlike action caused heart-burnings among the financiers of the New World and their friends, who treasured up their ire until the insurrection supplied them with an auspicious opportunity to translate it into acts. In like manner the exclusive rule of the American Standard Oil Company in the petroleum markets of Mexico was broken, and now a British company, known as Aguila, is struggling with that great firm for the mastery.

"Those are some of the manifestations of Mexican policy which Yankee plutocrats bitterly resent. And the present chaotic state of the country offers them a handle which is being used for interference."

The clash in policy between England and the United States originated in the fact, says the *Kreuzzeitung* (Berlin), that the English Ambassador in Mexico merely represented "the oil interests of the Pearson Company, which was backed in its

claims by the British Government." This point is enlarged upon by the aristocratic *Berliner Tageblatt*, which speaks with a certain Governmental and official authority, is circulated among the capitalists of the country, and has great influence at home and abroad. After quoting Sir Edward Grey's dictum that England had no reason for not recognizing Huerta, this paper proceeds:

"It is thus that the English policy in Mexico is directly contrary to that of Wilson and of the United States, and the fact is to be deplored. Yet it is affirmed that this contradictory policy by no means originated in England. The truth is that this stiff and cold attitude of England is greatly to the advantage of English industries and English trade in Central America. Sir Lionel Carden has moreover been blamed for the clash of policies, as an alleged worker for British capitalists to whose interests Huerta was more favorable than to the Standard Oil Trust."

"The hatred of Americans," declares the democratic and progressive *Frankfurter Zeitung*, "to a great extent originated in anxiety lest the country should become totally under the control of the powerful American trusts." And it proceeds to say plainly:

"It becomes more and more evident that the blame for the internal disturbance of this country must not be attributed to the United States. We are convinced, as we have already stated, that neither President Taft nor his successor had any intention of interfering in an unbecoming way with Mexican affairs. It is not to the Government at Washington, but to the great private interests, and mainly those of the Standard Oil Company, and its fatal influence on the American policy, that we must lay the account."—*Translations made for* THE LITERARY DIGEST.

THE BLACK LEGIONS OF FRANCE

AN AMUSING FEATURE of the eternal squabbles that are going on between France and Germany lies in the fact that the Berlin Government eyes with deep resentment the possession by France of what the Germans style a "foreign legion." Germany has never been wholly successful in Germanizing Africa. The history of German colonization in the districts which have been made famous by the heroes of European adventure has been admittedly a history of disaster and failure. France, on the contrary, has recruited her armies from the Sahara and has made from Algerian mercenaries soldiers that fearlessly confronted the finest forces of Europe. It is only just to the most prominent military journalist of Germany to say that he has always stated his views frankly on this subject. General Von Bernhardi is a man of strong and patriotic convictions. It is not too much to say that he has largely dictated the military and naval policy of Germany for the last twenty or thirty years. He is a regular contributor to the *Deutsche Revue* (Berlin), and in one of his recent articles he says that "no one ought to believe in the pacific protestations of France." While he acknowledges that France has strong reserves in the dark races of Africa he adds that "her army there is by no means ready for a struggle with us." Russia, too, he declares to be in a "condition of uncompleted preparation," and he reminds us that "the fear of a general revolutionary conflagration cripples every national effort at military efficacy."

While General Bernhardi thus rather despises the black contingents of France, another German officer of distinction, Alfred Brensing, writing in the *Magdeburger Zeitung*, insists upon the necessity of maintaining in the Mediterranean a strong fleet of German war-ships to intercept the North African troop-ships which, supposably, are to bring contingents to support France in war against her European foes. This doughty warrior tells Germany:

"We must have a strong fleet in the Mediterranean. The French military law of three years constitutes a distinct menace of war. Sooner or later, we may expect an explosion in France whose results will be a war of revenge against Germany. The aim of our military authorities should be to prevent the transport of two corps of the Army, 65,000 men, from Africa to France. The French have no ship of war which can compete with ours. France could not therefore destroy our naval divisions in the Mediterranean, which of course would be supported by the swift war-ships of Italy. Neither could the French fleet be depended upon for defending the transports from Africa. The transfer of the African regiments to France would be a slow process, and it is not likely that more than fractions of the two army corps could be landed in France."

Then comes the question whether France, thus divided by her enemies, African mercenaries on the South, and native soldiers on the North, can look to England for help. He replies in these long-sighted terms:

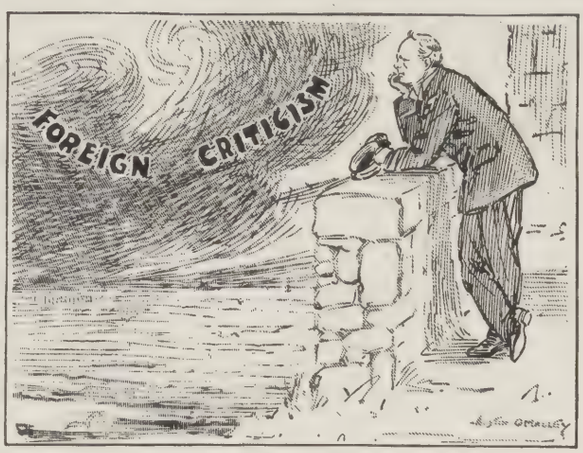
"If you ask whether England would go to the aid of France, I must reply that it is exceedingly doubtful. The danger which England would run of losing Egypt, Australia, and New Zealand through the power of the German Fleet, ever growing in importance, makes people think. This danger is by no means misunderstood in England, and the consideration of it has recently made English statesmen consider the advisability of coming to some sort of an entente with Germany."—*Translations made for* THE LITERARY DIGEST.

MR. CHURCHILL'S FAILURE TO STOP NAVAL RIVALRY

THE VERY SIGHT of Neptune's "placid head" popping up out of the ocean put a stop to the fierce conflict of winds and waves, we are told by the poet, and it has been hoped in some quarters that if Mr. Winston Churchill is not god of the sea, he is at least First Lord of the British Admiralty, and can stop the mad naval rivalry between Germany and Great Britain. He has made more than one effort at it, and if he succeeds he thinks that scores of millions of pounds "would be rescued for the progress of mankind." But his scheme for pouring oil upon the troubled waters of strife has not awakened much enthusiasm or support in the countries he wishes to pacify. The Germans hear "with mingled indignation, contempt, and pity," declares the Berlin correspondent of the London *Times*, the First Lord's latest offer of "a naval holiday." In the speech he delivered recently at Manchester, Mr. Churchill is reported as explaining his offer as follows:

"The proposal I put forward in the name of the Government for a naval holiday is quite simple. Next year, apart from the Canadian ships, or their equivalent, apart from anything that may be required by any development in the Mediterranean, we shall lay down four great ships to Germany's two. Now, we say to Germany: If you will put off beginning to build your two ships for twelve months, we will put off, in absolute good faith, the building of our four ships for exactly the same period."

Even the London papers condemn the proposal, which has been made and rejected before, as "impracticable," to use the term applied to it by *The Times*, which proceeds to say that "naval strength can not be reckoned in terms of capital ships alone. Such a proposal, if accepted, would not preclude Germany from spending the money she thus saved upon minor war-ships or upon submarines." "Once again the First Lord of the Admiralty exposes England to the deep humiliation of seeing an appeal regarded, as this is certain to be," observes *The Standard*, "either as a sign of weakness or an artifice to delude a rival into a feeling of false security. . . . 'Let them mock,' says Mr. Churchill, and that is exactly what they will do." "The proposal is assuredly one which no foreign Government will accept," is the final verdict of *The Daily Chronicle*. "What justification," angrily asks the Birmingham *Post*, "has Mr. Churchill in mind for hoping that his latest advance will be any more successful than the others?"



THE REST CURE.

In a recent speech Mr. Winston Churchill proposed a naval holiday for all nations, but the suggestion has not met with a friendly reception abroad.

THE FIRST LORD—"By jove, that cloud doesn't augur well for the holiday."

—*Newcastle Chronicle.*

VAIN HOPES.

THE OTHER MR. CHURCHILL—"Stop the hunt! Stop the FOX!"

Mr. Churchill's renewed suggestion for a naval holiday has already proved a failure. Its reception, both at home and abroad, has made it clear that it stands no chance whatever of being accepted.—(*Daily Paper.*)—*Pall Mall Gazette* (London). (*With acknowledgments to Mr. Punch.*

A BLUE HOLIDAY FOR MR. CHURCHILL.

In the German press the chorus of indignation is still louder. Count Reventlow, the chief Berlin authority on politico-naval affairs, treats the proposal with ridicule in the *Deutsche Tageszeitung* (Berlin). To quote a salient passage from his article:

"It is really time for Mr. Churchill to leave off damaging Anglo-German relations by his escapades. If he will stop speech-making for a year, Anglo-German relations would ripen to an intimacy hitherto unattainable."

The *Lokal Anzeiger* (Berlin), an official organ, thinks the First Lord is trying, with the possible aid of Canada, to bamboozle and get ahead of Germany in this naval competition, and we read of what is styled "Mr. Churchill's failure":

"He thinks to anticipate the production of Germany's naval estimates, doubtless recognizing the fact that, if he could make them appear wrong on any one point, the Reichstag would throw out the whole of them. Now what does this proposal mean? It means that England would either build three ships herself or get them from Canada. It is well known that Austria and Italy intend to enlarge their program in the Mediterranean. England would meet this by building two ships. England would therefore have five new ships, abstain from building five more, and expect Germany to build none."

The popular *Berliner Zeitung* thinks that England is simply trying to put Germany in a false position, and affirms:

"The English Government has not come forward with a proposal which it expected to be considered practicable. Nevertheless the Ministry suffers Mr. Churchill to pursue a private and personal propaganda which will create a situation impossible for Germany to tolerate. Germany knows that the intentions of England's Liberal Government are not philanthropic. The only proposals our Chancellor can consider are such as do not clash with German interests, and any proposals of the sort must wear a very different aspect from those made by Mr. Churchill."

It was the party politician addressing the gallery that spoke at Manchester, thinks the *Vossische Zeitung* (Berlin). "The Minister of Marine was left behind, otherwise the Minister of Marine would have told Mr. Churchill that discussion of such a proposal was absurd." German war policy is always supported and pushed by the Conservative *Kreuzzeitung* (Berlin), which dismisses Mr. Churchill's plan as "unacceptable" as an editor rejects a bad poem or a broken-backed story, and it says in part:

"Every one who has watched the attitude which the English Admiralty, from time to time, have taken toward Germany can not fail to discern a deliberate scheme in their attempts to interfere with us and our naval-construction program. They are trying by all the means in their power to invalidate the German Naval Law. They even infringe the sovereignty of a foreign state. These tactics are altogether wrong. Not only are they futile, but they arouse fresh antagonism. If people in England have any desire for a sincere political agreement with Germany, let them forbid Mr. Churchill to meddle by his offensive flights of oratory with the domestic affairs of the German Empire."—*Translations made for* THE LITERARY DIGEST.

HOOLIGANISM IN RUSSIA

UNLESS the Russian press exaggerate the condition of society in that country, social and moral anarchy and violence combine to produce a condition of chaos. Russians, we are told, have lost their historic ideals, religion is trampled under foot, violence reigns high and low among a people who live in defiance of the law. The people, indeed, are pictured as sunk into a condition of barbarism and bestiality. Murder and rapine are the prevailing elements in this strange condition of things. The "Apaches" of Paris, the "roughs" of London, the "gangsters" of New York represent but a small section of the population, but "hooliganism" in Russia comprizes in its ranks members of the highest as well as the lowest strata of society. It is found in the villages as well as in the cities, and the magistrates and police, we are assured, are powerless to check the vast wave of reckless lawlessness which is deluging the land. The Minister of the Interior, Maklakov, speaking of conditions in Russia some time ago, said among other things: "Crime increases here. The number of crimes has grown. A partial explanation is the fact that the younger generation grew up in the years of revolt, 1905–6. The fear of God and of laws disappears even in the villages. The city and rural population is equally menaced by the hooligans." While one may find his "partial explanation" quite unsatisfactory, the fact that crime increases to an appalling extent can not be doubted. The *Shkôla e Zhizn* (St. Petersburg) thus defines the term hooliganism:

"Hooliganism as a mass phenomenon is wholly unknown in Western Europe. The 'Apaches' who terrorize the population of London and Paris are people with an entirely different psychology from that of the hooligan.

"Hooliganism in our cities and villages has nothing to do with hatred of the existing social-political order. Its representatives can be met in all classes of society, from the highest to the lowest,

among the village youth and among people who have been honored with university diplomas, and who are occupying comfortable positions. Alcoholism, ignorance, and political disability, no doubt, contribute toward its growth, but the fundamental cause is the lack of ideals, the absence of any moral bases."

The *Niva* (St. Petersburg) thus describes the character of the Russian hooligan:

"Nothing human or divine restrains the destructive frenzy of the untrammeled will of the hooligan. There are no moral laws for him. He values nothing and recognizes nothing. In the bloody madness of his acts there is always felt something deeply blasphemous, disgusting, purely bestial. . . . Undoubtedly, in the flood of 'hooliganism' which is rapidly inundating with its turbid, menacing waters our capitals, provincial towns, and quiet villages, must be seen the beginning of some painful regeneration of the Russian popular soul. . . . A great one hundred and fifty million people, who have lived for whole centuries with definite religious-political conceptions and beliefs which have determined their mode of life and internal relations, begin to doubt, as it were, their gods, discarded their beliefs, and remain without any spiritual foundations, without any moral and religious supports."

WORKING FOR JAPANESE-AMERICAN PEACE.

Members of the Imperial Parliament of Japan and of the Congress of the United States constituting a committee of the Japanese-American Section of the Interparliamentary Union organized in September at The Hague, and who recently (October) were in conference at Washington, D. C. From the reader's left to right, they are (standing): Hon. Walter I. McCoy, New Jersey; Hon. Wachi Seki, Tokyo, Japan; Hon. Wm. D. B. Ainey, Pennsylvania, Secretary; seated: Hon. James L. Slayden, Texas; Hon. Zembei Horikiri, Tokyo, Japan.

The picture Mr. M. Menshikov draws in the *Novoye Vremya* (St. Petersburg) is really striking:

"All over Russia . . . we see the same growth of 'hooliganism,' and the terror in which the hooligans hold the population. . . . It is no secret that the army of criminals increases constantly. The courts are literally near exhaustion, crusht under the weight of a mountain of cases. The police are agonizing in the struggle with crime, a struggle which is beyond their strength. The prisons are congested to the breaking-point. . . . Is it possible that this terrible thing will not meet with some heroic resistance? . . . A real *civil war* is going on in the depths of the masses . . . which threatens a greater destruction than an enemy's invasion. . . . . .

"Not 'hooliganism,' but anarchy—this is the real name for that plague which has invaded the villages and is invading the cities. It is not only degenerates who enter upon a life of debauch and crime; already the average, normal masses join them, and only exceptionally decent village youths still maintain, as much as possible, their life of honest endeavor. . . . We see that nearly all the drinking people are drawn into criminal acts of violence, incendiarism, robberies, and murder. The young people, of course, make a greater show than the elderly peasants and the old men. . . . But the fact is that both the former and the latter are degenerating into a state of savagery and bestiality."

WHY JAPAN WILL NOT FIGHT CHINA

THE RECENT FRICTION between China and Japan has drawn attention to the fact that Japan would cut off her own food supply by attacking China. True, Japan might win, but it would be a costly victory. Japan is not financially prepared for war, we are told in the *Republican Advocate* (Shanghai), altho far more efficient than China as a military nation. The accompanying group picture shows the effort being made by members of the Japanese Parliament and the American Congress to improve our relations with Japan. That the Japanese Parliament is dominated by cool-headed statesmen who oppose jingoism is shown by the recent defeat of the military party which dominated the late Cabinet. *The Republican Advocate* is said to be edited by the secretary of Dr. Sun Yat-Sen, who has been living in Japan since the failure of his revolutionary effort in South China, and it is possible that Dr. Sun inspired the present article, founding it upon his observations in the land of his exile. We read:

"It is not difficult to see that any serious conflict between China and Japan would not only seriously impair the development of China, but would react most unfavorably upon Japan herself. Apart from the fact that a strong and progressive China is necessary to the political strength of Japan, which is to-day the only Asiatic Power possessing any appearance of real independence, Japan's economic position must be exposed to a very serious menace. Japan can not enter on a war with even a weak country like China without further seriously affecting her finances, which are already in a precarious condition. It was this which led to the strenuous fight of the Seynkai against the late Cabinet, resulting in the defeat of the military party; and the return of the latter to power would spell economic and political ruin to the Japanese nation. This should be evident to the intelligent statesmen of Japan."

China's chief weapon would be the boycott, we are told, and the Chinese know how to use it with terrible effect:

"While it is true that China can not at present wage war with Japan, it must be remembered that Japan now depends, and expects in future to still depend, principally upon China for her 'bread and butter,' and if China, in the event of a breach of friendship with Japan, should resort to the simple but most effective retaliation of boycott, an art China has learned to perfection during recent years, where would Japan be? That the Chinese all over the world would, in the event of hostilities, boycott Japan has been already shown during the *Tatsu-maru* incident and on other occasions. With her trade at a discount, and with no natural resources to fall back upon, it is even doubtful if Japan could borrow money from outside. The Japanese chauvinists and the disgruntled militarists might just as well face facts squarely; and, however commendable national pride and honor may be, they should remember that 'discretion is, after all, the better part of valor,' and that reasonable demands will do more for Japan than unreasonable demonstrations of force and undue efforts to seek reparation for injured honor."

SCIENCE AND INVENTION

USELESSNESS OF LOOPS IN THE AIR

HAS THE PROOF that one may upset in an aeroplane and regain one's position advanced the art of aviation? "Yes," some say; for it shows that the aviator who upsets accidentally is not necessarily lost. "No," others assert; for the ability to overturn an aeroplane at will only makes more certain the chance that it may also overturn by accident, and the fact that one may "loop-the-loop" in a monoplane only puts aviation again on the level where its friends prefer that it should not be — the level of a circus performance. Says a writer in *La Nature* (Paris, October 18):

"Aviation suffers cruelly from the lack of stability of its machines; all inventors have their eyes on this problem, and competent commissions are also at work on it; a society has been formed to secure safety in aeroplanes, which offers a huge prize ($80,000) to whoever will prove that he has found the solution. If the experiments of Pégoud have the value of a demonstration, the event should be celebrated by a shower of gold, of honors, and of commissions from the Government. But it is not so; and this is why:

"Pégoud began to fly in his machine in the usual manner, then with a quick movement of the rudder he lowered its head; instead of trying to regain his position, he accentuated his curve and was finally upside down. Then, by a new motion of the rudder, he regained the upright position. He also executed similar maneuvers in the transverse direction.

"A wonderful feat, surely. But is the aeroplane, upside down, more stable than in its normal position? If so, we must greet Pégoud's performances as a revelation. We then already have the stable aeroplane; it is the aeroplane upside down. Make no change in its construction, but fly with the wheels uppermost!

"If not, we must recognize that the aviator who should have recourse to such a maneuver in case of danger would be somewhat like the poor man who, in the classic joke, turned his vest 'because the other side had a hole in it.'

"Unfortunately the warmest admirers of Pégoud do not assert that the former supposition is true, but they reason thus: 'If the aeroplane overturns accidentally, the pilot, as shown by Pégoud himself, has a supreme and instantaneous recourse in "looping the loop."'

"There is nothing absurd in this, but if we are right in making this assertion we must give up all thought of stabilizing our machines, so that Pégoud's trials proclaim, not the success, but the failure of stabilization. But the serious tests made by Etevé, Doutre, Moreau, etc., presuppose that an aeroplane ought to be able to balance itself so as never to overturn. It is a matter of the angle at which the wings are set, and it is well to know that what Pégoud did on purpose has happened to other aviators involuntarily. This should make us do some thinking. If the machine is so constructed that the pilot may overturn it at will, is there not cause for fear, if he is not expert enough, that he will upset without wanting to? If that is so, an exceptional resource will be paid for with a permanent danger!

"This is not all. The machine, while overturning, is exposed, without defense, to all the hazards of the atmosphere. Once overturned, it flies in very different conditions from those for which it was built . . . in much more dangerous conditions. It must return to its normal position, and in so doing run another risk.

"Who wants to run such a double risk, except the experts of the air? How many passengers would embark on a craft that possest the ability, in case of an upset, to sail along for a while keel upward?

"We therefore draw this plain conclusion:

"Pégoud has shown that an exceptionally good pilot, if he gets into desperate straits, may grasp at a last chance of safety that no test has hitherto put in evidence.

"Does such a result improve the question? Not at all.

"Will it put us back? Quite possibly; by risking the direction of research in a false path and by offering a new prize for the performance of feats, which — why do our constructors fail to understand it? — is the prime obstacle to the popularization of aviation." — *Translation made for* THE LITERARY DIGEST.

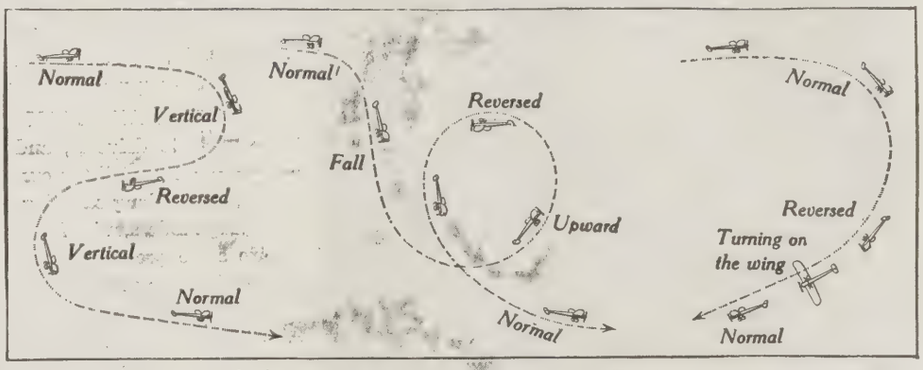

FIG. 1.—FLIGHT IN AN S. FIG. 2.—LOOPING THE LOOP. FIG. 3.—TURNING ON THE WING.

"STUNTS" THAT SHOW INSTABILITY—NOT SAFETY.

Instead of reassuring us of the safety of aviation, says a French scientific writer, "this should make us do some thinking," for "if the machine is so constructed that the pilot may overturn it at will, is there not cause for fear, if he is not expert enough, that he will upset without wanting to? If that is so, an exceptional resource will be paid for with a permanent danger!"

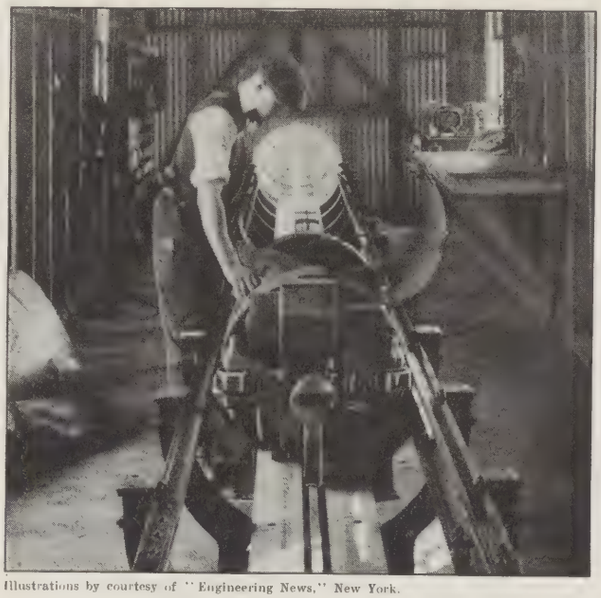
ELECTRIC MAIL-TUBES

AN ELECTRIC MAIL-CARRIER for packages too large to be handled by the ordinary pneumatic-tube service has been invented in Boston, and an experimental plant is now on exhibition in Cambridge, Mass. The tube is practically a tunnel through which a trolley-car runs,



Illustrations by courtesy of "Engineering News," New York.

FRONT VIEW OF THE ELECTRIC MAIL-CARRIER.

The car on the loading track, showing the track brake skids.

the whole device resembling on a small scale a city subway equipped with electric traction. The operation, of course, must be automatic. The device is described in an article contributed to *Engineering News* (New York). According to this paper it comprizes essentially one running rail, two side guide-rails, and an overhead trolley-conductor insulated from the tube structure. Through this runs a cylindrical built-up steel car with a length some three times the diameter. A single central wheel at each end-casting supports the car; one of these, the forward wheel, is geared to a direct-current constant-speed motor. We read further:

"This company has a large-scale demonstration and experimental plant at Cambridge, Mass., where the complete system is shown working. There is seen about one-third of a mile of track, part in 30-inch cast-iron pipe and part in a skeleton-tube construction. The track follows the sides of a rectangular lot, the corners being made with 90-degree curves of 50-foot radius. One corner is also at the summit of a five per cent. grade, these curves and grades being considered by the designers, from their experience, as the maximum that would be necessary for such a carrier railway. At one point, a short section of concrete tunnel of elliptical cross-section, 7 feet wide and 6 feet high, has been built to show how two skeleton tubes would be run through a single tunnel when that construction would be considered preferable to two pipes. The track passes through a temporary steel building fitted up as would be a dispatching and receiving station. . . . . .

"In dispatching a loaded car, the attendant pulls out the auxiliary-trolley handle and walks along to the tube entrance; when the car has sufficient velocity to make the entrance, the attendant lets go, the auxiliary trolley flies back out of service, the main trolley bar picks up current at full voltage from the overhead conductor, and the car quickly runs up to normal speed, which it maintains, approximately, until entering the distant terminal section. Back of the trolley baseboard is a field-reversing switch to reverse the motion of the car, but this is provided for emergencies and not regular service. A turn-table is used to transfer cars to and from sidings, and is used for reversing a car when it is desired to dispatch it in the same direction from which it came. The table is easily swung by hand.

"Braking of the car on entering the station is secured by letting it slide along on wood track skids, which take the weight off the wheels. Between the skids and the cars are two maple-faced shoes, which, however, can be lifted by the station attendant, so that the car can be run along out of the way of the next one; the shoes drop automatically as the attendant lets go the lift handle, so that a car can not be dispatched unprepared to stop properly at the other end.

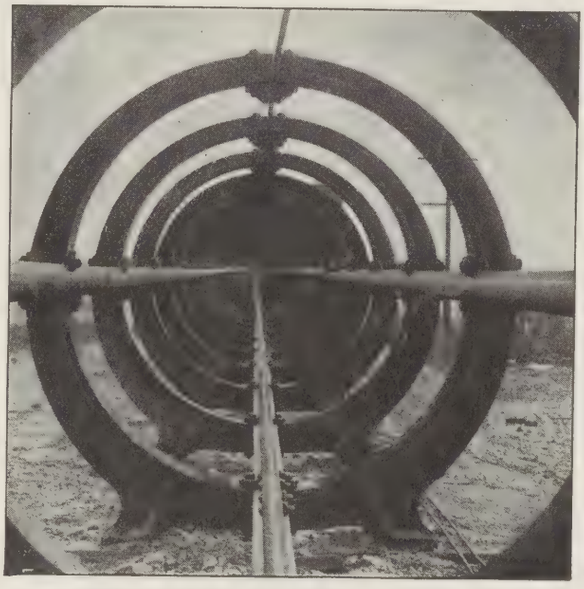
"Cars can be equipped with trips or contact devices to give indication of passing different points in the tube line, or for operating turnout switches for station sidings."

TELLING TIME WITH A PIN

HOW ANY MAN with an ordinary pin or needle, a place to drive it, and a reasonable amount of intelligence, may tell the exact time when his watch happens to run down on a long camping expedition in the woods is told by F. Irving Anderson in *The Sunday Magazine* (October 12). There are some preliminaries, and in particular it is necessary to remember the group of figures—3 minutes 55.90944 seconds. In actual practise, Mr. Anderson compassionately tells us, we may discard the last three figures in the fraction and call the decimal .91. Set it down as 3 minutes 55.91 seconds. He goes on:

"When you leave your train compare your watch with railroad time. This is likely to be observatory time, because a railroad watch that varies more than fifteen seconds a week is put into the discard. When you get to camp that night is the time to set up your observatory and take an observation.

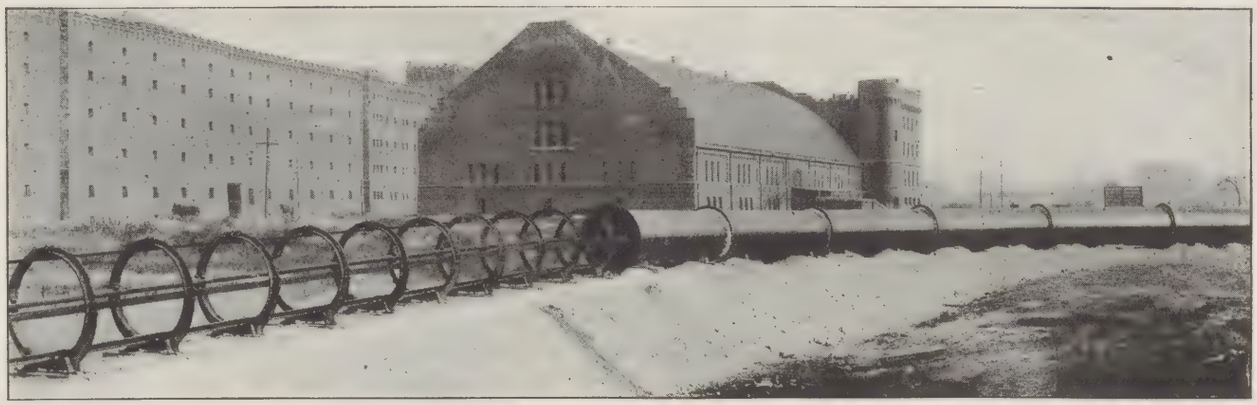
"Drive the pin into a window-frame so that it stands out horizontally across the glass, if your camp boasts of a window. If not, pick out a sizable tree-trunk that will not sway with the wind. Now pick out some object a hundred feet or more away that stands out sharply against the western sky. A high rock or the sharp outline of a mountain crag will do. The best thing is the roof of a near-by house. The main thing is to get a point that is absolutely stationary, so that when one sights in a bee-line over the top of the pin he is shooting a straight line into



VIEW ALONG CARRIER RAILWAY TRACK.

infinite space. In other words, the pin and the outline of the rock or crag must answer the same purpose for the observer as the two sights on a rifle-barrel.

"About ten o'clock at night, or a few minutes before, take a peep across your sights and pick out some prominent star that is near the outline of your crag. This star, like all others in the



A DEMONSTRATION SECTION OF THE ELECTRIC MAIL-TUNNEL, SHOWING THE 30-INCH PIPE AND SKELETON TUBE.

heavens, is slowly moving toward the west, and at a definite hour that night will set on the line you have projected into the sky. As the star approaches the line keep your eye on your watch.

"You will be surprized at the sudden disappearance of this star as it hits the line. At that moment note instantly the time of your watch, which you must presume is correct on this occasion.

"Say the star you have selected sets at exactly ten o'clock. Put the time down on paper, with the date. That star will set three minutes and 55.91 seconds earlier every night. Thus it now becomes the hand of your astronomical clock.

"You won't have any use for this star for some time to come. You still have faith in your watch. But say two weeks later you discover that you have forgotten to wind your watch. Then you will be glad that you have picked out a guiding star.

"Say this is the fourteenth day you have been in the woods. Your star has been setting three minutes 55.91 seconds earlier each night for fourteen days. Multiply this by fourteen, which gives fifty-five minutes 2.74 seconds. Subtract this from ten o'clock, and you have four minutes 57¼ seconds (nearly) past nine. Set your watch at 9:4:57. From this stage proceed as a jeweler would when he is starting a chronometer that must be correct to split-seconds. When the hands are indicating the right hour, minute, and second he slips the tip of a camel's-hair brush in the balance wheel to act as a trigger. A few strands of hair will answer just as well as the brush. Then he winds up his instrument, and at the precise moment suddenly releases the balance wheel, and the wheels begin to revolve.

"The jeweler depends on the noon ball, or a standardized chronometer. Your star is just as good, perhaps a little better. Keep watch of it from time to time over your sights and as it approaches the line get it ready to let go. As the star suddenly hits the line and is quenched release the balance wheel, and—presto! your watch is ticking observatory time, to the fraction of a second.

"This simple scheme of keeping tabs on celestial time is much used by surveyors and engineers, whose work carries them far off the high road. They have found that even the best of chronometers will vary as much as three to eight seconds a day at times, due to changes in temperature, altitude, etc. A pin line and a fixt point on the horizon enable them to check their time to a nicety.

"The observations can be carried on over a period of years, if necessary, and any one with the smallest amount of practise need not vary a minute in true time. When it is desired to use the system over a long period it is well to select a star, say, forty degrees above the horizon, and take the first reading at midnight. As the star sets on the made-to-order horizon four minutes earlier each night, it will set in twilight about two or three months after the first observation, according to the season of the year. As it approaches daylight it must be discarded, and another star chosen, again forty degrees above the horizon.

"There is another use to which this system can be put besides telling time when one is not handy to standard observatory time; that is, to test the accuracy of one's watch or chronometer. Select several stars, say half a dozen, and take their setting time on the dial of the watch to be tested. Repeat this at intervals of a night or two, and average the results. This does away with the least possibility of error and shows if your timepiece is even a fraction of a second out. If you want to be painfully accurate, use 3:55.90944 instead of 3:55.91."

ARMY AND NAVY CONDEMNATION OF FOOTBALL

SURGEON-GENERAL STOKES, of the United States Navy, has been conducting for some time a strenuous crusade against football. He has now been joined by the Army, in the person of Col. Clarence P. Townsley, Superintendent of the United States Military Academy, who asserts in his annual report that 75 per cent. of all the injured treated by the surgeons in the season at West Point are due to football casualties. This large percentage comes from only forty or fifty cadets who engage in the game, while the remaining 25 per cent. come from over six hundred cadets. *The Army and Navy Journal* (New York) remarks:

"Colonel Townsley says that the frequency of injuries to football players, and the permanent character of many of such injuries, make it a question of whether football is of sufficient value to the corps to warrant its continuance and the tremendous expenditure of time and money involved. Of the sixty-one injuries due to football and treated at the hospital at West Point from September 1 to November 30 last year, eleven were of a character liable to cause future trouble—that is, 18 per cent. of the injuries were of a serious nature. Colonel Townsley says: 'Football certainly serves no useful purpose in the physical development of training in the corps, as it is voluntary and attracts to its squad only the few who are already physically strong, active, and well developed. Its value, if it has any, lies mainly in the interest, entertainment, and excitement it affords to the other members of the corps and the thousands who attend its principal contests and are willing to contribute to its support.'

"Surgeon-General Stokes, from the very beginning of his term as head of the Bureau of Medicine and Surgery of the Navy, has thundered against the injurious effects of football and other too strenuous sports, and in his very first annual report took strong ground against the encouragement of games which he believes tend to weaken the heart of the participant and thus make him an easy victim in later years to the inroads of disease. Dr. Stokes has had studied the careers of a number of officers who were athletes in their Academy days, and has sought to prove from the data thus collected that the Service suffers a positive loss in weakened physique at a time in life when the best should be expected of officers in the coordination of mind and body. In one of the Surgeon-General's reports he gave the records of 622 star athletes in classes from 1892 to 1911, compared with the records of 580 of non-athletic midshipmen, showing that the former had suffered severely in health. An excess of 50 per cent. was shown among these star athletes over the non-athletic in valvular diseases of the heart, general poor health, obesity, tuberculosis, etc. The Surgeon-General of the Navy believes that this condition is brought about by overtraining and overstraining, and has recommended that athletics be regulated to avoid such conditions, that endurance contests dependent upon brute strength be eliminated from the category of Academy sports, and that a maximum effort be made to develop a symmetrical, normal physique rather than a highly specialized machine."

SHALL WE HARDEN OUR CHILDREN?

THE OLD BELIEF that exposure of children to cold, hunger, or fatigue served to make endurance easier for them in after-years was once accepted as a truism, and some of the more delicate little ones doubtless received permanent injury, or perhaps even lost their lives, in the "hardening" process. Lately we seem to have gone to the opposite extreme of coddling our children too much. Surely a happy mean may be found between putting a child to bed in a wintry room with insufficient bed-covering and never exposing him to cold or hardship at all. A recent German authority assures us that the old-fashioned "hardening" is actually necessary, but adds that it must be accomplished in a sane way, with due regard to the child's age and physical constitution. Says an editorial writer in *The Medical Record* (New York):

"The physician is frequently asked to express an opinion on this subject, and it is quite likely that in most instances he will hesitate before giving an answer which is more apt to be vague than definite. The reason for this is that the risks of an injudicious method of hardening are greater than those of a careful nurture of the young. The specter of rheumatic endocarditis more than counterbalances the virtue of wet feet, of bare knees, and of gauze underwear. There are so many factors to be considered: the individual child, the climate, the season, and the environment, that the problem of hardening becomes one of careful study and deliberation rather than one of vague generalization. The question may be asked: Are there any accurate scientific data upon which one may base a rational method of hardening? Fortunately an affirmative answer is available.

"The subject of hardening is discust in its broader physiological and clinical aspects by Alois Strasser. . . . He emphasizes the necessity of this hardening, but it should be accomplished with due regard to the age and constitution of the child. The fact should be borne in mind that the surface covering of the child with reference to the latter's weight is an extensive one, and that the tendency to loss of heat and the irritability of the nervous system are greater than in the adult. These circumstances decree that rigid systems of hardening are not only unnecessary but may be of distinct danger. Neither during the first few weeks of life, nor at any rate during the first years, can the child tolerate a hydrotherapeutic process of hardening. For the first few years of life the open-air method of hardening is the more important. The question is not so much one of exposure to the ever-varying changes of the outer air as one of adaptation of the uncovered skin to the atmospheric temperature variations of indoor air, and the adaptation of the body suitably clad to all sorts of weather outdoors. Pouring cool water over the child while the latter is in a lukewarm bath is more a process of stimulation than one of hardening, and it is of no great importance if the daily bath, which at any rate should not be too warm, about 90 F., is cooled a few degrees while the child is in the bath. Mild hydrotherapeutic measures may be employed in the case of children three or four years of age, but these measures should not go beyond a mere sponging of the body. Showers and douches of low temperature are at this age detrimental. The morning hours are the best for giving the sponge bath. . . . . .

"During the later years of childhood up to puberty the order in the carrying out of hydriatic procedures is of greater moment than a mere intensification of the latter. As a rule a single short stimulating bath in the morning is sufficient, and this must be adapted to the susceptibility of the child. Safety and comfort are the criteria upon which the mode of bath should be based. Physiological observations have shown that psychic influences, such as fear, have a profound influence in changing and even in reversing the physiological effect of thermic stimuli.

"With reference to the age of the child an important point is emphasized by Strasser. During the period of growth there are certain stages of rapid increment of organic development, during which the body needs all of its resources for growth and during which any excessive strain upon the nervous system, upon the heat-regulating mechanism, etc., is apt to produce disastrous consequences. These periods of rapid growth are between the fourth and fifth, the ninth and tenth, and the thirteenth and fourteenth years of life, and particularly in the girl at the time of puberty. During these critical periods one should be particularly cautious in carrying out any hardening measures."

TO KASHMIR BY AERIAL CABLE

THE FAR-FAMED Vale of Kashmir, in northern India, is to be brought into touch with the outer world by means of the longest aerial cableway in the world—75 miles across the Himalayas. United States Consul Henry D. Baker, on special commercial service in India, writes from Simla, the summer capital, to *The Daily Consular and Trade Reports* (Washington, October 17) that engineers have long tried in vain to solve the problem of adequate transportation across this mountain barrier. It is crossed at present by a road 200 miles long, a wonderful piece of engineering, completed in 1887. Fifty-four men were killed by falling boulders during its construction, and owing to the presence of these huge loose rocks in the soft soil, the building of a railroad—even a light electric road—has been pronounced impracticable. There is nothing for it but to swing a cable high in air over the treacherous mountain-chain. Writes Consul Baker in substance:

"After the invention of Brennan's monorail system of transport the Government of Kashmir entertained strong hopes that this system would be well adapted to meeting the special difficulties of communication across the mountains, and Mr. Brennan, in his experiments with the monorail, was liberally assisted by subsidies from the Kashmir Government. However, it was found that the monorail system would also be impracticable, chiefly because of the sharp-turning angles which would be required, and also the danger from slips.

"At the suggestion, then, of Lieutenant-Colonel A. J. de Lotbiniere, a Canadian military engineer, whose services had been lent to the Kashmir Government as state engineer, it was decided to cause investigation of the feasibility of an aerial cableway, and, if possible, to encourage private enterprise to enter on this project. This survey has been completed and has demonstrated to the satisfaction of the firm and of the Kashmir Government that the scheme is practicable and will not be unduly expensive. It is anticipated that the cost will amount to about $1,500,000.

"In discussing with Lieutenant-Colonel de Lotbiniere, at his home in Kashmir, the features of this great scheme, it was mentioned to me that altho the work would be undertaken by a London company, yet he hoped, as the cableway would be operated by electricity generated by water-power at a station near the town of Rampore, built by an American electrical engineer and equipped with electrical machinery from the United States, which had given every satisfaction, that the London company in the interest of uniformity of electrical equipment would purchase all its electrical machinery and material in the United States.

"The cableway will be constructed in big spans of about 800 yards each with fixt cables upheld by iron pillars or towers of latticework, some of which will have to be 100 feet high. There will be separate sections every five miles and separate cables, of course, for outgoing and incoming freight, which will be about nine feet apart and with a diameter of about 1½ inches each. From these cables steel cars will be suspended and conveyed, about 30 to every mile, and holding 335 to 450 pounds each of freight. These cars will be carried over great gorges and precipitous hills, and in some instances there will be a sheer drop underneath them of 1,200 feet. The transfer of cars from section to section will be automatically accomplished by revolving drums which will effect release of the cars and their renewed gripping to the hauling ropes of the next section. On account of the difficulty of expansion and contraction from heat and cold, the cables will be equipped with a complicated system of springs anchored with tremendous weights to make them of the same length all the year round. The cableway will follow the gorge of the Jhelum River most of the way, which it will frequently cross and recross, accordingly as the spans can be most conveniently constructed, and the towers be located where there can be safety against slipping and dangers from falling boulders. The great advantage of the aerial cableway will be that all dangerous parts of the road can be dodged and the cars moved from hill to hill and over gorges instead of at the side of them, the towers being based at places where there can be no danger of slips.

"It will not be the intention at first to use the aerial cableway for transport of passengers, but only for freight. However, if the cableway is found to work with perfect safety and no acci-

dents occur, it is likely that within a year or two it will be equipped with cars suitable for passengers."

The cost of carrying goods over the present mountain road now amounts to about $25 a ton, and the transport requires over two weeks. In many cases this cost is practically prohibitive. By the aerial ropeway it is estimated that goods will travel five or six miles per hour and, by short cuts from the present road, be over the ropeway within 15 hours, while being propelled by cheap water-power the cost of transport would be an insignificant charge against the cost of the goods transported.

VENTILATION AND EFFICIENCY

THAT BETTER RESULTS may be obtained from work in the open air than in an ill-ventilated room is a fact well known to most persons. The factors of efficiency are now being put to the mathematical test of figures, this particular one among them. Says *American Medicine* (New York, September) on its editorial page:

"Dexter's work on 'Weather Influences' was the first to prove that meteorological conditions affect us far more profoundly than we had imagined. We all long knew the nervous effects of great disturbances, but it was a revelation to know that the minor changes also had appreciable results. This kind of work is now being carried on by Prof. Ellsworth Huntington, of Yale University, whose writings have already attracted great attention from his originality and his power to analyze figures which are meaningless to others. Last but not least is the investigation of the loss of efficiency due to unsanitary conditions in the work rooms. Winslow, of the College of the City of New York, has called the attention of manufacturers to the fact that if the above-mentioned investigators find that in a hot sultry August day the output is less and of a poor quality, while it is far better in October, it is business folly to make the work rooms so hot and stuffy as to resemble August dog-days. We fully expect that it will be proved to be a paying investment, in certain lines, to introduce cooling apparatus in such factories, so that the workers are kept in the best conditions for speed and accuracy. Our interest in the matter is the influence on public health. Every factor which is found to reduce efficiency certainly affects health adversely, and we are therefore sure to learn more about hygiene than we ever knew before. Every improvement in factory conditions to increase efficiency will reflexly enhance health and reduce the number of breakdowns. We therefore urge physicians to take an active interest in these investigations, for they are quite sure to find out why many of their patients get sick, tho apparently living wholesome lives. Cure as well as prevention will become more certain. President Taft's economy commission is said to have found inefficiency due to the unsanitary conditions in which clerks are compelled to work in the executive departments in Washington. . . . We therefore urge factory owners to investigate all such matters as room temperature, excess or deficiency of light, ventilation, the food of employees, and even their home conditions, for it will increase profits enormously if the workers are made healthier. We particularly urge the economy commission to investigate the effects of long hours for clerks, for if the above-mentioned investigators are not deceived the Government is losing very heavily through the errors committed by tired brains after four o'clock and probably after three in lines requiring keen attention—not to mention the nervous breakdowns resulting from straining jaded nerves to work when rest is imperative."

AN AERIAL-CABLE ROAD IN THE ALPS,

Which gives an idea of what the much larger and horizontal one will be in the Himalayas. It will be 75 miles long, sometimes swinging 1200 feet in air.

COLORS THAT CHANGE IN THE DARK

A CLASS of substances has been discovered that is of one color by day and another at night. Change of color under the influence of light is no new thing; any fabric dyed with a pigment that is faded by the sun will illustrate it. These changes, however, are not reversible; one can not restore his faded carpet or curtains by keeping them in the dark, no matter how long. The substances endowed with "phototropy," which is the name that has been given to the curious new property, may be changed from one color to the other as often as we please to move them from light to darkness or from the violet to the red end of the spectrum. Furthermore, they differ from colors that simply fade, by revealing sometimes their richest tints in the brightest light. Such are the salicylidenes, which are a clear yellow in the dark and orange or red in the light. The change effected by light is more rapid than the reverse change due to darkness, and the violet rays of the spectrum appear particularly effective in bringing it about. Writes a correspondent of the *Revue Scientifique* (Paris, September 20):

"The particular portion of the spectrum that brings these changes about varies with each compound; but it has been found that the active part of the spectrum, between that which produces the first change and that which effects the inverse change, has always the same extent. If one shifts, the other alters to correspond.

"At the ordinary temperature, the first modification (from the light to the dark color) is rapid, requiring only a few minutes. The inverse transformation is slower; it sometimes lasts hours, days, or even weeks. But if the temperature rises, the inverse change may be considerably accelerated, and at a certain temperature, which is different for each compound, but characteristic of it, this inverse transformation takes place almost instantaneously. . . . . .

"To explain phototropy, Senier supposes that in solids the molecules exist in the state of groups, which may be arranged in numerous isomeric forms.

"The phenomenon of phototropy is quite comparable to that of phosphorescence. In the case of phosphorescent substances, absorbed solar energy is transformed into phosphorescent light. It is not given off under this form by phototropic substances; and yet, so far, no one has been able to show exactly what it becomes."—*Translation made for* THE LITERARY DIGEST.

LETTERS AND ART

A PLAY WITHOUT A "PUNCH"

THE JADED TASTE of Broadway is supposed to demand drama of a rather strong flavor, yet the latest offering is a "pretty little old-fashioned tale, charged with an essentially modern spirit and embellished with much quaint humor and sentiment"! Is this a dish to set before a public that is reputed to demand a punch with each act in its theatrical fare? But it is what Mr. Winthrop Ames has brought forward with the quaint label "Prunella." Some of the newspapers are thankful that we still have managers who believe in "a more enlightened order of playgoers," and Mr. Ames in his beautiful Little Theater is not neglectful of their needs. "Prunella," the work of two Englishmen, Mr. Granville Barker and Mr. Laurence Housman, is English to the core, and has been a favorite with English playgoers since it first saw light ten years or more ago at the Court Theater in London. It has been a little slow in coming to us, but by a strange coincidence it shows how the theme of many a contemporary play that seeks its effects from disagreeable realism may be treated without these features. In it we see, as the New York *Evening Post* puts it, "the peril into which innocence may be plunged by ignorance and the folly of an educative system based upon the presumption that dangers cease to exist when they are not suspected." *The Evening Post*, in giving an outline of the story, reminds us that elsewhere we should look in vain did we seek to find this theme treated "with such poetic fancy or in such pleasant parabolic fashion." It proceeds:

PIERROT AT *PRUNELLA'S* WINDOW.

This production at the Little Theater shows how the theme of many a contemporary play that seeks its effects from disagreeable realism may be treated without the features that call for police intervention.

"The scene is laid in an old world walled garden, a peaceful paradise, into which no sight or sound of the wicked world without has ever been permitted to enter. Within these slumberous precincts, in an old cottage nestling beneath the thatch of centuries, the lovely girl *Prunella*, orphan of a mother who fled with a wandering artist, has been reared, in puritanical seclusion, by three overfond and overanxious maiden aunts, the Misses. *Prude*, *Prim*, and *Privacy*. She has been taught to conduct herself with the most perfect propriety and the most unquestioning obedience, and she has been stuffed with the moral maxims of expurgated primers. She has never looked upon a young man, and has been carefully instructed that the story about the existence of such a person in the moon is a myth. Her only male companions are three old gardeners, whose insistence upon the fact that nature must be pruned if she is to be kept within bounds does not strike her with any particular relevance. Nor does she derive much satisfaction from a statue of Love in the garden modeled long ago by her unremembered father. On one eventful day a troop of strolling players pass through the village, and, in spite of all precautions —for the aunts employ all bars and bolts against these dread invaders—the leader of them, our old friend *Pierrot*, aided by his rascally jackal, *Scaramel*, gains admission. *Prunella* has never dreamed of a creature so entrancing, and, after her first kiss, falls a ready victim to his wiles. When he and his roistering companions, *Hawk*, *Kennel*, *Callow*, *Mouth*, *Doll*, *Romp*, *Tawdry*, and *Coquette*, return at night to serenade her (having stolen the key of the gate), while all the household is conveniently asleep—a condition which is highly improbable, but which must be taken, presumably, in an allegorical sense—she allows herself, in all innocence, to be carried down a ladder from her bedroom window, and, after brief and bewildered resistance to his ardent and artful wooing —in which he is assisted by the statue of Love, which becomes oracularly vocal—she consents to flee, and is straightway transformed into a *Pierette*.

"Three years later death and ruin have befallen the cottage. Only one of the old aunts survives, and she, a pauper, has been obliged to sell the place to a rich stranger. This is *Pierrot*, who has deserted *Prunella*, and now believing her to be dead is broken-hearted. No longer can he find any relief in the ribaldries of his boon companions, which now pall upon him. For their part, they deem him mad when he insists upon reenacting the scenes of the elopement three years before in the hope of raising

at least the shade of the lost *Pierette*. The latter, of course, is not dead, but, as a broken wanderer, crawls home to die, while the stage is empty. She reproaches the stone *Love* for his measure of responsibility in her misfortunes, and again receives from him an oracular assurance, of which the symbolism was not made very definite on Saturday evening. To *Pierrot*, when she confronts him a little later, she seems a spirit, and when she appeals to him to accompany her he regards it as an invitation to death. But now for her sake, being at odds with life, he is willing even to die, and upon this proof that pure love has succeeded to selfish passion, she takes him in her living arms, and the curtain falls."

"I have heard it said that New York will not 'fall for any such stuff,'" remarks that most sophisticated of our weekly journals, *Town Topics*, "but I hold that, besotted by commercialism and the lust of purely physical sensation as we are, there are still enough of us left with the poetry in our souls to keep 'Prunella' with us for many a day." This same journal warns off "that unmitigated and omnipresent nuisance, 'the tired business man,'" and prays heaven that "his snores will never disturb the Little Theater while 'Prunella' is holding the boards there." *The Times* quotes *Pierrot's* story of "the house that shut its eyes" as a specimen of "the delicate fancifulness which characterizes the play":

Asleep on the edge of a town,
Where the highroad ran by,
Stood a house with the blinds all drawn down,
As if waiting to die.

And everything there was so straight,
With high wall all about,
And a notice was up at the gate
That told Love to keep out.

But Love can not read—he is blind;
So he came there one day
And knocked, but the house was unkind,
It turned him away.

But, lo, when the gates were all closed,
When the windows were fast,
At night while the householders dozed
Love entered at last.

SHALL AN ARTIST WRITE FOR POPULARITY?

SO MANY OBJECTIONS have been raised against the creed of "art for art's sake" that not many workers in the realms of art employ it now. Mr. Anold Bennett is promulgating a creed that might be styled "art for popularity's sake," and tho he is ingenious in its advocacy, some shake their heads. The London *Evening Standard* fears that the time is hardly ripe for such a creed, tho it admits that Mr. Bennett "possesses no little plausibility in presenting his case." His pulpit is *The English Review* (London) where he has been delivering himself on the story-teller's art. He starts out with the assumption that "an author is justified in desiring immediate popularity, instead of being content with poverty and the unheard plaudits of posterity." The worst of it is, most writers are so occupied with themselves that what they would say, if put into words, is: "I shall write exactly what and how I like, without any regard for the public; I shall consider nothing but my own individuality and powers; I shall be guided solely by my own personal conception of what the public ought to like." Mr. Bennett, with more worldly wisdom, would have them say, "Let me examine this public and let me see whether some compromise between us is not possible," for, he argues—

"The truth is that an artist who demands appreciation from the public on his own terms, and on none but his own terms, is either a god or a conceited and impractical fool. And he is somewhat more likely to be the latter than the former. He wants too much. There are two sides to every bargain, including the artistic. The most fertile and the most powerful artists are the readiest to recognize this, because their sense of proportion, which is the sense of order, is well developed. The lack of the sense of proportion is the mark of the *petit maître*. The sagacious artist, while respecting himself, will respect the idiosyncrasies of his public. To do both simultaneously is quite possible. In particular, the sagacious artist will respect basic national prejudices.

"For example, no first-class English novelist or dramatist would dream of allowing to his pen the freedom in treating sexual phenomena which Continental writers enjoy as a matter of course. The British public is admittedly wrong on this important point—hypocritical, illogical, and absurd. But what would you? You can not defy it; you literally can not. If you tried, you would not get even as far as print, to say nothing of library counters. You can only get round it by ingenuity and guile. You can only go a very little further than is quite safe. You can only do one man's modest share in the education of the public.

"In Valery Larboud's latest novel, 'A. O. Barnabooth,' occurs a phrase of deep wisdom about women: '*La femme est une grande réalité, comme la guerre.*' It might be applied to the public. The public is a great actuality, like war. If you are a creative and creating artist, you can not ignore it, tho it can ignore you. There it is! You can do something with it, but not much. . . . . .

"This contact may be closened and completed by the artist's cleverness—the mere cleverness of adaptability which most first-class artists have exhibited. You can wear the fashions of the day. You can tickle the ingenuous beast's ear in order to distract his attention while you stab him in the chest. You can cajole money out of him by one kind of work in order to gain leisure in which to force him to accept later on something that he would prefer to refuse. You can use a thousand devices on the excellent simpleton. . . . And in the process you may degrade yourself to a mere popularity hunter!"

To get this far is only to go half way with an author in his relations to his public. He has still to see that his work "is placed before the public as advantageously as possible." The sensitive author will find that Mr. Bennett has small sympathy with his tenderer feelings. He will not let the author merely dream about the masterpiece he has created, for there is "an article to sell, and the more skilfully he sells it the better will be the result, not only for the public appreciation of his message, but for himself as a private individual and as an artist with further activities in front of him." Mr. Bennett proceeds:

"Now this absolutely logical attitude of a merchant toward one's finished work infuriates the dilettante of the literary world, to whom the very word 'royalties' is anathema.

"The dilettanti's snobbishness and sentimentality prevent them from admitting that, in a democratic age, when an author is genuinely appreciated, either he makes money or he is the foolish victim of a scoundrel.

"They are fond of saying that agreements and royalties have nothing to do with literature. But agreements and royalties have a very great deal to do with literature.

"If an artist writes a fine poem, shows it to his dearest friend, and burns it, I can respect him. But if an artist writes a fine poem, and then by sloppiness and snobbishness allows it to be inefficiently published, and fails to secure his own interests in the transaction, on the plea that he is an artist and not a merchant, then I refuse to respect him.

"A man can not fulfil, and has no right to fulfil, one function only in this complex world. Some, indeed many, of the greatest creative artists have managed to be very good merchants also, and have not been ashamed of the double rôle.

"The late discovery of a large public in America delighted Meredith and had a tonic effect on his whole system. It is often hinted, even if it is not often said, that great popularity ought to disturb the conscience of the artist. I do not believe it. If the conscience of the artist is not disturbed during the actual work itself, no subsequent phenomenon will or should disturb it. Once the artist is convinced of his artistic honesty, no public can be too large for his peace of mind.

"But many artists have admittedly no aptitude for merchantry. Such artists, however—and they form possibly the majority—can always employ an expert to do their business for them, to cope on their behalf with the necessary middleman.

"Not that I deem the publisher or the theatrical manager to be by nature less upright than any other class of merchant. But the publisher and the theatrical manager have been

subjected for centuries to a special and grave temptation. The ordinary merchant deals with other merchants—his equals in business skill. The publisher and the theatrical manager deal with what amounts to a race of children, of whom even archangels could not refrain from taking advantage.

"The same dilettante spirit which refuses to see the connection between art and money has also a tendency to repudiate the world of men at large as being unfit for the habitation of artists. This is a still more serious error of attitude—especially in a story-teller. No artist is likely to be entirely admirable who is not a man before he is an artist."

GORKY ASSAILING DOSTOIEVSKY

TWO GREAT FIGURES in Russian literature seem to have fallen foul of each other—Dostoievsky and Gorky. The former, of course, is dead and his place is becoming fixt not only among his fellow countrymen, but in the world at large. Gorky, according to recent reports, is expecting early death, and, in his home on the island of Capri, is feverishly working to finish his stint before the reaper takes him. His idea seems to be that Dostoievsky's writings are exerting an evil influence on the Russian character, and he has written a letter to the *Russkoye Slovo* to say so. The Moscow Art Theater staged with great success a few years ago an adaptation of "The Brothers Karamazov," and is now preparing a similar adaptation of another novel of Dostoievsky, "The Possest." Gorky condemns the production of such works as essentially harmful, and asks whether the presentation on the stage of the events and characters described in "The Possest" is "necessary and useful in the interests of social pedagogy." In the Manchester *Guardian* a St. Petersburg correspondent represents the position of Gorky in these further words:

"Dostoievsky, he says, is undoubtedly a genius, but 'he is our evil genius. He felt with inimitable penetration, he understood, he delighted in portraying' specifically Russian diseases, the morbid cruelty of the Nihilists and the impotence of the intimidated and downtrodden man. Dostoievsky writes, continues Maxim Gorky, as tho the Russian people consisted only of anarchist sensualists and half-dead fatalists. But it is impossible that such characters could have created and developed Russian culture. And in view of the impending work of social reorganization, that demands all the efforts of a sound and healthy people, it is dangerous to concentrate attention on Dostoievsky's characters by portraying them on the stage of the best Russian theater. The return to the 'so-called highest demands of the spirit' which is now noticeable in Russia does not provoke ethical development, distracts attention from real work, and is simply a result of the long subjection of the Russian spirit to the Church. Only the best and most useful must be chosen from the heritage of the past, not the worthless and the morbid. And in face of the growth of drunkenness and hooliganism, the Moscow Art Theater should aim at cultivating a healthy spirit rather than at emphasizing phases of character to which hooliganism is closely akin."

This strange misunderstanding by Gorky of the whole character of the great novelist's work, we are told, has evoked from the management of the Art Theater the following reply:

"In the midst of our difficult and joyful work in staging a second novel of Dostoievsky's your letter produced on us a particularly painful impression. It is not that we fear that the letter may cause the public to regard our theater as an institution which lulls to sleep the public conscience—the repertoire of the theater for the last fifteen years is a sufficient answer to such a charge. But it grieved us to learn that Gorky sees nothing in Dostoievsky's characters but sadism, hysteria, and epilepsy. . . . It is our duty as a body of artists to remind you that those highest demands of the spirit in which you see nothing but an empty play of words that distract attention from real work constitute, in our view, the primary aim of the theater. If you were to convince us of the truth of your view we should have to abandon art, for then it would have lost all meaning. And at the same time we should have to relinquish all that is best in Russian literature, seeing that it is devoted to the service of those very highest demands of the spirit."

CLARETIE LEAVING THE COMÉDIE-FRANÇAISE

PARIS HAD COME to feel that Mr. Jules Claretie, like the poor, she would have always with her. There have been rumors of his resignation often circulated; there were several threatened resignations; there was at least one definitely given and withdrawn, so that the announcement of his final leave-taking stirred up some skepticism. He has really departed from the directorship of the Comédie-Française, and his successor, Mr. Carré, formerly director of the Opéra-Comique, has been gazetted as his successor. He is seventy-odd years of age and has directed the fortunes of the most famous theater in the world since 1885. The Comédie-Française is the first State-subventioned theater of France, and lives rent free and receives $50,000 a year from the State. A writer in the London *Daily News* gives these further facts:

"It is the direct descendant of Molière's original company of the seventeenth century, which was democratically self-governed by the actors, and these democratic traditions are responsible for much that is anomalous in its present management. For when the company was officially taken over after Molière's death by Louis XIV. it became at once self-governing and court-controlled, and the same dual authority was carried on by Napoleon when in 1812, on a drumhead in Russia, he signed the Decree of Moscow, which with few modifications is the charter under which the theater is still carried on.

"The position of the administrator-general is therefore always a difficult, sometimes an almost impossible one. His final sanction is the State, as represented by the Ministry of Fine Arts, whose servant he is. At the same time he is at the head of an organization nominally self-governed by the Sociétaires or leading actors, who are also the sole shareholders, altho their resolutions can be quashed by the Government, as happened in the case of Mlle. Dudlay in 1886, and was the first cause of the elder Coquelin's resignation. This position M. Claretie has filled with extraordinary tact and skill since October, 1885. As Coquelin *cadet* said to him in a speech at the twenty-fifth anniversary of his management three years ago, he often played his difficult hand with '*une diplomatie machiavélique*'—so successfully Machiavellian, indeed, that tho the actors often clamored for his resignation, yet whenever he threatened to take them at their word they asked him to withdraw it."

At the present moment, declares Mr. Emile Faguet, in *Le Gaulois* (Paris), there are "still more to regret his going than to rejoice over it, which is most unusual in such cases." Wherewith Mr. Faguet proceeds to show how Mr. Claretie has achieved high success, in work thick with pitfalls and difficulties, as much through the force of his personality as through the enlightenment of his mind. For one thing Mr. Claretie has always had the happy gift of being able to make enemies that did not last—and Emile Faguet remarks:

"He made many enemies. In his position it would have been impossible for him not to make some. First, not to have made enemies would imply a miracle. Then it would imply also a lack of character. Character is everywhere a rarity, the lack of it is everywhere an evil, but the lack of character at the Comédie-Française would be a calamity. So, while Mr. Claretie made many enemies, they were enemies only for a short time. As there are men who can make friends but cannot keep them, so there are men who can make enemies but cannot keep them. Mr. Claretie is of the latter kind.

"He knows how to command, how to refuse, but one always feels that when giving an order he is really only persuading one's obedience, and that while he refuses a thing it would be a great pleasure for him to grant the request."

Apart from the charm of his sincerity, this writer points with admiration to the devotion, profound and tender, yet wholly free from ostentation, with which Mr. Claretie has cherished the ideals of the House of Molière. Nor is he less handsome in praise of what he calls Mr. Claretie's "sureness of diagnosis and judgment" in the choice of plays. "Of course," Emile Faguet adds, "he has selected certain plays of which I have not considered well;

and he has declined others that I would rather have seen him produce. In the main, however, his critical acumen is exceptionally quick and sound, which is no easy matter in the theater, where one can never foretell the destiny of a play 'before the candles are lighted,' that is, before it is played; or, even after they are extinguished and the first performance is over." Mr. Claretie's mistakes, however, have been few and far between, we read, and the reason is plain to see, if we ponder on the literary career that preceded his incumbency as director of the Comédie-Française.

"At thirty he was an old hand at letters. He began to observe, to investigate, to think, to judge, and to write during his eighteenth year. About 1870 he was an old Parisian of twenty-eight years. Before taking charge of the Théâtre Français he had written novels, plays, historical sketches of Paris, and had done journalistic work. To an acute degree he was dowered with the sense of French literature and of the French public, but even more particularly of the literature of Paris and the public of Paris. That describes him sufficiently, and to my mind there never has been a director of the Théâtre Français more plainly destined for the post."

Copyrighted by C. Gerschel.

HEAD OF THE COMÉDIE-FRANÇAISE FOR TWENTY-EIGHT YEARS.

Mr. Jules Claretie, who has just resigned this post, gave the public "the last glories of the past" and "consecrated all the glories of the new day."

As has happened to all the directors from Molière down, the writer informs us, Mr. Claretie had his troubles with the actors of the company; but he contrived always to get himself out of them with honor to himself and to the theater. He never lost his temper, but when hemmed about with vexation was able to contain himself with more than his usual calm and to show a surface expression colder than habitual. This diplomacy of temperament goes far, Emile Faguet says, with actors, "men and women generally of a nervous disposition, inclined to irritability"; and in settling disputes and misunderstandings, while of course not changing the stormy tendencies of the actors, he compares Mr. Claretie to oil upon troubled waters. Turning to his record as a producer for France's proudest theater, he states:

"Mr. Claretie gave the public the last glories of the past and consecrated, by admitting them to the Théâtre Français, all the glories of the new day. He tried out conscientiously many of the younger generation, who hardly delivered as much to him as he had hoped for, or wished. Yet he will always be credited with having welcomed, encouraged, aided, and proved them, than which there is no purer fame for a director of the Comédie-Française.

"One day I said to him: 'You've just put on a play that's a failure in your house, yet in any other theater would have been said to be worthy of Shakespeare. Then, why should any one complain?' He smiled. He understood what I meant; he knew even before the piece was produced. Yet why should he complain? The fact is, he never did complain of anything with bitterness.

"I was only reproaching him a bit for being too much of an old Parisian, having been such in his adolescence, and for not having an excessive complaisance toward the classics. As a matter of fact his taste, while wholly eclectic, which is proper in a director of the Comédie-Française, nevertheless balked a little at the classics, or at least did not take them up as generously as I desired. On this point there is always the defense that if the classics are not played much, it is out of love for them, and because one would not care to see them played unless divinely. In politeness he refrained from giving me that argument; and it may be he never even thought of it. Putting this aside, the fact is that under Claretie the House of Molière was not often the House of Corneille. Yet it is true also that under Claretie we saw a revival of 'Rodogune,' a play of which no director for a long time had even thought, and which proved to be a revelation. Nobody thought it would be a success, and everybody discovered it to be a triumph. We must not forget the good surprizes he has given us."

If he must go, then, Emile Faguet sums up, "let him go, having gloriously merited the distinction *emeritus;* but if you want to see or know a person of skeptical mind, look at my signature," and he adds:

"M. Claretie has always been torn between the desire to leave the Comédie-Française and the longing to remain there. . . . He is like the man—as long as it's Chateaubriand, I think no harm's done—who could not get along without the things he didn't care anything about. He has always wanted to escape, while having a muted craving for his prison, and has always wished to remain while possest of a lively impatience to be set free. It is possible that this is his present state of mind."

Some of the well-known actors and actresses who have been at the Théâtre Français during Mr. Claretie's reign are recalled by the writer in *The Daily News:*

"When Jules Claretie succeeded Emile Perrin at the house of Molière in 1885, the company still numbered many of the great actors of the middle of the century. . . . Sarah Bernhardt, tho she was still young, had already resigned some years before, but there were Got, Delaunay, the two Coquelins, Mounet-Sully, Maubant, Febvre, Worms, Prudhon, and Silvain among the male, Sociétaires, and Madeline Brohan, Reichemberg, Jeanne Samary, and Bartet among the ladies: while the Pensionnaires, or younger actors not yet admitted to full membership, included Truffier, Le Bargy, Leloir, de Féraudy, Duflos, and A. Lambert the younger, as well as Mesdames Kalb and Pierson."

RELIGION AND SOCIAL SERVICE

MINISTERS WHO RUN CITIES

THOSE WHO INSIST that ministers should leave politics alone, and those who profess to believe that "a minister is not the right sort of a man to be placed at the head of a million-dollar corporation such as a large city," might read with profit the Rev. Judson Lewis Cross's *Congregationalist* article on "Ministers as Mayors." Mr. Cross happens to know something of the work of three Congregationalist pastors who first became interested in civic reform, and then were given the chance to run the good-sized cities in which they had preached. And all three, according to this writer, love their jobs and are remarkably efficient in them. These men are W. J. Hindley, George R. Lunn, and George A. Brock, who exercise the chief magistracy in Spokane, Wash., Schenectady, N. Y., and Lockport, N. Y. Mayor Lunn, it is true, was defeated for reelection last week, but only through a combination of the other parties against him; he looks upon the fact that his vote was increased over that of two years ago as an indorsement of his administration. The predominant impression gained by meeting these and hearing them talk enthusiastically of their work, so we read, "was in the case of each that of an unusually strong personality, positive in the belief that churches and ministers should assume the leadership in civic and social reforms, independent and fearless, sensible of the responsibilities and burdens of office, yet optimistic of the future and confident of the religious as well as the social significance of the results obtained."

Mayor Hindley, of Spokane, we read in *The Congregationalist*, is a Canadian by birth, and was for seven years pastor of the Pilgrim Church in that Western city. He became an active worker for reform, was largely instrumental in bringing the city's present park system into existence, and was one of the leaders in the movement for a commission form of government. Upon the adoption of the commission plan he consented to run for a commissionership. Except for one man whose experience as city official gave him a place without contest, Mr. Hindley received the largest vote. He was chosen chairman of the commission, and is "virtually mayor, presiding at the sessions and acting as the head of the Department of Public Affairs." Here is what Mr. Cross has to say of his work in office:

"Mr. Hindley's term does not expire until December 31, 1915, but already in his eighteen months of office-holding he has achieved fine results along the lines of reform and efficiency advocated in the pulpit. The so-called 'Contractors' Ring' has been broken up with a consequent saving in the cost of public improvements of over 40 per cent. of the cost under the old system. A reduction in the tax levy for the coming year of $90,000 has been made possible in spite of an increase of $250,000 in the budget for expenditures voted by the people or contracted by the previous administration. Efficiency and merit have displaced favoritism and political debt-paying as grounds for civic preferment.

"By a strong enforcement of existing laws forty saloons have been forced out of business, and vice has been driven to cover, so that it can be said that there is no commercialized vice in the city. As the mayor himself put it, 'There is not a street or alley in the city where you can go with a ten-year-old girl and see anything, other than perhaps a drunken man, that will call for an explanation from your lips or cause a blush upon her cheeks.' While there have been some attempts to recall the mayor, these have never reached serious proportions.

"Interviews with business and professional men of Spokane brought forth, for the most part, expressions of hearty praise for the administration and a unanimous indorsement of the commission plan—a good testimony to the seriousness and efficiency with which Mayor Hindley has tackled his job as mayor of this progressive Western city of 110,000 inhabitants, a job with which he declares he is very much in love, tho he hopes eventually to resume the work of the ministry."

The second member of this trio, Mayor Lunn, of Schenectady, needs no introduction to LITERARY DIGEST readers. Mr. Cross calls him "the mayor that made Schenectady famous." His election as Schenectady's first Socialist mayor, after years as a Reformed, then as a Congregationalist, minister is remembered by all. Despite the partizanship of the opposition press and the prejudices entertained by many conservative church members against anything having "the stigma of Socialism," the evidence, as the writer sees it, shows that Mayor Lunn—

"has steadily gained ground and won the confidence of many who do not agree with him politically, but who believe in him personally, and who are willing to admit that he has given to the city its best administration for many years. To quote the expression of one prominent man of a different political faith, 'Lunn's administration has been a godsend to Schenectady.'

"With a passionate devotion to the cause of the people, an unusual power as a public speaker, and with a grasp of civic affairs and political methods which few experienced political leaders could rival, Dr. Lunn has thrown himself unsparingly into his task of administering the affairs of a city of ninety thousand and has proven himself equal to it, and more than a match for his political opponents.

"Large public improvements, long dreamed of but never realized, including the planning and starting of a comprehensive park system, the expansion of the educational equipment, and the installation of modern sewerage and garbage-disposal plants, have been put through with an economy and honesty that have saved the city thousands of dollars and incidentally destroyed the control of certain contracting interests. All gambling-houses have been closed where convictions could be obtained; Sunday-closing laws have been enforced against all alike, and prostitution suppressed as far as conditions would permit, one notorious and long-tolerated character being driven from the city. Serious criticism and protests on the part of the clergy and church people have been aroused by the liberal policy toward Sunday amusements and moving-picture shows, tho the same element has failed to recognize, for the most part, the fact that, according to the testimony of the State Law and Order League, vice conditions are the best in the recent history of the city and of any city in the State. . . . . .

"In answer to the question, How do you like your job? Dr. Lunn replied, as his face sobered: 'I love it, but only as I can realize that I am actually doing something for social uplift, only as I can feel that it is the expression of my religion and that by it I am helping the Kingdom. Otherwise the strain, the constant struggle and bickering are not worth while.'"

The third, "and perhaps most modest of our ministers who have become mayors," continues Mr. Cross, is Mayor George A. Brock, of Lockport, N. Y. Tho less conspicuous than the others, his work as the head of a city is, we are told, "none the less real, and the more unique because it has been combined successfully with regular parochial duties." To proceed:

"Mr. Brock is pastor of the East Avenue Congregational Church of Lockport. After being defeated in his first campaign on the issue of commission government, he was finally elected on a non-partizan ticket, backed largely by the support of the church element. Tho seriously handicapped by lack of harmony in the city council, much has been accomplished in the way of reform, especially in the enforcement of all laws against vice, and so bitter has been the opposition that in some cases it has taken the form of threats of personal violence against the mayor, but this has not worried him.

"Any one who has met this big mayor and heard him tell of his experiences in dealing with grafters and representatives of the saloon interests would never envy the unfortunate individual who felt moved to seek from him political favor. Mr.

MINISTERS WHO ARE ALSO MAYORS

And who believe churches and ministers should assume an independent and fearless leadership in civic and social reforms.

Brock's entrance into political office was simply the acceptance of obligations which came upon him as the result of his sincere insistence upon the need of non-partizanship in municipal government and the responsibility of Christian citizenship."

CAPITALISM AND THE JEWISH RELIGION

THE ENORMOUS INFLUENCE of the religion of the Jewish people on their economic activities, if it did not actually produce the Jewish capacity for capitalism, has undeniably enhanced it, says Werner Sombart in his recently translated book, "The Jews and Modern Capitalism," and he proceeds to devote a whole chapter to this peculiar significance of their religion. What is more, he cites a colleague, Max Weber, as having demonstrated the connection between Puritanism and Capitalism, in order to provide additional argument that the religion of a people does deeply affect its economic life. Judaism, Sombart finds, however, makes the deepest mark of this character, because "among no other civilized people has religion so impregnated all national life."

With the Jew, we are reminded, religion is not merely a matter of Sundays and holy days. It is with him all days of the year and all hours of every day. He is guided by it in every move he makes, asking himself always: "Will this tend to the glory of God or will it profane his name?" Jewish law does not merely formulate "a metaphysical conception," but lays down rules of conduct whether as between man and man or between man and nature. In this connection Sombart points out that Jewish law "is as much a part of the religious system as are Jewish ethics." In truth there are no special ethics of Judaism, because the law is from God, and "moral law and divine ordinances are inseparable." Moreover, he tells us, no other people have been so careful as the Jews to insure the teaching of their religion, on which point he quotes from Josephus: "Ask the first Jew you meet concerning his 'laws' and he will be able to tell you them better even than his own name." Between their religion and capitalism Sombart draws a parallel. As for their religion:

"In all its reasoning it appeals to us as a creation of the intellect, a thing of thought and purpose projected into the world of organisms, mechanically and artfully wrought, destined to destroy and to conquer nature's realm and to reign itself instead. Just so does capitalism appear on the scene; like the Jewish religion, an alien element in the midst of the natural, created world; like it, too, something schemed and planned in the midst of teeming life. This sheaf of salient features is bound together in one word, Rationalism. Rationalism is the characteristic trait of Judaism as of capitalism; rationalism or intellectualism—both deadly foes alike to irresponsible mysticism and to that creative power which draws its artistic inspiration from the passion world of the senses."

Following this line, Sombart calls attention to the fact that the Jewish religion knows no mysteries, and is "perhaps the only religion on the face of the globe that does not know them." Unknown to it is the ecstasy that permits the worshiper "to feel himself at one with the Godhead, the condition which all other religions extol as the highest and holiest." Whether these fantastic, mystical elements are met with in the religion of the Hindus, Persians, Greeks, Romans, or Christians, Judaism with proud disdain condemns them all. While the faithful of other races "hold converse with God in blissful convulsions," we are informed, the Jews in the synagog, which significantly is called a *Shool*, that is *school*, are listening to a public reading of the Torah. Continuing, Sombart says:

"The kinship between Judaism and Capitalism is further illustrated by the legally regulated relationship—I had almost said the business connection, except that the term has a disagreeable connotation—between God and Israel. The whole religious system is in reality nothing but a contract between Jehovah and his chosen people, a contract with all its consequences and all its duties. God promises something and gives something, and the righteous must give him something in return. Indeed, there was no community of interest between God and man which could not be exprest in these terms—that man performs some duty enjoined by the Torah and receives from God a *quid pro quo*. Accordingly no man should approach God in prayer without bringing with him something of his own or of his ancestors by way of return for what he is about to ask.

"The contract usually sets forth that man is rewarded for duties performed and punished for duties neglected; the rewards and punishments being received partly in this world and partly in the next world. Two consequences must of necessity follow: first, a constant weighing up of the loss and gain which any action needs must bring, and secondly, a complicated system of bookkeeping, as it were, for each individual person."

It is evident, Sombart goes on to state, that since Judaism rests upon a contract between God and his people, each party to the agreement must have definite responsibilities; and he points out how the Jew that lives up to his pledges assures himself material profit as well as spiritual. As he puts it:

"I really believe that the rationalization of life, and especially of the sexual life, which the Jewish religion effects, can not be too highly estimated for its influence on economic activities. If religion is at all to be accounted a factor in Jewish economic life, then certainly the rationalization of conduct is its best expression. . . . Sobriety, moderation, and piety are surely qualities which stand the business man in good stead."

Yet what Sombart describes as "the morality of the small shopkeeper," good as it may be, can have but little to do with capitalism except as the qualities of the class might serve as a basis on which capitalism could be built up. The first cause which made the Jews "pioneers of capitalism," he finds, is their cultivation of family life, which he attributes to the efforts of the Rabbis, aided by the vicissitudes of the Jewish people. The sexual restraint implied, he adds, resulted in enormous funds of energy being turned in a better direction; and he concludes:

"The effect of the rationalization of the whole of life on the physical and intellectual powers of the Jew must still be gone into by scientists; at present we have only beginnings of such studies. . . . The rationalization of life accustomed the Jew to a mode of living contrary to (or side by side with) nature, and therefore also to an economic system like the capitalistic, which is likewise contrary to (or side by side with) nature. What in reality is the idea of making profit, what is economic rationalism, but the application to economic activities of the rules by which the Jewish religion shaped Jewish life? Before capitalism could develop the natural man had to be changed out of all recognition, and a rationalistically minded mechanism introduced in his stead. There had to be a transvaluation of all economic values. And what was the result? The *homo capitalisticus*, who is closely related to the *homo Judæus*, both belonging to the same species, *homines rationalistici artificiales*.

"And so the rationalization of Jewish life by the Jewish religion, if it did not actually produce the Jewish capacity for capitalism, certainly increased and heightened it. One of the causes to which the Jew owed his economic progress was . . . the fact that Israel was for generations a stranger and an alien. If we seek to account for this aloofness we shall find its roots in the ordinances of the Jewish religion, shall find that this religion always maintained and broadened the line of separation. As Leroy-Beaulieu, who has studied this aspect of Jewish history with great success, has so well said, '*La loi leir donnait l'esprit de clan.*' The very fact that they had their Law forced the Jews to live apart from the Gentiles. For if they desired to observe the Law, they needs must keep to themselves. The Jews created the Ghetto, which from the non-Jewish point of view was a concession and a privilege, and not the result of enmity."

TOO MANY SPECIAL SUNDAYS—The proposal that some Sunday be designated as "Fathers' Day" and observed by the Churches "with appropriate services and special sermons," calls forth a serious protest from *The Christian Intelligencer* (New York) that we now have too many "special Sundays." The Church, this weekly declares, "has long enough been laden with man-made topics and causes." With this *The Episcopal Recorder* (Ref. Epis., Philadelphia) is in hearty agreement, and desires to emphasize the fact that "Sunday is the day appointed by God for our special growth in grace and in the knowledge of our Lord and Savior Jesus Christ." There are already "sixteen Sundays devoted to the consideration of special occasions and topics," according to *The Christian Intelligencer*. And it goes on to enumerate them:

"January 4, New Year's Sunday; January 25, Child-Labor Sunday; February 8, Lincoln's Sunday; February 22, Washington's Sunday; April 12, Easter Sunday; April 19, Sabbath Observance Day; May 10, Mothers' Sunday; May 17, Peace Sunday; May 24 or 31, Memorial Sunday; June 14, Children's Sunday; June 28, Independence Day Sunday; September 6, Labor Sunday; October 25, Prison Sunday; November 22, Thanksgiving Sunday; November 29 to December 6, Tuberculosis Day; December 20, Christmas Sunday."

And when the editor examines "this rather formidable list," he finds that "only five of the sixteen can be considered as in any true sense connected with direct spiritual development or culture."

"These are the Church days of New Year's, Easter, and Christmas, Thanksgiving Sunday, which is really needless as a separate day if the officially designated National Thanksgiving Day is properly observed with religious services, and Children's Day, which, tho universally sanctioned by neither ecclesiastical nor civil authority, is of undoubted religious value in emphasizing the responsibility and privilege of the Church in reference to the spiritual care of her children and youth. Of the other special Sundays, Memorial Sunday and Independence Sunday have something of a spiritual culture in their bearing upon the civic rights and duties of the Christian."

DR. SHELDON'S "CONFESSIONAL"

THE SUGGESTION of a Protestant confessional, made last summer by one of the leaders of Protestant thought, led some to the hasty conclusion that he advocated the Protestant adoption of the Catholic institution. In our issue of August 16 appeared an article on this proposal of the Rev. Charles M. Sheldon, of Topeka, Kansas, who uttered his views before the Christian Endeavor Convention at Los Angeles, and while we stated the matter clearly, other newspapers and individuals in various quarters, he feels, have given distorted views of what he proposed. Mr. Sheldon finds no fault with the representation accorded him in our columns, but we give him the opportunity of making a further statement in order that he may be clearly apprehended by all concerned. He writes:

"In the first place, I do not believe that because the Roman Catholic Church has a confessional which stands for certain things no Protestant can accept, therefore the Protestants can not make use of a fundamental need in human nature which craves help and a sharing of its burdens.

"In the second place, I do believe in the right and privilege of the Protestant minister to stand in such a relation to his people that they will turn to him as the confidant of their troubles and make him the counsellor of their problems.

"There is nothing 'Roman Catholic' about this—it is simply human nature, which is not a monopoly of any Church. I object, in my ministry, to the idea that the Protestant is 'imitating' the Catholic when he uses a universal human principle.

"My meaning of the term 'Protestant confessional' may be summed up as follows:

"1. The Protestant minister should be in the closest possible relations to all the people in his parish as a spiritual and practical adviser and friend. If he is not able to win the perfect confidence and respect of his people so that they will naturally regard him as their best friend in spiritual matters and in general counsel, then no 'confessional' is possible.

"2. If such relations are established, the minister will find that it is a help to definite usefulness to have a stated time during the week when his people can come to him with their problems. Sunday afternoon is a good time for such counsel. I have found it so in my own practise for many years.

"3. There are many problems in the lives of men and women that they can not and will not discuss with their own relatives or friends. If it is an established custom to take such problems to the minister, it will be accepted with a great feeling of relief and gratitude.

"4. The number of such troubles and the kind are limited only by the number of people who come to the minister for help.

"5. In all this there is not the remotest similarity to the Roman Catholic confessional as that is actually practised. The last thing in the world that the Protestant minister wants is a 'copy' of the Roman Catholic confessional. What he does want and ought to have is a personal relation to his people of such a character that he will come to be with them the one person in all the parish who can help them solve their earthly troubles and help bring them close to God. In all this there is not the remotest hint of 'absolution for sin' or 'pardon for sin' or 'indulgence.' Of course it goes without saying that the practise of such a 'confessional' as outlined here means heroic qualities in the ministry and an enlargement of the definition of 'parish work.'"

INVESTMENTS AND FINANCE

FUTURE RAILWAY FINANCING IN MARKETS "WATERLOGGED WITH BONDS"

By JAMES J. HILL *

Author of "Highways of Progress," and familiarly known as "The Empire Builder of the Northwest."

LESS than a year's subsistence stands between man and starvation. That is the measure of his accumulations. Six and a half bushels of wheat per capita is a low estimate for consumption and seed. The 97,000,000 people living, according to the census estimate, in the United States in 1913 would require 630,500,000 bushels to keep their stomachs and fields in condition for a year. That is a little less than the crop of 1911 and a little more than the crop of 1912. Subtract our total exports of domestic wheat and flour for the last three years from our total wheat production, and the average surplus retained for home consumption is less than 600,000,000 bushels per annum.

What is true of our bread supply is more than true of most other necessaries that we consume and produce. We could live for a few months only on our savings. Immense as seems the total of accumulated wealth, most of it is not available for consumption. Even the income from it must be transformed into things to eat and drink and wear, and tools to work with; into capital for future production, without which not only the machinery of industry, but the human machine itself, would presently cease to operate, and a dead world remain the monument of defeat in that economic battle which man has waged with nature from the beginning.

The principal asset of the world, aside from the land, is its plant; in the form of buildings, machinery, transportation agencies, apparatus of all kinds in which capital has been fixt to enable the work of production to go on in increased volume and with added economy. To this every man who earns more than he spends contributes. Into this tremendous reservoir the surplus efforts of the ages have poured contributions from the hundreds of millions of men who, by planning, directing, and working, add to the margin of profitable production all over the world. Credit enables them to do this. They acquire a participating interest in a host of enterprises through loans represented by shares of stock, bonds, notes, or other instruments of credit. This relation of operating efficiency on the one side and credit support by capital on the other, in its extent, artfulness, and practical working success, is the principal advantage of modern over ancient civilization. There is less difference between the forked tree drawn by cattle and the improved steam-plow than there is between labor in the isolation of distrust and labor in the universal cooperation which credit facilitates and encourages. No wonder that credit has been called the most wonderful invention and the greatest wealth-producer devised by man.

Investment securities are mostly stocks and bonds. The former entitle the holder to a proportionate voice in the management of the concern, and to a share in the profits or a responsibility for the losses. The place of the share of stock has changed little. The bond has been subject to alteration and dilution. With a great increase in total volume has come a depreciation of many of them in both reputation and quality.

It happened, perhaps inevitably, because of the increase of capital for investment, the increase of vision and of daring among borrowers, and the assured reputation of the bond, that its standing was slowly sapped. The repudiation of debts by some American States gave public credit a heavy blow. Panics and reorganizations compelled a closer scrutiny of corporate securities. But the main cause of such deterioration as the bond has suffered is the putting out under that name of a great volume of paper promises which are not entitled to the name. And this is partly the effect of the excessive borrowing and spending of our day, and partly that of an expansion of industrial effort and an inflation of the capital of industrial enterprises which have often raised the total of bond issues, heretofore representing the value of the property under the hammer, to approximately the figure that would once have covered stock and bonds combined. In fact, the stock of more than one pretentious concern would have nothing behind it if the bondholders had to be paid off. Nor could the latter themselves hope to receive dollar for dollar on a forced sale.

Criticism, or even a proper understanding of the situation, calls for discrimination between the classes into which bonds are divided. First are those of public bodies; the Government, States, counties, cities, and sometimes villages. Here a frightful inflation is going on. An old-fashioned public aversion to debt still holds the nation and, to some extent, the States in check; tho many of the latter evade it by marketing certificates of indebtedness which differ from bonds only in the shorter time they have to run and the inferior weight of the sanction behind them. The total national debts of Europe rose from about eight billion dollars in the period 1845–48 to nearly thirty billion dollars in 1905–07. With the exception of a slight rise in 1899, made good the following year, the total debt of the United States, less cash in treasury, was greater on the first of last May than it had been for twenty-five years. In a study of credit made some time ago, I showed that the net ordinary expenses of the United States Government had increased 1.4 per cent. between 1870 and 1890, and 121.4 per cent, between 1890 and 1908; while between 1890 and 1909 the expenditures of the thirty States from which reliable reports could be obtained had increased 201.6 per cent.

Most of our cities are mad spenders, intent only on securing an increased margin for bond issues by raising the assessed valuation. Not a few of them are meeting part of their current expenditures by issuing bonds; while refunding, instead of levying taxes to pay at maturity, has become the almost invariable rule. Several large cities whose credit has always stood high have offered bonds within the last few months without finding takers, even at an increased interest rate. This collapse of the market is due not only to a relative scarcity of investment capital at the time, but also to an underlying consciousness on the part of the public that the danger-line has been reached.

In the five years between 1907 and 1912 the sales of municipal bonds in the United States nearly doubled. According to a summary made this year by the *Commercial and Financial Chronicle*, the average sales for the period immediately preceding 1904 were about $150,000,000 a year. In 1911 they were $396,859,000, and in the dull year 1912 they were $386,551,000. This is an enormous increase for the market to digest. But it is far from telling the whole story. This amount represents only our own actual municipal-bond sales within the territorial limits of the United States. New York has now become a financial center to which outside customers resort for purchasers. Adding to the domestic municipal-bond sales the temporary loans and sales on account of Canada, Hawaii, Porto Rico, and other borrowers in our market, the grand total for the year amounts to nearly $781,000,000. The figure speaks for itself.

It is fairly certain that our market can not absorb such a flood without a perceptible increase in the interest rate and some financial derangement in the conduct of ordinary business. Thus the unchecked rage for borrowing affects not only those who sell securities, making it more difficult to place bonds, but also general business operations, by lessening the supply of available free capital and increasing the price at which it can be had. If the true story of all municipal indebtedness, now concealed behind various temporary makeshifts, so as to maintain an ostensible credit and help push out the annual crop of new or refunding bonds, could be told, it would shock the country and give pause even to the advocates of unlimited expenditure for public purposes.

The situation with regard to bonds generally spoken of as "industrials" is worse. The field is so large and so diverse as to defy statistical tabulation. Hundreds of millions of bonds have been issued to promote consolidations, these securities being part of the purchase price of the smaller concerns to be united in one big corporation. Other hundreds of millions have been issued against property still to be developed, such as mines, timber lands, irrigated lands, and even ordinary real estate, where many separate holdings are combined in the hands of an active selling or developing concern. These are

REVIEWS OF NEW BOOKS

ROMANCE IN OUR OWN COUNTRY

Schauffler, Robert Haven. Romantic America. Large 8vo, pp. 339. New York: The Century Company. $5 net.

There are two objects in leaving home for strange scenes and cities. The first is that of meeting grand or beautiful scenery, scaling majestic mountains, or visiting great waterfalls. Many people leave their homes and cross deserts or sail along shores whose frowning cliffs are almost uninhabited, or uninhabitable, merely for the sake of enjoying new impressions. We are not speaking of scientific travelers like Alexander von Humboldt, who took the whole external world or the fields of his explorations; or like Dahl, who discovered the dahlia in Mexico; or Zinn, who introduced into Europe the zinnia from the same country. We refer to pleasure-seekers.

Now, besides those who hunt after the picturesque there are others who do not care so much for scenery as for associations. A building, an old castle, a Roman camp or amphitheater, a cathedral, or a palace each or all are examined with delight, and their history and the traditions that cling to them dwelt upon or call up the pageantry of the past. Singular to say, America to intelligent travelers combines in a great degree both these attractions.

The author of this volume, who wrote "Romantic Germany," proves to the satisfaction of the reader that American scenery is the grandest in the world and its historic places are all the more interesting because they are not so far removed from us as the monoliths of Stonehenge, the pyramids of Egypt, or the hall of William Rufus. Mr. Schauffler has done justice to his theme and takes his reader from the romance of New England to the romance of the Colorado cañon and Yellowstone Park. The colored illustrations are vivid and faithful and the half-tones well drawn and well printed. This book will teach many restless globe-trotters that they had better stay at home and study what a world of beauty and historic association is lying unnoticed at their very door.

BOOKS ABOUT WOMEN

Mozans, H. J. Women in Science. Pp. 417. New York and London: D. Appleton & Co. $2.50 net.

Dr. Mozans has sought to become a sympathetic historian of women of intellectual eminence—women who have achieved something in the domain of the mind. He believes they have received too little credit. First, he outlines "woman's long struggle" for things of the mind, from ancient Greece and Rome, through the Middle Ages, the Renaissance, and even to modern times. Under the magic of his pen, Aspasia, Hypatia, Sappho, Hildegarde, and Vittoria Colonna become living influences conferring glory on their sex. The fact that for ages women were excluded from all opportunities for attaining and exercising knowledge is believed by the author to be the only reason for lack of attainment on woman's part. He cites countless illustrations to show how quickly women responded when they had the opportunity.

Woman's participation in the progress of such sciences as mathematics, astronomy, physics, chemistry, medicine, and surgery are carefully analyzed. We are surprized at the array of famous names associated with wonderful achievements: Maria Agnesi, Caroline Herschel, Mrs. Somerville, Mme. Curie—names of which the public knows all too little in the way of appreciation. The author gives many facts about women inventors. He makes one feel that perhaps the reason why so few women appear on the list of the "great" is that women, as in the case of Mme. Curie, have not been admitted because they are women. All who are interested in the progress and advancement of women will be inspired by this exhaustive treatment by Dr. Mozans. He believes in woman as an inspirer and doer of great deeds and has unlimited faith in her future. He has yielded recognition to every woman who has "achieved distinction since the beginning of the world."

Chesser, Elizabeth Sloan. Woman, Marriage, and Motherhood. Pp. 275. New York and London: Funk & Wagnalls Company. $1.50. Postage extra.

The author, a physician and daughter of a physician, has had exceptional opportunities for studying the sources of the wrongs and suffering with which social reform has to deal. She outlines, here, reforms and readjustments which, tho desirable, can be attained only by slow degrees. While the author is English and the subject matter naturally treated from an Englishwoman's standpoint, the illustrations are chosen from all countries. A glowing tribute is paid to the superiority of American prisons and their reforms.

The theme of the book is motherhood and its protection, even the motherhood of the unmarried. We are shown, historically, the development of marriage laws and customs, and the legal position of woman as wife and mother in different countries. Ways and means for bettering her position are carefully considered. The author's discussion of divorce and its connection with present marriage customs is illuminating. Her exposition of the suffering of the "sweated mother" in the home is appalling. Nowhere is she more direct than in her discussion of the social evil, which she describes from every point of view. While we believe that there is no one way to check that evil, we are forced to agree with the author that some of it could be obviated by making possible for woman a living wage. Each one of us is guilty to the extent of our participation in the universal craze for cheap commodities, which make necessary sweat-shop wo k and underpaid employees. This is a book that should be read by every one interested in woman's progress and the world's betterment.

Hartley, C. Gasquoine (Mrs. Walter Gallichan). The Truth About Woman. Pp. 385. New York: Dodd, Mead & Co. $2.50 net.

Just now the world is very much concerned with the problem of woman's restlessness, its sources and probable relief.

This particular volume by Mrs. Gallichan is a frank and comprehensive statement of conditions as she sees them. With a firmly fixt faith in woman, she gives suggestions for bettering conditions and aiding in woman's progress. She writes: "No one of us can be free, for no one of us stands alone; we are all members one of another, and woman's destiny is rooted in the race. No freedom can be of service to woman unless it is freedom to follow her own nature."

In her plan for establishing woman's claim to freedom, the author divides her book into three parts. In the first and second she proves, biologically and historically, that woman has not been the inferior, dependent being she is so often called, but that her freedom is deep-rooted in the past. In the third she deals with present-day aspects of the woman's problem, "the differences between woman and man, and the relation of the sexes." She traces the origin of sex and its early relationship, describes civilization in different lands through the matriarchal and patriarchal periods, and finally discusses all phases of woman's power and its expression. To the author's mind, woman's lack of expression in the arts is due to lack of training and opportunity, not to inability. "I make the claim that woman, from her constitutional femininity, is a compound of all those qualities that genius demands." The chapters on Marriage, Divorce, and Prostitution are enlightening and thorough, savoring strongly of the ideas of Ellen Key.

Mrs. Gallichan believes that when woman's right of selection is given back to her to exercise without restraint, we shall see more beautiful mating. "We are only awakening to the terrible evils of these powerful economic restraints which now limit woman's range of choice and drive her to revolt." Her conclusions are loyal and enthusiastic: "The manifestations of the present are only the superficial evidence of a deep undercurrent of awakening. Surely from out of the wreckage and passion a new woman will arise."

RECENT NOVELS

Barclay, Florence L. The Broken Halo. Pp. 471. New York and London: G. P. Putnam's Sons.

This author of popular novels must have some very strong opinions in regard to marriage between persons of unequal ages. In "The Postern Gate," her hero is younger than the heroine, and in this new book the discrepancy in ages is almost too great to make the story plausible. Forget that, however, and the reader will be charmed by the tenderness exprest by "Dr. Dick" for the patient who afterward becomes his wife under very tragic, dramatic, and unusual conditions.

When a child of five, Dick had his sensibilities very much injured by the unkind treatment of those whom he had trusted. His religious belief was shattered much as he shattered the halo, the "gold tin-plate" which surrounded the apostle's head in the chapel's stained-glass window, a deed which was the outward manifestation of his inner revolt. When, as a young physician, Dick is able, through singular coincident circumstances, to "get even" with his childhood enemies, he antagonizes some influential characters and nearly loses his mascot, the "Little White

"You ought to know this Campbell 'kind'."

If you have never tried it, a new and delicious treat awaits you. Why not begin to-day's dinner with

Campbell's CELERY SOUP

Put up strictly in the season only, this delicate creamy soup retains the sweet natural flavor of the tender stalks in their best condition. Blended with milk, fresh butter and other choice ingredients, this is one of the most tempting dinner courses you could imagine.

Better phone your grocer for it right now, while you think of it. *Your money back if not satisfied.*

"Each Campbell kind
Just suits my mind,
There is no soup to beat it.
'Tis merely play
To serve each day,
And more fun yet to eat it"

Charles N. Kain, 304 Arrott Bldg., Pittsburgh, Pa.

Lady." Tho he repents later, his character is not wholly admirable when he tries to force his luck, and he certainly plays the "cad" for a time. The scenes between Mrs. Herriot and Dick are very human and appealing, if we do not try to visualize the characters. The "Little White Lady," with her ever-present heart trouble, was more charitable than Dick deserved when she discovered his motive for marriage. We do not question Florence Barclay's power to charm, but she has given us here an almost impossible situation. Its incredibility mars its fascination.

Jackson, Helen Hunt. Ramona. (Tourist's Edition.) Illustrated. Pp. 308. Boston: Little, Brown & Co. $2.

There are few except the very young who have not read "Ramona," the romance which twenty-five years ago thrilled the American reader by its sympathetic exposition of the wrongs of the American Indian. This edition is prepared to satisfy the natural curiosity and interest of the traveler to Southern California, and to help him to identify the places and scenes described. Mr. A. C. Vroman has written a very comprehensive and enlightening introduction, identifying the places mentioned in the novel, explaining all apparent inconsistencies, and making very real the facts which formed the foundation of every part of the story. So many places have been pointed out as "Ramona's house" that an explanation of the confusion was necessary. The twenty-four full-page illustrations make the scenes very real.

Mrs. Jackson was much affected by the failure of the United States to keep the promises made to the Indians. This story grew out of her appreciation of the sufferings inflicted on them. Her descriptions of the Indian villages, the Californian homes, and the conditions of those days are almost perfect. It was a passionate love-story, a purposeful book, and a book unique in its way, as was Mrs. Stowe's "Uncle Tom's Cabin." There is only one "Ramona," and its friends will welcome this beautiful new edition.

Wiggin, Kate Douglas. The Story of Waitstill Baxter. Pp. 273. Boston and New York: Houghton Mifflin Company.

Waitstill Baxter and her half-sister, Patty, are delightful creations. We mourn over their hardships and rejoice that they have each other to love and cherish since their father, "Foxy Baxter," became a burden, and a cross almost unbearable. Such a mean, miserly, ill-natured, diabolically calculating, and selfish character is almost unbelievable, but, brought up as these sisters were in the narrow New England atmosphere, there seemed nothing to do but make the best of it. The reader is delighted when, at last, Patty rides away with her lover, and Waitstill, having decided that she has waited long enough, proceeds to give her father a detailed statement of his shortcomings, her reasons for leaving, and her determination to bear his imposition no longer.

Patty's mother, when dying, had entrusted her to her sister Waitstill with these words: "Anyhow, Waitstill, he's your father, after all. He's no blood relation of mine, and I can't stand him another day; that's the reason I'm willing to die"; and we are left to imagine life with a man when death, in contrast, becomes a pleasure. The lives of Ivory Boynton (Waitstill's fond and devoted lover) and his "cousin" Rod, with their eccentric little mother, give Mrs. Wiggin good opportunities for the display of her unusual power for character delineation. There are many quaint and humorous comments on events in the lives of the Baxter girls. The story is not deep, but engrossing and amusing.

Post, Van Zo. Diana Ardway. Pp. 327. Philadelphia and London: J. B. Lippincott Company. $1.25 net.

This is an unconventional, incredible love-story that almost indicates "brainstorms" or the hallucination of some fever. The heroine is a young red-haired woman, the "copper cataclysm," impossible in every way, erratic, erotic, and telepathic. There is a grand confusion of plot over a young dramatic author, no end of "actoreens," horses, automobiles, Chinese servants, and there are unheard-of situations. The "copper cataclysm" determines to make the author marry her, and she wins finally after more crazy scenes than are usually found in one book.

Johnston, Mary. Hagar. Pp. 390. Boston and New York: Houghton Mifflin Company. $1.40 net.

Miss Johnston's versatile genius has found still another outlet for expression in "Hagar." This time she has discarded the purely romantic type and the seriously historical, and has woven her story around the "New Woman" and the Feminist revolt. Her serious consideration of all phases of that subject and her favorable criticisms and comments show that she has given the subject careful and sympathetic study. One characteristic of this clever writer is completeness. No detail is too trivial to consider if only it adds to the perfection of the result. She is also just and consistent, traits well illustrated in the present story.

Hagar belonged to a Virginia family, one of the "F. F. V.'s." Any faults she possest were laid to her mother's influence. Her father, possest by "wanderlust," had deserted both wife and child and wandered on the Continent for years. All portions of the book contribute to the building up and understanding of Hagar's character, which was a product of the conventional South. And yet it felt the modern uplift of socialistic ideas, and she was possest by a desire to be some one and to do something—a desire which she fulfilled in spite of the restraining influence of the hidebound social restrictions and her family's disapproval.

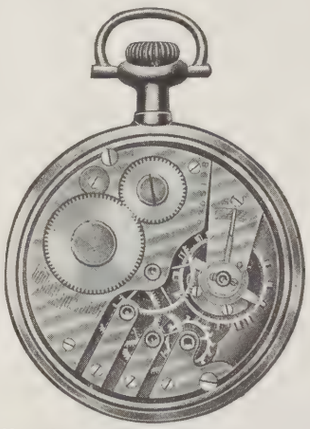
Hagar's father finally comes back into her life in a very tragic and dramatic way. It is in his character that the author shows her extreme fairness. Hagar's character finally rounds out to its full proportions after she has tried poverty, wealth, work, and play, and has attained happiness. Unlike many novels, it is not the love interest alone that thralls the reader. Its power grows more and more apparent as the theme develops. Feminism has never had a more human exposition. It is a book notable for sane methods as well as a delightful plot.

Potter, David. The Streak. Pp. 348. Philadelphia and London: J. B. Lippincott Company. $1.25 net.

The Philippines make a fertile basis for romance and discussion, and we find here, as usual, that a story has force and attraction when identified with living interests and

(*Continued on page* 957)

"Trenton Ten"



No other medium-priced watch could pass the rigid factory tests which every "Trenton" must undergo before it can leave the timing room—none other gets the "3 position" regulation. It all shows in the closer running.

The "Trenton" is built in the most recently equipped watch factory. Improved processes of precision formerly considered impossible have been installed and contribute to the superior accuracy. This factory is owned and operated by the company which has successfully marketed over thirty million Ingersoll watches and understands advanced manufacturing methods and economies.

The workmanship, finish and wearing quality of "I-T" gold-filled cases are the best known to the case-making art. Plain, engine-turned and fancy engraved patterns in variety will be found at your jeweler's.

What $10 Now Buys in a Watch

Your home jeweler is ready to show you the new "Trenton Ten," a watch that really gives about all that an exacting man need ask in a timepiece.

For time-keeping, no watch can run more than a few seconds a week closer. It reaches nearly the limits of accuracy. Its movement is bridge-model; jeweled at the principal wearing points with 7 genuine jewels and good for 20 years of service.

"Trenton Ten"

In appearance no watch is finer. You will recognize that, when you see it. The cases are gold-filled, with solid gold bows, guaranteed for 20 years and furnished in fancy engraved or plain patterns.

This Trenton watch is timed and regulated in 3 positions, instead of the customary one position timing, and to much stricter standards than any other at the price. It is the only movement of bridge-model construction obtainable for the money, though nearly all high-class watches are of this type.

Ingersoll-Trenton $5 to $35

The "Trenton Ten" is a special model of the "I-T" line.

If, instead of the gold-filled case, you require only a solid nickel case, your jeweler can supply it with the same accurate movement, at $5

Or if, on the other hand, you must "go the limit" and get the very finest movement that can be made, your jeweler has the 19 jewel "Trenton" adjusted to temperature, isochronism and 5 positions. This watch is of rare and perfect workmanship, that could not be better made if the price was $100. It will be an heirloom for your grandson and is as accurate a timer as human skill can produce.

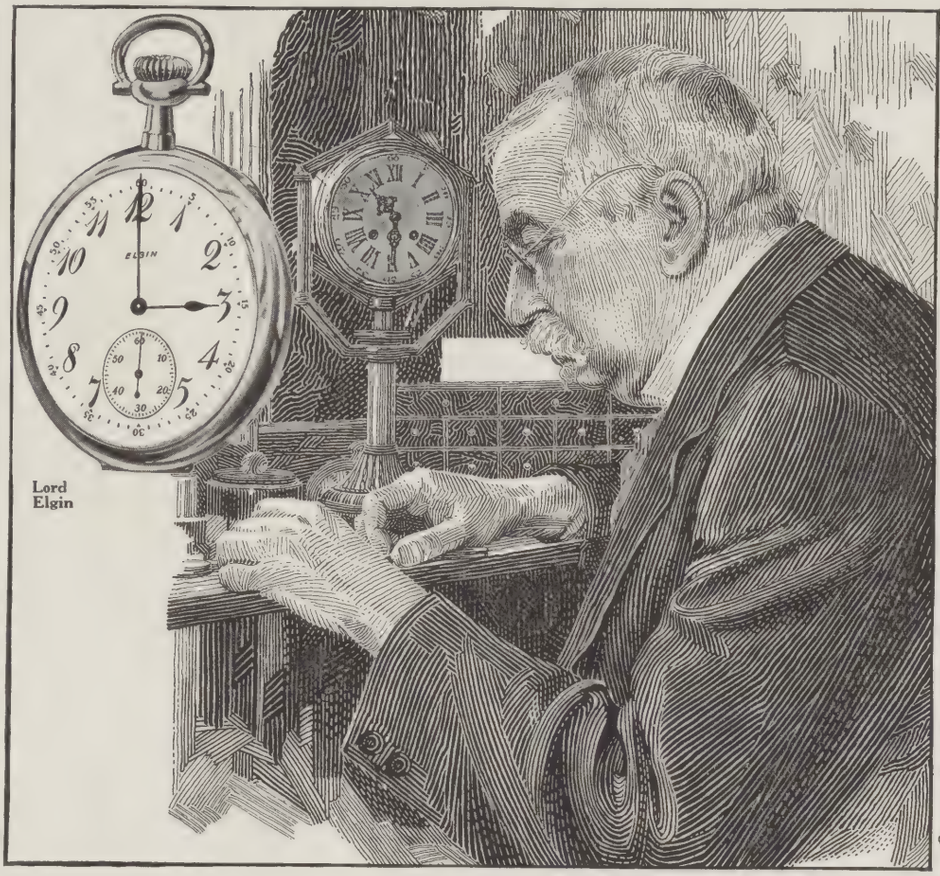
In 20 year gold-filled case In a permanent gold-filled $25 open face case $28, or in permanent hunting case $35.

In between the 7 and 19 jewel models is the 15 jewel "Trenton." It lasts a life time and is exceedingly accurate.

In 20 year open face case $12. Hunting case $15

Sold only by Responsible Jewelers in 9900 cities and towns and at the same prices everywhere

Robt. H. Ingersoll & Bro., New York, Makers



Lord Elgin

A FAMOUS ELGINeer

IN a queer old building, in a quaint old street, in a fine old city, works a rare old man.

This man is W. N. Brunner. He is an Elgin*eer*—"Master of Watchcraft." For forty years he has lived among watches and worked over them.

His records, faithfully kept, show that forty-five thousand watches of every make and of every degree of *de*bility and *a*bility, have passed under the keen scrutiny of his practiced eye.

Few men have had a like opportunity for intimate watch study. Few men *know* watches so thoroughly. *No* man's opinion of a watch is entitled to greater respect.

Mr. Brunner's commendation of a watch is praise from Caesar. He commends the Elgin watch—commends it for its true adjustment, fine balance and perfect fittings—for its *masterly* mechanism, which insures accuracy, reliability and enduring service.

As an all-round, trustworthy, truth-telling timepiece, Mr. Brunner says the Elgin has no superior—and Mr. Brunner *knows*.

Mr. Brunner's judgment of the Elgin is concurred in by thousands of other Elgin*eers*—repairmen and jewelers—in all parts of the country. They are the men who really *know* watches—who see deeper than the case, and understand the *vitals* of watches.

The Elgin Watch

Put the watch question up to *your* local Elgin*eer*. He will tell you why the Elgin is a safe investment. There are Elgin models to meet every possible requirement, and whether you pay $15 or $150 you get a watch which will give fullest service and satisfaction at its price.

LORD ELGIN—illustrated above—is the masterwatch. Extremely thin. Favorite timepiece of dominant men. Its mechanism, beauty and stamina are far-famed. Your Elgin*eer* will gladly show it to you.

ELGIN NATIONAL WATCH COMPANY,
ELGIN, ILL.

REVIEWS OF NEW BOOKS

(*Continued from page* 954)

public problems. Everywhere the question is forcing itself into prominence—"Are the Philippines ready for self-government?" While this story is a love-story rather than a political discussion, that question forms the vital issue in the test of the hero and the evidence of the "streak" which develops in him. The local color is very good, but the technic is rather poor. Even when we despise, we pity the race whose instincts and undesirable traits are ineradicable. Love, jealousy, intrigue, and loyalty combine to make this an exciting tale.

MR. EATON'S TRAVEL ESSAY

Eaton, Wallace Prichard. Barn Doors and Byways. Illustrated. Pp. 300. Boston: Small, Maynard & Co. $2.50.

These fourteen essays have appeared in *The Atlantic Monthly*, *Harper's Magazine*, *Collier's Weekly*, and other publications. They are here beautifully illustrated, bound and boxed, and make an ideal gift book. The two papers chosen to give a title to the book indicate the character of the contents. All the others have attractive titles; as, "The Harbor," "The Landscape That Flows," "Berkshire Winters," and "Night." The author, a man of culture, apparently intimate with the best in art, music, and literature, describes places, recalls boyhood experiences, and draws pictures that stimulate the mind and memories of the reader. There is poetry in his descriptions—not the poetry that soars over the head of the reader, but the exquisite poetry of truth that touches the heart and appeals to the mind.

"The Dismal Swamp" and "Old South County" are historical revelations, full of interesting facts as well as fancy. The power of the author seems to depend mainly on his comprehensive outlook, his ability to see not one bird or one particular tree, but birds and trees in relationship to sky and landscape. His descripions are graphic word-pictures and his fluency of expression is fascinating. Memories, long sleeping, revive, and childhood experiences, ambitions, and affections are alive again, while we read with ever-growing interest these nature-essays of real charm.

BEERBOHM TREE'S BOOK

Tree, Herbert Beerbohm. Thoughts and After-Thoughts. Pp. 308. New York and London: Funk & Wagnalls Company. $1.50. Postage extra.

This volume of personal reflections and conclusions by an eminent gentleman and scholar abounds in satirical humor, epigrammatic philosophy, and sincere and serious consideration of Shakespeare, both for reading and acting. We get an inside point of view which is illuminating and convincing. The first essay is on "Our Betters," but all the time the author makes us realize that "our only Betters are ourselves," and that "to be true to himself is man's best endeavor." One especially clever suggestion is made in the course of this article, *i.e.*, the use of the gramophone for preserving, for future generations, our best and purest English by means of records made by men chosen for that purpose. There would be a much more uniform pronunciation possible if that suggestion could be carried out.

The book is pervaded by an extreme loyalty, admiration, belief in, and love for Shakespeare. The author declares himself very frankly in favor of complete and detailed presentation of the Shakespeare plays, believing in every possible aid to complete illusion. The so-called "adequate treatment" seems, to the author, very inadequate. He proves by quotations from prompt-books that Shakespeare himself wished every device utilized for making a perfect illusion. His chapter on *Hamlet* and his ideas on *Hamlet's* madness, feigned or real, is one of the most lucid and plausible expositions of that play. "The Tempest" and "Henry VIII." are discust at length, and the discussions are both charming and convincing. "When we study Shakespeare to his depths, we find in his works the key to the myriad cells of the human heart."

OTHER BOOKS WORTH WHILE

Morley, Margaret W. The Carolina Mountains. Illustrated. Pp. 387. Boston and New York: Houghton Mifflin Company. $3 net.

No one will read this appreciation of the Carolina mountain region without a longing for personal experience of their allurements. The author first gives us word-pictures of the physical beauties of the country in consecutive seasons, and with a skill which makes it easy to visualize peach-trees in blossom, cotton fields, forests, and mountain tops. There is, also, much solid information—interesting facts about forest preservation, ornithology, early settlers, the peculiarities of the people and the far-reaching and ennobling influence of the Biltmore estate and industries on the native mountaineer. No possible beauty of the Blue Ridge or Smoky Mountains is omitted. We find the narrative as engrossing as a romance, enlivened, as it is, by entertaining gossip of places and people, and always with a background of historical fact and poetic truth. Aside from the subject-matter, interesting in itself and well told, the book is beautifully illustrated, attractively bound, and prepared in regular gift-book style.

Domville-Fife, Charles W. Submarine Engineering of To-Day. Crown 8vo, pp. 324. Philadelphia: J. B. Lippincott Company. $1.50 net.

There is always an element of interest in a book on an occupation that involves danger to the men that engage in it, and submarine engineering is certainly not one of the safest callings. This book, written in popular vein by an English submarine engineer, describes the various methods employed in avoiding and overcoming the dangers of drowning or of being crusht by the weight of water while working at various depths. Interesting illustrations and diagrams are scattered throughout the book showing the apparatus employed in harbor, salvage, and submarine work and in planting and destroying mines. An escape-dress is described and illustrated for use in case of accident under water in a submarine; this dress will no doubt be of service, provided sufficient time is gained to don it, but the minutes are terribly short when an accident happens. While mainly concerned with operations in and around the British Isles, Americans will be interested in the appendices, of which there are two, giving the logs of submersions of the United States submarines *Holland* and *Octopus*. An index at the end of the book facilitates reference.

"Xmas Gift!"

HORN'S Combination Sets

Consider the man's taste in your selection of a holiday gift. His preference will be a Horn Combination Set.

The name Horn, and the quality and style that go with it, are known and appreciated. No other sets are so beautifully boxed, nor are other ties and socks so perfect in colorings—all exactly matched. $1 to $5. Unlimited selection. Evening Dress Sets $10 to $20.

CURRENT POETRY

NEVER yet, in the history of the world, has the announcement of a prize-award been received with general satisfaction. So the news that the guarantors of *Poetry: A Magazine of Verse*, have given first prize ($250) to Mr. William Butler Yeats for his "The Grey Rock," and second prize ($100) to Mr. Nicholas Vachell Lindsay for his "General William Booth Enters Heaven," will not satisfy every reader of that excellent magazine. But of the poems printed during *Poetry's* first year, it would be difficult to select two superior to these in beauty, imagination, and sustained strength. There may be those who will think that the decision should be reversed—that Mr. Lindsay's poem should receive first prize. We have already reprinted "General William Booth Enters Heaven"; we give below a part of "The Grey Rock." We regret that its length prevents its quotation entire:

The Grey Rock

By William Butler Yeats

When cups went round at close of day—
Is not that how good stories run?—
Somewhere within some hollow hill,
If books speak truth, in Slievenamon—
But let that be—the gods were still
And sleepy having had their meal:
And smoky torches made a glare
On painted pillars, on a deal
Of old stringed instruments, hung there
By the ancient holy hands that brought them
from murmuring Murias; on cups—
Old Goban hammered them and wrought them,
And put his pattern round their tops
To hold the wine they buy of him.
But from the juice that made them wise
All those had lifted up the dim
Imaginations of their eyes;
For one that was like woman made
Before their sleepy eyelids ran,
And trembling with her passion said:
"Come out and dig for a dead man,
Who's burrowing somewhere in the ground;
And mock him to his face, and then
Hollo him on with horse and hound,
For he is the worst of all dead men."
"The Danish troop was driven put
Between the dawn and dusk," she said:
"Altho the event was long in doubt,
Altho the King of Ireland's dead
And half his kings, before sundown
All was accomplished.

"When this day
Murrough, the King of Ireland's son,
Foot after foot was giving way,
He and his best troops back to back
Had perished there, but the Danes ran
Stricken with panic from the attack,
The shouting of an unseen man;
And, being thankful, Murrough found,
Led by a foot-sole dipped in blood
That had made prints upon the ground,
Where by old thorn trees that man stood;
And tho when he gazed here and there
He had but gazed on thorn trees, spoke:
'Who is the friend that seems but air
And yet could give so fine a stroke?'
Thereon a young man met his eye
Who said, 'Because she held me in
Her love and would not have me die,
Rock-nurtured Aoife took a pin
And pushing it into my shirt
Promised that for a pin's sake
No man should see to do me hurt;
But there it's gone; I will not take

The fortune that had been my shame,
Seeing, King's son, what wounds you have.'
'Twas roundly spoke, but when night came
He had betrayed me to his grave,
For he and the King's son were dead.
I'd promised him two hundred years,
And when, for all I'd done or said—
And these immortal eyes shed tears—
He claimed his country's need was most.
I'd saved his life, yet for the sake
Of a new friend he has turned a ghost.
What does he care if my heart break?
I call for spade and horse and hound
That we may harry him." Thereon
She cast herself upon the ground
And rent her clothes and made her moan:
"Why are they faithless when their might
Is from the holy shades that rove
The grey rock and the windy light?
Why should the faithfulest heart most love
The bitter sweetness of false faces?
Why must the lasting love what passes?
Why are the gods by men betrayed!"
But thereon every god stood up
With a slow smile and without sound,
And, stretching forth his arm and cup
To where she moaned upon the ground,
Suddenly drenched her to the skin;
And she with Goban's wine adrip,
No more remembering what had been,
Stared at the gods with laughing lip.

The habitual use of "did," "dost," and "doth" is a fault which seriously mars the work of many poets. The fourth and fifth lines of the following are amateurish, but as a whole the poem is exquisite. We take it from the London *Academy:*

The Verse Reading

By Max Blowman

Thy voice I hear. Not warbling birds at break
  Of joyous day, nor vesper-singing thrush,
  Can give the grateful sense so deep a hush
As fell when thou my hearing's thirst didst slake
With those soft tones memory doth reawake;
  Not distant bells, nor laughing waters' rush
  Down pebbled beds to osiered pastures lush,
Like lulling harmonies could ever make.

I see thee still: the dark and queenly head:
  The little hand half-closed upon my knee.
I hear thee still: but when the sound is fled
  Not beggared of its beauty shall I be;
For, in thy voice, music and love did wed,
  Whereof is heavenly rapture born to me.

Here is a cynical little poem which appeared in *The Independent.* We can not guarantee Mr. Wattles's psychology, but his ability to write musical and attractive verse is indisputable.

The Last Fortress

By William A. Wattles

So you have come a-courting, boy, with bonnet in
  your hand
And all the little juggler tricks that women under-
  stand;
You swear your love is true, lad, and bend your
  knee so low;
And tho I will not have you, sir, I can not say you
  no.

Go off and win your spurs, boy, and then come
  back to me;
I'll never take a lady's page to tend the hearth with
  me.
Now, don't go to whimpering, but set your teeth
  and win;
And when you come a-knocking next, mayhap I'll
  let you in.

Fully equipped and leaving nothing to imagination

The Mitchell Little Six

at $1,895.00

Is the logical investment of the year

The Mitchell Little Six is the only six cylinder car on the market that sells for less than $2,000 and is delivered to you bearing all the ***modern conveniences and refinements.***

It is the only six cylinder car on the market under $2,000 that has an electric self-starter which is operated by a separate generator that generates its own power.

It is the only six cylinder car offered to America today under $2,000 which has all the class, the beauty, the smartness, the quality and comfort of the high-priced cars.

The tendency of the time is toward the six. ***This is a six.*** The tendency is towards a compromise between great and small power. ***This is the Logical Compromise.*** It has ***fifty horse power*** and seats five passengers. It is built on rakish lines. It is graceful to a degree. It has the sweetest of motors with the popular long stroke. It is finished to suit exacting people. And as it stands today it will look good to its owner for years to come ***no matter how styles may change.***

It is fully equipped and the equipment is included in the price of $1,895. There is nothing left for you to buy. Read the list of conveniences and see if there is anything that we have overlooked.

Electric self-starter—electric lights—electric horn—speedometer—mohair top and dust cover therefor—Jiffy quick-action side curtains—a wind and rain vision shield (two-piece and quick action) bair bow holders—extra demountable rim—license plate bracket—extra tire carrier—robe rail—foot rest—electric exploring lamp—pump—jack and complete set of tools.

This equipment is also part of the Mitchell Big Six seven-passenger, sixty-horse power touring car at $2,350, and the Mitchell four-passenger, four-cylinder touring car at $1,595. This makes a trio of modern high-class cars at popular prices and no matter which one you buy, you are ***investing,*** not speculating.

The Car You Ought to Have at the price You Ought to Pay

Mitchell-Lewis Motor Co.

Racine, Wis, U.S.A.

80 Years of Faithful Service to the American Public

A good windup for any day

FOR that broken shoestring, that rebellious necktie and that blocked street car line

For that flying start on Monday morning's mail and that *all-cleaned-up* feeling on Saturday noon.

For that early ride back home, that change before dinner, that hit with *her*, with the kids, and—that smile from the cook

Big Ben—the best windup for any day—two splendid clocks in one. A rousing good alarm to get up with, a rattling good reminder for the down-town desk.

Seven inches tall—easy to wind, easy to read and pleasing to hear.—$2.50 anywhere in the States—$3.00 anywhere in Canada. *Made in La Salle, Illinois, by Westclox.*

CURRENT POETRY

(*Continued from page* 959)

I love a flashing rapier that glances in the sun,
A bronzed and battle-sabered cheek that tells of ramparts won,
A coal-black stallion's ringing feet and straining nostrils wide,
And strength to swing a battle-ax as fast and far we ride.

There is no lady in the land, tho fair and proud she be,
Who would be flattered by a boy, for all his courtesy;
But if a knight-at-arms should come with sheltering blade and shield,
There is no lady would not rise and feel her proud to yield.

There is no lady rich and grand who would not leave her bower
To share with love a soldier's cloak and midnight's darkest hour;
So when you come from conquering, perhaps I may adore you
Unless a fairer, bolder lad should win my heart before you.

It is good to find a poet defending romance—defending, indeed, romanticism. So many of our younger writers of verse have been led into the sordid by-streets of realism recently that Mr. Fox's spirited lines come as a pleasant surprize. In the third and fourth stanzas and in the concluding stanza, he rises to a high level. The introduction of the names of Greatorex and the other heroes and heroines is skilfully maneuvered. We take it from *The Colonnade:*

To H. B. Marriott Watson

BY PAUL HERVEY FOX

You gallop down the brave highway
Between the hedges' even rows.
The moon peers forth; the glare of day
Gives place to night; a cool breeze blows.

The shadows in a trembling mesh,
The rich wine of the twilight air,
Bring peace upon your throbbing flesh,
And solace to your soul's gray care.

Is this the mold your spirit takes?
For so I glimpse it, first and last,
A gallant dreamer who awakes
As painter of a crimson past!

Ah, singer of the days that were!
Ah, poet of the prose romance!
You little know what hearts you stir,
When, with your pen, a good knight's lance,

You battle as the splendid foe
Of tawdry things. And when your art
Breathes life into dead years, then, lo,
You rise to play a master's part!

You labor with a loving hand,
To fashion in that fine, free way;
You needs must wander in the land
Of style to say the things you say.

Does Greatorex within your breast
Still guard a secret treasure-trove?
Does bold Dick Ryder out in quest
Of 'ventures in the night still rove?

Does urbane Hood with quiet eyes
Regard you luminously, while
Gaunt Sercombe toys with airy lies?
Is lithe-limbed Chloris on her isle?

What matter whom you choose to take
As puppet of your joyous play?
Tobyman, rogue, and gentleman rake
Alike have caught the fire of May!

PERSONAL GLIMPSES

THE PARCHED GOLD FIELDS OF AUSTRALIA

THE gold fields country of West Australia, of which the famous Golden Mile is the source of life, is in summer a red desert place where the sun almost blisters and the temperature is 120 degrees in the shade, yet there are hundreds of men, many of them so old and feeble that they can hardly walk, who, year in and year out, use their lungs as bellows to separate the dry sand from the scattering little specks of gold left by the miners who reaped the first harvest. Some of the luckless miners subsist almost upon hope alone. Practically all the "pay dirt" is now owned and mined by large corporations, as is the case in the Cripple Creek district of Colorado and in the Klondike. Conditions are settled, but the region is a wonderfully interesting place, if we are to take Norman Duncan's word for it. Mr. Duncan, writing in *Harper's Magazine*, not only describes the place, but tells an absorbing human story, of which we quote a part. All gold-mining is a human story, because hardly anything in history except the Crusades equals in dramatic interest a great stampede for gold. No modern army of conquest ever advanced as desperately as a horde of gold-seekers toward their goal. We begin by quoting Mr. Duncan's description of a journey to the mining country:

Late of a January afternoon, quivering midsummer, a day lying white in the naked heat—the thermometer declaring a temperature of one hundred and ten in the shade at sea-level, as tho it were quite used to the feat—the Goldfields Express screeched out of the station, rattled importantly through the yards, and puffed off and away from the bustle and broiling asphalt streets of Perth on the four-hundred-mile run northeast to Coolgardie and Kalgoorlie. It was a slovenly little train—a diminutive English contraption, gone shabby with hard service, filled to the doors with a free-and-easy western company, in khaki and leather, in tweeds, in black coats, in woolen shirts, and broad-brimmed felt hats, a company tanned and hairy and adorned with diamonds and virgin nuggets. Presently, in the light of a great red sunset, it was swaying recklessly through raw, rolling eucalyptus country, which the pioneers were stripping to expose the fertile soil, and on into the dark of a murky night. A thirsty journey, for the relief of which water was provided in the Australian way—long canvas sacks of water, with wooden spigots, suspended on the platforms, dripping from every pore to cool the contents by evaporation. It was hot weather, and by this time incredibly dry; a hot wind, blowing from the central deserts, rioting in at the open windows, came with clouds of gritty dust, which it deposited in inch-deep drifts in the corridors and seedy compartments. In this parching heat and dust, when the

Two-Sash Frame

Capture the Sun's Rays

in this miniature glass garden and with their help during the cold winter months provide your table with fresh vegetables and beautiful flowers.

There is genuine pleasure in watching things grow. There is far greater satisfaction in raising produce or flowers in your own garden patch when Nature all about you slumbers under a blanket of frost and snow.

Lettuce, radishes, beets, parsley, Swiss Chard and other of your favorite vegetables yield profitable winter crops. Violets, pansies and mignonette flourish abundantly in these cosey beds.

Start seedlings of tomatoes, cauliflower, cabbages and asparagus and have healthy plants for early setting out.

Lutton Sash Frames are made in 2, 3 and 4 sash sizes, each sash 3 x 6 ft., single or double glazed. Any size shows a profit on the first crop and will give years of service. Carefully crated and shipped. Stored away compactly in summer. Frames sold with or without sash.

Write today for descriptive pamphlet D describing these frames and their uses. Lutton Patented Greenhouse catalogue also sent upon request.

WILLIAM H. LUTTON
Office and Works Jersey City, New Jersey

night had fallen deep, men wandered about in pajamas, women in desperate dishabille, whimpering children in their scanty nightclothes; and in the little dining-car, where they sat late over cards and drink—jammed with prospectors, miners, immigrants, engineers, commercial travelers, and the worn-out women and children of the drylands beyond—the bar was rushed by a clamoring crowd from the coaches in the rear.

"She humps along," an old prospector remarked, in hearty satisfaction with his state's achievement in the matter of long-distance railroad travel. "Not too bad, eh?"

I laughed a little.

"Ah, well," said he, laughing, too; "you're a bit unfair, aren't you? We've altogether different standards. You're thinking of transcontinental limiteds and a hundred million people; and I'm thinking of the early days in a God-forsaken gold country—'way back in 'ninety-two, when Bailey rode into Southern Cross from the desert at Coolgardie, like a madman, with two thousand pounds in nuggets and dust, picked up in two days." And having described the first fever and stampede of those wild times, he went on, seeming to recall it all as a man remembers the amazing incidents of a village fire: "In two hours horses went from a couple of pounds a head to fifty pounds a head. Camels?—you couldn't buy 'em at all. Dogs, cows—anything that could haul; bicycles—anything a man could ride; buggies and butchers' carts—anything on wheels: in a day or two Southern Cross was cleaned out. Before I managed to get away I saw a husky young chap take the Coolgardie train with his outfit packed in his little boy's express cart. I saw a dozen fellows set out with wheelbarrows. I saw an old bloke push off with a baby-carriage. I saw some chaps get away with barrels—a sort of axle through the center, the man between the shafts, the outfit stowed away somehow inside. It was something like one hundred and twenty-five miles from Southern Cross to the old Coolgardie field, I reckon—sand and scrub and stony ground, dry country; and at first nobody knew the water-soaks. We footed every mile of it in the early days with our tongues swollen and our lips black—in a week, two weeks, three weeks. Thirst? My word! And that's why it occurred to me that this little Goldfields Express was humpin' along."

"Of course, now—"

"Oh, now," the prospector interrupted, contemptuously, "all a man has to do is to wake up in Coolgardie."

"And—"

"Water? Why, young fellow," he swore, his eyes twinkling, "they waste it! They bathe in it—a shilling a go at Kalgoorlie!"

We swayed along—bumping, jerking, squeaking, rattling. It seemed the capable and ambitious little train would jump the track in a devoted endeavor to accomplish its distance in the time allotted. These were exhausting hours: the hot wind, the clatter of our progress, the dust, the close contact with all those abandoned others in the same misfortune. Occasionally we stopt at some woebegone wayside place; and these pauses were so ample in the measure of them, and so grateful in opportunity, that the horde of passengers alighted, in whatsoever sort of night attire they affected, if that chanced to be their condition, to take the air on the platform until a hand-bell clanged and the guard shouted, "Seats, if you please, gentlemen!" and a whistle shrilled like a boatswain's pipe, and the locomotive shrieked a last warning to be aboard at once or be left to make the best of that gloom and desolation for the night. It was a task to go the length of the tumultuous little train—to avoid treading on the fevered children, to escape surprizing the women in the relaxation of undress, to keep from being shot from one side of the corridor to the other, and eventually into the corpulency of some pajama-clad gentleman returning from the flowing bar with a bottle of beer in each hand. And thereafter there was a long, black night, spent in a storm of dust and cinders—and then the immensity of the dawn, so red and bold that the window was a lurid square, solid with color, with the whole outdoor world a thick, awesome glow of brightening glory—and then the yellow blaze of the gold fields, waste of green scrub and red earth, and at last the wide, vacant streets of Kalgoorlie, prostrate and blind and ghastly white in the dreadful mid-morning sunlight.

The first rich strike at Coolgardie, so named by the aborigines, was made by a man named Bagley, and then there was a wild rush. A little later Pat Hannan found square miles of wealth in alluvial gold at Kalgoorlie. A nugget of 463 ounces was unearthed; and subsequently the Bobby Dazzler—480 ounces in a lump—enriched a digger at Shark's Gully. Capital came and corporations grabbed most of the promising territory. For a time men spent money as freely and as lavishly as if it were sand of the desert. Nowadays old-fashioned individual diggers have hard scratching to make a living. One of the most interesting parts of Mr. Duncan's article relates his interviews with peculiar characters among the luckless:

It was so very hot in Kalgoorlie—a thin, dry, blazing heat, widely distinguished from the thick oppression of a humid hot wave—that a swift shock of surprize and concern accompanied a first plunge into the white sunlight; nor was a venture from the shady side of the broad street thereafter to be undertaken—at least by any stranger—without a momentary pause of speculation as to the outcome of the foolhardiness of it. It was amazing to discover that the sun could strike so straight and keen and deep, that it could blind and daze a man. Unofficially it was said to be one hundred and sixteen in the shade. It is quite beyond my temerity—this estimate being taken for accurate within a range of six or seven degrees—to compute the sun temperature of that mid-morning. It would storm, they said. Rain? Oh, no! It wouldn't rain! It hadn't really rained—not rained in any quantity to make the gold fields proud—for more than three years. Nobody expected rain. But it would blow a gale—a dust wind; and when the sand had settled the temperature would

(*Continued on page* 964)

Give your son a watch he will be proud to show.

"Father gave me this; I am very proud of it!"

Your son or daughter will feel this way if the watch you give for Christmas is a Gruen Verithin.

Young people are keener than others in their appreciation of this watch. They like its "style"; its beauty; and its high efficiency as a timekeeper.

GRUEN Verithin Watch

"The Most Admired of Timepieces"

How we obtained the beautiful, yet practical thinness which made the success of this watch so great in the past twelve years, is shown in the illustration below.

This original and mechanically perfect arrangement of wheels is the basic principle of the Gruen Verithin Watch. With it as a foundation, skilled Swiss craftsmen finish and adjust every movement part by hand, after the machines have done their work, thus *building up* the Gruen Verithin as a genuine thin model watch, and combining with its beauty an accuracy that meets the most exacting time-keeping requirements.

Go to the best jeweler in your town and *see* this watch. You will realize then the reason for the pride there is in possessing it. If your jeweler has not the Gruen Verithin, ask him to get you one to see.

Adjusted Models, $25 to $60, guaranteed to perform within railroad time requirements.

Grades marked "Precision," $45 to $250, guaranteed to come within best observatory time requirements, which are more exacting than railroad time inspection rules. Lady Verithin Models, $45 up. Lady Gruen, $17.50 up. The Dietrich Gruen, $265 to $650.

Write today for the interesting "Story of the Gruen Verithin." With it we will send you the names of those jewelers who have the Gruen agencies in your locality.

GRUEN WATCH MANUFACTURING CO.

Makers of the famous Gruen Watches since 1876

57-E E. Fifth Street Cincinnati, Ohio

Factories: Cincinnati and Madre-Biel, Switzerland

PERSONAL GLIMPSES

(*Continued from page* 962)

surely fall to a point which would at least relieve a timid traveler of the expectation of being roasted in his habiliments before he could escape the country. Beyond town, where the old dry-blowers work, there was no breeze; the flat, red land—desert without end and all stript and scarred and soiled—was almost intolerable. The heat struck down and rebounded with hardly diminished fervor; no breath of wind stirred in the dry world, and there was no gauze of cloud or impalpable contents of the air to mitigate the scorching quality of the light.

By and by I sat down on some old mound of waste earth to rest a little from the toil of wandering these famed acres in that disheartening weather. Near by, at the edge of a deep trench, an old man—an old, old man—was with dull patience shaking his diggings through an antiquated invention for sifting. He was the oldest man I ever saw at labor—a ragged, bent, knee-sprung agglomeration of bones and dried-out muscle and disreputable gray hair; and he was lean and wrinkled beyond belief, and burned a leathery red, tanned, indeed, to the depth of a hide from the vat, as tho through skin and flesh to the marrow of his crazy skeleton. I gave him good-day and begged the favor of permission to watch his work. He would not look at me; but he shifted his glance, uneasy, troubled by shyness as by a stab of physical pain, and was momentarily conscious of a strange presence, I am sure. I should have gone away, disconcerted, ashamed of this intrusion, had I not perceived that the next instant he had forgotten me, that the plain was blank again in so far as he was in any way aware. Presently, with a gesture and angry mutter of disgust, he gave up a futile search of the sieves and sat to rest in a vacant way; and then, all at once, grimly renewing a determination which must in its prime have been of gigantically dynamic proportions, he gathered some siftings in his pan and tossed them up and caught them back. There was no wind: no dust drifted off; and so he must employ his old lungs for bellows, and blow and wheeze and gasp until he fairly panted for breath sufficient to his own need.

As the ghastly operation drew to its close I observed that he was agitated with expectation. His legs trembled, the pan shook in his hands; the old fever of the gold search began to burn again—to stimulate his hope. But nothing came of it—nothing—not a speck to reward the labor of his morning. His interest collapsed. The pan fell at his feet. And he sat down again, and fanned the flies from the grimy sweat of his lean, red face, and disconsolately smoothed his dusty white beard, and sighed—all as tho fortune had dealt him a foul blow.

"I can't rise no color," he muttered.

Conceiving this observation to have been addrest to me, I inquired:

"Why, then, do you dig in this place?"

"I can't rise no color," he repeated.

"Since when," said I, "have you had any luck?"

"Jus'—can't—rise—no—color!"

He was still spasmodically fanning off the ghoulish flies, still occasionally tugging in bewilderment at his old gray beard, still sighing, still staring, disconsolate,

into the vacancy of his world. I perceived that he had not spoken to me, that his consciousness did not stray beyond the boundaries of his disappointment, that the plain was still blank of any presence save his own.

"And I'm a patient man," he sighed, despairing. "I'm—a—very—patient—man."

Beyond this demented man I fell in with a communicative old fellow who seemed with unexampled and most exemplary courage to have preserved a joyous delight with life through all his years of gold-fields luck and failure. He apologized at once for the unsocial habit of digging alone. His mate (said he)—this in the Australian vernacular being the equivalent of the American "pardner"—with whom he had shared fortunes for twenty-seven years, the fat and lean of them all, had died and been stowed away two years before. He had himself been landed in Melbourne in 1859, to win quick riches and live a gentleman all the rest of his days—fifty-four years ago; and he had been no raw youngster (said he) even in those historic years. "Aged eighty-one, sir, this summer. You wouldn't credit it, would ye, sir, in a old bloke o' my power?" In outward aspect he was not by so much as a blackfellow's wash (which is no wash at all) improved above his wretched neighbor; his state was in every way quite as deplorable, his rags as inadequate, his layer of wet, red dust as deep and as wide-spread and as permanent. But vicissitude had not daunted him; he was still vastly confident of turning the tables on Fate; and he lived well enough, for a hard old digger like him (said he), on his takings and the old-age pension of seven shillings a week. Moreover—if one could believe the sly admission—he knew the secrets of these fields. Ah, there were many, many secrets!—abandoned claims which had fabulously yielded in the early days. This very spot—the very hole he was digging over—had given a fortune to a Frenchman in '98.

"What luck this morning?" I asked

"Ah, well," said he, "I reckon I'll strike a bit o' color this afternoon."

It would be hard luck, I agreed, if the day should fail him.

"Ah, well," said he, "I reckon I'll strike it to-morrow, anyhow. That," said he positively, "I'm sure of."

In the meantime I had in an absent way been whirling some siftings about in the old man's pan—sometimes throwing up the dirt, for sport, and awkwardly recapturing it, and once in a while blowing off the confusing dust. There had in the beginning been no motive in this play; but by this time, curiously, I was possest of a lively wish to discover whether or not some grains of gold would lie disclosed in the heavy residue when I had blown the pan out. I began to toss the dirt in earnest, and to blow with determined intention to see the little adventure through to the end. And observing this genuine absorption, the old man kept watch with me for the color of gold.

And—

"Ha!" he cried, pouncing with delicate touch upon a pitiful little yellow speck.

And—

"Ha!" I cried, too. "This isn't too bad! I reckon I'll blow another pan!"

Upon this the old man looked me straight

Demonstrated Superiority in the Four Vital Points

Control: Magnetic—a small disc taking the place of the usual cumbersome control lever.

Braking: Magnetic, operating upon pressure of a button. The car cannot skid when this is applied. Foot-brake has automatic power cut-out. The brakes are external, and will not freeze up.

Drive: Double drive from both front and rear seat.

Principle: Chainless, direct shaft drive without universal joints. Consequently, maximum efficiency per unit of power.

These four features are patented and exclusive to the Ohio Electric. They are only a few of many.

See the car at the nearest Ohio dealer or write us for catalog.

in the eye and chuckled in a way to indicate that the joke was on me. Presently he was laughing so heartily that he held his old sides to ease the spasm. A fancy that he would soon shake himself to pieces, that in another instant he would lie in tatters and fragments before my very eyes, had a more excellent inspiration than many a laughable exaggeration I have encountered in books. I had felt a touch of the fever, he declared, when he could command himself; and this was true enough, to be sure, and excuse enough—attacking me on these depleted old diggings—for any man's laughter. But now, when this hearty explosion of his humor had crackled off in little chuckles and gasps and had at last vanished in grins, and when I had been shown a glass vial which contained a few grains of gold, and when I had hemmed and hawed and doubtfully ventured to propose an exchange of ten shillings for the receptacle and its contents, a frightful change came upon the old man. He began to weep, to pray in the midst of his sobs that God Almighty himself would shower me with blessings for this manifestation of generosity. And I stood astonished, for I had thought him not impoverished beyond the ample satisfaction of his need. This disclosure—the brave and merry demeanor of the old fellow which now in collapse seemed almost to have been a resplendent achievement of character—would shock any man to search his own soul for some quality to equal that splendid independence.

Aged eighty-one—and a prodigal! And it turned out that he had not dug the worth of five shillings in a month!

NON-GADDERS

IN some ways the world moves with considerable speed, particularly in the matter of improved conveniences, but the four McLaughlins, of Columbiana County, Ohio, refuse to budge. Railway-trains might be made wreckless, steamships sinkless, and automobiles as safe as the Mammoth Cave during a windstorm, but neither Jesse, aged 69; John S., 58, nor Belle Hester would use them under any circumstances. Mary Jane McLaughlin, the eldest member of the family, now 73, took a chance once on a railway-train, riding to Pittsburg, a distance of less than a hundred miles. The story of these confirmed "stand-patters" is told in the Cleveland *Plain Dealer*, which says:

Mary Jane holds uncontested claim to the title of family globe-trotter. Jesse ranks next. He has been on horseback across the Pennsylvania State line, a distance of close to twenty-five miles from the old home place nestling among the Ohio hills. John Scott McLaughlin has covered a range of maybe ten miles at times on horseback or by wagon, while Libson, the county seat, five or six miles distant from their home, is the farthest point Belle Hester ever reached.

Away from the noise and dirt and worry of a busy workaday world, the four McLaughlins, two brothers and two sisters,

JUST PUBLISHED

The Country of "The Ring and the Book"

By SIR FREDERICK TREVES

Author of
"The Other Side of the Lantern," Etc., Etc.

A LIVING, vital document, describing the scene of a story of two hundred years ago—the story of the Franceschini, husband and wife, and of the priest who came between them. It is of these three that the tale is told in Browning's wondrous poem of "The Ring and the Book," as pathetic, as lurid, and as dolorous as a Winter sunset. The present volume is a great and beautiful book by a keen observer and a lucid writer. Illustrated with a colored frontispiece of the Madonna by Fra Filippo Lippi, and more than a hundred beautiful, full-page half-tones on super paper.

Octavo, Cloth. $5.00 net

live happily and peacefully on the same little farm where the father and mother as bridegroom and bride set up housekeeping three-fourths of a century ago.

The very logs used by McLaughlin *père* in building a nest for his bride are still treasured by the four "old" children. True, a new house twenty-eight years ago took the place of the little old log cabin as a home; but the logs were not destroyed. Perhaps a sentiment for the old-worm-eaten pieces of wood held back the hand that would otherwise have chopped them into firewood; perhaps a realization that the logs were still good saved them. In any event, the selfsame logs used to build the house in which the four McLaughlin children were born, and in and about which they grew to manhood and womanhood, form the walls of a stable a stone's throw away from the present home.

A farm of fifty-one acres belonging to the McLaughlins surrounds the little house, and here each year crops are harvested to provide for the year's needs.

No flame of ambition to get out into the far-away, strange world and make a place for himself or herself has ever disturbed or unmoored a member of the McLaughlin family. A unity of purpose, a strong affection each for the other, has kept them together, contented and happy. The doings of their neighbors, the comings and goings of those about them, have for these people only the most casual interest.

But while the unrest of ambition has not whispered enticing words luring them away from home and away from one another, their contentment is not a slipshod shiftlessness.

The house itself, cared for by the two old sisters, is as clean as the proverbial pin. Every inch of it is swept and garnished, not for the eyes of visitors, but because the family wishes it so. Visitors are few and far between at the McLaughlin home. Callers are welcomed hospitably when they do come, but this happens seldom; no public road leads by the door.

Surrounded by trees, splendid oaks, under the roots of one of which a clear spring bubbles up, cedar-trees, tall rose-bushes and maple-trees, their leaves turning red and yellow with the autumn frost, the house is hidden from view unless a determined visitor is actually in search of it, and from the public road, a quarter of a mile distant, the whir of passing vehicles is scarcely heard by the occupants of the single home.

"Ride on a railway-train, a street-car, or a steamship, go away from home merely for the sake of going!" The suggestion is an absurd one to the McLaughlins. They do not hedge and pretend they have traveled; a query on the subject arouses no ill temper or indignation, for they simply have not traveled because they did not want to travel, business never called them away from home, their immediate needs were attended to, with a family of four companionship was provided for; the outside world had no allurements to offer when youth was theirs; now that dim eyes, gray and thinning hairs have come, their viewpoint has in no way changed.

"Mother died thirty-one years ago next April; father will have been dead sixteen

Hupmobile

Now Europe claims half of all the cars we can build for 1914

When we designed the Hupmobile we made it essentially an American car, for use under American conditions.

But Europe thinks the American Hupmobile such a good car, and so well suited to European requirements, that it stands ready to absorb half of the coming year's output of 1914 cars.

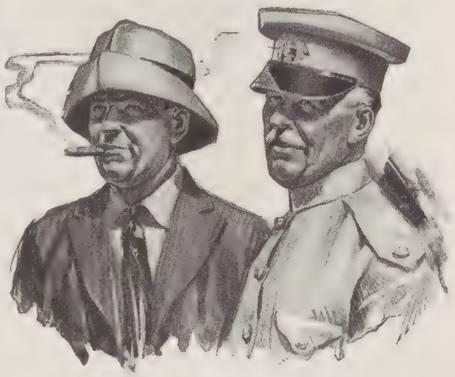
Can you imagine a tribute higher than this; or a more positive confirmation of our belief that the Hupmobile is the best car of its class in the world?

The Briton, the Frenchman, the German, pays $200 to $400 more for his Hupmobile than you do because he recognizes its high quality and its operating economy.

Likewise the Hupmobile buyers of South Africa, Australasia and New Zealand, where the Hupmobile has overcome an anti-American prejudice even stronger than that which exists in the European countries.

And in the Philippines—thousands of miles from home—the Hupmobile is as truly the car of the American family as here, as shown by the domination of its name on the registry lists.

Thus the belief that the Hupmobile is the best car of its class in the world rolls on to practically every section of the globe where automobiles are used.



The keen American in the Philippines—he, too, is loyal to the Hupmobile

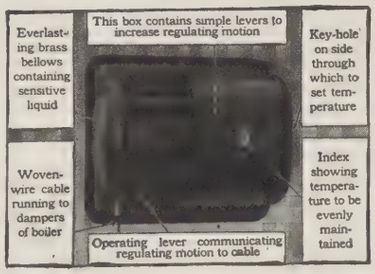
Automatic heat regulation



This box contains simple levers to increase regulating motion
Everlasting brass bellows containing sensitive liquid
Key-hole on side through which to set temperature
Woven-wire cable running to dampers of boiler
Index showing temperature to be evenly maintained
Operating lever communicating regulating motion to cable

In your home or other buildings you can avoid fuel wastes, discomforts of chilly rooms from quick weather changes, or overheating due to high winds, by putting your heater draft- and check-dampers under the sure *automatic* control of an

IDEAL SYLPHON REGITHERM

EASILY PUT INTO OLD BUILDINGS

Placed on wall of a living room and set at say 70 degrees, it needs neither watching nor manipulation. The temperature of air in the room acts on the sensitive liquid in the "Sylphon" bellows, in which even a degree of change will cause expansion or contraction; instantly motion is sent to boiler dampers (see picture notes) and the temperature of air in rooms returns to the set degree. The REGITHERM sees to it that the coal you feed to heater is burned to make only the heat needed. There are no batteries, electricity, machinery or diaphragms to watch, renew or wear out. You have uniform warmth day and night, and fuel economies soon repay purchase price.

FOR FACTORIES, ETC.—REGITHERM can be specially adjusted to evenly maintain any set degree (50 degrees to 250 degrees) for cooling, varnishing, gluing, drying processes. (Send for special catalog.)

If you have troubles from an old heating outfit with faulty valves, and fuel-wastes because of no regulation, send for our "New Heating Aids" booklet (free) describing the REGITHERM, Sylphon Damper Regulators and Sylphon Packless Valves, (never leak steam or water around stem; cannot wear out,) Norwall Siphon Air Valves, and other time- and fuel-saving improvements. 409 Madison St., South Bend, Ind.

years in January," Mary Jane explains, telling of the family.

"We have always lived right here. The little log house father built when he and mother were first married stood just beyond the spring under that big black oak-tree. All the children were born there, and we lived in the house until twenty-eight years ago, when we built the present one. The logs of the old house are still in the little stable at the end of the lot.

"Scott is quite deaf; we use a slate and pencil to carry on any conversation with him. The accident that robbed him of his hearing happened seven years ago." He helps with the farming still, cuts wood, and takes care of the small chores, but Jesse is the mainstay of the family. He runs the farm, helps out his income by hunting and trapping and tramps back and forth to Lisbon, carrying marketable commodities and taking care of the family buying. Jesse was four times elected assessor of Lisbon township, three times on the Democratic ticket, once on the Prohibition ticket.

Romance and love have played but a small part in the life-history of the McLaughlins. Neither of the four ever married. Mary Jane, the eldest, early assumed responsibility as her mother's little helper, for other babies followed close on her heels. Duty, not love, was the big word in her life. It has always been so.

Belle Hester and John Scott also have fought shy of entanglements with the opposite sex; in fact, the little love-god apparently forgot their existence.

Once Jesse planned to be married. He was 28, and the girl, a neighbor, only 20. She died a few months before the date set for the wedding. Of other love-affairs there were none.

THE ONLY PERSON EDISON OBEYS

BURDENED with hard physical labor and having to grapple constantly with complex inventive ideas, Thomas A. Edison must be "taken care of" by somebody, and the job of "bossing" the wizard and guarding him against interruptions and the dangers of sickness or fatigue is handled by Mrs. Edison. Much has been written about the personality of the inventor, but that of his wife does not appear frequently in the newspapers and magazines. Izola Forrester, an interviewer for the New York *World Magazine*, recently went to the Edison home in West Orange, N. J., and got a first-hand impression of Mrs. Edison's personality and learned something about her daily life. She writes:

It was almost 4 by the clock on the mantel in the library. Mrs. Edison came down the wide staircase quickly, softly, and into the room, drawing on her gloves. She was drest for outdoors, but not in motoring togs, altho her electric runabout was waiting for her. Her whole costume carried out the tones and hues of the season, the delicate, shadowy grays and deep rose reds.

She is of medium height and rather plump. Her hair is brown and waves back from her face girlishly. Her complexion is clear and pink as if she faced the wind often,

and she does. Her chin is rounded and she has the most understanding smile in the world. She doesn't have to say a word to make you feel that she knows everything you want to say, and her wide hazel eyes look clear away into your soul.

"How do we take care of Mr. Edison?" she repeats, looking at the clock on the mantel. "Well, first of all, he needs quiet. We all guard him against any noise or confusion or interruptions. When he is home here he needs perfect rest. Sometimes he stays down at the laboratory for twenty hours at a stretch and longer without sleep, but when he does come home he will lie down and fall asleep as easily as a child, and perhaps sleep straight through for twenty hours without waking. So the house must always be quiet for him."

"No, he has no regular habits." She answered this with a little smile and shook her head. "No regular habits at all. No regular time for rising, no regular diet, nothing like that. He has been called a vegetarian, but he eats wild game and beef and lamb—only they must be well cooked. Everything must be thoroughly cooked, he believes. No cereals, salads, or uncooked foods. He believes that boiling or bringing them up to 215° destroys all germs and removes the danger from typhoid.

"Exercise? Not what other people call exercise. You see, he is on his feet down at the works all day. That is enough exercise, he thinks, so he does hardly any walking outdoors, but he loves his garden, and motoring is his favorite recreation. We have our ride together in my car every day. I am just going down for him now. We ride for two hours before dinner, and he looks forward to it, for I never let him forget that he must be ready when I come for him."

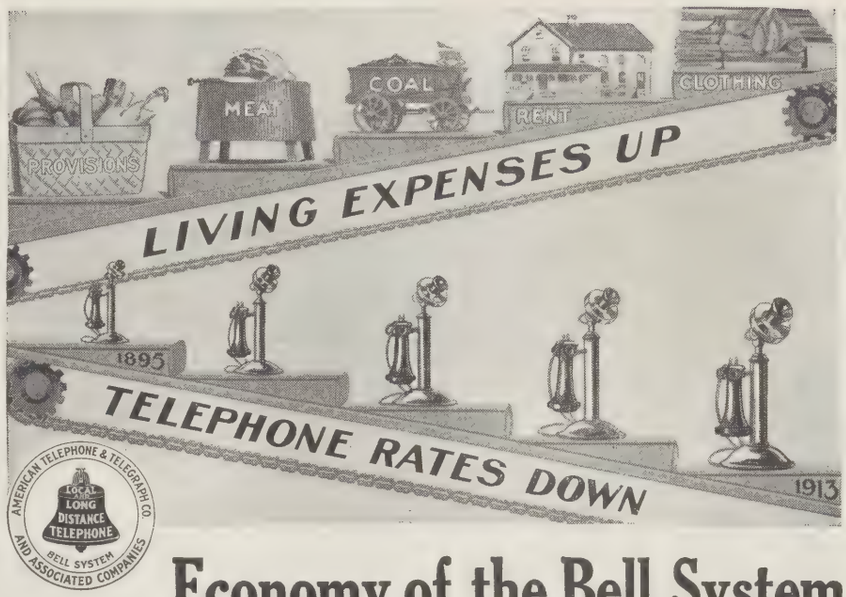
It was 4 by the mantel clock now and we went out to the waiting car. From the distant garden Theodore sent out a hail to "mother." And two figures rose from the stone seat as she came toward them. There was just time for a quick word of pleading from the woman. The old gentleman had some invention. It was all his life-work consummated. He had no funds to carry it on, so he had come to West Orange and followed that winding hill-road up to the house of the great wizard who could make dreams come true.

And the beautiful, calm-eyed woman who takes care of the wizard listened to it all with that little smile of understanding on her lips and told them gently that she would bring it to Mr. Edison's attention, that he had been ill and how careful every one was not to disturb him, but she would promise that he should see it and would let them know.

"There are so many, so many like that," she said, as we spun around the driveway and took the road leading to the ravine. "And sometimes it is their last hope—reaching him. But I always try to see them first for him."

The runabout seemed like a living creature under her touch. There was no jarring, no noise, nothing but swift, exultant speed about this machine that carries Thomas A. Edison out every day for his afternoon spin. On one side rose the craggy gray rocks, overrun with crimson vines. Below were the cool, dim green depths of the glen. It is Mr. Edison's favorite route to his home.

(*Continued on page 976*)



Economy of the Bell System

Consider this significant fact: While most of the necessaries of life have gone up, the price of telephone service, which is one of the essential factors in our commercial and social life, has moved steadily downward.

Although a pound of these necessities still contains but sixteen ounces, the telephone user has been getting more and more service for less money.

On the average, the people of this country pay 49% more today for food, fuel and clothing than they did in 1895. Since then, the decrease in the average rates for telephone service has been more than one-half.

At the same time, the efficiency and value of the service to the subscriber has vastly increased. Today he can talk to an average of five times as many persons in each exchange as he could eighteen years ago.

This is the inevitable result of the comprehensive policy of the Bell System, which brings together the associated Bell companies and the communities they serve.

Through the very size and efficiency of their organization they accomplish improvements and effect economies which give the greatest service at the lowest rates.

Mothers, send us this advertisement and your address on a postcard, with druggist's name, and we will mail you a Ball-cup Nipple to try. Fits any small-neck bottle. Only nipple with open food-cup and protected orifice at bottom—will not collapse, feeds regularly. Outlasts ordinary nipples. Only one to a family.

Half Section

State baby's age, kind and quantity of food.

Hygeia Nursing Bottle Co., 1355 Main St., Buffalo, N. Y.

Upside down or rightside up, it can't leak.

If you're "finicky" about fountain pens and partial to things that mean convenience and satisfaction, my handy little Jack Knife Safety will make a hit with you. I think you will be delighted with it.

Geo. S. Parker.

PARKER LUCKY CURVE

Jack Knife Safety Fountain Pen

As handy as a short pencil. Carry it anywhere like a jack knife. Just slip it in any pocket, suit case, trunk or drawer and forget about it until needed. Can't leak because of the "lucky curve" and the little special locking feature that safely shuts in the ink. Always ready—writes like a fresh dipped pen, smooth as glass and silent as the fall of snow.

The Lucky Curve

The patented idea that has banished all leak and smear and made the Parker Pen so clean.

You can buy any Parker Pen on free trial, with money back if not satisfactory. 15,000 Dealers handle all styles—many sizes—in Standard, Jack Knife Safety, and Self-Filling types at $2.50, $3, $4, $5 and up. If you can't locate a Dealer, write us for catalog.

No. 23½ (ring) $3.25 No. 20 $2.50

60 Mill St. Janesville, Wis.

You are cordially invited to visit our New York **Retail Store** in the big Woolworth Building.

Delicious Country SAUSAGE Direct from the farm

Made from the choicest cuts of yearling pigs, flavored with pure spices after an old Virginia recipe, it is delightfully tasty. No "fillers" or preservatives of any sort are used. Wrapped in parchment and shipped in 5, 10, 20 and 50 lb. boxes. Price 30c lb., delivered at your door. **FOREST HOME FARM, Purcellville, Va.**

Keep Your Eyes Right with the "EMERALITE" DESK AND TABLE LAMPS

"Emeralite" light is strong and scientifically toned to a rich, soothing, eye-helping "daylightness." The adjustable green shade, emerald green outside, opal inside, reflects the light just where you want it—no glare, no shadows.

For Carbon, Tungsten or Tantalum Electric Lamps.

For eyes that need a soothing but strong light—and all eyes do—the "Emeralite" is just the right lamp.

For office, library, parlor, sick-room; for doctors, artists, students—everybody.

Thirty different handsome styles (including a new Bed Lamp) pictured in colors, described and priced in our booklet. Dealers everywhere can supply you.

INVESTMENTS AND FINANCE

(*Continued from page* 951)

of varying degrees of soundness; from the bond with property behind it that would fetch face value at a forced sale at any time to mere speculative pledges of a future realization or increment that is little better than a guess. Finally, there is the enormous mass, recorded only locally and beyond any reliable estimate in amount, of bonds that are not, in view of the flimsy or insufficient security behind them, entitled to be called bonds at all.

In days of soberer financing, an industrial concern was capitalized at somewhere near the amount of cash actually put into the business. With the advent of the large corporation, capital stocks began to grow by multiples of five, ten, one hundred. A company could scarcely respect itself if it had less than a million dollars of capital stock; while from five to a hundred millions became not uncommon. Now the market for stock shares is always limited. The supply increased so fast, the underlying values became so attenuated or doubtful, that some additional assurance was needed to bring in the ready money. Here began the deterioration into the significance of the word "bond." Finding that bonds would sell where stocks would not, the promoter substituted the latter for the former. A concern that might reasonably have carried a total capitalization of $500,000 bonded itself for that amount, and issued half a million or a million dollars of stock in addition. Little local manufacturing or commercial corporations bonded themselves for the limit; the bond in these cases, of course, being nothing but a share of stock, and having no sounder value behind it. The old definition of a bond no longer fits.

Formerly, and always in any properly financed undertaking, the limit of a bond issue is the total cash value of tangible property in possession; not its value for the uses to which it is being or is to be put, but its value as an asset for immediate conversion by forced sale at any time into cash. Under this rule the investor might rest secure. The worst that could happen to him would be to have to take over this property, in case of a receivership, wind up the business, and get back his money. About all that he could lose would be the interest on his investment for the unrealized term of the life of his bond. Now it is altogether different. Not only wildcat concerns, which are outside the range of this discussion, but companies of real merit and solvency, conducted by men who would scorn to do an act commonly recognized as dishonorable, do not hesitate to bond their businesses for very much more than could be obtained from either a forced sale or a careful liquidation. Plant is set down at its cost or its estimated value in use, and not its selling price as real estate and second-hand machinery if affairs had to be wound up. And in addition, present or prospective profits or both, and sometimes mere good-will, are capitalized. The security behind the bond has deteriorated. Its value is diminished. Capital takes alarm. Loans must be made at a higher rate and are harder to place. Instead of a man's word being as good as his bond, his bond has become no better than his word. Securities of that name which actually deserve it, by being worthy of their lineage and true to the traditions of their past, must jostle their way to market through a mob of tatterdemalions with scarcely a rag of respectability to cover their poverty and deceit.

Without undue preference for the interest to which most of my active life has been given, I think I may say that the railroad bonds of this country as a rule have remained faithful to their trust. For one thing, it is practically impossible to place an overissue of railway bonds. If a manufacturing or commercial concern liquidates, its property has only current real-estate value unless some successor wishes to carry on the same or a similar business. If an industrial enterprise is wrecked by competition that it can not meet, by a shift in the market for raw materials, by a cessation of demand owing to changed conditions or new inventions, its bonds may fall to a few cents on the dollar; because the intangible values behind them are reduced to nothing, and the tangible can no longer be turned to profitable use. A railroad is differently situated. Its business can not be discontinued. While it may and does suffer from unjust legislative and other assaults that add to its expenses and subtract from its revenues, it enjoys as a compensation security through the courts against actual confiscation. The road and its belongings will always remain there. They can always be operated. They must be operated by somebody. Therefore the security can not altogether vanish; and experience has shown that it will eventually bring, under wise management, some return in the most desperate cases.

So far as the old, established properties, with an unbroken record for payment of interest and dividends, are concerned, there is no security that can compare with them for safety of the principal and certainty of the interest payment. The United States Government itself has been compelled to suspend specie payments; but the best railway systems of the country went through the stress that drove it to the wall without disappointing investors in them of one dollar when it was due or expected. There never was a bond issued through the centuries since the word first came into use which better deserved to bear the title than the first-class railway bonds that are the favorite investment to-day of the great life, fire, and accident insurance companies, of savings banks, of all who make it their first condition that a security shall have full value behind it, pay at maturity, and be readily convertible into cash with the least shrinkage, even in time of public panic and financial demoralization.

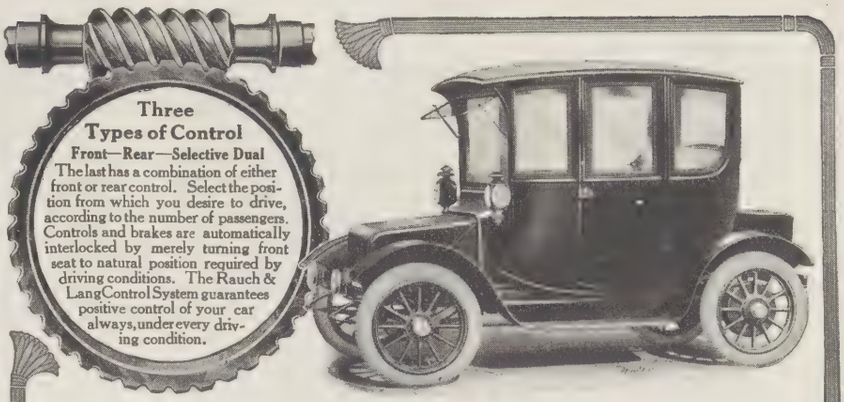
Limitations by law on increase of capitalization are of recent origin. The managements of our railways have, for the most part, financed them voluntarily, so far as bond issues at least are concerned, moderately and wisely. The amount of railway capital outstanding in 1911 was, by official report, a little over $19,000,000,000. Of this, $10,738,000,000 was funded debt, $7,825,000,000 of that amount being bonds. There is no present means of estimating the total money value of railroad property. We do know that it represents the greatest property interest in the country next to the land on which we

live and its improvements. It is so far in excess of capitalization that the margin of safety is plainly in view. It is so much further from the total of the railway bonded debt that the most careful administrator of a trust never guarded it more completely against possible depreciation.

This survey and analysis should explain whatever may seem mysterious or discouraging in the recent course of the bond market. In spite of the care with which men who understand and respect the limitations of credit attempt to guard and restrict bond issues, the grand total mounts so fast and the security is so progressively impaired that the investor hesitates. Those who are desperate for capital bid higher. The rate of interest rises. So does the risk. And these results, unhappy for the borrower, unhappy for the lender, discouraging and dangerous for the community, will continue until the country reconsiders and amends its ways. The two noticeable features of the general bond situation are the extraordinary conservatism in the increase of the railway bonded debt and the extraordinary recklessness of public authorities and the managements of industrial enterprises, taken as a whole, in forcing out every dollar of bonds that anybody will take, until they must finally be advertised as summer sales and peddled out over the bargain counter.

I need scarcely sum up for you, whose business it is to know them well, the present conditions of the investment world. There is plenty of capital in the country. The extent and productivity of our soil, the enterprise of our business men, the sagacity of capital and the industry of labor are continuing that marvelous accumulation of resources which constitutes the aggregate of the nation's wealth. The rate of interest is low for call loans, except in temporary crises. The man with money is content with a small return if he is sure of getting it back the instant a cloud rises in the sky. The reserves of the New York banks show an ample store. But long-time loans are hard to place at rates from one-third to one-half higher than they were even three or four years ago. "The simple truth," says a recent financial criticism, "is, the country to-day is suffering as perhaps never before, except in times of actual panic, from a loss of confidence. The money market is abundantly supplied with funds, but there is timidity and fear, so that no one is willing to let his funds go out of reach." There could be no completer illustration of the essentials of credit as I stated them at the outset. The investor is not sure to-day of either the ability or the intention of the soliciting borrower to pay at maturity. The country is waterlogged with bonds. Confidence can not be restored until the name "bond" has won back something of its old standard. And that can not happen until issues are limited by moderation, conformed to the value of the security and confined to the margin of safety and the form of credit for which the bond was originally designed.

After all has been said, the main explanation of prevailing conditions in the bond market runs back to the old law of demand and supply. There has been too much spending and borrowing. The individual, the corporation, the municipality is no longer willing to pay as it goes. The



Three
Types of Control
Front—Rear—Selective Dual
The last has a combination of either front or rear control. Select the position from which you desire to drive, according to the number of passengers. Controls and brakes are automatically interlocked by merely turning front seat to natural position required by driving conditions. The Rauch & Lang Control System guarantees positive control of your car always, under every driving condition.

Society Adopts

The New Rauch & Lang Worm Drive

Again has the Rauch & Lang Electric asserted its premiership as Society's chosen car.

The success of the new worm drive has been immediate. This feature means the continued leadership in driving quality—just as the beautiful body lines, rich finish and ultra refinement of every detail have always marked supremacy of Rauch & Lang construction.

Hundreds have already ordered the new car. They are enthusiastic because the Rauch & Lang Straight Type Worm Drive (top mounted) which is superior to all others means a greater-than-ever all-'round efficiency, a silence that is manifest, a power-economy hitherto unknown, and a driving simplicity that appeals to the most timid woman.

The Rauch & Lang is the highest-priced Electric on the market. Its value is readily apparent to those who seek a car of artistic and mechanical perfection.

Any Rauch & Lang agent will gladly demonstrate. Catalog mailed on request.

MAKERS OF COACH HISTORY—For over sixty years Rauch & Lang have been building fine vehicles for a select patronage. In each successive vehicle era they have been accorded the leadership. Strict adherence to lofty art ideals and a wonderful mechanical perfection have won and held the acclaim of people of refinement. (147)

future is mortgaged until the interest charge alone absorbs more current revenue than can be spared. This is the standing danger, the crowning abuse of credit, from which no age has been free. It has been the cause of every act of currency inflation, always aggravating the evil. Inflation by bond issues in excess is just as dangerous in practise, produces the same effects, and leads to the same end. Correct this, and the troubles of the market will be relieved, since credit always adjusts itself automatically to the public need when freed from artificial stimulation or compulsion. Let the present abuse of credit continue, and an abyss of possible suffering and financial distress opens before us. This need not happen. It will not happen if the wiser counsel and the conservative view reassert themselves.

It is your duty and your good fortune to help bring this about, to perform this service to the people at the same time that you promote most surely the highest interest of the business in which you are engaged. The men here are not those to whom a commission from a sale ought to or could weigh against the violation of a trust. You handle more frequently the patient and painful savings of the worker, the widow, and the helpless than you do the fortune of the millionaire. You can not venerate your calling too truly or set its standards too high. Your association should voice its opinion and set its face against any trading in bonds that are not proof against all assault. You might even consider whether you should not ask for it the recognition and the safeguards of the law.

There would be little need for blue-sky laws if all who engage in your business were bound by a code both moral and legal to stamp out not only the obviously wild-cat security, but every other that has a surplus of prospectus and a deficit of live assets behind it. There is no reason why your occupation, any more than that of the national banker or the physician, should be disgraced by the adventurer, the charlatan, or the quack.

The times demand of you a new loyalty and a more searching discrimination. You need no proofs to tell you that, if the deterioration of bonds by excessive additions to their volume and by relaxed rules for security is to continue, it will be as disastrous to the reputation of your office and the growth of your business as it can be to the investing public. The man who has been disappointed in his hope of a safe and paying investment, for whom either principal or interest fails, who in time of need is obliged to sell out at a loss, has a long memory, an easy tongue, and a bitter heart. That is human nature. So that for you as for all of us, if we were but wise enough to see it, the path of duty and that of self-interest do not merely run side by side, but converge and melt into each other. You are not merely business men, not merely agents of large bankers or capitalists, not merely traders in paper floating about the street; you are representatives of millions of hard-earned savings, and you are, to a large extent, the custodians of the future welfare of the country. Your work is not only to buy and sell, but to study the foundations, the impairments, and the safeguards of credit; to insist upon its proper limitations; to keep its flying instruments true to their promises and

I Want to *Give* You "Human Energy"

My book explains the laws governing right exercise—some of them for the first time. It shows clearly and concisely why a few minutes daily of movements scientifically directed to reach your internal organs—most of which are muscular—will do infinitely more for your health and strength than hours of random exercise.

I offer it to you free, because I want you to understand the principles underlying The Thompson Course, which has brought thousands from uncertain health and inefficiency into fuller, more useful and serener life.

Sooner or later, you will adopt the principles of my Course—all men of sedentary life will. You will find "Human Energy" a real contribution to the science of making the most of oneself. It is startling, yet obviously true. Sending for it puts you under no obligation, except to read it as though it were written by a friend.

J. EDMUND THOMPSON
Suite 72, Exchange Bldg., Worcester, Mass.

always equal to or better than their face. Remembering the place that the slow accumulation of wealth has had in the advance of civilization, the growth of intelligence and morals, the amelioration and enlargement of the common lot, your function and your opportunity are not lower or less sacred than those of patriots and statesmen. What are the coming years to show as the reward of your labors—which need be none the less helpful because they need not be wholly unselfish—for the common good?

DECLINE IN BANK AND TRUST COMPANY STOCKS

Along with the year's decline in railway and industrial shares, coincident also with inactivity in the real-estate market, has been a considerable decline in the market prices of bank and trust company stocks. One of the causes is generally believed to be the "Money Trust" investigation of a year ago; another the Currency Bill pending before Congress.

The decline has affected trust companies' stocks somewhat more than the stocks of banks. *The Wall Street Journal* is of opinion that this has been due to "shrinkage in their investments," inasmuch as trust companies are not as restricted as are banks in making investments. While the stocks in both "are exceptionally attractive at the present moment, from the standing of the institutions and the point of view of earnings," investors are not much inclined to patronize this class of securities "until they know just how the banking community is going to fare."

The writer in *The Journal* believes that it is this feeling more than any shrinkage in investment values that has caused the decline in these stocks. He declares that the present bid price is not in keeping with values. As an example, the First National Bank is cited. The bid price for stock of this institution has declined from 1000 last year to 940, altho its surplus account in the same period increased from $21,582,000 to $22,196,200, and the book value of the stock from 316 to 322. So also of the National City Bank, whose stock declined from 440 to 360, while its surplus in the same period increased from $29,540,700 to $31,734,100, and the book value of the stock from 218 to 227.

Not so with the trust companies—at least, not to the same extent. With the decline of the stock of the Bankers' Trust Company from 575 to 468, there was a corresponding decline in its surplus from $16,412,400 to $14,860,500. The same, however, was not true of the Guaranty Trust Company, for, while its stock declined from 635 to 560, its surplus increased from $22,723,900 to $23,672,200. The decline in the market price of this company's stock was coincident with a decline in the book value from 554 to 337. This book-value decline was not due to any shrinkage in the value of its investments, but to the fact that the company in October, 1912, took over the Standard Trust Company, and increased its capital from $5,000,000 to $10,000,000. Following is part of a table compiled by *The Journal*,

Wine Jelly when flavored with Abbott's Bitters is made more delightful and healthful. Sample of bitters by mail, 25 cts. in stamps. C. W. Abbott & Co., Baltimore, Md.

Your Whole Business Right in Your Hand

—and you can carry the book in your pocket

You simply cannot carry all the details of your business in your mind. But if you are a good business man you will not fail to have these details at your fingers' ends and you will compare them with those of yesterday, last month and last year.

You will compare John with James; one department with another; keep your eye on expense; realize just where the profits come from; discover the holes that make the leaks in your business.

You need this information every day—at your desk, on the train or if you're fishing—right in your pocket, and that's what the Burroughs Blue Book will do for you and do easily. This book can be obtained only from Burroughs Adding Machine Company.

Write for our Bulletin for Retailers—"Stopping Store Leaks"—which more fully explains (in detail) the way to get, easily, all the facts of your business at your fingers' ends. It will be sent free. Write today and learn how others succeed.

THE YIELD OF SOME STANDARD RAILS

A list of standard railway stocks (to which are added a few industrials), and their yield at current prices, was printed early in the month by *The Financial World*. Besides including such high-class properties as Great Northern preferred and Pennsylvania, it embraced Southern Railway preferred, Brooklyn Rapid Transit, and Westinghouse. At the market prices then current, several of these stocks now yield more than 6 per cent. and none of them yields less than 5 per cent. Following is the list:

	Close Monday	Sept. High	Div.	Yield at Present Price
Atch	92¼	97	6	6.50%
Brooklyn Rapid Transit	86⅜	90½	6	6.95
Am. Tel. & Tel	121½	131⅝	8	6.61

RECOVERY FOR THE EXPRESS COMPANIES

Just what the outcome of the enforced reductions in rates and of the parcel-post competition may be to the express companies remains yet to be demonstrated, but some students of existing conditions believe that eventually the companies will be able to right themselves, partly through economies

You get your own sleeve length in the

Emery Shirt

No need to tug at and soil your cuffs, to hunch your shoulders, or bunch your sleeves with sleeve-holders.

And for comfort and appearance there's pre-shrunk neckbands; unbreakable buttonholes; generously cut shoulders; smooth setting fronts; matched patterns.

Guaranteed Fit, Color and Wear. A New Shirt for One That Fails.

Ask your dealer for the shirt with the Emery label.

"'Emery' Style Booklet," a gentleman's guide to correct dress, will be sent to you free upon request.

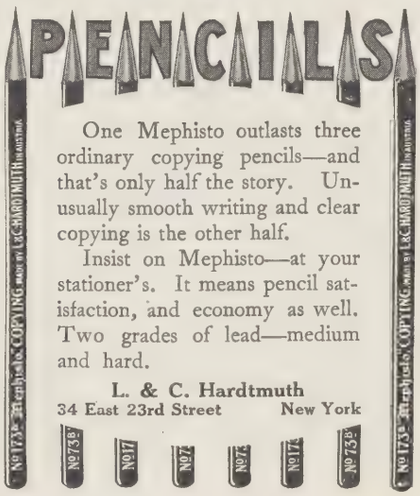
MEPHISTO INDELIBLE COPYING PENCILS

One Mephisto outlasts three ordinary copying pencils—and that's only half the story. Unusually smooth writing and clear copying is the other half.

Insist on Mephisto—at your stationer's. It means pencil satisfaction, and economy as well. Two grades of lead—medium and hard.

L. & C. Hardtmuth
34 East 23rd Street New York



and scientific management, partly through securing new business, such as a fast-freight department. At present, however, returns show that their business in net has met with a serious decline. The four big companies —Adams, American, United States, and Wells, Fargo—during the last fiscal year earned only 9.68 per cent., as against 13.17 per cent. the year before on the same capitalization.

Each of these companies recently decided to accept, without further protest, the 16 per cent. rate cut proposed by the Interstate Commerce Commission, but *The Wall Street Journal* believes this reduction in its effect on future earnings has been fully discounted by the present prices for express stocks; in fact, it was discounted not long after the investigation of express rates was undertaken by the Commission. Following is an analysis of the course of prices for these stocks as made by *The Journal:*

"Prices of the big express stocks during 1911 up to July had shown certain small declines from the high levels reached in the first quarter of that year on rumors that an examination of express affairs would be undertaken within the year. The declines from July 3 to November 22, when the investigation was actually under way, and subsequent declines are indicated in the following tabulation.:

	July, 1911	Nov 22, 1911	Low 1912	Low *1913
Adams Express.....	240	198	160	122
American Express.....	235	208	160	122
United States....	95	90	62½	48¼
Wells, Fargo.....	172	148	115	90

* Prices for 1913 are to October 25.

"The proposed reduction of interstate rates was the greatest factor in the progressive shrinkage in market valuation, but an added one in 1912 was the parcel-post service, which, tho it did not commence operations until January, 1, 1913, was in prospect in 1912. The parcel post became largely a factor in the price situation because of the effect it promised to have on the reduced margin of profit left by the new rates, which margin was to be sustained chiefly by the lightweight-package business of the express companies.

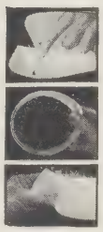
"On the basis of the above quotations, the four express stocks, since July, 1911, exhibit a shrinkage of over $59,500,000. This heavy shrinkage on a total par value of the four stocks of $63,967,000, is shown in the following tabulation:

	July, 1911	Current Price	Shrinkage (Points)	Total Value
Adams Express.....	240	122	118	$14,146,000
American.....	235	118	117	21,060,000
United States.....	95	48¾	46¼	4,675,000
Wells, Fargo.....	172	90	82	19,652,940

"The above deductions are on a basis of 120,000 shares for Adams Express; 180,000 shares for American; 100,000 for United States, and 239,670 for Wells, Fargo & Co. Adams Express stock, which has no stated par value, has been accorded a nominal value of $100 per share, the same as the other companies."

The writer finds a disposition now extant to look for "a steadying appreciation of express companies' stock prices." This disposition exists "in quarters where the values back of them are known." It is based on the believed ability of the companies to meet new conditions and secure new business. They have already secured better control of their operating costs and a closer hold on business in their respective territories.

'SHADOW'—the season's smartest collar—the style that *leads* wherever the clever dresser is seen. 'SHADOW' is a LION collar with all the exclusive LION comfort features—



The "Pliable-Points." Cannot injure the shirt.

The "Slip-Over" button-hole. Fastens in a second. Cannot easily tear out.

The "Easy-Tie-Slide" space. Gained by special LION design. Gives a comfortable channel for cravat to slide easily.

The patented "Lock-that-Locks." Keeps a closed-front collar *closed.* It's the thing that makes all the difference between a stylish collar and a careless one.

See your haberdasher today and order your 'SHADOW' collars. Everybody will be wearing this style a year from today. Why not buy *now* when all the smart dressers are wearing it.

If you cannot get the new 'SHADOW' collar from your dealer—send us his name and 75c—if in Canada send $1.00. We will mail you, by return, a box of six collars in the style and size you specify, for 75c—or as usual 2 for 25c.

PERSONAL GLIMPSES

(*Continued from page* 969)

At the park entrance the policeman salutes her, and the little children playing by the road wave to her and caps swing off boys' heads and men's as she passes by. They all know she is going to take "the old man" out for his airing. Nobody out there ever calls him anything but that—just "the old man"—and it is said with a wealth of loving proprietorship. They love Tom Edison out there. Isn't he there with them every day of his life? Doesn't he work harder and longer than any of them? Isn't the very sight of his tall, rugged, restless old figure darting around the big gray buildings an inspiration and a lesson to every man there?

But when that runabout turns in under the ivy-covered archway there is a feeling of relief and approval. For any man in the place will tell you that "the old man" would work himself to death if it wasn't for "the missus."

"He's in the library still, ma'am," says the door-tender as she steps down from the car. She goes in quickly, with that soft footfall and little, knowing, understanding smile.

"I'm a little late, dear," you hear her say. And then he comes out. No, he doesn't. He simply bolts out, for all the world like a boy let out of school. And he needs a shave. He needs a clean collar. He needs brushing and combing and grooming all over, this big, smiling, white-haired, blue-eyed, sixty-six-year-old boy of hers.

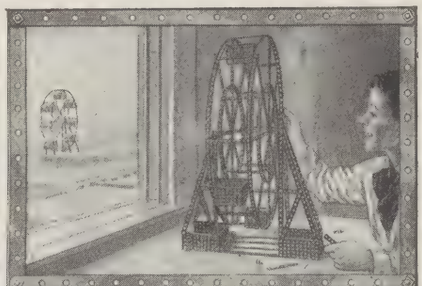
Just as she thinks he is all ready to leave, he darts away from her, out of the door and across the courtyard into another big stone building. But she never loses that calm, happy smile, just waits for him to come back.

The watchman at the door looks after him and the boy sitting down by the big gate looks after him, and they both know that it is to the tender, unfailing watchfulness of "the missus" that the world owes the conservation of Tom Edison's powers. She is the woman at the switch that regulates the current of his life.

THE LIGHTS OF BROADWAY

CITIES, like cats, reveal themselves at night, declares the latest of our English observers. And we are revealed by our electric signs. At least it is these nightly decorations that induce in Mr. Rupert Brooke a most lyrical outflow in *The Westminster Gazette* (London), wherein also he finds no figures so apt in enforcing comparisons as those his school-books provided him from classic and legendary lore. He takes his post on Broadway beneath the panoramic of its antic night lights and sends home to his waiting fellow countrymen this report:

A stranger of another race, loitering here, might cast his eyes up, in a vague wonder what powers, kind or maleficent, controlled or observed this whirlpool. He would find only this unresponsive canopy of black, unpierced even, if the seeker stood near a center of lights, by any star. But while he looks, away up in the sky, out of the gulfs of night, spring two vast fiery tooth-brushes, erect, leaning toward



"A Wonderful Developer of Latent Ability—"

MECCANO

The romance of the sky-scraper and the great bridge glows in every boy's soul. He who today builds toy towers, derricks and Ferris Wheels with his MECCANO—learning the magic of beams and girders, bolts and plates—may tomorrow build the giant structures of his dreams.

Get that boy you are interested in a set of MECCANO

See its brass and nickeled-steel toy building material at your toy or sporting-goods dealer. Or, if he hasn't the book of designs to show you the wonderful things a boy can build with MECCANO, write us to send catalogue and full information of "the best thing ever invented for a boy."

Be sure the name MECCANO is on box

JOHN WANAMAKER, New York

each other, and hanging on to the bristles of them a little devil, little but gigantic, who kicks and wriggles and glares. After a few moments the devil, baffled by the firmness of the bristles, stops, hangs still, rolls his eyes, moon-large, and, in a fury of disappointment, goes out, leaving only the night, blacker and a little bewildered, and the unconscious throngs of antlike human beings. Turning with terrified relief from this exhibition of diabolic impotence, the stranger finds a divine hand writing slowly across the opposite quarter of the heavens its igneous message of warning to the nations, "Wear ——— Underwear for Youths and Men-Boys." And close by this message come forth a youth and a man-boy, flaming and immortal, clad in celestial underwear, box a short round, vanish, reappear for another round, and again disappear. Night after night they wage this combat. What gods they are who fight endlessly and indecisively over New York is not for our knowledge; whether it be Thor and Odin, or Zeus and Cronos, or Michael and Lucifer, or Ormuzd and Ahriman, or Good-as-a-means and Good-as-an-end. The ways of our lords were ever riddling and obscure. To the right a celestial bottle, stretching from the horizon to the zenith, appears, is uncorked, and scatters the worlds with the foam of what ambrosial liquor may have been within. Beyond, a Spanish goddess, some minor deity in the Dionysian theogony, dances continually, rapt and mysterious, to the music of the spheres, her head in Cassiopeia and her twinkling feet among the Pleiades. And near her, Orion, archer no longer, releases himself from his strained posture to drive a sidereal golf ball out of sight through the meadows of Paradise; then poses, addresses, and drives again.

O Nineveh, are these thy gods,
Thine also, mighty Nineveh?

Why this theophany, or how the gods have got out to perform their various "stunts" on the *flammantia mœnia mundi*, is not asked by their incurious devotees. Through Broadway the dingily glittering tide spreads itself over the sands of "amusement." Theaters and "movies" are aglare. Cars shriek down the street; the elevated train clangs and curves perilously overhead; newsboys wail the baseball news; wits cry their obscure challenges to one another, "I should worry!" or "She's some daisy!" or "Good-night, nurse!" In houses off the streets around children are being born, lovers are kissing, people are dying. Above, in the midst of those coruscating divinities, sits one older and greater than any. Most colossal of all, it flashes momently out, a woman's head, all flame against the darkness. It is beautiful, passionless, in its simplicity and conventional representation queerly like an archaic Greek or early Egyptian figure. Queen of the night behind, and of the gods around, and of the city below—here, if at all, you think, may one find the answer to the riddle. Her ostensible message, burning in the firmament beside her, is that we should buy pepsin chewing-gum. But there is more, not to be given in words, ineffable. Suddenly, when she has surveyed mankind, she closes her left eye. Three times she winks, and then vanishes. No ordinary winks these, but portentous,

$1 Worth of Old English Wax Put the Beautiful Finish on This Floor
The expense of having beautiful floors is small if you use the right wax. And a beautiful floor makes a beautiful room. Old English Floor Wax makes the most beautiful of all finishes because it brings out the lights and shades of the wood grain and puts over all a soft, lustrous surface that makes you proud of your floors.
Old English Floor Wax
does not change the color of the wood. You can make the wood any shade you wish. And the surface is never sticky, doesn't collect dust, doesn't show mars or scratches. Old English spreads farther (thinner) than other waxes and the finish lasts longer, because it contains much more of the hard, imported (expensive) wax than is put into other floor wax. Hence its economy. You can apply it yourself on floors, interior woodwork and furniture. Send for

HON. BRAND WHITLOCK, Mayor of Toledo Ohio, after examining the manuscript, wrote thus: "They have accurately analyzed conditions in our own cities, and with most of the conclusions they express I am entirely in accord. . . . . I know of nothing that has been written or printed that would make a more valuable text-book on this whole vital problem."

All Students of Governmental Science Will Find This Volume Essential.

What a Dollar Bill can do

for your backyard and the high cost of living.

IF you have a backyard or a garden that is not working for you to the limit of its possible efficiency, here is the best investment you can make. The intensive culture of gardens can be so developed by the "Garden Profits" System that small plots will frequently produce as much as the average small farm does now.

In this book, by one of the Agricultural Editors of *Country Life in America*, the best stories of 1000 garden successes are gathered together, reduced to simple terms and systematized for your ready use. Every phase of gardening is discussed comprehensively and expertly. Fifty illustrations and scores of plans and planting tables point the way to as many economies of time, work and money. A carefully prepared index adds great value as a ready reference guide throughout the planting season.

THE GARDEN MAGAZINE

is the final authority on all things horticultural. It aims to interest people in gardening by showing them how to get results in the most attractive and practical way. It has helped to decrease the cost of living in hundreds of homes by encouraging the use of once-neglected backyards for truck gardens.
It has brought health and joy into households by bringing their members into closer touch with nature. Among the leading features for the next year are the following:

Efficiency in Backyard Gardening

By Adolph Kruhm. These articles will help you make your garden produce more. They deal with the following subjects: Preparation of the soil, sowing and seeds, the cultivation of crops, crop rotation and the keeping of records.

New and Better Plants for the Hardy Garden

A series of articles written by experts dealing with improved types, races and varieties of shrubs, herbaceous plants, etc.

The Home Fruit Garden

By J. R. Mattern. These articles will show you which orchard fruits are best suited to your soil, climate and needs and how to plant them.

The Months Reminder

What to do right now and why and how to do it in *your* garden. The timeliest practical advice, warnings and explanations.

$2.00 worth for $1.00

A well-printed, strongly bound book of over 200 pages. It retails at one dollar. And *eight* issues of the *Garden Magazine*.

terrifyingly steady, obliterating a great tract of the sky. Hour by hour she does this, night by night, year by year. That enigmatic obscuration of light, that answer that is no answer, is, perhaps, the first thing in this world that a child born near here will see, and the last that a dying man will have to take for a message to the curious dead. She is immortal. Men have worshiped her as Isis and as Ashtaroth, as Venus, as Cybele, mother of the gods, and as Mary. There is a statue of her by the steps of the British Museum. Here, above the fantastic civilization she observes, she has no name. She is older than the sky-scrapers among which she sits; and one, certainly, of her eyelids is a trifle weary. And the only answer to our cries, the only comment upon our cities, is that divine stare, the wink, once, twice, thrice. And then darkness.

WHEN THE MILITANTS BEGAN

IT has been just ten years since that troublesome organization known as the Woman's Social and Political Union was founded. During its first decade the organization has given England much comedy, some tragedy, considerable heroism, and a great deal of flamboyancy. The doings of its leaders have been headlined in large type in the American newspapers about once a week, and oftener in the British press. The career of militancy is raised to the dignity of history by Israel Zangwill, the distinguished London author, who champions "The Militant Woman" in *The Metropolitan Magazine*. The early part of the story begins:

Most of the pioneers of the W. S. P. U. were Manchester workingwomen—one, Annie Kenney, a mill-hand who, as a half-timer of ten, had had a finger torn off by the machinery—and the new gospel was preached at the "wakes," or local Lancashire fairs. Militancy, even metaphorical, was unthought of. The first sparks of that were—strangely enough—struck out at the Free Trade Hall by the flintiness of one of the oldest supporters of woman suffrage—Sir Edward Grey. Prophesying in October, 1905, the overthrow of the Conservatives at the coming general election, he yet refused to say what would be the attitude of a Liberal Government to "Votes for Women." The question had even (by request) been put into peaceful writing, and signed "Annie Kenney, Member of the Oldham Committee of the Card and Blowing-Room Operatives." The humble mill-hand rose as the monster meeting was closing and insisted on a reply. Here again a great pioneering deed was done, destined to find imitations and reverberations innumerable. Sir Edward Grey was silent, but it was Annie Kenney who stood upon a peak in Darien.

Those who know the temper of a political meeting at a passionate crisis will appreciate the almost superhuman courage needed for a girl to get up and traverse it. The vast gathering of Liberals, hoarse from cheering the doctrines of liberty and equality, howled at the frail little figure, and stewards precipitated themselves upon

THE MORLEY CO., Dept. 772, Perry Bldg., Phila.

her. It was at this moment that Christabel Pankhurst leapt into history. She sprang up, threw one arm round her friend, and warded off the hysterical males with the other. They scratched and tore at her hands till, as her sister Sylvia records, "the blood ran down on Annie's hat, which lay on the seat, and stained it red."

Expelled from the meeting, the two girls tried to form one of their own outside. Charged with "obstruction and assaulting the police," and refusing to pay a fine, they were thrown into jail, drest in serge and fed on skilly. In that prison the real W. S. P. U. was born. The same Free Trade Hall that had howled down the questioners was packed to fête the ex-prisoners. Thus is persecution ever the pillar of the Church.

Annie Kenney, abandoning her clogs, except for ceremonial occasions, set out to rouse London—with two pounds in her pocket. Little Mrs. Drummond, the wife of an impecunious upholsterer, a cheery, humorous Scotch body, plump of person and prodigious of voice—the Madame Sans Gêne of the movement, destined also to become its field-marshal—joined her with a borrowed typewriter. The Pankhursts, too, migrated to the capital. And one wonderful day they found the propertied Pethick Lawrences, the able barrister and his brilliant and beautiful wife, self-consecrated from girlhood to social service, and oddly bearing the same Christian name as Mrs. Pankhurst. The new Emmeline became the honorary treasurer, and from that moment the fledging Union was feathered and winged and taloned.

Among the more noteworthy of the early recruits were Theresa Billington, a young school-teacher with brains and looks; Mrs. Despard, the septuagenarian sister of General French, not inferior to him in dash and brio, and Mrs. Baines, who had been a Salvation Army captain and was now the wife of a journeyman bootmaker. Gradually, figures like Mrs. Ayrton, the scientist; Miss Ethel Smythe, the composer; Miss Beatrice Harraden, the novelist, began to appear on the same platform with Lady Constance Lytton, the Countess Russell, and Mrs. Walker, the eloquent Poplar laundress. And, gradually, it began to be understood that a suffragette was not necessarily an elderly spectacled female: the type even changed in *Punch* to a pretty girl. But the notion that the suffragette is a neurotic spinister is inexpungeable. It has even survived the discovery that some of the fiercest of the militants are married men—unique exemplars of the fabulous chivalry of man.

In 1870 Mrs. Pankhurst's husband had drafted a measure which, under the name of the Women's Disabilities Removal Bill, was introduced into Parliament by John Bright's brother and passed its second reading by a majority of thirty-three. It is a pity the long-due reform was not carried in this negative shape, for the cry of "Votes for Women" accentuates the opposition of sex rather than the common citizenship, and whereas the motive power of the suffrage movement had been woman's consciousness of her own dignity, it is becoming more and more her consciousness of man's indignity. Man has failed to run things decently. There must be "joint housekeeping." Woman must help man to set the house in order. "I, for one," cried Mrs. Pankhurst, "looking round on the sweated and decrepit members of my sex,

Play Billiards at Home

The Cost is a Trifle

$1.00 DOWN

The prices are from $15 up, on terms of $1 or more down (depending on size and style) and a small amount each month.

BURROWES
Billiard and Pool Table

Do you know how very little it would cost to have your own Billiard and Pool Table? Under our easy payment plan the expense is hardly noticeable.

Play While Paying

Instead of paying for the use of a public table, with nothing to show for the expense, you can become the owner of a Burrowes Table for the same amount or less, using the table in the meantime.

This is your opportunity to play these fascinating, exciting, wholesome games under ideal conditions. Billiards and Pool are the most popular games in the world.

Burrowes Tables are correct in every detail. They are used by experts for home practice. The most delicate shots can be executed with the utmost accuracy. No special room is needed. Table may be mounted on dining-room or library table or on its own legs or stand. Balls, cues, etc., free.

FREE TRIAL—NO RED TAPE

On receipt of first installment we will ship Table. Play on it one week. If unsatisfactory return it, and on its receipt we will refund your deposit. This ensures you a free trial. Write today for illustrated catalog giving prices, terms, etc.

THIS BOOK MAKES BIBLE STUDY ATTRACTIVE and full of Human Interest

Its purpose is to present a type of Bible Study fitted for the requirements of modern times.

It shows how up-to-date Bible Study may be organized and developed in different communities, to meet the current needs of men.

The Bible and Modern Life

By CLAYTON SEDGWICK COOPER, International Secretary for Bible Study, Young Men's Christian Associations.

"An admirable piece of work, full of suggestion, and—what is even better—of inspiration. It is one thing to be told what to do and how to do it; it is another thing to be told in such an attractive and stimulating manner that one feels both the desire and the power to do. The entire presentation of the theme is ceear, forceful, broad-minded, progressive and practical." *Prof. Henry Hallam Tweedy, Yale Divinity School, New Haven, Connecticut.*

"A tremendous earnestness pulsates through its pages. It is literature of power as well as of information."—*The Standard, Chicago.*

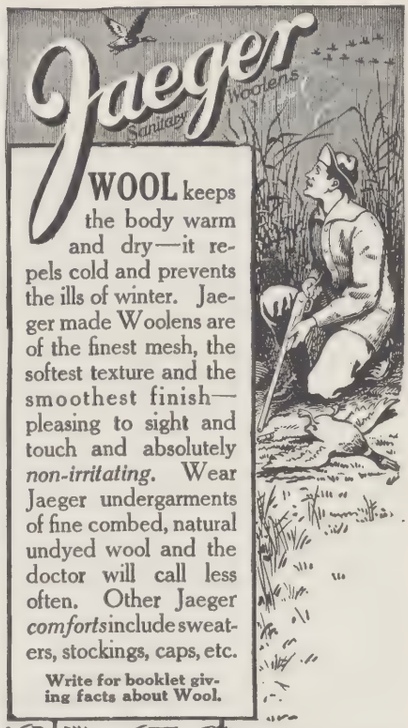
12mo, Cloth, 16 full-page illustrations. $1.00 net; by mail, $1.10

FUNK & WAGNALLS COMPANY, New York, N.Y.

say that men have had control of these things long enough." In particular, the "social evil" has entered into the suffragette consciousness, the veil of our compromise with polygamy has been lifted, and the sins of the male, assuredly great enough to be safe from exaggeration, have been magnified by taking the abnormal for the average. Woman's place in our matrimonial system was represented much as the West represents her place in the oriental scheme, or as Mark Twain's Yankee described the Court of King Arthur, with all the facts and little of the truth. If a minute minority forthwith demanded equal immorality with man, its organ, *The Freewoman*, was not destined to exemplify the survival of the unfittest, and by the vast majority the vote is regarded as the great instrument of social purification.

The example of suffrage countries is cited to show, says Mr. Zangwill, that many laws for the protection of women have been enacted. To conclude:

Annie Kenney's deed of derring-do came like a trumpet-call to the millennium. "Here at last is action!" cried Mrs. Pethick Lawrence, and a thousand devotees rushed into it. Heckling became a fine art, and even a joyous; for, despite all the suffering it cost them, they carried it through with such inexhaustible spirit and invention as to restore a touch of chic and bravado to our drab life and add to the gaiety of nations. Miss Pankhurst even managed to badger Cabinet Ministers in the witness-box. Why interjection was invariably answered by ejection, why legitimate petitions were punished with sentences reserved for the most atrocious crimes, is what no woman understands. But if denunciations of arson leave the suffragette cold, it is because the vocabulary of vituperation had been exhausted over a phase which now looms to us as sedate as an Impressionist picture in a Futurist exhibition. Parliament actually passed a bill to protect public meetings from her—a measure which, like every other hatched against her, has been a still-born monstrosity. There was no meeting, however guarded, to which, by hook or crook, organ-pipe or drain-pipe, she did not gain admission, padlocking herself against easy expulsion, while, even were her bodily presence averted, always, like the horns of Elfland faintly blowing, came from some well-placed megaphone that inevitable and implacable slogan which, chalked on pavements or scrawled on walls or blazoned on sky-signs, became a universal and ubiquitous obsession. Steamers carried it under the terrace of Parliament or balloons suspended it from above. Cabinet Ministers were dogged to their privatest haunts, for the leakages of information were everywhere. Since Christianity no such force had arisen to divide families. No household, however Philistine, was safe from a jailbird. If Lady Anon asked Lady Alamode when her daughter was coming out, it no longer referred to the young lady's début. The most obstinate autocrat since Pharaoh, Mr. Asquith, has been shown similar signs and wonders. "We are the appointed plagues," said Mrs. Pankhurst, with a rare touch of humor. And nothing has plagued British society



WOOL keeps the body warm and dry—it repels cold and prevents the ills of winter. Jaeger made Woolens are of the finest mesh, the softest texture and the smoothest finish—pleasing to sight and touch and absolutely *non-irritating*. Wear Jaeger undergarments of fine combed, natural undyed wool and the doctor will call less often. Other Jaeger *comforts* include sweaters, stockings, caps, etc.

Write for booklet giving facts about Wool.

How To Be Happy and Efficient, and Live Long Despite A WEAK HEART and Hardened Blood-Vessels

The HEART and Blood-Vessels

Their Care and Cure and the General Management of the Body

By I. H. HIRSCHFELD, M.D.

In this new book is told the really interesting story of the heart, and how to lead a happy and efficient life even when it is sick and the blood-vessels are hardened. The author, a prominent physician, discusses the correct management of the body in regard to work, play, sleep, food, sex, climate, and the different values in life, and shows the way by which to reconstruct one's system after it has been mismanaged.

"Nothing like it has appeared for supplementing the wide work of human conservation," says the *News*, Chicago.

"This book should be an aid to humanity in general."—*News-Tribune*, Detroit.

more than that outbreak of religion which brought disgrace upon so many respectable homes. Incidentally, the prisons and the courts were improved by receiving critics instead of criminals. "We do not care for ourselves," cried Christabel Pankhurst at the London police court, "because prison is nothing to us. But the injustice done here to thousands of helpless creatures is too terrible to contemplate." Warders and wardresses, too, profited by the society of their new prisoners. It was like a rise in the social scale to them. Nor was even the Bench immune from education.

"Boyle!" called the magistrate. "*Miss* Boyle," corrected the prisoner. "We always call our prisoners by their surnames," explained the magistrate. "We are here to teach you better manners," said the suffragette.

Simultaneously with these constitutional tactics there had gone a political militancy, equally constitutional. "The Liberal Government refuses the vote—turn the Liberals out," was the simple formula, and so at every by-election the W. S. P. U. worked against the Government candidate. He might be an old and tried suffragist. The Conservative candidate might be an old and scurrilous anti-suffragist. No matter. The laws of the Medes and Pankhursts do not change.

JUNGLE BEASTS AT LARGE IN LEIPSIC

THERE came from Leipsic the other day a lively circus story that was neither written nor inspired by a press-agent. Eight lions and a tiger got loose, several thousand people were scared almost to heart failure, and the police fired three hundred shots at the beasts, giving a fairly good suggestion of the rumpus that shook the great German city when, a century ago, the Austrians, Russians, Prussians, and Swedes thrashed and gave chase to the proud army of Napoleon. This summary of important results merely serves to start the story off. The details are furnished by the Reuter news service to the London papers on October 20:

The illuminations arranged in honor of the ceremonies on the previous day had been repeated, so that the streets were crowded with people. A number of animals belonging to Barnum's Circus, which had given performances during the evening, were being taken in vans to the railway station, and owing to the fog the driver of an electric tram-car did not observe the procession passing across the end of the street down which he was running. The consequence was he collided with one of the vans, which contained eight trained lions and one tiger.

The van was turned over and broken open by the impact, and all the animals bounded out of it in terror. As may be imagined, the panic among the crowd in the streets was awful, people rushing off in all directions, imagining the lions were after them.

The police were at once alarmed, and

This man is doing his Xmas shopping!

He *used* to dread it—put it off until at least December 22d. Then he cane-rushed into the hurrying masses of Christmas shoppers, tramped for weary hours, at last in desperation picked up the things nearest at hand—

And finally emerged tired and dissatisfied, with a lot of conventional gifts that had cost more than he intended.

Now he gets our illustrated catalog, a very cyclopedia of Christmas, compiled by experts in gift-selection. Sits at his desk and leisurely turns its pages and picks out his Christmas gifts. In half an hour it is all done. He has selected presents for Mother, Aunt Mary, Lucy and Frank, most of the things for the children, and the gifts for the folks back home. And each one seems an inspiration! He simply writes or dictates the order and sends a check for the amount. His gifts have cost him only what he wished to pay, and they show an originality that will prove a happy surprise to the folks.

Now, how do you do *your* Christmas shopping? Do you really *enjoy* the annual nightmare, with its hours of searching and its unlooked-for expense? For, if you do not, you can have this same relief. Just write for our free catalog of 230 pages, a book that hundreds of busy men have come to depend upon as the easiest and quickest method of shopping possible.

We send everything daintily packed, delivery charges prepaid. You cannot lose, as we guarantee satisfaction *unconditionally*. We have been selling gifts for 46 years. The name Daniel Low & Co. on a gift box is recognized everywhere as a guarantee of quality and artistic excellence.

every available man was ordered out with his revolver.

The lions were in reality as frightened as the people, and endeavored to escape from their pursuers, especially when the police opened fire on them.

The wife of a circus director complicated the situation by throwing herself between the police and the lions, imploring that the valuable beasts might be spared. She had to be moved out of the way by force. In the meantime three lions had fled for safety into the neighboring Hotel Bluecher, where an indescribable panic ensued among the guests and waiters.

One lion was enticed into the lavatory, where he was promptly shut up, a second beast reached the attic, where the door was also shut upon him, and a third reached the fourth floor, and lay in terror outside one of the hotel bedrooms amd scratched at the door. The occupant of the room, a Frenchman, was already in bed, but he promptly got up and opened the door, only to find himself face to face with the terrifying king of beasts. He rushed aside, and the lion sprang through the window into the street, falling on a cab horse, just underneath. He bit and tore this poor, helpless animal, the cab-driver meanwhile flogging him desperately with his whip.

Ultimately the lion was shot by the police. By this time another lion had reached the railway, where he was shot with a revolver-bullet, while standing undecided which way to turn.

Altogether five lions were shot by the police, and the two imprisoned in the hotel were with great difficulty got into cages by attendants from the Zoological Gardens and the circus, but not until 7 o'clock this morning. The scene in the streets at midnight was awful. The lions roared, the fleeing crowds shrieked, revolvers were fired incessantly, and people in their nightclothes appeared at windows of houses and joined in the universal clamor.

The loss to the proprietors of the circus is estimated at between $25,000 and $30,000. Several horses were badly bitten.

Gervangeline's Progress.—Mrs. Briggs was no exception to the general rule. She believed implicitly in the heaven-sent genius of her offspring—and there were five of them.

Above all, was she convinced that Gervangeline was born to charm the best audiences in America by her gift for piano-playing.

So at the age of ten Gervangeline was sent twice a week to the expensive academy of Herr Poppanfizzel.

At the end of the first term the proud mother called on the great man, in order to give him an opportunity of holding forth on Gervangeline's genius. Said she:

" Now, professor, how long will it be before my daughter is a really great pianist?"

Herr Poppanfizzel thought for a few minutes. At last:

" Dot is a ding imbossible to dell," said he.

" How's that? " said Mrs. Briggs, in a mother-fighting-for-her-young sort of voice. " I'm sure she has the necessary qualifications, hasn't she now? "

" Vell, matam," said the professor, " she haf two hands ! "—*New York Mail.*

Cramped.—" What's the matter with this elevator? " asked the nervous man. " You keep trying to run it through the roof."

" You'll have to excuse me," replied the operator. " I'm not used to one of these little twenty-story buildings."—*Washington Star.*

Real Head Work.—" I say, Reginald, I've forgotten my card-case."

" Nevah mind, deah boy. I'll lend you some of mine."

" But—ah—the names would be different, doncherknow."

" So they would; what a head you have got, Algy ! "—*London Opinion.*

WARNING

Fraudulent persons, representing themselves as agents of publishers of popular periodicals, are at work in various parts of the country. We urge our readers to pay no money for periodical subscriptions to strangers, even tho they show printed matter purporting to authorize them to represent publishers, especially when cut rates and bonuses are offered. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect your community is being swindled, notify the Chief of Police and the publishers, and arrange another interview at which the proper action can be taken.

CURRENT EVENTS

Foreign

October 30.—A bill authorizing Prince Regent Ludwig to proclaim himself king in place of the insane King Otto is passed by the lower house of the Bavarian Diet.

Companies representing a capital of more than $1,000,000,000 form a committee in London for the purpose of inducing the British Government to alter its decision not to participate in the Panama-Pacific Exposition.

October 31.—Joseph E. Willard, the first United States Ambassador to Spain, is received by King Alfonso in Madrid.

November 1.—Prince Ernst August of Cumberland, heir of the Guelphs and son-in-law of the Kaiser, takes over the government of Brunswick as reigning Duke without explicitly renouncing his claims to Hanover.

November 3.—Price Collier, the American author and traveler, dies in Denmark.

The Conservatives, under the Premiership of Sir Edward Morris, are returned to power by the elections in Newfoundland.

November 4.—President Yuan Shi-kai expels 300 members of Parliament who have been opposing his policies. Martial law is declared in Peking.

Forty-seven passengers are killed in a collision between two trains at Melun, 30 miles from Paris.

Six thousand business men of Ulster pledge themselves not to pay taxes under a home-rule Irish Parliament.

November 5.—Prince Regent Luitpold of Bavaria proclaims himself King Ludwig III.

Domestic

WASHINGTON

October 30.—By a unanimous vote the National Association of Railway Commissioners adopt a substitute for the "States' rights" resolution on Federal jurisdiction over interstate commerce.

Postmaster-General Burleson decides to standardize the postal service with a view to greater efficiency.

October 31.—The Senate Banking and Currency Committee amends the Owen-Glass Currency Bill by reducing the number of regional institutions to four.

November 5.—The Navy Department orders the assembling of a fleet at Vera Cruz, Mexico.

GENERAL

October 30.—The employees of the street-railway and interurban traction companies in Indianapolis go on strike.

November 3.—The Garden Club of Minneapolis announces that $59,870.55 was earned from vacant-lot gardens in that city last summer.

November 4.—John Purroy Mitchel, Fusionist, is elected Mayor of New York City over Edward E. McCall by a majority of 121,209. Charles Edward Russell, Socialist candidate, polls 32,109 votes, twice as many as the Socialist candidate received four years ago. William Sulzer, deposed Governor, is elected to the New York Assembly, and a majority of the Assemblymen who voted to impeach him are defeated.

Joseph C. Armstrong, Republican, is elected Mayor of Pittsburg over Stephen G. Porter, Progressive.—F. S. Spiegel, Republican, defeats Henry T. Hunt, Democratic incumbent for Mayor of Cincinnati.—The Republicans elect Carl H. Keller Mayor of Toledo.—Mayor Newton D. Baker, radical Democrat, is reelected Mayor of Cleveland, defeating Harry L. Davis, Republican.—Joseph E. Bell, Democrat, is elected Mayor of Indianapolis, Dr. W. H. Johnson, Progressive, running second. The Democrats win in 31 other Indiana cities, and the Republicans elect four mayors.—The Republicans are victorious in a campaign for minor offices in Philadelphia, defeating the Fusion forces led by Mayor Blankenburg.—John H. Buschmeyer, Democrat, is elected Mayor of Louisville, the Progressive candidate running second.—Dr. George R. Lunn, Socialist Mayor of Schenectady, N. Y., is defeated for reelection by Teller Schoolcraft, Fusionist.—Louis Will, Progressive, wins the Mayoralty of Rochester, and Louis P. Fuhrman, Democrat, is reelected Mayor of Buffalo.—Mayor Karb, of Columbus, Ohio, is reelected by the Democrats.—David I. Walsh, Democrat, is elected Governor of Massachusetts, Charles S. Bird, Progressive, running second.

James F. Fielder, Democrat, wins the Governorship in New Jersey, ex-Governor Edward C. Stokes running second.—Henry C. Stuart, Democrat, is elected Governor of Virginia without opposition.

The Democrats gain control of the Maryland Legislature and elect Blair Lee United States Senator.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"P. S.," Courtenay, N. Dak.—"(1) Kindly tell me which of the following expressions is correct and your grammatical reason for the usage of either: 'I wish that you *will* kindly do this for me,' or 'I wish that you *would* kindly do this for me.' (2) Is the following expression correct? 'We are liable to have a storm.' Is it not better to say, 'It is very likely that we will have a storm,' or 'We are apt to have a storm'?"

(1) A verb of "wishing" requires that the verb in the subordinate clause (expressing what is wished for) should be in the subjunctive mode. That is why one should say, "I *wish* that you *would do* this," not "I wish that you *will do* this." *Would do* is to be parsed as the subjunctive mode of the verb *do* (tho any other name might do for the mode if it is understood what the verb-form signifies, and why it is used). It would be still better, in this case, if one recognized *would* as the verb, meaning "were willing" or "would consent," in the past tense, subjunctive mode, and *do* as another verb in the infinitive form dependent on the verb *would*.

(2) One may say, "We are *likely* to have a storm," or "It is very *likely* that we *shall* have a storm." *Apt* would not fit the passage well, and *liable* is still further from suitable.

"E. A. F.," New York, N. Y.—"Can the word 'woods' be used correctly with the singular verb as well as the plural, as distinguishing one cluster? Are the following sentences grammatically correct? 'The shooting in this woods is good'; 'The woods is full of game'; 'This woods is the largest of all the woods.'"

The word *wood* in the singular means a large and thick collection of trees; a grove of trees. When used in the plural, even when referring to a single collection of trees, it should have plural words associated with it; as, "The shooting in *these* woods is good"; "The woods *are* full of game"; "*These* woods *are* the largest of all the forests (or groves)."

"M. L. S.," Randolph, N. Y.—"Is the masculine for *Frances* ever correctly spelled the same as the feminine?"

Francis is the only correct form for the masculine noun.

"C. S. W.," Bijou Hills, S. Dak.—"(1) How would you write the sentence, 'I was coming from the *place of Mr. Thomas*,' in the possessive case, when the singular ends in *s*?" (2) Why is 'an' used in the phrase 'an historical fact' when grammarians say that the article 'a' is used before consonants and the article 'an' before vowels or vowel sounds?"

(1) "From Mr. Thomas's place." (2) Formerly, initial *h* was not pronounced in a great many of the words *spelled* with *h;* that is, the words were pronounced *'istory, 'istorical, 'ospital, 'onor, 'our; honor* and *hour* are still pronounced without *h: an* honor, *an* hour. Nowadays, nearly all *h*'s are pronounced, and so these words now begin with a consonant, and we say *a* history, *a* hospital. But when the accent does not come on the *h*-syllable, some people still use *an* before the word; as, *an* historical, *an* historian. The retention of *an* here is somewhat favored by the fact that the *h*, standing in an unstressed syllable, is itself very light. But the NEW STANDARD DICTIONARY recognizes only the pronunciation of *h* as a genuine consonant, and would therefore authorize only *a*, not *an*, before such words.

"J. K.," Tiffin, Ohio.—"Which of the following is correct? 'Each of you must get *his* lesson' or 'Each of you must get *your* lesson.'"

The correct form is *his*, not *your*. "Each (of *us, you, them*) must get *his* lesson."

"N. K.," Miles, Iowa.—"When two pronunciations are given, is the first preferable?"

When the NEW STANDARD DICTIONARY gives two pronunciations, that given first is the pronunciation preferred by the majority of its Committee on Disputed Pronunciations.

Changing Nature's Face

The Panama Canal—an everlasting memorial to the imagination, perseverance, and ingenuity of the American people—will soon be ready to receive the traffic that eagerly awaits the opening of its giant locks.

You must see this great engineering feat—declared by James Bryce to be "the most gigantic effort yet made by man on this planet to improve upon nature."

NORTH GERMAN LLOYD

West Indies Panama Cruises

afford an ideal means of visiting the Canal and the West Indies. The world famous

You Find *the* True Spirit *of* Christmas in

the Ingersoll Dollar Watch

$1

Measure your gifts by the pleasure and service they give—and your mind will turn naturally to watches—and to Ingersolls.

Childish faces light with pleasure at the tick of an Ingersoll on Christmas Morn, and older folks appreciate them just as much.

An Ingersoll is a sane and sensible gift—the nature of which cannot be measured by price. It is the sincerest of remembrances, an intimate daily companion and consultant.

Think how many of your friends you can please with an Ingersoll—there is a model just suited for each one of them. The five models are:

"The Watch that made the dollar famous" - -	$1.00
The Eclipse—a thin model for men - - -	1.50
The Midget—a model for women and girls - -	2.00
The Junior—a small thin model watch - -	2.00
The Wrist Watch—for men and women - -	2.50

Send for the Ingersoll booklet, "Pointers"—it's free

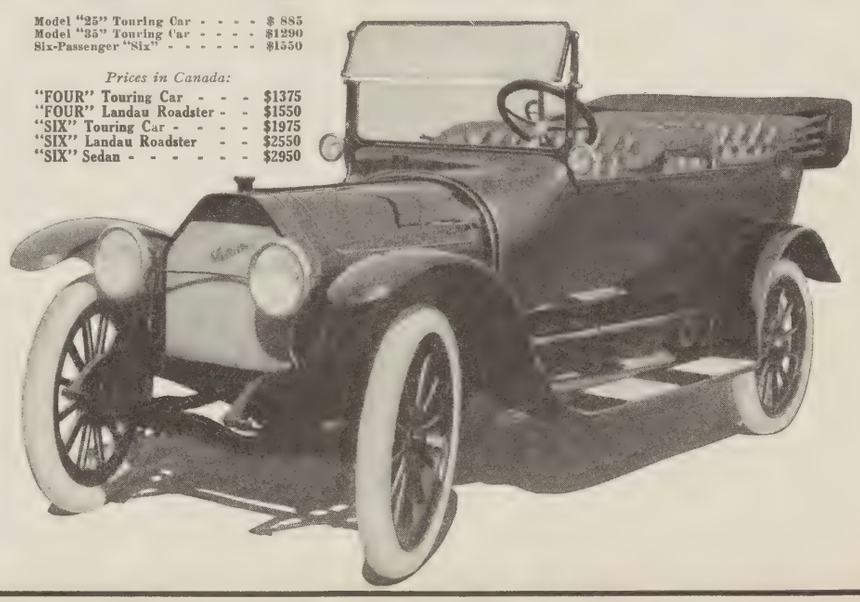
"SIX" Touring Car	$1975
"SIX" Landau Roadster	$2550
"SIX" Sedan	$2950



The One Question Settled

There never has been any *real* question as to the superior smoothness of the "Six."

The real question was whether you could afford to pay for that superior smoothness—from $2,000 to $5,000.

The need of such an expenditure is forever eliminated by this Studebaker "SIX."

For the Sake of Argument

Assume for a moment that you do doubt the superior smoothness of this "SIX."

A single ride in the car will settle that.

But so will a mere study of the "*Six*" *principle itself*.

What you pay money for in a motor car is *power impulses*.

And what you want most is to get them as *close together* as possible.

What Happens in a Six

The continuous cycle or unbroken circle of power, generated by six cylinders, is what makes the unsurpassable smoothness of the Studebaker "SIX."

Power is not continuous with less than six cylinders; and the fewer the cylinders, the greater the *lapse* between power impulses.

There's a *halt* between the explosions, which drive the pistons, which turn the crankshaft.

One impulse does not *merge into another* to create continuity.

That's why a single cylinder lunges and chugs.

As the cylinders increase in number, these halts or lapses lessen and finally become *almost* imperceptible.

But they are still *there* until the six cylinders form an uninterrupted flow of power.

When You See the Difference

You see the difference the moment this "SIX" starts.

You may never have experienced the charm of a "Six" before.

But you'll never forget it.

You may not have felt the lapse in power impulses in other cars.

But you *know* the difference now.

You *know* that this car rides as no car having fewer cylinders *can ride*.

A Manufactured "SIX"

Here, for the first time, you are able to get manufactured qualities in a "Six" at the price we place on this splendid new Studebaker "SIX."

The Studebaker "SIX" is manufactured throughout in the Studebaker factories.

We build its motor from the raw iron and steel materials to the finished product.

We build its full-floating rear axle; we forge, cut and machine the axle gears.

We select and test and prove the rough stock, and cut and machine the transmission gears.

We use Timken bearings throughout the rear axle and transmission, and in the front wheels, for quiet, easy running.

Economical of Fuel and Tires

In fuel consumption the "SIX" will surpass the economy of any car of equal horsepower.

It is economical because, in spite of its 121-inch wheelbase, it is light; yet it is wonderfully strong.

It is generously roomy and richly upholstered, and carries its seven passengers in utmost comfort.

In beauty of design, and grace of line, we believe no other car excels the "SIX."

The starting and lighting system is the Wagner two-unit starting motor and generator separate.

Lamps are Gray & Davis' highest quality parabolic type.

The equipment throughout is complete and satisfying.

Send for descriptive literature.

Hamilton Watch

The Watch of Railroad Accuracy

A True Test of True Time

These Engineers, Conductors and Trainmen of Fast Limited Passenger Trains, and thousands more, carry the Hamilton Watch because of its accuracy and durability.

Over one-half (56%) of the railroad men on American railroads where Official Time Inspection is maintained carry the Hamilton Watch.

Hamilton Watches for general use include beautiful thin models for men and women and are sold by jewelers everywhere.

Movements only are $12.25 and upward. Complete watches, certain sizes, are $38.50 to $150.00. Ask your jeweler about them; also about fitting your present watch case with a Hamilton movement.

Write for "The Timekeeper"

It illustrates and describes the various Hamilton models and is a book well worth reading if you are thinking of buying a fine watch.

HAMILTON WATCH COMPANY

Dept. L, Lancaster, Pennsylvania

You may have a Hamilton movement fitted to your present watch case by your local jeweler if you prefer.

Terra-cotta cylinder containing Cyrus' own story of the "Fall of Babylon"

The Writing on the Wall

It was at the famous feast of Belshazzar, King of Babylon, that the prophet Daniel read the awful dictum—"Mene, Mene, Tekel Upharsin." That night Cyrus and his army captured the city, but not until thousands of years later was unearthed the inscribed cylinder that told the **real** story of the "Fall of Babylon." This curious account, which is very different from the popular version, is but one of many thousand "original documents" contained in

The Library of Original Sources

now for the first time available to the general public. This remarkable Library has previously been sold by subscription, but by purchasing the *entire unsold edition* from the publishers, we secured it at an *absolutely unheard of reduction.* Therefore we are able to offer a few sets to LITERARY DIGEST readers at

THIS MARVELOUS WORK is revolutionizing modern thought. It's turning upside down old notions and ideas. It gives the authoritative, rock-bottom sources of our knowledge on ALL SUBJECTS OF HUMAN INTEREST from the earliest civilization *down to today*—the inside facts which the average person has never even heard of.

OVER 100 RESEARCH SPECIALISTS spent 10 years gathering the contents of this great work. Ancient and remote and forgotten civilizations in all parts of the globe were uncovered, and age-buried hieroglyphics on monuments, tablets, sun-baked bricks and palimpsests yielded their secrets; untiring workers ransacked the hidden literature of every age, ancient, mediæval and modern, to find the "original documents" that shaped the civilizations and influenced the thought and life of the world. Nothing like it has ever been attempted or thought of before. You'll be amazed at the wealth of information this unique library contains.

DO YOU KNOW that the old Egyptians 5000 B. C. had a Bible?—Do you know that the Assyrian literature gives the story of the Creation?—Do you know that books and newspapers were printed in Asia thousands of years before printing was invented by Gutenberg?—Did YOU ever read Columbus' *personal* log of his great voyage?—Do you know that there occurred in Mediæval England the first great Socialistic protest?—Do you know by what unique process Harvey demonstrated the circulation of the blood?—Do you know who Machiavelli was, or what world famous treatise he wrote?

YOU'LL FIND THEM ALL—and thousand of others equally as curious and important—in the Library of Original Sources. Every document is in the exact words of the original, translated; every contribution is from the actual eyewitness or person who took part; every idea is in the words of the thinker, investigator, discoverer or inventor.

JACK LONDON SAYS:—"It is a whole library in itself. I certainly never could spare these books from my shelves."

10 sumptuous, massive volumes, bound in rich, deep, red morocco; full page illustrations, pure silk headbands, printed in large, clear type on handmade paper, gold tops—a triumph of the book-maker's art.

This Christmas Morning Scene Will Be Witnessed In Many Homes!

—transferring treasured volumes from the overcrowded shelves of the old-fashioned, solid bookcases to the beautiful, modern

Globe-Wernicke
Sectional Bookcases

Globe-Wernicke Bookcases make perfect gifts, because, as perfect bookcases affording every convenience and protection, they are a source of constant pleasure.

Many so-called "sensible" gifts are frequently inartistic, but in Globe-Wernicke Sectional Bookcases, utility and art are united in a rare combination of practical and artistic values.

You will not be fair to yourself or to those whom you are going to remember this Christmas if you do not attend your local Globe-Wernicke dealer's

Globe-Wernicke Bookcase Event, Dec. 1st to Dec. 13th.

Your local Globe-Wernicke dealer will devote this time to demonstrating the beauty and economy of the modern bookcase in its highest form. You will find this event interesting and instructive.

There you will see demonstrated the many advantages of Globe-Wernicke Sectional Construction that permits this Bookcase to grow with your library and adapt itself to becoming arrangement in spaces of various shapes and sizes. There you will review the many Globe-Wernicke styles and finishes which harmonize with all interior decorative and furnishing schemes.

Don't miss attendance at this event — more especially if you have some dear one whom you wish to remember with a Gift of more than ordinary significance—a gift of *permanent*, rather than fleeting value.

We have local Agents nearly everywhere, but where not represented, we ship freight prepaid. Our special Christmas Folder No. 80 will aid you in your selection. Write for it.

Kindly send your special Christmas Bookcase Folder No. 80 to the name and address on the margin below:

This Man Has the World's Most Wonderful Memory

HE can instantly give the population of any place in the world of over 5,000—

HE can give without hesitation every important incident and date in the world's history—

HE can give the dates of birth and death of the great men of history—

HE has 300,000 Facts and Figures stored away in his brain, ready for instant use.

Felix Berol is this man's name, and a few years ago his memory was distressingly poor. His present amazing efficiency has been developed through his own simple, practical method.

He is now teaching his system with great success to large classes at many of the leading educational institutions in New York City, having been endorsed by the heads of the educational departments. He desires to impart his method to YOU.

He Can Build *YOUR* Memory So That It Will *Always Serve You*

"THE BEST SYSTEM OF MEMORY TRAINING YET DEVISED"

"So well pleased have we been with his system at our Y. M. C. A. that I am voluntarily writing you and commending your efforts by which a larger number of persons all over the country can be reached. Over two hundred men at our Association have studied under his direction. Two hundred or more have studied in many Brooklyn Associations. The system has been helpful to all classes, teachers, lawyers, doctors, and other professional men. A number of men have testified to advancements and increase of salary due to their study. Mr. Berol himself is the best example of what his system can do. I have heard him before an audience answer any question regarding population of cities, important dates in history, birthdays of famous men, etc. From all I have been able to learn, he has the best system of memory training yet devised."—*Edward L. Wertheim*, Educational Director, West Side Y. M. C. A., New York City.

THE COURSE IS SIMPLICITY ITSELF

"I deem his methods sufficiently valuable to send my son to his classes. Mr. Berol has so simplified the scheme as to take out the objections of other complicated memory systems."—*G. D. Waite*, New York City.

His Simple System Will Prevent Mind-Wandering, Strengthen Powers of Observation and Concentration. It Will Develop Will Power

YOU will be able to recall Names, Faces, Dates, Telephone and Street Numbers—

YOU can remember the salient Facts in a Book or anything else you read—after one reading—

YOU can instantly recollect important Business and Professional Facts or Memoranda—

YOU can become a clear thinker and in Public Speaking retain a firm grasp on what you desire to say.

Give him a few of your spare minutes daily at home and you will be astonished at the change for the better which he will accomplish for you. He makes no promise to students that he cannot substantiate by what his method has done for him personally.

HELPS SALES MANAGER MEMORIZE CATALOG, PRICES, ETC.

"It was my privilege to have Mr. Berol teach me how to develop a good memory. Having recently accepted a position as sales manager I have found my new power of invaluable assistance. About the first week, I had memorized one entire catalog—prices and all. Mark the advantage of this to a salesman! I can also remember persons and their names. It seems since I met Mr. Borel I can not help but retain every fact of importance. I am especially proud of the fact that I can now observe, concentrate and reflect correctly."—*C. F. W. Lotz*, Brooklyn, N. Y.

"CAN NOT BEGIN TO ESTIMATE ITS VALUE TO ME"

"Mr. Borel's method has helped my memory in every way. I use it every day and its possibilities are opening up to me more and more as I put it more and more into practise. I can not begin to estimate its value to me."—*Chas. A. Stebbins*, Carnegie Hall, New York City.

Wouldn't You Like to Own a Store Like This?

Wouldn't you like to be proprietor of a money making business? Once I was just a struggling candy maker. The profits from Crispettes, the new, delicious popcorn confection, built this big business for me. The very same proposition that made me, should do the same for you. Long winter months are ahead. Don't slave them away for someone else. **Start in the Crispette Business for yourself.** Build a business of your own as I did. Get a window—a small store—a cozy nook where the rent is low. Keep **all** the profits. I'll teach you the Crispette business—tell you how to succeed—show you how to make Crispettes by my special secret formula. I'll do it right here in Springfield—personally or by mail. But the thing for you to do is to

Come to See Me At My Expense

Don't say you're coming. Just drop in quietly. Call on any banker or merchant. Ask them about Long—about my store—my crispette business. Ask them if what I say isn't the truth—right from the shoulder. Look into my reputation. See if folks think I'll give you a square deal. Then come and see my store—see that it's just like the picture. See the machine. See crispettes made—make a batch yourself. Learn the business. Get my pointers on how to succeed. Up to a distance of 300 miles I'll pay all your traveling expenses, if you buy a machine. You'll see—know—learn everything. It's simple—easy. Won't take you a day. I'll be glad to see you—glad to show you the store and have a good talk with you. You'll go home ready to make more money than you ever made in your life.

This is the Money Making Machine

Send for Free Book

Every Nickel You Take in Nets You Almost Four Cents Profit

Think of it! Think of the fortunes made in 5 cent pieces. It's one business in a hundred. Everybody likes crispettes—children—parents—old folks. One sale always means two—two means four. So it goes. It's a great business. I found it so—so should you. **Send for my big free book. "How to make money in the Crispette Business"** —48 pages illustrated—complete information and story of how I built my business. Read it and then come to Springfield.

TOPICS OF THE DAY

DOLLARLESS DIPLOMACY FOR MEXICO

IN THE NEW LIGHT shed upon it by the events of last week, President Wilson's Mexican policy now appears, even to the eyes of some of its former critics, in the guise of a "glacial movement" whose goal is the elimination of Huerta and the establishment of constitutional government in Mexico. "It is now perfectly evident that Victoriano Huerta must get out of the Provisional Presidency of Mexico and loosen his grip on the governmental machine," said the Washington *Post* upon the announcement of the plan, and it adds that the Administration will have achieved this result by "patience and an inexorable pressure." This pressure takes the form of financial starvation, a variety of dollarless diplomacy made irresistible by the cooperation of the European Powers. "There are elements in this case which I can not at present discuss, but which make it look to me very much more favorable," said President Wilson to the correspondents at the end of last week, when Americans and foreigners were fleeing from Mexico City in something very like a state of panic before the rumor that a crisis and possible intervention were imminent. At that time Mr. Lind had demanded of Huerta assurance that he would not convene the new and unconstitutionally elected Congress, the dictator had failed to reply within the time specified, and Mr. Lind had left Mexico City and returned to Vera Cruz, this development serving as the signal for a suddenly increased exodus of foreigners.

Prior to this Huerta had declared "absolutely false" all rumors of his readiness to resign, and while in a note to the diplomatic corps in Mexico City he admitted that the election of October 26 was without valid result as far as the offices of President and Vice-President went, he maintained that the Congressional election had met the constitutional requirements. And he pointed out that it was therefore his duty to retain the reins of government until the new Congress convened and provided for another Presidential election. This view, however, President Wilson declined to accept, declaring that the new body was elected under conditions which made its title as little valid as Huerta's. It was about this time that editors and correspondents began to see the real significance of the President's policy, and to admit that it might possibly prove so effective as to end not only all talk of intervention, but even of the less ominous alternative of lifting the embargo against the exportation of arms from the United States for the use of the Constitutionalists.

This policy, which has been variously characterized as a financial blockade, a financial quarantine, and a financial boycott, is a plan, originated by the Wilson Administration and acquiesced in by the chief European Powers that have heavy financial interests in Mexico, to discourage their bankers from making any loans to the Huerta Provisional Government. President Wilson and Secretary Bryan, according to the Washington correspondents, shared the conviction that Huerta's power would collapse completely once the channels supplying him with the sinews of war were blocked. This process, however, required a certain amount of time, and the problem in the meantime was to stave off drastic action. With Huerta eliminated, the Administration hopes for conditions which will make possible an election in which all parties will participate and which will place a constitutionally elected man in the Presidency. It is rumored, reports the Washington correspondent of the New York *World*, that Huerta has not funds sufficient to carry his government along for more than thirty days, and that he will then be unable to pay either his soldiers or his civilian employees.

Speaking, it is generally believed, with the authority of the Administration, Senator A. O. Bacon, chairman of the Foreign Relations Committee, recently emphasized the Government's "inflexible determination" that "Huerta must be eliminated," and went on to say:

"We desire to accomplish this in the speediest way and without extreme measures if possible. Whenever it is fully understood in Mexico, as we ourselves intend and fully understand it here, that this question will be dealt with and determined by the United States alone, and that there will be acquiescence by European governments, the power of Huerta will speedily crumble. Peace will be most speedily established when the hopelessness of the Huerta course is demonstrated and recognized in Mexico."

Curiously enough, it is in the London *Times*—but by way of its Washington correspondence—that we find the most specific and detailed outline of what purports to be President Wilson's program for dealing with the Mexican situation. In this English paper we read:

"1. The United States will insist on the elimination of Huerta and all those closely associated with him from the control of public affairs, and to secure this end will spare no effort and invade Mexico if necessary.

"2. Every endeavor will be made to effect the elimination of Huerta's Administration by financial pressure or, in other words, no steps will be taken to help his Administration to avoid what

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

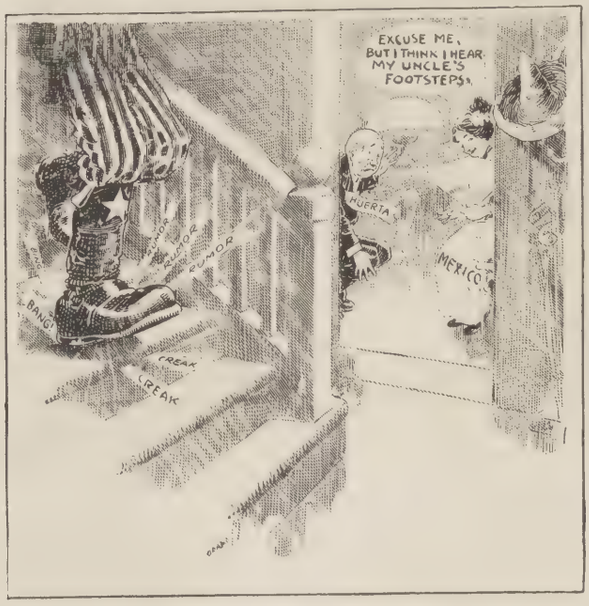
Entered at the New York Post-office as Second-class Matter.

seems to be inevitable bankruptcy. It will be made clear to foreign investors that obligations incurred by the present régime will not be recognized and must become worthless.

"3. If financial pressure prove insufficient to accomplish the end desired, the United States will resort to a blockade of



NOT REASSURING TO A LATE STAYER.

—Bradley in the Chicago *News*.

Mexican ports, thus destroying customs revenues and preventing the importation of munitions of war. In the meantime the possibility that the American Navy shall collect the Mexican customs is being seriously considered.

"4. When the elimination of Huerta is obtained, efforts will be directed to inducing some one acceptable to both factions to assume the Provisional Presidency under the protection of the United States.

"5. President Wilson requires that a general election shall be held and a new Congress and President elected.

"6. It is made clear to all foreign nations that nothing will induce the United States to acquire territory as the result of intervention."

The correspondents find evidence in "a variety of quiet diplomatic activities" that the great Powers abroad are now acting in entire harmony with this Government, and that the purse-strings of Europe have been effectually tied against Huerta. This fact moves the New York *Commercial* to comment on the "almost uncanny luck" that comes to the rescue of Mr. Bryan in his new rôle of diplomatist. Thus we read:

"The latest lie told to make trouble for the Federal Administration was that Great Britain and France were about to support the claims of their concessionaires in Mexico without waiting longer for the United States to move. Last Monday the stock market began to break badly on this sort of news. But all was changed overnight, and Mr. Bryan once more comes to the surface as the wisest of Secretaries of State.

"At the Lord Mayor's banquet, in London, Herbert H. Asquith, Premier of Great Britain, gave solemn assurance that his country would keep its hand off Mexico, in saying: 'It is no part of our duty to prevent or to control civil wars. The utmost we can do is to give what protection is possible on the coast to British subjects and property. There have been rumors that, after the United States had adopted a line of their own in regard to Mexico, we took a line calculated deliberately to thwart America. There is not a vestige of foundation for such a rumor. . . . . .

"France goes even further in supporting Mr. Bryan's policy. The French Government has notified Paris bankers that it will be displeased if they furnish money to the Huerta Administration."

Not the least important feature of President Wilson's uncompromising stand against Huerta, the New York *World* points out, is the warning it conveys to "adventurers of the Huerta type all the way from the Rio Grande to Cape Horn." And it carries a lesson also, we are reminded, for the civilized nations generally, among which there prevails a tendency to show too much courtesy to political cutthroats. Says *The World:*

"The recent elections in Mexico were set aside by Huerta, so far as the Presidency is concerned, because by that act he confirmed his own dictatorship. He has undertaken to hold the same elections valid as to the Congress because he has reasons to believe that the rabble that he may now assemble as a legislature will also confirm his dictatorship.

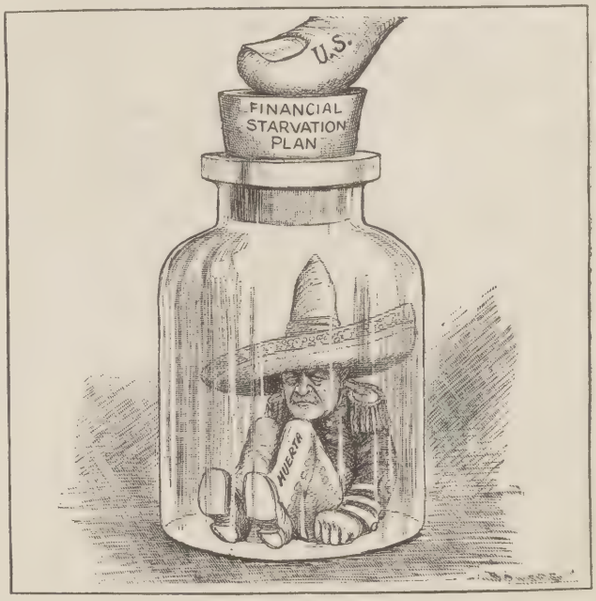
"President Wilson's dissent from this program is not too emphatic. To recognize a Congress drawn wholly from the camps of a despot and as obedient to him as any of his men-at-arms would be only to give dignity to a pretender already discountenanced and under condemnation. The sentence against Huerta as a pretended President extends to all of the ghastly travesties upon government which Huerta may devise.

"In what other way than this are the desperadoes of Latin America to be suppress? Encouraged, they follow each other in tragic succession. Recognition by civilization is the high prize for which they always contend. Without that approval they would find little of value in their brigandage. To discourage them even to the point of abandoning them and their countrymen for a season to anarchy is a policy that can not fail of results.

"The President has accomplished a mighty reform outside his own jurisdiction by impressing upon the great Powers the wisdom of this course. There has been among nations a courtesy too fine for mere cutthroats. There has been among business men a rivalry too keen for the favor of common criminals. There has been in diplomacy too much consideration for monsters hastily bedecked in lace and tinsel impudently parading themselves as rulers of men."

President Wilson's plan to drive Huerta from power by cutting off his credit in the money markets of the world, admits the New York *Evening Mail*, "has a better sound than the foolish and frantic talk of armed intervention in Mexican affairs." And in the New York *Press* we read:

"Mexicans themselves no longer retain their confidence in the strength of Huerta as a soldier and as a man. They know he has been weakened by the disaffection among his unpaid soldiers



A CORKING SCHEME.

—Bowers in the Newark *News*.

and by the success of revolutionary 'armies' in defying him as perhaps they never could have defied him if his Government had been promptly recognized by Washington, and if he had been able to borrow the money he needed to pay the soldiers already under arms for him and to enlist still others. They favored the

MEXICO'S MILITANTS: WOMEN WHO ARE FIGHTING HUERTA IN NORTHERN SONORA.

recognition of Huerta last spring only because he was the strong man. Now that he is the weak man—by very reason of President Wilson's policy—they don't think he could be saved, if the Administration were willing to have him saved.

"That is why President Wilson's policy is now indorsed by virtually everybody in this country. If it was once a question whether he ought to get Huerta out, there isn't a bit of question about it now. He's got to get Huerta out. When he adopted his policy of preventing Huerta from setting up a real government he assumed the responsibility of insuring that anarchy and chaos in Mexico should not be perpetual. That's our national responsibility now, and we can't shift it."

But even with Huerta eliminated, what is the outlook for Mexico? ask many of our editors. "The Mexican problem has really passed beyond Huerta" and is now "a question of providing a decent government after Huerta has gone," remarks the Washington *Post*, which suggests that the latter problem presents incomparably greater difficulties than the former. And in the New York *Times* we read:

"The most serious part of the Mexican problem concerns the immediate succession to Huerta's Government. This country can not be too cautious in its dealings with Carranza, who may be an admirable man of high principles, but has done nothing as yet to justify support. As a leader of a revolution he has been a conspicuous failure, most of the guerrilla warfare of the last seven months having been carried on by unattached bands of marauders. The Washington Administration might suggest the temporary investment of the executive authority in a commission, including men of the quality of Calero, Lascurain, Gamboa, De La Barra, with Francisco Vasquez Gomez and Carranza, until legal elections could be held. If such a commission could satisfy the agrarian classes that the plan of enforced sales of unimproved lands, so long talked about, would at last be carried out and an equitable system of land taxation instituted, it is not unlikely that peace could soon be restored in all the States."

Yet it seems to be on the figure of General Venustiano Carranza, leader of the Constitutionalist forces, that the attention of our journalists chiefly centers in this crisis. Thus when Dr. William Bayard Hale, who is generally regarded as a personal representative of President Wilson in Mexico, had a four-hours' conference with Carranza at Nogales at about the same time that Mr. Lind in Mexico City was awaiting Huerta's reply to our Government's demands, a Nogales correspondent of the New York *Tribune* described the meeting as one on whose outcome depended "probably the salvation or destruction of a nation." And the Washington correspondent of the New York *Sun* informs us that "the conference is interpreted in official circles here as the first open move by the United States to show its interest in the Constitutionalist Government."

Whatever else may be said of Carranza, remarks the Baltimore *News*, he has been a consistent Liberal in Mexican politics. And it goes on to cite the following facts in support of this statement:

"The discoverer of Madero, his first reported act of rebellion came with Madero's being counted out by Porfirio Diaz's election officials. He remained true to Madero after the latter attained the Presidency. And after Madero's death he was one of the few leaders who refused to recognize Huerta's unconstitutional title to the office. Second, at the commencement of the revolt he occupied an inconspicuous position in it. Less than eight months ago he was only a petty chieftain. During that time he has managed to forge his way to the headship of the rebellion.

WOULD THIS BE MORAL SUPPORT?

—Cesare in the New York *Sun*.

"This, on its face, is a good record, both for fidelity to the Constitution and constitutional rights and as a demonstration of his forcefulness and resourcefulness as a leader of men. But is it enough to warrant our staking upon him and his qualifications the solution of the Mexican problem?"

$6,000,000 MORE FOR RAILROAD MEN

THO the conductors and trainmen on Eastern railways get but a third of the $18,000,000 wage-increase they asked, and tho the railroad executives, who loudly protested that they were already paying their workers more than they could afford, face an additional yearly outgo of $6,000,000 through the pay-window, newspaper opinion is nevertheless inclined to the view that both sides have reason to be satisfied with the Arbitration Board's "compromise" award. The labor-unions, according to the New York *Journal of Commerce*, have a settled policy of "demanding more than they have any hope of getting, and relying upon compromise to get as much as they really expect." And we read in the Boston *Transcript* that when President A. B. Garretson, of the Order of Railroad Conductors, learned the result of the arbitrators' deliberations, he "took no pains to conceal his gratification." Railroad officials have some rather hard things to say about a decision which fastens such a heavy burden upon the roads, yet a New York reporter found several of them admitting that they had found a substantial grain of comfort in it. For they hold "that it practically clinched the case of the Eastern roads for an advance of 5 per cent. in freight rates." This thought also occurs to the editorial writers of the New York *World* and *Journal of Commerce*, Boston *Transcript*, and many other papers. Even if the railroads begrudge this increase in operating expenses, they may also be thankful, *The Wall Street Journal* observes,

"that the Board has recognized the inevitableness of 'overtime' and refused to penalize the carriers therefor; and that it has laid down the new principle that increased productivity of railroad plants has come from multiplication and development of facilities and 'not to any measurable extent from the labor of conductors and trainmen.' The fact that the Board treats the present increase as the last of an old cycle of advances, instead of the first of a new cycle, is at least an intimation that railroad wages may have reached a level of rest under existing circumstances."

Yet it is to the men that the immediate benefits come, in the shape of thicker pay-envelops. The actual wage advance decreed is thus set forth in tabular form by the Boston *Transcript:*

PASSENGER SERVICE
(RATES PER MILE, CENTS)

	Present Rate	Rate Demanded	Rate Awarded
Conductor	$2.68	$2.90	$2.90
Baggageman	1.58	1.87	1.65
Flagman	1.50	1.80	1.60
Brakeman	1.50	1.74	1.60
THROUGH FREIGHT			
Conductor	$3.63	$4.18	$4.00
Flagman	2.525	2.88	2.67
Brakeman	2.42	2.78	2.67
WAY FREIGHT			
Conductor	$3.97	$4.84	$4.50
Flagman	2.80	3.31	3.00
Brakeman	2.70	3.21	3.00
WORK TRAINS (PER DAY OF 10 HOURS, OR 100 MILES)			
Conductor	$3.63	$4.50	$4.00
Flagman	2.525	3.10	2.67
Brakeman	2.42	3.00	2.87

Each side won several minor points. As an instance of compromise, it is noted that wages in the Eastern territory are standardized with Southern wages, but are not brought up to the level prevailing in the West. Seth Low and John H. Finley, neutral members, cast the deciding votes in most of the findings of the Board, the two representatives of the railroads and the two representatives of the men filing dissenting opinions on the points that went against them.

The award of a wage increase of about 7 per cent., amounting to about $6,000,000 annually, is based primarily upon the increase in the cost of living in the last three years. The arbitrators did not believe themselves called upon to consider the railroads' "high cost of railroading" plea, for the question before them was, to quote the New York *Sun*, "not whether the railroads were in a position to increase wages, but whether the necessities of their employees did not make an increase imperative." Or, in the language of the report:

"This Board believes that it must make its finding as to what is the proper rate of pay to be awarded . . . without any reference to the dilemma in which the railroads are evidently placed by the laws which make it impossible for them to increase freight and passenger rates without the authority of the Interstate Commerce Commission or of the railroad commissions of the various States. . . . . .

"The Interstate Commerce Commission and not this Arbitration Board has the duty of determining whether the railroads can earn, in addition to their other fixt charges, without an increase of freight rates, the rates of pay this Board believes to be due at the present time."

But while the Arbitration Board is careful not to commit itself on the question of rates, it has put into the report a paragraph or two which to many an editor read very much like a hint to the Interstate Commerce Commission, which will meet next week to consider this problem. To quote the sentences which the newspapers find most significant:

"At the present time a ton of freight is moved in the Eastern territory more than three miles for the value of a two-cent postage-stamp. This is the cheapest railroad service to the shipper to be found on the face of the globe. In the face of such a fact it would be unjust to say that railroad employees must continue to be satisfied only with what can be paid from freight rates as low as this.

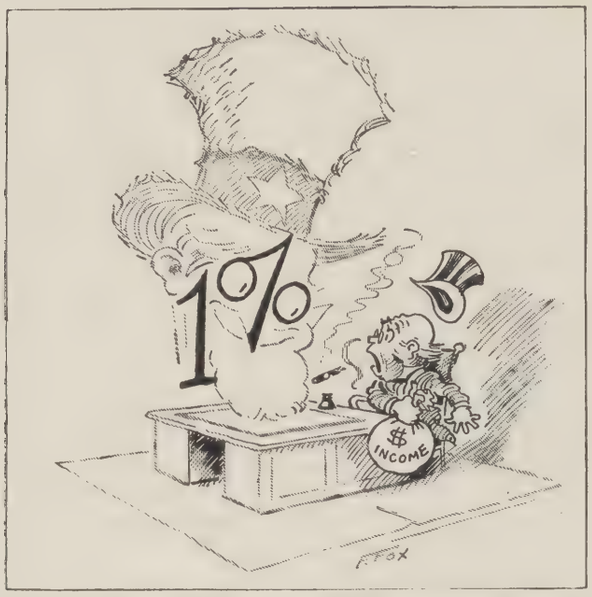
"One other factor this Board believes should be called vividly to the attention of the Interstate Commerce Commission. The connection between the decrease of hazard and danger to life and limb through the installation of safety appliances, by the substitution of steel for wooden cars, by double tracking, by increasing railroad facilities as railroad business increases, appears to this Board to be direct and not indirect. . . . All of these things cost in the aggregate an immense sum of money. Any policy that would make it impossible for the railroads to command this money would be a profound misfortune to the whole nation."

Most people, thinks the Baltimore *Sun*, will sustain the Board's decision to grant the workers' demands for more pay because it costs them more to live. But, it adds, "there is a wide difference between a thing that ought to be done and a thing that can be done. . . . It is comparatively easy for an arbitration board to say you must pay your men 7 per cent. more, but it is not so easy to go out and get that 7 per cent., and still maintain railroad standards and make the improvements and extensions demanded by business and traffic." And *The Sun* sums it all up by asking: "If the high cost of living justifies an increase in wages, does not the high cost of living justify an increase of rates on the part of the railroads?" To this question the press seem to agree that the Interstate Commerce Commission must find an affirmative answer. At least editorials to this general effect appear in the columns of Eastern papers like the New York *Commercial, Journal of Commerce, World, Sun, Times, Tribune, Evening Post*, Brooklyn *Eagle*, and Boston *Transcript*. "If the railroads get this increase," remarks *The Commercial*, "they will be where they were before wages rose."

"If they do not get it, they will be seriously handicapped and the service will suffer from lack of means. In either case the public pays, either through higher freight rates or through defective service. It is all at the expense of outside capital and labor that must pay more without getting anything in return. However, it is satisfactory to know that no excuse for railroad strikes exists any longer in this country."

This is the first wage dispute settled under the Newlands amendment to the Erdman Act, which increased the number of arbitrators from three to six. It would be unwise, thinks *The Wall Street Journal*,

"to draw any hard and fast conclusions as to the superiority of the amended Federal Arbitration Act over its predecessor



UNCLE SAM BEGINS TO LOOK SOMEWHAT SCARING TO SOME PEOPLE.
—Fox in the Chicago *Post.*

"I THOUGHT MEXICO WAS THE BIG TANGLE."
—Berryman in the Washington *Star.*

THE EMBARRASSMENT OF RICHES

from the results of the first arbitration conducted under it. Certain initial difficulties of the present case it did solve, but there is as yet no assurance that similar difficulties will not recur, and otherwise this arbitration resembles those that have gone before. The rule still holds that arbitration of wage controversies is predestined compromise in which one of the parties has much to gain and nothing to lose. An arbitration in which it shall be judged, on a large scale, that the employees are not entitled to any increase of wages remains wholly a matter for the imagination."

PROFIT IN THE PARCEL POST

AN ESTIMATED PROFIT of about $30,000,000 from the operation of the new parcel-post system for the year 1913 is proof to the Philadelphia *Record* that "the system is no longer to be deemed experimental," but "is here to stay." These figures are, of course, as the New York *Times* reminds us, "only a claim." For "the Post-office put it out of its power to prove or even to know the profits when it abolished the parcel stamp and authorized its use for letters." Yet we read in *The Times's* Washington correspondence that the present estimates show just twice the profit that Post-office officials had expected. This will be interesting news to the railroads, which contend that they are entitled to extra remuneration for carrying the mails on account of the operation of the new service, and expect Congress to give heed to their demands at the coming regular session. *The Times* learns "from a reliable quarter"

"that, even assuming that the contention of the railroads was correct, there still would have been a good margin of profit at the end of the calendar year 1913 after the payment of extra remuneration to the roads. If a parcel-post adjustment were made along the lines suggested by some of the railroads, probably not more than $10,000,000 of this $30,000,000 would be due to the railroads as extra pay. The total income from the parcel post for 1913 will be around $80,000,000."

If this is the case, perhaps the public will benefit as well as the railways. The New York *Press* sees no reason why the parcel post should be operated at a profit. And it remarks:

"It is not going to be necessary to impose unreasonably low rates on the railroads or excessively high ones on the public. The time is ripe for such readjustment, at both points, as will give a square deal all around."

ANOTHER VICTORY FOR LINDSEY

THE DISPATCHES tell us that Judge Ben B. Lindsey, of Juvenile Court fame, has had another favorable inning in his struggle with "The Beast in the Jungle," as his foes in Denver are collectively called by the crusader and his friends. The other day a committee of three men and two women from the Denver Taxpayers' Association declared groundless the charges of the Woman's Protective League that Judge Lindsey had been too lenient with men found guilty of crimes against young girls and had been absent from his post too much. This, in the opinion of the Washington *Herald*, "completely vindicates Lindsey's court and methods." And in the Denver *Post* we read that "Lindsey's foes are scored by their own committee," and that "the old Beast dies hard—but it dies." Yet later news from the Colorado capital would indicate that the figurative animal is far from dead. While the three men on the committee adhere to their decision, "afterward," says a dispatch to the New York *American*, "it is said the two women yielded to the demands of the 'interests,' which for four months persistently sought to besmirch and ruin Judge Lindsey." The "yielding" alluded to by the *American* correspondent came when, some ten days after the "vindication" was filed, the two women, in a minority report, asked the Taxpayers' Association to recommend that the charges against Lindsey be investigated by a grand jury. The minority report was adopted by a vote of 33 to 19 after what the newspapers describe as a "rough house," which followed charges of falsehood passed between Mrs. R. E. England and the Rev. W. P. Simington, members of the committee. The dispatch to *The American* says there "broke loose a torrent of recrimination, of profanity, of shrieks and threats and tactics which resulted in a call for the police," and "the departure from the hall of many of Lindsey's friends, who were no longer willing to take part in the shameful farce." The Judge's supporters charged that the house had been "packed" with non-members of the association, who were allowed to vote. The original report, which exonerates Judge Lindsey, follows:

Many rumors came to the ears of individuals composing your committee regarding derelictions of duty and wrong decisions of Judge Lindsey, but when asked to submit written reports of the same and evidence in support thereof, none were forthcoming.

Most of these related to a previous term of office and were decided by other judges, sitting for Judge Lindsey in his absence. The only matter that affects the Taxpayers' Association your committee deemed pertinent is a question of his absence during this term of office, from March, 1913, to September, 1913, for which you have heard his excuses and reasons. Very respectfully submitted,

W. F. Simington,
Bernard Ford,
Mrs. Vassa Replogle,
H. S. Vaughn,
Mrs. R. E. England.

On the day the report was printed the Denver *Post*, with Lindsey leanings, had this to say:

"It is an evidence of the fair-mindedness of the members of the committee and it is a direct rebuke to those anonymous agents hiding behind the Woman's Protective League and the methods they brought with them from the old days when the Beast ruled Denver.

"Never has a judge or court been so covered with slime and mud as Judge Lindsey and the juvenile court have been covered by the circularizing Bates-Whitehead-Curtis Protective League.

"When, on September 15, the committee of three men and two women was appointed by the Taxpayers' Association to investigate Judge Lindsey and probe charges made against the administration of his court, their anti-Lindsey sentiment was acknowledged.

"'We were ready to hear charges against Lindsey,' said Major Vaughn, 'and I told the judge that I would certainly find against him if the evidence warranted. Any number of men and women have appeared before the committee and been glib with their tongues, but when it came to pinning them down with a written signature and asking them to name witnesses who would substantiate their charges—that was another story; they flew out of the room.

"'The judge explained his absences from court at the public meeting of the association, and since no one can be found who will come in the open and fight, we consider the incident closed and Denver is well rid of the turmoil which the Woman's Protective League has stirred up.'

"The Woman's Protective League, consisting of Dr. Elizabeth Bates, Rodney Curtis, former president of the Tramway under the Evans management, and E. K. Whitehead, secretary of the Bureau of Child and Animal Protection, has been moving heaven and earth to 'get something' on Lindsey. That they have failed and that circulars made up from jail records are not to be relied on in the discussion or disposal of cases in the juvenile court is proved by the finding of the taxpayers' committee.

"'The investigation has served one purpose,' said Major Vaughn; 'it has cleared the atmosphere. Now we can all go to work together for the good of the city.'"

TOURING AT THE GOVERNMENT'S EXPENSE.
Mr. J. Ham Lewis presents Mr. Pinhead, confidential agent, at the Court of Dahomey.
—Cesare in the New York *Sun*.

The Denver *News* says some of the members of the Taxpayers' Association are in favor of dissolving the organization because of the fight on Judge Lindsey. This is from *Harper's Weekly:*

"His enemies thought he was sicker than he was. When they found he was able to present his own case, the probabilities of attempting a recall vanished. There never was anything in it but oppression. There never was any doubt in the mind of the awakened and free part of the population of Denver that Ben Lindsey has done more for the welfare of that city and of its inhabitants, and of generations to come, than the city can ever repay. Those who attack him are those who think they profit from a system iniquitous in its essence."

The Judge's enemies have not been given much space in the newspapers, and practically all the editorial comment and most of the news dispatches are favorable to him.

MR. PINDELL, OF PEORIA

SCANDALIZED as all the critics and some friends of the Wilson Administration are at the letter said to have been written by Senator Lewis, offering the Russian Ambassadorship to Editor Henry M. Pindell, of the Peoria *Journal*, it also appeals strongly to their sense of humor. The New York *Tribune* (Rep.), indeed, "can not recall anything more diverting than the view of Mr. Pindell, of Peoria, being taken up to a high place by the Hon. 'Jim Ham' Lewis and shown a vision of himself hobnobbing with crowned heads while Mrs. Pindell and the little Pindells got 'social positions' and future Pindells acquired the priceless heritage of fame as descendants of an Ambassador to St. Petersburg." The New York *Sun* (Ind.), which would rather see Mr. Bryan Ambassador to the Antipodes than Secretary of State, concludes its editorial on "'Two-Bits' Diplomacy" with the casual remark that "in affairs international, as in matters domestic, if Chautauqua morals are still unexceptionable, Chautauqua manners are as usual—original." Another daily, however, the New York *Globe* (Ind.), sees no reason for gibing at Secretary Bryan, but would rather extend its sympathy to him on having such a friend as Senator James Hamilton Lewis: "on his hands," and to President Wilson "on being compelled to keep on terms with a donkey of such braying power." With "one blast," says *The Globe*, "Jim Ham is able to rattle a cool-headed President, to depress a professionally optimistic Secretary of State, to destroy poor Pindell, and to write himself down conclusively as an ass as great in his way as Blease of South Carolina."

It must be admitted, on the other hand, that no signs of panic appear in Secretary Bryan's statement that "malicious misrepresentation" would not interfere with the President's nomination of Mr. Pindell for the Russian Ambassadorship, and that the appointment was made because of the Peorian's "character, his ability, his exceptional fitness for the duties of such a place." The President and the Secretary of State, says Senator Lewis, have been shown the "real" correspondence with Mr. Pindell. For the now famous "Lewis letter," insists the Illinois Senator, is a forgery based upon a discharged employee's memory of the actual correspondence. "The language used and the phraseology," declares Mr. Lewis, are quite "foreign to anything ever used by me." The newspapers, however, printed this letter in good faith, as well as one of earlier date disclosing a motive for the later offer of a post abroad in the reminder to the Peoria editor that he is "the original Wilson man in Illinois" and "must be taken care of." The document, still known as the "Lewis letter" despite the Senator's protests, and still believed authentic by his critics, begins with the explanation that Mr. Pindell could accept the ambassadorship to Russia "and all the honor that goes with the position," and yet not lose "control of nor association with" his newspaper by resigning "in a year—say October 1, 1914." This "irresistibly alluring" epistle, as the New York *Evening Post* calls it, continues:

"There will be no treaties to adjudicate and no political affairs to bother with, for the Administration will see to that for a year, and you would not be tied to St. Petersburg, but would have trips to Berlin and Vienna and the other capitals of Europe, and also Stockholm, and perhaps Copenhagen, and all the attendant delights that go with such trips.

"You would meet with the delightful companionships of the English and other officers connected with the various legations

at St. Petersburg, and would be socially and officially treated, as my letters to those abroad would serve you.

"I think you have a little daughter. Think what it would mean to her, all the remainder of her life, to say that her father had been Minister to Russia, and of all the honor and prestige that will go with it to the third and fourth generations. . . . . .

"No diplomatic matters will be taken up during your service, and you will have all the honors of having been Ambassador to Russia; but, if you accept this position it must be with the understanding that you will resign on the 1st of October, 1914, and then you will be able to, and no doubt glad to, return to your business interests in Peoria and your paper.

"You will not have to be at the expense of a permanent residence, as are other ambassadors, and you will have in your family forever the honor that must accompany the holding of such a position. And in doing this you will please the President, and also your good friend, Secretary Bryan."

In this country we are "so accustomed to regarding the diplomatic service of the United States as the roosting-place of the *nouveaux riches*, and as the means of paying political debts," observes the New York *Evening Post*, "that we are not surprized at having the real purpose and importance of an ambassadorship so convincingly portrayed." Yet this journalistic friend of the Wilson Administration goes on to ask in all seriousness, "Does not this Pindell case approximate a scandal for the Wilson Administration?" Nor can *The Post* deny that "Mr. Wilson's appointments to the diplomatic service have as a whole been disappointing."

"He came into office in debt to no politicians or bosses, and with a long record of fidelity to the principle of merit in the civil service as the only proper basis for appointment and promotion; yet he seems to have yielded to political pressure much as if he were Taft or McKinley or Roosevelt. The old tradition of the use of the diplomatic offices as party rewards is not yet broken. We do not overlook or fail to give Mr. Wilson credit for such excellent appointments as those of Messrs. Walter Page and Henry Van Dyke. But these are offset by the choice of men like Messrs. Gerard and Penfield, who, whatever their fitness, were latterly chiefly conspicuous for the size of their campaign contributions. . . . .

"Ours is a long-suffering public; it has been accustomed to seeing misfits in our legations abroad and to smiling at the cavortings of those who sought them for social reasons or in order to splurge. But in this case we fancy the public's smile will be a little wry. At least, thinking people everywhere will regret that Woodrow Wilson is not to have the credit of once and for all placing the diplomatic service where it belongs, on a basis commensurate with its dignity and worthy of the country it represents."

With such strong words coming from a consistent supporter of the Administration, we are not surprized to find a chorus of indignation arising from those who are classed among the opposition. They agree with the Philadelphia *Inquirer* (Rep.) that the Pindell affair "is a disgusting exhibition which will not make the Administration any more popular." The diplomatic service is "getting to be pretty cheap," thinks the Philadelphia *Public Ledger* (Ind.), "when an ambassadorship is turned into a bald sinecure." True, notes the New York *Tribune* (Rep.), the appointment may now be defeated in the Senate, but, it declares, "Pindell is going to be rejected not because he is unfit and because his nomination was the result of a discreditable deal, but because he and the egregious 'Jim Ham' got found out."

PERHAPS DISCUSSING AMBASSADORIAL GLORIES.

Senator James Hamilton Lewis, at the reader's left, may be describing the delights of St. Petersburg for the benefit of Mr. Pindell, at the right.

So runs the editorial criticism evoked by the Lewis letter, and in the Washington correspondence of these papers we find conjectures as to how many other Pindells there are about whom we know nothing. Aside from "the gross impropriety of the bargain," it seems to the New York *Sun* (Ind.) and Philadelphia *Press* (Rep.) that Mr. Pindell is "plainly not of ambassadorial caliber." And the New York *Times* (Ind.) reminds us that—

"In point of importance, no ambassadorial appointment the President has been called upon to make or still has to make ranks with that at St. Petersburg. We have no treaty with Russia. The Ambassador sent there will have to deal with many questions of great delicacy and possible gravity. Should the negotiation of a new treaty be undertaken, he should be a man capable of carrying on the work. Experience in international affairs and recognized ability are qualities to be demanded, to be insisted on, in making this appointment."

Nevertheless, the President is standing by his friend, and the New York *World* (Dem.) is inclined to believe that his determination "may be better appreciated when it is better understood." *The World* would have us be fair to the man from Peoria—

"If Mr. Pindell is guilty of the offense of being an editor little known, it must likewise be said of him that he has been none the less a successful one, an effective man of affairs, a man of large public service, and one who in personal appearance and qualifications would adorn the position in question.

"As for the alleged Lewis letter, which Mr. Pindell says he never received and which Mr. Lewis now pronounces largely the forgery of a discharged employee, it could not be said that a case of trafficking in the public patronage was proved. Secretary Bryan denies that the Peoria editor ever sought the appointment, and when he says that appointment for a full term was resisted for business reasons, the most that could have been said of the Lewis letter was that it might have been a sincere attempt to induce Mr. Pindell to take the post for the short time only he could spare. And Mr. Bryan certainly is

playing no favorite in the case, for no one in Illinois ever fought his Presidential aspirations more strenuously at times than Mr. Pindell."

MURDEROUS AMERICA

WE DIDN'T MURDER as many people in 1912 as we did in 1911, but the difference is so slight that Mr. F. L. Hoffman, our authority, thinks it "not conclusive evidence of a material improvement." Even the little encouragement our editors glean from a 3.6 per cent. drop in the homicide rate vanishes when they compare our rate with that of Prussia and Italy, and see how much cheaper life is held in American cities than in those of Europe. In Italy, for instance, "where it is generally assumed human life is held more cheaply than in any other country of the world," Mr. Hoffman figures that for the five years ending with 1910 the average homicide rate "was only 3.9 per 100,000 of the population, against an average rate of 5.9 for the registration area of the United States." Or, take the great cities—in London, for example, during 1912, the homicide rate was only 1.31 per 100,000 population; in New York (the old city) it was 6.8. "The available facts are wanting in accuracy and completeness," says Mr. Hoffman in his *Spectator* (New York) article, "but they are sufficient to disclose what is perhaps the most serious defect in the life of the American people at the present time."

The daily press share Mr. Hoffman's alarm. "Why are there more murders in the United States than in other civilized countries?" asks the Springfield *Republican*. Some say "immigration," but "the average rate is highest in Southern cities, where there has been little foreign immigration." The race question may have something to do with this, continues *The Republican:*

"But there is no escaping the fact that in all parts of the United States the homicide rate is much too high for a country in many ways so advanced in civilization. Is it hereditary? Was the continent largely peopled by violent and lawless stock, as some ill-tempered critics have held? Or is it due to laxity in the enforcement of laws?"

In the thirty large American cities which form the basis of Mr. Hoffman's figures the homicide rate per 100,000 population fell "from 8.4 during 1911 to 8.1 during 1912." This was an actual decline of 3.6 per cent. There was a corresponding decline, which the Chicago *Inter Ocean* calls "encouraging," in the suicide rate of 4.1 per cent. According to Mr. Hoffman's table of comparative homicide records of thirty American cities for the year 1912 and for the ten years preceding,

"The city of Memphis experienced not only the highest average homicide rate for the decade ending with 1911, but also for the year 1912. The largest number of deaths from homicide during the decade occurred in the city of Chicago, and the smallest number in the city of Hartford, Conn. The rates for 1912 varied from a maximum of 64.3 per 100,000 of population for Memphis to no homicide for the city of Reading, Pa., and a rate of only 1.4 for the city of Philadelphia. . . . . .

"The homicide rate during 1912 was highest in the Southern cities, or 20.2 per 100,000 of population, followed by Western cities with a rate of 10.8, by Central cities with a rate of 8.9, and Eastern cities with a rate of 4.6. Comparing the year 1912 with the average for the decade ending with 1911, the homicide rate increased in each of the four groups, and at the rate of 0.9 per 100,000 of population for all cities combined."

What Mr. Hoffman calls the "unenviable homicide record" of Memphis he partially explains by noting that the city is surrounded by prohibition territory and is "the resort of a considerable lawless element." Our readers will also take into account, as bearing on the figures for this and other cities, that their negro population is relatively large. And they will remember that Southern papers, quoted in our article on Mr. Hoffman's figures for 1911, pointed out that in the vast majority of cases the victims were colored people, and that their assailants were generally of the same race. It should be understood, insists a Charleston editor, that the white people of the South "are not given to crimes of violence in larger degree than are their neighbors of the North, the East, or the West." Yet the compiler of figures can make no distinctions, says Mr. Hoffman, for "according to the law the murder of a negro has the same significance as the murder of a white man."

FOREIGN COMMENT

TO PROVIDE LAND FOR THE BRITISH POOR

THE SHARP CONTRAST between the vast game preserves of the British nobility and the squalid quarters where the poor are huddled in the cities has roused the indignation of British writers from Carlyle on, but without any great improvement. General Booth's plan was to ship the "landless man to the manless land" in the colonies oversea. But Mr. Lloyd-George, who is taking British civilization to pieces and putting it together again to suit his radical ideas, thinks there is plenty of land right in Britain, and he proposes to create a commission that will reduce rents, prevent unjust evictions, reclaim waste land, build cottages, and do many other things to restore agriculture and relieve the poor. He elaborated his plan in a speech on October 22, at Surindon, which can be only briefly summarized here. Emphasizing the fact that his policy has the unanimous support of the Cabinet, he urged the creation of a Ministry of Land, to perform these functions:

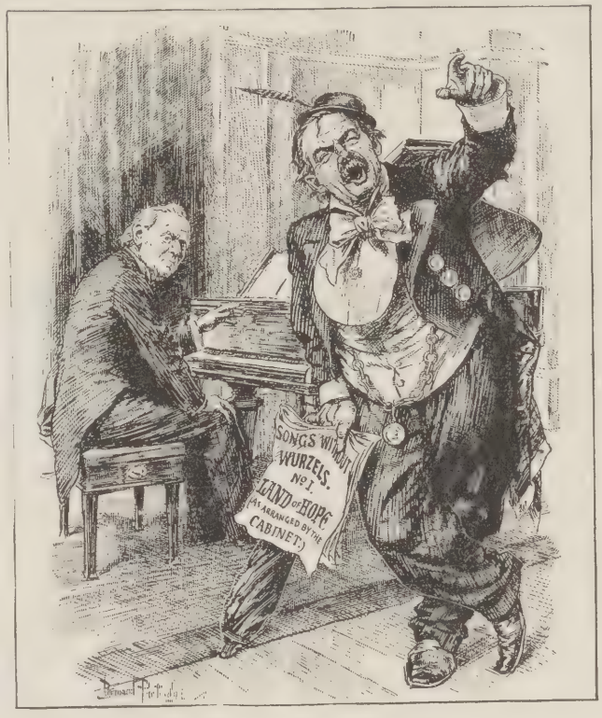
To control the registration of title and land transfer.

To act as a court of appeal on schemes of land improvement, granting powers to raise money.

To take over the whole machinery of land valuation.

To deal with small holdings, land purchase, and disputes between landlord and tenant.

To exercise powers of afforestation, reclamation, and development of derelict land.



THE IRREPRESSIBLE.

MR. ASQUITH (waiting for the "patter" to finish)—"This is the part that makes me nervous." —*Punch* (London).

The new Ministry, declared the Chancellor, would do its work through commissioners possessing the power—

To revise eviction notices, with power to award compensation and damages in cases of capricious eviction.

To render null and void any "wanton" notices to quit.

To compensate the farmer for improvements in case of removal.

To reduce rents.

To acquire waste land and reclaim it.

To revise the hours of labor.

To fix the price of land when compulsorily acquired for any public purpose.

Mr. Lloyd-George also outlined a scheme to provide cottages for agricultural laborers:

The cottages will be provided by the State.

An economic rent will be charged.

They will be built out of the surplus revenue of the Insurance Fund, which is believed to amount to £10,000,000.

The horror of the British landlord at these proposals can be imagined. Lloyd-George is regarded in something the same way as Robespierre and Marat were viewed by the nobility of France, and if the House of Lords had its old veto power his scheme would have short shrift. Baron de Forest, M.P., predicts its failure in these words:

"They can lower rents; they can, if they choose, force down the rent of 1,000 fertile acres to £10 a year. But if the land is worth more to the users, not all the courts or commissions in the world can prevent the landowners in the long run from securing in other ways the full amount by which their rents have been reduced below their market and competitive value. Nothing can prevent them from taking advantage of their exclusive monopoly and of the unavoidable public need for its use, and from so squeezing out of the public every penny it can afford to pay.

"As soon as new leases or tenancies have to be granted, as soon as land to which the new privileges are attached becomes vacant, as soon as tenants die or leave, the full force of competition for something exclusive, limited, and essential will come into play again, and landowners will be in possession of all their old powers. They can pick and choose between the competitors, and so can force them to pay, openly or secretly, the full competitive price for the valuable right of occupying their artificially low rented land."

The plan is also bitterly condemned by the organs of the Unionist party, the party of the great landowners. Says the London *Pall Mall Gazette*, the organ of Mr. William Waldorf Astor:

"Mr. Lloyd-George professes to be eager for increased production from the soil, more security for the cultivator, higher wages for the laborer, land for all who can work it, and better cottages, and more of them. . . . [But actually he] is intent on taking power away from the arm of both capital and labor. He diminishes the farmer's inducement to work and the landlord's inducement to invest. In what other species of industry is it possible to find men ready to put their money in a business for a return of 2 per cent.? Mr. Lloyd-George is preparing to rob agriculture of this aid for the future by making the landlord a mere rent-charger, and by refusing to give him the necessary margin of help to increase housing accommodation. By cutting off its resources of capital, he seeks to make the cultivator an absolute dependent of the State and driven to have his political allegiance determined strictly by what parties offer for his vote."

The London *Daily Mail* ridicules what it styles "the little Welsh Chancellor" and puts at the head of its leader the following quotation from Shakespeare's "Henry VI.," where Jack Cade, leader of the futile Cade rebellion, is made to say:

"There shall be in England seven half-penny loaves sold for a penny; the three-hooped pot shall have ten hoops; and I will make it felony to drink small beer. All the realm shall be in common, and in Cheapside shall my palfrey go to grass . . . when I am king—as king I will be."

Then it makes the following editorial comment on the Chancellor's promises:

"These wild promises, it need hardly be added, are not for the present but for a remote future. Mr. Lloyd-George's program can not take effect until after the next general election, so that his campaign . . . is merely one to catch votes. He must really be warned that his promises are now at a heavy discount. The public has not forgotten how it was tricked with his land

taxes, which were to have produced old-age pensions and dreadnoughts, yet have actually yielded a dead loss to the nation of £1,169,000 in four years. It has not forgotten the booms offered by him under the Insurance Act, or those 'first-class hotels' where consumptives were to recover their strength in the most luxurious surroundings. As that particular promise came in effect to mean only a bottle of cod-liver oil or a shelter in the

GOOD LUCK!

Lloyd-George gunning for the landlords.

—*Amsterdammer.*

back garden, so it will be with the new bushel of blessings which he offers the rural districts in exchange for their votes. Once bitten, twice shy. He has made his promises too often and has too often been found out. The public has discovered that with him it is always a case of 'jam to-morrow,' never of 'jam to-day.' Now that he returns like a cinematograph man with a fresh lot of 'faked' films, it will simply decline to be deceived."

The Peers with big game-parks argue that their vast estates are wild and uncultivable land, good only for their present use, and they are trying to prove their point by offering thousands of acres to the Government at a low figure. If the offer is declined, their possession will be justified, they believe. Thus the Duke of Sutherland offers 200,000 acres of Highland property at £2 ($10) an acre. In one of his speeches the Chancellor had declared these Highland deer-parks "kept tens of thousands from cultivating the soil." In a letter to the London *Daily Mail* the Duke of Sutherland says:

"Crops on land used as deer-forests, most of which is many hundred feet above sea-level, can only be grown in small patches. The crops only ripen in very favorable years, and then are too far from markets to make them profitable. Take away the sporting tenants in Scotland, from whom most of the crofters in the neighborhood of deer-forests get remunerative employment, and there is little left.

"According to one newspaper report Mr. Lloyd-George said, 'Why, you remember the story of the steamer which was coasting along the shores of Sutherlandshire. The smoke was so thick, coming from the burning crops, that the steersman could not see his way. That is the first thing you do when you make a deer-forest.'

"It is almost incredible that Mr. Lloyd-George could believe this story or that he could be so ignorant of his subject as not to know that the heather is periodically burnt, not by the landlord, but by the sheep-farmers in order to provide better pasturage for their sheep."

But the Liberal press indorse the Chancellor's plan. Thus we read in the London *Westminster Gazette:*

"We may now look forward to a new kind of commission, which will do roughly the same work with the same purpose of making the best use of the land for the whole country. We are aware that the old conditions can not be restored. But we can make new conditions which will insure that the laborer is not the wretchedly paid, ill-housed, landless toiler which the modern land monopoly has made him in so many parts of the country, and we can endeavor to stop the migration and emigration from the land of the keenest and ablest part of the rural population by giving them freedom and breathing-space and the opportunity of a career on the soil."

The Government's proposed Land Law, which "will drastically alter the conditions of land-tenure and of English rural life," is also commended by the Manchester *Guardian*, and of the Chancellor we read:

"What he proposes to the public is the use of the powers of the state to develop its land and create its peasantry anew, and through all criticisms of detail, for which his method of launching the scheme is intended to give ample time and scope, this conception will maintain itself as the main burden of his appeal."

The popular *Reynolds's Newspaper*, of course, hails it with jubilant delight and after asking

> Men of England, wherefore plow
> For the men who lay you low?

proceeds in its editorial to enumerate the oft-repeated list of peasant grievances, concluding with the words:

"And now relief is to come for poor Hodge. A living wage, decent houses, reasonable hours, and a prospect of a bit of land are to be secured by State action. An effort is to be made to save the British peasantry from annihilation, and we must confess that this pleases us more than any other item in the plan of campaign. 'There is no greater weakness you can inflict upon a nation than to destroy its peasantry.' Whether consciously or unconsciously, every effort has been made in the past to destroy that peasantry, and to-day town and country alike suffer in consequence."

OUR PECULIAR MILITARY POLICY

OUR GOVERNMENT is antimilitarist, our boys will not offer themselves as recruits, it is with difficulty that Congress is induced to make a naval appropriation, and rank political favoritism prevails among the naval and military administration, declares the *Kreuzzeitung* (Berlin). This paper is Conservative in politics, and orthodox to the core; and just as it riddles all heresies without mercy, it also finds the fatal flaws in every military system outside of Germany. Its military editor has chosen the moment when our forces are almost on the eve of arming for the field to point out some of

CATCH 'EM ALIVE OH!

THE ILLUSTRIOUS LLOYD-GEORGE GAUDISSART—"You want security of tenure, you shall have it; higher wages, more land, you shall have 'em. Cheaper fares, cottages, gardens, cash or its equivalent all, all is yours for what?—for a VOTE."

—*Pall Mall Gazette* (London).

the "curious features" in our war administration. To quote his essay:

"In the present Democratic Cabinet of the United States the offices of Secretary of War and Secretary of the Navy are by no means enviable incumbencies. These gentlemen may do their uttermost for the development of the Army and Fleet, but the prevailing spirit of the ministry—from the President downward—

is decidedly antimilitaristic. Congress will appropriate only the barest necessities for military and naval needs, and even this amount is granted with a sour face. In each regular session less and less is being appropriated for building up a complete fleet. The strength of the standing Army is only 70,000, altho the President has the right to maintain the military forces at a maximum of 100,000; but as long as no foreign war is imminent the tendency has been to reduce instead of raising the strength of the military forces."

This writer proceeds to give the reasons why the Fleet and Army of the United States are so comparatively weak in numbers. Of recruiting he tells us:

"In both Army and Navy it is with the greatest difficulty that the requisite number of recruits is procurable. The trade of last year was good, and in New England a shortage of labor prevailed. Under these circumstances recruiting was a poor business. The young lads laughingly said: 'Uncle Sam must offer soldiers higher pay if he wants us to swallow the bait.' Under these circumstances the Secretary of War suggested that it would be advantageous to change the terms of military service from five to three years. This was a diminution which would deprive recruits of the last two most valuable years of experience, but Mr. Garrison thought it would bring more men to the colors. It might even end in introducing an arrangement similar to our one year's volunteer service which has induced many youths of the educated classes to join the Army and has provided an increased number of cultivated military men to serve in case of war. Mr. Garrison complains that youths of the upper class and the highly educated class avoid military service. To the present long period of military service these classes can not be reconciled, but to the service of three years or one and a half years the students might submit and at its close return to their studies. Then men with military education might be drafted either into the reserves or the State militia. This, as the specialist knows, is the capital point of the one year's service, and Garrison's proposal is interesting because it shows that Americans are not disinclined to take a leaf from the book of not much overloved Germany. The War Minister has declared to many prominent men that under the above conditions he would be glad to give his son a year's service in the Army. Price Collier, the author, said the same thing. He went still further and declared he would gladly, if it were possible, give his son a year's service in the German Army, if only for the training he would receive thereby."

A LITTLE PREVIOUS.

MASTER GEORGE—"Wot! aint yer 'orrified?"
MR. BULL—"Run along, my little man, run along, I'm busy."
—*Pall Mall Gazette* (London).

But what makes the Army still more unpopular, says this writer, is that its higher offices are controlled by politics and the spirit of favoritism fatally handicaps its administration.

The "peculiarities" of our naval administration are next pointed out as follows:

"The Naval Department, moreover, is not exactly as it ought to be. For example, in the spring a pile of naval plans, that is, construction plans, disappeared. They were to be used in the building of the dreadnought *Pennsylvania*, and were never recovered. As is characteristic of Americans, they suspected Japanese agents, but the suspects were not to be found, and it is probable that the thief was to be looked for among Navy office officials."

Finally, the American Fleet runs the risk of being commanded by men who have not had sufficient sea service to enable them to meet more experienced naval leaders. Hence this editor says:

"The twenty-eight rear-admirals of the American Fleet, according to Colonel Thompson, chairman of the American Naval Board, had served up to January, 1912, on an average but one year and seven months as commanders, one year and nine months as captains. Fifteen of them had seen no sea service as admirals, and the others had on an average been but nine months in command."—*Translation made for* THE LITERARY DIGEST.

THE CANAL UNITING THE CONTINENTS

THE DIVISION of North and South America by the Panama waterway is really likely to unite the two continents in a commercial and political alliance, thinks no less expert an observer than Mr. Gabriel Hanotaux, the French historian and recent Minister of Foreign Affairs. And he not only predicts the unity of the northern and southern peoples, but affirms that it will come about under the influence of French civilization. Now that the wall between the Atlantic and the Pacific is pierced, he says in the Paris *Figaro*, "it is not possible any more to think of a North American people, but of a unique people dwelling north and south of the Canal, animated in their national life by the same ideal—the American ideal." Mr. Hanotaux seems to think that Americanism is one of the new developments of human life, public and private, in the progress of the human race; and that this development is to be promoted by the opening of the Canal. This brilliant writer and philosopher goes on to say:

"For the future the sentiment of Americanism ought to be developed uniformly in the two Americas of the North and South. Nobody can deny that there are analogies and special parallelisms between the various peoples of America even among those who are of different racial origin and brought up on a different religious and educational basis."

North America and South America have both of them a civilization which is quite of a new order. Both of them have seen their two Anglo-Saxon and Latin races sometimes prest to the wall by European emigration of constantly increasing power. They have adopted the principle of a republican government; at the same time, they organize themselves into a cluster of independent but united states which constitute a region unparalleled in history. Then it is interesting to notice how this leader of political and historical thought in France, even in Europe, claims for his own country a supremacy in that realm of political enlightenment of which he is conceded to be a supreme teacher. "France," he says, "which is in the world the centralizer of civilization, has been ever eager in attaining a position by which she should set the standard of intellectual unity, and now French intellectualism has become the talk of the world." The South American has recognized the fact that

nobody in Brazil, Argentina, or Peru can exist without an acquaintance with the splendid cosmopolitan works of France. In America 60 per cent. of the foreign books imported from Europe are French. Consequently France really possesses a wonderful influence over North American thought. France, in fact, he concludes triumphantly, is able to serve through the Panama Canal as an intermediary between the Americans of the South and the Americans of the North, and the power of France will ever thus be recognized as that which will link the two peoples into a moral, political, and intellectual harmony.—*Translation made for* THE LITERARY DIGEST.

WHY WE HECKLE HUERTA

THREE MOTIVES actuate the Washington Government in its treatment of the Mexican question, we learn from the veracious German press. First, President Wilson is hungering and thirsting to establish a protectorate over Mexico. Then, too, he wishes us to set up another outpost against the Central American States, whose power might be a menace to the Canal Zone. As a by-issue, he is secretly desirous of obtaining the economic control of Mexico and Central America. The very respectable and influential *Kreuzzeitung* (Berlin) puts it in this way:

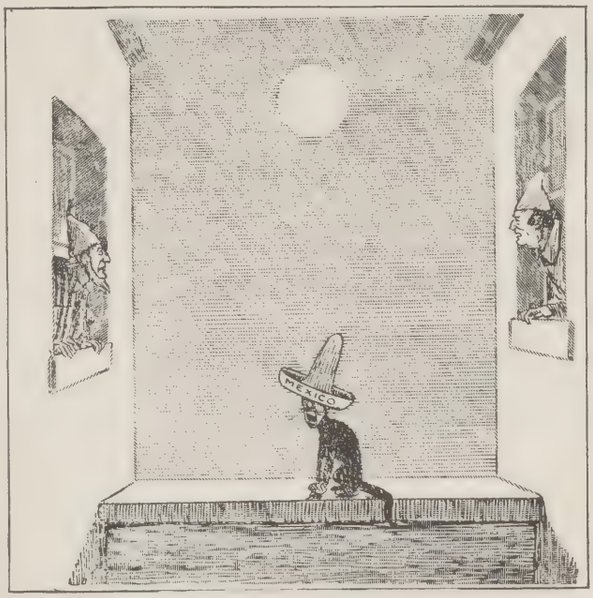
"For years the United States has been making strenuous efforts to acquire great influence over the Central American Republics. In a large part of them, notably Panama and Santo Domingo, this end has already been reached by the help of dollars; in Honduras and Nicaragua the success of this scheme is as good as assured, and the remaining small Republics, San Salvador,

THE GÖTTERDÄMMERUNG OF MEXICO.

The Indian war-god wakes once more,
After four centuries of slumber,
And joys to see the gash and gore
Of wounded fighters without number.
But he'll soon learn his reign is o'er,
For Uncle Sam is at the door.

—*Wahre Jacob* (Stuttgart).

Costa Rica, and Guatemala, will certainly in time follow suit. By means of a promised loan their great Sister of the North is going to gain a so-called 'control' over their domestic and foreign policy, and the Government of Washington is quite satisfied with this arrangement inasmuch as the Union, as the Palladium of Liberty, will eventually realize the plan of stripping the little States of their freedom. By this means, the United States will become the immediate neighbor of the Panama Canal, both as regards political and commercial relations, valuing as it



JOHN BULL—"He's making a horrible noise, but there's no reason why we should quarrel about him." —*Daily News* (London).

does the safety of the Canal as of the most vital importance. Unfortunately Mexico has resisted this suspected scheme of control in the most obstinate manner, and this resistance is the sole ground onw hich strong-willed Porfirio Diaz was turned out of his blest government, and Huerta is anxious to obtain the recognition of the Union. The safety of the Panama Canal is at stake, and on this ticklish point the United States will stand no nonsense."

All the German papers intimate that the policy of the United States is one of hypocrisy and piracy. Thus, for instance, we read in the *Berliner Tageblatt:*

"Every Mexican knows very well that the policy of the United States in regard to Mexican affairs aims at establishing a protectorate, more or less disguised, over their Republic, because it separates the United States from the partially subjugated republics situated north of Panama. Huerta is not a particularly attractive individual, but it is nevertheless true that this 'immoral' man against whom the ex-professor of Princeton contemplates the mobilization of an army is exactly the man that Mexico at this juncture needs. He would have established the order which has so long been disturbed if he had been permitted to do so, and the interests of foreign trade, excepting those of the Standard Oil Company, would have been in a much improved condition.

"The dictator is fully aware of the peril to which he and his country are exposed from the United States. He has merely persistently faced this peril without paying any attention to the clamor that rises on the other side of the Rio Grande. That he has so far succeeded in his plans to a certain point is proved by the check administered to the tragicomic mission of Lind. . . . At present the submission of Huerta is a thing inconceivable. It appears more probable that he will let Uncle Sam bite the sour fruit of failure."

The *Boersen Courier* (Berlin), the great trade and financial organ of the capital, joins in the same bitter arraignment of our Government and says in part:

"The sly and undecided policy of the United States has made American diplomacy the laughing-stock of the world. The Government at Washington is aiming in an underhand way at stripping Mexico of her political independence, but above all at establishing in that country the economic supremacy of the United States. If that Government had desired nothing more than the reestablishment of peace it would have recognized Huerta long ago."—*Translations made for* THE LITERARY DIGEST.

SCIENCE AND INVENTION

NERVOUS AFFECTIONS DUE TO RAILWAY ACCIDENTS

THE RECENT shocking railroad accidents in this country give peculiar timeliness and poignant interest to a detailed study of the subsequent nervous troubles suffered by the victims of such occurrences which has been made by an eminent German surgeon. Professor Rumpf, with the assistance of a colleague, Dr. Horn, has investigated 173 cases of persons suffering from affections of the nervous system, consequent on shock or injury or subsequent worry due to their presence in railway accidents. His observations are thus detailed in *Die Umschau* (Frankfort-on-the-Main):

"In the case of persons who were present in great catastrophes without suffering actual physical injury, there commonly appears a group of symptoms best described by the term 'fright-neurosis.' Chief among such symptoms is a marked psychic alteration, accompanied sometimes by complete loss of self-control, incapability of thinking, and apathy, and at times by a state of confusion.

"The aspect of the patients is at first pale, with faces drawn by anxiety, and limbs seemingly crippled. This state of rigidity is often followed by greater agitation, trembling of the body, and convulsive weeping. Then there gradually succeeds a certain quieting down, but the great irritability of the nervous system is shown subsequently by sleeplessness, frightful dreams, great acceleration of pulse, rush of blood to the head, and a tendency to perspire. These disturbances disappear more or less rapidly according to the disposition of the person.

"Entirely different symptoms are displayed in nervous disturbances due to injuries to the head. So far as possible I am ignoring here the more severe forms of skull injury, fracture, etc., and confining myself to the symptoms of the simple forms. Among these are headaches, head pressure, sensitiveness of the skull to blows, a feeling of faintness, affections of the memory, and irritability of the eye and ear; in some cases we find ringing of the ears, and sometimes there is great sensitiveness to nicotine and alcohol. In such cases secondary hysterical disturbances may also appear. Where there is actual pressure on the brain common symptoms are unconsciousness, a feeling of illness, nausea, and retardation of the pulse.

"The symptoms of illness are essentially complicated when the patient suffers from more than one thing—for example, from fright and local injury at the same time. . . . But the most serious complications are due to two things—ideas of fear and of recompense. The first may begin very soon after the accident, but as a rule they occur in connection with memories of it and with reading about it; frequently also from the influence of relatives and acquaintances. Connected with these more or less profound images of fear are the images of recompense, which cause not only the cherishing of subjective emotions, but also occasion simulation. Complete simulation is not very frequent (only 3 times in 173 cases); but partial simulation is found much more frequently, constituting the second stage of an illness whose primary symptoms are frequently cured. This second stage is marked by the neurosis of financial anxiety, a tendency to exaggeration, and obstinacy in the pressing of claims for damages."

In a few cases, we are told, the primary injuries were cured without the appearance of nervous symptoms; but later, in the course of the suits for damages, nervous complaints frequently impaired the victim's earning power, which had been entirely intact. Through a gradual psychic transformation of the original trouble appeared symptoms based on a desire for indemnity. The efforts to obtain it were accompanied by profound internal disturbances, acceleration of pulse, sleeplessness, and loss of flesh. Frequently such symptoms, not originally present in the case, develop in the course of the struggle for money, the many investigations, and the usually superfluous inquiries. To resume our quotation:

"The most interesting results, however, were obtained from a study of the progress of nervous affections consequent on accidents. If we regard as cured those cases which have regained complete working ability and earning power, and as improved those which still complain of illness and show a small diminution of earning power, we have:

Cured	95	=57 per cent.
Improved	24	=14.3 per cent.
Unchanged	43	=25.8 per cent.
Made worse	5	= 2.9 per cent.

"But these figures are completely transformed if we divide the cases into two groups: those in which a cash indemnity was paid, and those in which a regular stipend was paid. Among the 136 cases of the first sort we have:

Cured	95	=70 per cent.
Improved	22	=16 per cent.
Unchanged	16	=11.8 per cent.
Made worse	3	= 2.2 per cent.

"But further investigation shows that of those receiving a cash indemnity in the first year, 81.5 per cent. were cured, 8.5 per cent. improved, and only 9.9 per cent. remained unaltered or grew worse; and that with the increase in lapse of time between the accident and the cash settlement the percentage of the cured cases slowly falls and that of the unchanged rises. The amount of the indemnity had no perceptible influence. The principal effective factor consists in the fact that the struggle for damages, and therewith the constant mental preoccupation with the consequences of the accident, was removed.

"The prognosis was most favorable in youthful individuals, in those not having a nervous disposition, and in cases of pure fright-neurosis. In general, about 10 per cent. remain uncured. In these it was proved that the patients were either persons evincing diseased conditions before the accident . . . or those who were in receipt of an income from some other source. Also long-drawn-out judicial proceedings were unfavorable to the cure of persons of nervous disposition.

"As a general result, it was found that the prognosis of nervous affections following accidents was extraordinarily favorable where a cash indemnity was given, and that in the small number of cases remaining unaltered or becoming worse there were complicating influences, usually arising from previous disease or former accidents. In contrast to this the investigation of the progress of the illness among those receiving a regular stipend shows that in 31 cases none was cured and that improvement was shown in only two while the stipend continued to be paid; while 27 cases remained unchanged, and two grew worse. In considering this remarkable contrast, the question naturally arises whether in the cases examined more serious symptoms or more complicating illnesses played a part than in those cases settled by a cash indemnity. This was not the case, so that the differences observed must be ascribed to the difference in the method of judicial settlement of claims."—*Translation made for* THE LITERARY DIGEST.

MANSLAUGHTER BY ANESTHESIA—That deaths are caused by the unskilled administration of anesthetics by incompetent persons is charged by Sir Frederic Hewitt, a British surgeon, in a recent address. As quoted in *The British Medical Journal* (London, September 20), Sir Frederic said that to let untrained and unqualified persons administer powerful anesthetic drugs was as tho a railway company were to permit its porters or cloak-room attendants to drive express trains or to work the signals. We read:

"There are no statistics available, but the small proportion of cases that come before coroners or into the law courts are sufficient to make it practically certain that more people are killed or maimed for life by the reckless administration of anesthetics, chiefly for dental operations, than similarly suffer owing to accidents on the railways. To those who are acquainted with the risks run it seems almost incredible that the educated classes who still largely determine the course of legislation should be so callously indifferent to the victimization of the poorer members of the community. Here we have a set of traders who, from

mere greed of money, are ready to put any number of impecunious folk in danger of their lives. If a milkman purveys polluted milk, or a grocer a poisonous pork pie, the public are, very rightly, indignant and demand condign punishment. But if death is caused by gross incompetence in handling dangerous drugs, . . . the coroner's jury are shocked and adopt a rider, but the public keeps on taking no notice. We should like to see a charge of manslaughter made in such cases; we have no doubt that an indictment could be framed at common law."

THE WRECK OF THE GERMAN AIRSHIP

WHAT CAUSED the huge Zeppelin *L 2* to burst into flame in mid-air, explode thrice, collapse, and fall to earth, killing every one of the 28 men on board? The very day before the accident, *The Aeroplane* (London) had published figures showing that the Zeppelins had traveled 80,000 miles and carried 23,271 passengers without injury to any of them. In fact the impression had been growing that Zeppelin traffic was quite safe. The official report of the disaster, says the Berlin correspondent of *Aero and Hydro* (Chicago, November 8), gives us material for a careful analysis of the catastrophe, and makes it in every way probable that the gas-container caught fire from an explosion of gasoline vapor ignited by a "back-fire" from the engine. Such an occurrence is easily guarded against. In other words, the great German airship and her crew perished through carelessness, and such an accident need never be repeated. The following excerpt from the official report is given by the paper just named:

Copyrighted by the International News Service.

A CLOSE VIEW OF THE WRECK.

"It appears that the dirigible was beginning a trial flight previous to its acceptance.

"She started at 10:10 o'clock on the morning of October 17 for a high flight, with 28 persons on board. After three minutes she had attained a height of over 600 feet when flames burst forth between the forward gondola, housing the forward motors, and the envelop. In two or three seconds the whole ship was on fire and an explosion occurred. At the same time the airship fell slowly head downward, until she was 130 feet from the earth. Here a second explosion took place, presumably of the fuel supply. When the vessel struck the earth a third explosion occurred, and the framework collapsed. A company of pioneers and guide-rope men hastened to the scene, and doctors were immediately in attendance. Two of the crew were picked up outside the ship still alive, but they died shortly afterward. Lieutenant Bleuel, who was severely injured, was taken to the hospital. The remaining 25 of the crew had been killed during the fall of the airship or by the impact with the earth. The cause of the disaster appears to have been, so far as at present known, an outbreak of fire in or over the fore engine-car."

The correspondent of *Aero and Hydro* goes on to say:

"It has been pointed out that the cars, or gondolas as they are called in Germany, of the *L 2* were much closer to the body than those in the passenger-ships, and that for the first time the gangway between the cars was actually built inside the framework.

"The significance of the statement that one of the engines was giving trouble thus has great importance. One can turn to the engine-car to find the materials for the disaster. In a confined space was installed a powerful motor, and close by was its liquid-fuel supply-tank. Gasoline has great aptitude for leaking from its containing-vessels, and readily vaporizes.

"Gasoline vapor, being heavier than air, sinks down and lurks about the floor of the engine-car, mixing with air. Thus in the engine-car there is a downward-moving gasoline air aura which can only be got rid of by very thorough ventilation.

"A contributory cause must be sought for to account for the *L 2* wreck, and the engine trouble supplies the clue. A common phenomenon in running a gasoline motor is the 'back-fire.' A little piece of grit on an inlet valve seat, a broken valve spring, or a defect in the carbureter may cause the engine to 'spit back' some of the explosive mixture of gasoline vapor and air which has been drawn into the motor from the carbureter. The mixture may become ignited before it leaves the engine, and then a tongue of flame would dart through the carbureter and out through the air-intake pipe. The carbureter may take fire, and then there is every likelihood of the surrounding aura being ignited.

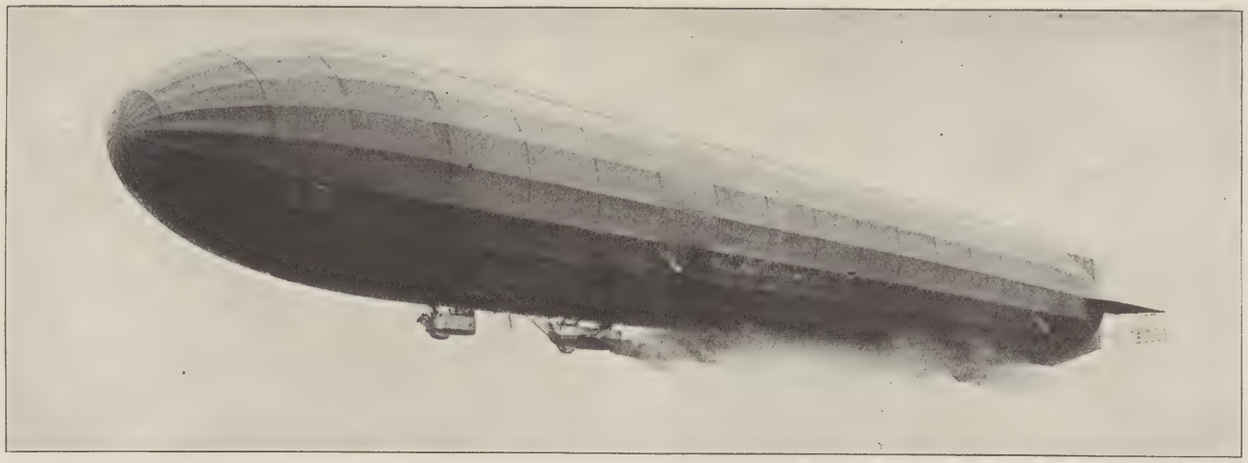
"All this could happen in a few seconds, and flames of considerable height would flare upward. The distance between the Zeppelin engine-car, as noted above, and the gas-envelop is so small that any serious gasoline fire would at once carry the flame to the hydrogen aura. With the rapidity of an explosion the conflagration would spread along the vessel, and the intense heat would burst the gas-bags and so add enormous quantities of fresh hydrogen to the fire. The escaping gas, rapidly mingling with air, would be consumed with explosive violence, and in an incredibly short time the airship, falling rapidly through the air, would become a veritable furnace, in which hydrogen and petrol burned at their fiercest in the forced draft of headlong descent.

"Then, too, leaving out the question of fire immediately in the gondola, which must have been the primary cause of the explosion in the car, as the official report explicitly states, owing to the rapid descent of the ship, the expansion of the hydrogen in the envelops may have caused an escape in the bottom of any one of them. As there were 20 compartments, it would be impossible to keep a man on duty watching each of them. The natural tendency of hydrogen would, of course, be to escape upward, but a slight leak at the bottom of any envelop would force the hydrogen into the gangway. . . . . .

"It is an appalling picture and it teaches the importance of scrupulous attention to detail. Obviously every airship carbureter should have a safety expansion chamber, and every airship car should be well ventilated, as well as any passageways built into its structure. Then, again, there should be a shield on every motor to prevent a gasoline flare-up igniting the hydrogen leakage. With these matters attended to one need not fear a repetition of the disaster which has plunged all Germany into mourning. At enormous cost another great lesson has been learned in aerial engineering. Let every nation employing airships take it well to heart."

Glenn H. Curtiss, the aviator, said to an *Evening Mail* reporter upon his return from Germany:

"Aviation in Germany is demoralized because all the aviation commissioners are dead. They will have to find new commissioners before any more progress can be made there."



THE ILL-FATED "L 2" BEFORE THE WRECK, SHOWING PROXIMITY OF THE ENGINES TO THE GAS-ENVELOP.

A STUDY OF HEN LANGUAGE

DOMESTIC FOWLS are able to make at least twenty-three different notes or cries, all of which convey distinct meanings, besides others observed but not yet classified or explained. This is the conclusion of Edward Carpenter and George Merrill, who contribute an account of their investigations to *The Humanitarian* (London, September). If tame birds have so respectable a vocabulary, they say, wild ones must have a very large one, especially as the ordinary hen is not noted for intelligence. Probably, they think, domestication, in this case at any rate, has actually diminished alertness and resource in the fowls and correspondingly restricted the range of their "speech." Messrs. Carpenter and Merrill preface their paper with a word about language in animals. They say:

"Our words, highly articulate and differentiated, mostly define objective things or actions—the sun, the moon, a tree, a man, to kill, to eat, and so forth. It is chiefly by combinations of them that we express our feelings. But with animals, their language from the beginning consists of cries which express their subjective feelings directly—*e.g.*, the hissing or purring of a cat. It is only in a secondary way that these cries sometimes indicate an objective thing—as when hearing a cat spitting we surmise the presence of a dog. Thus animals have primarily a language of the emotions, and their emotional states they convey to each other with extraordinary rapidity and distinctness—as when a flock of rooks in a field is suddenly warned or alarmed by a sentinel rook; but secondarily their languages do no doubt in cases convey distinct images, as when the sentinel rook by some inflection of the voice is able to indicate that the particular cause of alarm is a man with a gun. Of course, in many cases a movement combined with a cry will give definition to the meaning—will define, for instance, the direction of danger or of attraction. When a hen utters a quick squeal and immediately crouches in the grass, she says as clearly as words could do: 'There is a hawk just overhead.' We have heard a hen utter this cry, and instantly the chicks—only two or three weeks old—have rushed in all directions and hid themselves motionless in the grass. Or, in cases there may be no voice or cry at all—the hen may just simply crouch down—and with the same result; the chicks hide themselves, knowing well what she means. Or, again, a wasp may bring the smell of strawberry jam to another wasp, and then at once fly away with such a whiz as says unmistakably, 'Come this way and you will find strawberry jam.' In all these cases there is language in a sense; definite acts or sounds having definite meanings."

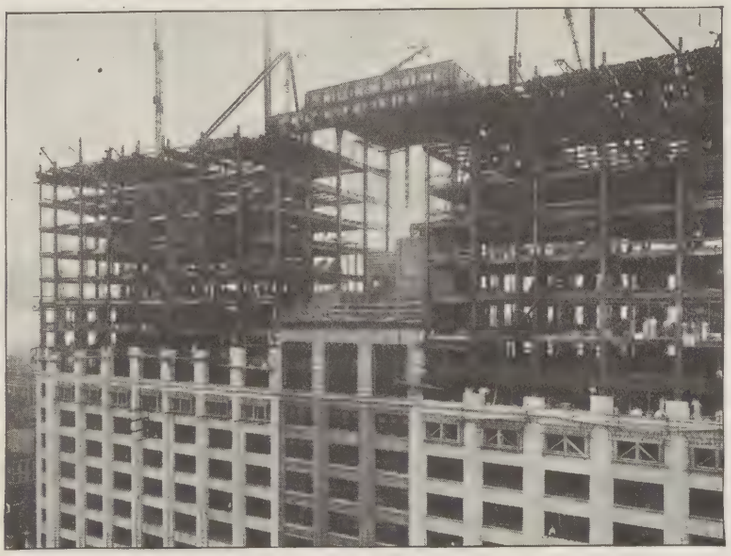
The cries or notes, which are given in tabular form, with annotations, include such sounds as cackling, grumbling, scolding, clucking, crooning, purring, and crowing, besides many others that have to be defined rather than named. The author's comment upon them runs as follows:

"These twenty-three notes or cries are all very distinct and convey distinct meanings, and must denote a considerable degree of intelligence. As we have said, there is a good deal to show that the sureness and precision of their instincts have, in the case of domestic fowls, been adversely affected by their long dependence on man. Their reasoning power is also very weak, tho whether this has been improved or deteriorated by the influence of man, we do not know. Fowls on the outside of a large pen, when they see the others being fed inside, will almost invariably rush violently against the wire netting in vain endeavor to reach the food—tho they have been round hundreds of times by the usual entrance, and must know it perfectly well; and it is only occasionally that some exceptional genius, after a few efforts at the netting, bethinks herself of the better way. In this case one seems to see an instance of the world-

THE RESULT: "AT ENORMOUS COST ANOTHER GREAT LESSON HAS BEEN LEARNED IN AERIAL ENGINEERING."

old conflict between instinct and reason. The sight of the food wakes the primitive impulse to go straight for it, with such force that a bit of modern experience, like the necessity of using the doorway, counts for nothing; and it is only a very progressive-minded bird that can give due weight to the latter.

"A similar instance is the curious and complex dissimulation a hen will use in concealing the when and where of her laying an egg, and in contrast with this, the loud and brazen cackle she utters as soon as ever she has laid it. It seems probable that the cackle is a very ancient and primitive instinct—a swift reaction of relief at parting with the egg, and of pride and joy at the addition of a new member to the community—a sort of 'For unto us a child is born.' On the other hand, and especially under the brigand domination of man, reason comes in to counsel concealment of the eggs; and hens who are bent on this will show remarkable craft—watching their lords for hours together and pretending to be occupied with unimportant matters, till they see the coast is clear, when they will make a dash for their covert. . . . And yet sometimes the place is so ordinary that one wonders what there is to commend it. But in these cases, as in the case of poets and artists, the operation is too sacred to be interfered with. And no doubt there is some hidden association, unseen by outsiders, which alone will set in action the creative faculty.



THE MIDDLE SECTION IS BUILT FROM THE TOP.

And hangs like a bridge over the building below.

"Instinct, which is a sort of practical intelligence derived from the experience of thousands of generations, acts as a rule with extraordinary celerity and decisiveness; but the world-old causes and reasons of its action (which may possibly be intelligent and luminous enough in the race-soul) are not intelligent, and indeed often have an unreasonable and blind operation in the individual. Not long ago a hen who had been sitting and had hatched out most of her chicks, became restless over the remaining eggs, which were rather late. So we took the latter away and placed them under another hen who was already broody and anxious to sit. The second hen was pleased, and so was the former, who could now lead her chicks about unhampered. The second hen sat joyfully on the two eggs for two days, and then—the chicks within them moved and faintly piped. . . . Well, here was a situation! The memorial experience of countless centuries told that hen that three weeks and not two days was the proper period for well-regulated chicks to come to their hatching. Yet here they were alive already! It could not be right. There must be some delusion or falsity or fatal wickedness somewhere. The whole evidence of her senses and intelligence was in conflict with the certain experience of thousands of years. Unable to reconcile the two, she turned round and destroyed the eggs and pecked the two chicks to death.

"Here was the grand, the motherly, race-guarding, age-long instinct of the hen tribe working in a little brain too slightly evolved and too unintelligent to deal with the resulting problem. In the tribe of mankind, sometimes (but not too often), the two intelligences are harmonized."

BEGINNING TO BUILD AT THE TOP

A PORTION of a New York sky-scraper is being constructed literally from above downward, being hung from the top instead of supported from below. The part so built is seven stories high and forms in itself a structure of no inconsiderable extent. It is suspended between two 19-story buildings, directly over an old 12-story one, so that the completed mass will form an apparently homogeneous 19-story building. There will be no hint to the passer-by that the whole does not rest upon its foundations in the ordinary way. The circumstances that led to this astonishing achievement in structural engineering, which is being carried out for the Consolidated Gas Company, are thus explained in *The Scientific American* (New York, October 11):

"For many years the company had owned an old building on the corner of Fifteenth Street and Irving Place. It had long outgrown the building, and various departments had been housed in neighboring offices. It was decided a few years ago to tear down the old structure and build a more commodious one. In order not to disturb the office work during the construction of the new building, the old building was not torn down until after a new 12-story building had been erected on a lot immediately to the east of it. The 12-story building was erected in record time by the engineers of the company. Work started in November, 1910, and in six months' time it was ready for occupancy, after which the old building was torn down.

"Before work had commenced on the old site more property had been acquired to the east of the new building, and also to the south of the old building on Irving Place. It was then considered advisable to have all the gas companies of the consolidation in one central building, but this would require more floor space than could be afforded by a 12-story structure over the entire property. Accordingly it was planned to carry the building up to 19 stories. But in the middle of the property was this new 12-story building, whose columns had not been designed to support any additional stories. To be sure the columns of the building could be strengthened, but this would necessitate ripping away the walls built about them, which would seriously interfere with, if it did not actually interrupt, the work in the offices. It would be possible to bridge across the building with heavy girders and carry the structure from there up; but these girders would have to be 8 feet deep, which would mean that the rooms on that floor must necessarily take the form of hallways between the girders with small windows near the ceiling. Furthermore, the appearance from the outside would be architecturally bad; the break in the design could not very well be concealed. Accordingly, it was finally decided to carry the bridge across at the very top of the structure and suspend the seven stories from it, the columns of the new 19-story building on each side being made doubly strong to support the additional load. This called for a form of construction that was revolutionary. The building was to be constructed from the top down. . . . . .

"In order that no break might appear in the architectural design where the new building joined the now 'old' 12-story building, it was necessary to expose the columns at each side of the old building, and bring the new 19-story columns in contact with the old ones. Thus the pillars at the junction of the old and the new buildings would not be any wider than the other pillars.

"Ten extra heavy columns were erected to support the girders spanning the old building and to carry their share of the new construction. The girders are arranged in pairs at the top of the building, where the span is 62 feet. There are six of these long girders. . . . . .

"Unlike the customary columns, the hangers are under tension instead of compression, and they do not need a cover plate to prevent them from buckling. The structure is now nearing completion. The stonework has been carried up the face of the building, and there is nothing to show where the new joins the old."

A BOOK-MARK TO SAVE EYESIGHT

REFLECTION by the reader is supposed to be beneficial; reflection by the page is injurious; so now we have a reflecting book-marker to prevent too much reflection of the wrong sort. That much injury is done by glistening pages that throw the light into the reader's eye is asserted by Dr. John Neely Rhodes, of Philadelphia, who describes in *The Ophthalmic Record* (Chicago) what he calls a "reflecting book-mark," intended to call the reader's attention to the presence of injurious reflection of this kind. When the paper is highly glazed the reflection is noted at once and the angle of the page is altered to avoid it. But when the high glaze is absent the reflection is often unnoticed and gets in its vicious work all unknown to the victim. In such a case a bit of bright material on the page will catch the reader's eye and warn him of his danger. Writes Dr. Rhodes:

"Book-publishers and binders should be urged to bind their publications with one of these devices attached, or at least with a ribbon, to which a marker might be fastened, in order that every book reader may be educated to see his danger.

"The marker should be stamped out of bright aluminum or tin, and have printed or stamped on it instructions telling how a book may be held to produce the injurious reflections, and also how it should be held to avoid them. . . . .

"I want to emphasize the fact that it is a mistake to hold even dull paper at such an angle as would cause it to reflect vicious light into the eye if the paper were shiny. I firmly believe that all readers' eyes should receive less injury if their books or papers, no matter as to color or condition, were held at such an angle that reflected rays from the illuminating source could not enter the pupils.

"Persistent use of this contrivance with book or paper will, I hope, soon render the reader as much afraid of glare as some of our patients already are of germs. About a year ago I made a demonstration of this evil to a prominent optician, and he seemed wonderstruck, but when I met him again some months later he told me that he was sorry I had called his attention to the matter, for now he could scarcely get away from the blamed thing.

"It would be well for bookkeepers, stenographers, and even mechanics to take one of these devices with them in their labors so that they might avoid working in a glare, by placing the instrument on their account-books, or on any bright object over which they are engaged.

"Rays from glazed paper are injurious, and printing should not be done on such stock. If, however, a reader is educated to hold properly his journal or book, he can read on glazed paper without injury—but the paper must be held flat, not rolled or curved. . . . . .

"Place the printed side of the marker against the page of your book, then follow the conventional method, take the book in your left hand and turn your back to the light so that the light shines over your left shoulder. Now, shift the position of your book until the reflected light is pouring directly into your eyes. Holding the book in this position for a few minutes will teach you the bad effects of glare. Just tilt the book the least bit, and notice the relief caused by the disappearance of the reflection—it is a lesson you will never forget.

"Notice that this phenomenon occurs when the book is held in what teachers consider the best position. The truth is, that for reading it matters not which shoulder the light shines over, nor does it matter which hand holds the book, if the holder is ambidextrous. If one who is writing is not ambidextrous, but, for example, right-handed, then the holding of the book in the left hand leaves the right hand free for writing, and, at the same time, keeps the writing itself out of all shadow.

"I understand that the New York City Board of Education has a rule which directs the student to hold his book at approximately 45 degrees. He who formulated that rule evidently knew nothing about the conditions which cause a glaring reflex. The relative position of the source of illumination with respect to each child governs the angle at which the book must be held."

THE SIMULIUM FLY, ENLARGED.
It carries pellagra, and should be "swatted" on sight.

ANOTHER FLY TO SWAT

ONE BY ONE, the transportation of infection is being traced to insect pests. The latest, the simulium fly, has now been proved to be the carrying agent of pellagra, a disease lately attributed to a fungus growing upon Indian corn. The fly exists, we are told by *American Medicine* (New York, October), in about 70 known species, 15 of which live in the United States and are called "biting flies," "black flies," or "sand flies." These have long been unfavorably known as pests, but it has not hitherto been suspected that they were responsible for the active dissemination of disease. Now that the fact is known the stamping out of pellagra will depend on how soon the flies can be exterminated. We read in the paper named above:

"Altho this fly is a serious pest here and there in the late spring or early summer, its study has been greatly neglected, perhaps because there was no practical purpose in sight for the expenditure of public funds, and we are too practically minded a people to waste money collecting information about bugs in general and this one in particular. Still we can not understand why the information had not been classified as a matter of pure science, just as the data as to mosquitoes were even before they became matters of practical sanitation. The simulium takes on great importance now that Dr. Louis W. Sambon, of the London School of Tropical Medicine, has published facts which indict it as the carrier of the infecting agent of pellagra, and we understand that he has since then collected enough more evidence to make conviction certain. That is, pellagra is not due to a maize diet at all, but is an infection imported from Italy by the hordes of immigrants who have arrived in the last thirty or forty years.

"The opinion is growing that it is a new disease here, and had not been long overlooked, as we once thought. Our alienists and dermatologists are too keen to have missed such a clean-cut entity, and we are now justified in concluding that the sad condition is a recent affair. The believers in the maize theory explain the sudden appearance by the alleged fact that only recently have southerners been using northern corn, which spoils because it does not have time to ripen on the stalk. But this argument is now worthless because the disease is appearing in northern places where they have never had any other kind of corn.

"The seriousness of the pellagra situation is shown by the fact that it is appearing in new areas where it had never before occurred and where there has been no change of diet to account for it. What makes the matter worse is the discovery that the insect is very wide-spread in Illinois, where ten species are found, and that no part of the State can be said to be free of it. . . . .

"Most of the Illinois cases are in people who have lived in or near towns, and they so far seem to show a tendency to come from restricted localities, as tho the infection was slowly spreading from new foci. The outlook is not pleasant, and if the infection spreads we have another insect against which we must carry on a perpetual sanitary warfare, as its elimination does not seem so practicable as in the case of the mosquito. We must again call attention to the urgent need of a large, well-equipped aquarium for the study of the diseases of water-animals, as there has been a suggestion that the cause of pellagra is a harmless inhabitant of a cold-blooded species. The relation of fish to leprosy is still entertained, and there is room to suspect that some of our other ills come from the water rather than the land."

A press dispatch from Spartanburg, S. C., in the New York *Sun* reports that—

"The Board of Health's vital statistics for the year show that pellagra now causes more deaths than any other disease in this city. Pellagra for the last three years has been second to tuberculosis, but this year takes first place, having caused thirty-one of 340 deaths in Spartanburg. More than six hundred cases have been found in the county. . . . A bill is pending in Congress for the building of a $300,000 Government pellagra hospital here."

LETTERS AND ART

HOW THE FACE BETRAYS THE VOICE

THE FACE is so much more than the index to the soul that it tells to those who have eyes to see even what the acquired physical accomplishments of the owner may be. One of the former tenors of the Boston Opera Company, Mr. Umberto Sorrentino, asserts that he can tell by looking at the face whether the possessor has a singing voice or not, and further what kind of a voice it is, high or low. His assertions were once met by the challenge of an operatic director, so he tells us in the New York *Tribune Sunday Magazine*, who asked Mr. Sorrentino to go over the line of his chorus men and arrange them in groups according to the theories he had worked out "as to contour of face, nose, and throat, indicating the pitch, resonance, and quality of the singing voice." Mr. Sorrentino declares:

"With but five exceptions, those who I had set aside as tenors were found to have high-pitched voices. Those who I thought were bassos, almost to a man, had deep, resonant voices; but in those who were selected as barytones—among whom were these five exceptions—there was some confusion, based upon the fact that the physical qualities of both tenors and bassos were diffused in them—they 'mixed' their signs.

"The director, for many years familiar with almost every phase of the vocal art, was now deeply interested, and anxious to discuss the matter.

"So I explained in detail that the pitch and quality of a voice depended very largely upon the peculiar anatomical formation of the face, nose, and throat. The facial angles, the size and shape of the nose, and the prominence or lack of prominence of the 'Adam's apple' (thyroid cartilage) determine the character, tone, and resonance of a voice. It works itself out with almost mathematical precision, this physical basis for voice classification."

UMBERTO SORRENTINO.

An Italian tenor whose avocation is "vocal physiognomy." Simply by observation he puts you in your voice class.

We are even assured that "one good look would enable an expert in 'vocal physiognomy' to tell with a tolerable degree of accuracy whether the applicant should attempt a tenor or a bass part in the 'Soldiers' Chorus,'" for—

"The man with a tenor voice invariably has high cheek-bones. The upper part of his face is strongly developed. The arch beneath the orbit of the eye—that prominence which you feel when you pass your finger along the ridge of bone running from the outer corner of the eye to the bridge of the nose, formed by the union of the malar and the temporal bones, called by anatomists the 'zygomatic arch'—is almost always full and prominent.

"The bassos and low barytones have a heavily developed lower face, thick lower jaw (inferior maxilla), and a protruding, sometimes almost an ungainly, Adam's apple. This is true to the extent of 85 per cent. of cases, in my experience; for of course the pitch of the voice is determined by the length of the vocal chords. The longer they are, the more slowly they vibrate, and the deeper the note they emit. And the longer they are, the bigger the larynx necessary to contain them; and the bigger the laryngeal cartilage, the more unblushingly it protrudes itself into the gaze of the world.

"An exception occurs with heavy dramatic tenors, or high, brilliant barytones—as before mentioned—in whom the points of anatomical cleavage are obscured by 'overlapping.'

"Now, everybody who is not aphonic—that is to say, dumb—has a singing voice, even tho it may be only one poor note. So it follows that what is true of the physical characteristics of a professional singer is equally true of the man who might be arrested if he attempted to perpetrate this one note within the hearing of the outraged neighborhood. Also the pitch, quality, and resonance of the speaking voice are determined by the development of his zygomatic arch, prominent lower orbit, and high cheek-bones, or by his Adam's apple and heavy lower jaw, as the case may be.

"The man with the round apple face, cute little nose, and the shrinking-violet type of chin, will almost uniformly use a thin, piping treble in making his wants known. The man with the high cheek-bones and generous, wide-nostriled nose will usually have a clear 'carrying' voice; while the individual with a nice, protuberant knob on the front of his neck coupled with a heavy lower face, is generally qualified by nature to bellow forth orders from the quarter-deck, or sway the multitude from rostrum, stage, or pulpit.

"So the rule works out with the singing voice. And further, these anatomical characteristics are practically universal; so that if an impresario wanted to select a male chorus formed of different races, he could engage a group of Chinamen—who have uniformly high facial prominences, smooth throats, and consequently high-pitched voices—for tenors; a crew of Japanese—with cheek-bones not quite so high, a little heavier lower jaw, and more definitely marked neck prominences—for second tenors; a tribe of Indians—with conspicuous Adam's apples, but with high cheek-bones modifying the basso characteristics—for barytones; and a regiment of negroes—with heavy, prognathous (or protruding) lower jaws, and thick, ample necks—for bassos."

All singers, we are further told, have one marked physical peculiarity in common, and that is the long, "competent" lower jaw. "It seems to matter little what part they sing nor how 'mixed' or obscure the physical signs in every other respect—they all have strong, well-developed lower jaws." Further:

"A glance at the photographs of any of the world's great singers will demonstrate this fact. Take, as examples, Caruso, Titta-Ruffo, Chaliapine, or Plançon among the men; or Tetrazzini, Cavalieri, Nordica, or Eames among the women, and notice the length and evident strength of their lower jaws. . . . . .

"To a student of vocal mechanics the advantage of this long jaw is obvious; for with its powerful muscles and attachment it facilitates the 'opening' of the throat. The 'smiling' and 'yawning' position so necessary to the proper relaxation of the vocal apparatus is here attained along lines of least resistance. The 'vocal emission' is more fluent, tone placement a natural process, the voice 'lies' better, and is more flexible, resonant, and sonorous. Facility is attained almost unconsciously. . . . . .

"Most great vocalists, and speakers also, have ample, well-developed noses. These instruments of beauty, grace, and dignity are indispensable for transmitting and reenforcing vibration in the resonance boxes of the larynx, fauces, pharynx, the arch of the palate, and in the nasal cavities themselves."

METROPOLITAN MUSEUM OF ART, TWO MILES AND A HALF FROM THE CITY'S CENTER OF ACTIVITY

In 1912, from a population of over 4,700,000, it drew 690,000 visitors.

INACCESSIBLE MUSEUMS

THE ACID TEST of actual utility is applied to our great museums by the keen-minded public librarian of Newark, who finds after his examination that the museum ideal of to-day can not stand the test of time. "To-morrow objects of art will be bought to give pleasure, to make manners seem more important, to promote skill, to exalt hand-work and to increase the zest of life by adding to it new interests," declares Mr. J. C. Dana. These objects of art, he further asserts, will be put where the greatest number of people can most handily use them. The ideal of to-day, which he goes to great pains to prove futile (in *The Newarker*, organ of the Free Public Library of this New Jersey city), seems to be to keep the museums' objects safely and to do this at some spot "in the splendid isolation of a distant park." The buildings that house the collections are imitations either of Greek temples or Italian palaces, which, Mr. Dana claims, are "very poorly adapted to the proper installation of collections and very rarely well-planned for growth." Mr. Dana is not careful of the artistic sensitiveness of our competing American cities, and charges that the objects in nearly all our museums are "very largely second-rate original art works, usually with large additions of things historical or archeological of little art value." To prove his contention of the small utility of the museum to-day he gives the accompanying statistical table covering fifteen of the leading institutions in the United States.

The figures do not absolutely prove the point that the number of a museum's visitors or the degree of its helpfulness in the community are dependent on its distance from the center of activity of the population, admits Mr. Dana, but a comparison of the cases of New York and Chicago lends color to the contention. "In Chicago, a centrally located and rather popularly administered museum, small and unimportant as to contents when compared with that of New York, and spending annually for accessions about four per cent. of New York's yearly outlay for the same, drew last year from one-fourth the population 30 per cent. more visitors." The writer continues:

"It may be said that if this development of American art museums into remote palaces and temples, filled with objects not closely associated with the life of the people who are asked to get pleasure and profit from them, and so arranged and administered as to make them seem still more remote—it may be said that if this development has been as natural and inevitable as has been suggested, then no one can be charged with responsibility for the fact, and not much can be done to correct the error.

"It would indeed be difficult to lay the burden of this unfortunate line of development on the shoulders of any persons who may be specifically named. It would be difficult also to correct the mistakes already made. No one, for example, would quite dare to suggest,—taking up the one point only of location,—to the citizens of Boston, New York, Buffalo, and Cincinnati that they can much better afford, in the long run, to move their museums into the centers of daily movement of population and thereby secure a ten-fold enlargement of their use and influence, than they can to go on paying large sums for their maintenance in relative idleness where they now are.

"And it would be idle to attempt to persuade architects and trustees and a public, bound to accept the architectural conventions of their time, that when they use the outward presentations of one-story buildings, designed for housing gods in a perpetual twilight, as the peripheries of well-lighted and convenient and easily warmed and controlled spaces for the display of precious objects to thousands of visitors, they show a certain magnificent courage, but not architectural taste, not originality, and not common sense.

"But, in spite of the depressing influence of fashion and of the architectural paralysis induced by the classic burden in these matters, one may hope that all museums hereafter built need not conform to the old ideas, and that some of the museums already in existence can be so modified as to be far more useful and influential than they are to-day."

Mr. Dana shows himself to be more of an iconoclast in dealing with some of the most

STATISTICAL NOTES ON SOME OF THE ART MUSEUMS OF THE UNITED STATES.

	Date	Administration	Paid for Objects	Location	Visitors
Boston Museum of Fine Arts	1912	$150,500	$186,807	From the "Common," two miles	220,043
Brooklyn—Institute of Arts and Sciences	1912	110,000	9,000	From Borough Hall, two miles	350,735
Buffalo—Albright Art Gallery	1912	140,000		From center, three miles	167,723
Chicago Art Institute	1913	156,000	6,400	Central	925,607
Cincinnati—Museum Assoc.	1912	25,000	1,400	From center, nearly two miles	48,733
Cleveland	(Under construction)			From center, four miles	
Detroit—Museum of Art	1912	17,000	3,000	Central	150,000
Indianapolis—John Herron Art Institute	1913	18,500	4,000	From center, one mile and a half	36,290
Minneapolis—Art Museum	(Under construction)			From center, two miles	
New York—Metropolitan Museum	1912	332,000	540,000	From 34th St. & Broadway, two miles and half	690,000
Philadelphia—Penn. Museum	1913	20,800		From City Hall, about four miles	319,789
Pittsburg—Carnegie Institute of Fine Arts	1913	53,000	10,500	From Post Office, three miles	
St. Louis—City Art Museum	1912	48,000	15,000	From center, five miles	114,139
Toledo—Museum Art	1912	19,000	All gifts Yes	From Court House, about one mile	121,351
Worcester—Art Museum	1913	28,000	55,400	Central	42,147

By center of the city is meant the business and rapid-transit center, not the geographical center.

FIGURES THAT SHOW WHERE MUSEUMS FAIL.

cherished ideas regarding a museum's style and the value of its contents:

"The museum building, located in the city's center, should satisfy the fundamental conditions of all good architecture; it should be large enough for its purpose; it should be constructed of the materials, proper in its day, which are best adapted to its form and size; it should be in harmony with its surroundings, and it should be as beautiful as the highest technic and the best taste of the time can make it.

"A building of steel and concrete, in a modern American city, is not made an appropriate home of the fine arts by placing on its front the façade of one or the façades of half a dozen Greek temples or of the fifteenth-century Italian palaces. It is impossible to believe that the best Greek architects, if they were the masters in good taste we suppose them to have been, would have continued to make their buildings look as tho they were built of columns of stone, with huge girders and cross-beams of the same material, long after they had learned to use steel and concrete in construction.

"In time we shall learn to insist that great public buildings like libraries and museums be erected as such and not as imitations of structures developed for quite other purposes, in other cities, in other times, and under limitations as to material and method by which we are no longer bound.

"A modern museum building for an American city is a distinct problem in arrangement, and a difficult one, not to be solved by the adoption for its exterior of a type, however beautiful, which in origin and development never bore the slightest relation to the subject of museums.

"It may be said that the contents of art museums are in part priceless, can not be replaced, must be so housed as to make their destruction by fire impossible, and that, therefore, the only safe location for a museum is in a park, far from all other buildings. In reply it may be said that the high value put on many of the objects in art museums is largely fictitious, born of the rivalry of rich collectors and even of rich museums, in their search for objects of honorific uniqueness; that a few students could truly feel their loss; but that as instruments of human enlightenment and happiness they are by no means priceless. Next, it may be noted that it is doubtful if any art-museum authorities have yet erected a remote building on the contents of which they can get fire-insurance rates as low as they could get them on the same contents housed in a fireproof building in the center of their city. There are risks in remoteness as well as safeguards. It should also be said that if a city wants a warehouse for the storage of art treasures, build it by all means; but do not encumber with it the fine, open spaces of a public park. But, if it wants an institution of the general museum type, something from which can be derived pleasure, surely, and profit if the gods permit, then let that be built where it can be easily made use of, in the city's center."

THE "CLERK OF LOST ILLUSIONS"—There is a new figure awaiting the scrutiny of the novelist, according to a personal in the Manchester *Guardian*. The prototype just died in England, but his counterpart must be found among us too:

"Some day a great writer looking into Fleet Street will see such a figure as Henry Edward Fenn, the old Divorce Court reporter, whose death is announced to-day, and make of him a universal figure—that is to say, if Fleet Street can ever show another Henry Edward Fenn. He was like a figure from Balzac. Here was a man who for thirty-eight years had sat in the hall of lost illusions. He had seen thousands and thousands of old lovers at the moment when they were parting for ever, and parting gladly. His ears had heard every ugliness and meanness and horror that may track the wedded state, hideous camp-followers that gather on the corpse of love. It was more ugly to look on than the police court, for most of the people there had never been happy, whereas the Divorce Court always postulates that the people had walked in Eden. Physically 'Uncle' Fenn seemed as tho he had been wronged by the course of his life within these unwholesome walls, but in character he was a friendly, wise, and helpful comrade. Yet despite it all there was always to the outsider a touch of the sinister in this quiet, stout little man, most of all when one saw him sitting exchanging memories with his friend the oldest reporter of fashionable marriages in London, the latter, perhaps, with a flower in his coat, just back from St. George's, Hanover Square. The Balzac of Fleet Street, had he seen it, would have known how to ring the last drop of irony from the meetings of these friends."

TO MAKE OUR LIVES RHYTHMIC

A NEW FORCE that bears the name of Eurhythmics is, we read, affecting not only musical education, but education in all its branches. A writer in the London *Nation* observes that the new force or practise—call it what you will—might be named rhythmic gymnastics, but that the term seems to limit the thing too much. "It would be truer to say that eurhythmics are an expression of a force that finds an easy and fascinating outlet in gymnastics, but can, and will, find an equal outlet in every conceivable branch of science and art." Europe is the home of the discoverer, Mr. Jacques-Dalcroze, and knows more of the new expression than does America, but our journals have not lacked occasional reference to it. It goes as far back at least as Plato, whose words are quoted by a Dalcroze disciple to the effect that "it is through the physical body that Eurhythmy—the expression of the symmetry hidden within the soul—is awakened into being, and it is by the 'dance gymnastic' that reactive harmony of soul and body is attained." Rhythmic gymnastics, we are assured by Mr. Cyril B. Andrews, "are not hygienic exercises; their object is to enrich the brain, not to have any direct effect on the body." But—

"Any one who watches the movements of Mr. Dalcroze's pupils will realize how far more perfect is this influence of the brain on the body than the clumsy and direct forms of physical culture which are at present the fashion. If the body is to be trained to the highest state of perfection, it must be by something more than mere bodily exercise.

"It might be thought that the teaching of Eurhythmics might suppress rather than develop individuality, but we learn in Professor Dalcroze's book how strikingly different were the interpretations of a Prelude by Chopin, performed by two girls trained side by side at the same institute at Hellerau, and we can see for ourselves the distinct individuality of his pupils who are now in England. As one watches each pupil interpret in her own way the airs played on the piano or written on the blackboard, one sees clearly the individuality of the child's conception, and later on, when the part of the conductor is taken in turn, one feels that each girl's mode of conducting is essentially her own, and not that of any of the others.

"The exercises teach steady attention, but never result in automatism; as soon as the movements become automatic they are used as units for further building. As the imagination of each child expresses itself in movement, an impression is made on the brain, and then the imagination, enriched by the experience of the movement, is able to realize itself even when the child remains motionless. When this effect and counter-effect are produced the exercise is abandoned, and the child passes on to a higher and more complicated performance, but at each stage there is perpetual interaction of imagination and of the power of performance. Many of the most perfect pupils are those who had little or no idea of music when they first arrived at Hellerau; unconsciously the sense of rhythm, innate in every one, dawns on the youthful mind; the boys or girls, by expressing consciously their emotions, produce their own movements and invent rather than learn the various rhythms. The sense of rhythm, started by memory and independent of the motor centers, is a poor thing until it is enriched by movement.

"In the past we used to hope vaguely that music might one day be a means of expression, but we never thought of allowing the pupil to express himself from the very beginning, and often by the time any instrument was mastered its emotional value was gone, the end forgotten, the means only preserved. Our children were studying music when they ought to have been making use of the power behind it to add balance to all their work. The pupils at Hellerau have widely different interests, which they all eagerly pursue, but the influence of Eurhythmics unconsciously pervades all their work and play and gives them joy, rhythm, and strength. Neurasthenia, we are told by Mr. Dalcroze, is nothing more than a lack of balance between mental and physical powers, a lack of rhythm, a nervous strain produced by mental excitement when it is denied bodily expression.

"Many who are well acquainted with the rhythm of music, painting, poetry, and prose have yet to realize the extreme

value of rhythm in life. Music may still be the privilege of the few, but rhythm will be the joy of the many. The different arts will become united by a general feeling for rhythm, which at the same time will form the link between art and ordinary every-day life. It was the privilege of the last century to make full use of science; it will, we hope, be the privilege of this century to make full use of art. Like the children in Mr. Dalcroze's school at Hellerau, we must learn to respect and enjoy the memory of previous achievements, but at the same time we must realize that the same joys can not be repeated again, but can only be used as stepping-stones to newer and greater things."

OUR ACCUSERS ACCUSED

THE CLASSIC ACCUSATIONS of the British against the bad English of American writers seem, for the time being, to have degenerated into jokes, even for the accusers themselves. But not to be robbed entirely of the slings and arrows of wit against their younger cousins, they have formulated a new charge. It seems that in addition to writing slipshod, slang-filled English ourselves, we have lately become guilty of forcing the English to do likewise. And this is the new ground of complaint they are taking, according to Dr. Rossiter Johnson, who has been a careful conservator of the niceties of English speech, and has frequently admonished us for our lapses. The new rebuke seems to stir Dr. Johnson's patriotic feelings, and in the New York *Times* he gathers up a rather formidable list of shortcomings in the English of some of Britain's best writers, sufficient at least to convince the querulous complainers that there is linen to wash at home. It will not probably be retorted by our English cousins that Macaulay or De Quincey or Tennyson was caught in the trap of bad American English and against their wills forced to do violence to their mother tongue. Here are the flaws Dr. Johnson points out:

"Macaulay is one of the most powerful of English writers, but open his history almost anywhere and read such sentences as this: 'Howe had, like Baxter, been personally a gainer by the recent change of policy.' There would have been a gain in gracefulness as well as in correctness if he had written: 'Howe, like Baxter, had been personally a gainer by the recent change of policy,' and any schoolmaster would have told him so. Again, in Chapter XII he writes awkwardly: 'The castle had in 1686 been almost uninhabitable.' It would have been just as easy, and much better, to write: 'In 1686 the castle had been almost uninhabitable.' Do the English want their writers to be forever splitting their verbs like this?

"And, again, there is perhaps no more eloquent writer in our language than Ruskin; but do we wish our younger writers to imitate him in such sentences as this? 'The quite happiest bit of manual work I ever did was for my mother in the old inn at Sixt.' Or do we wish our young writers to follow the example of Charles Dickens when he says, speaking of an innkeeper in 'David Copperfield': 'He quite shook hands with me'? I own that I can not quite approve this use of the word 'quite.'

"Shall we perpetuate the favorite British expression 'different to' instead of the correct American expression 'different from'? But the best British writers are using it. Because De Quincey, in 'The Afflictions of Childhood,' writes, 'The reader is likely to differ from me upon the question,' when it is clear that he meant 'differ with me,' is it to be accepted as good English?

"Tennyson, in his translation of 'The Battle of Brunanburh,' says in a note: 'I have more or less availed myself of my son's prose translation of this poem.' If by more or less he means that he took the words partly, or to some extent, he should have said 'partly' or 'to some extent.' If it was more, more than what? If it was less, less than what? No comparison is involved, and the expression is meaningless. Ruskin, in his 'Modern Painters,' makes the same error, as does Herbert Spencer in, of all books, his 'Philosophy of Style.'

"Israel Zangwill writes: 'Martin had only gone out for an instant,' when he meant that Martin had gone out for an instant only. Conan Doyle writes: 'He only saw "Hamlet" once,' which would have been correct if he meant to inform us that he had read the play several times, but had witnessed its performance only once. In that case 'saw' would be emphasized. Jerome K. Jerome writes: 'I shall only marry him for the sake of his position.' What more could she do for the sake of his position? Marie Corelli writes: 'Some authors can only write at night,' which is hardly true, for there is probably no author who can not also sleep at night—if the wolf is not too near the door."

Lecky, in his "History of the Eighteenth Century," hopelessly confused two persons in writing: "Being incapable of taking an active part in the war, Washington placed him in command at Philadelphia." He meant of course to say that Arnold was given the command at Philadelphia because he was incapable, etc., but Washington is definitely charged with the incapacity. Furthermore:

"Macaulay makes the same kind of blunder when he writes: 'They then proceeded to cut steaks out of the animal while still alive.' The reader hardly needs to be told that those still alive cut steaks out of the animal. Macaulay meant that steaks were cut from the animal while it was still alive, and he should have said so.

"No. 200 of *The Spectator* begins with this sentence: 'The ambition of princes is many times as hurtful to themselves as their people.' Grammatically this implies that the people are hurtful to the princes. The writer should have repeated the particle 'to' before 'their.' Another possible ambiguity would have been avoided if he had written 'often' instead of 'many times,' or had placed 'many times' at the beginning of the sentence. Matthew Arnold, in his essay on 'Sweetness and Light,' writes: 'I propose now to try and inquire what culture really is.' He means, 'I purpose to inquire,' etc. I could quote other eminent English authors to the same purpose.

"Thackeray writes: 'Three fierce and desperate assaults of our Foot were made and repulsed by the enemy.' Do the British critics pick up expressions such as this in our writings and so conclude that they are having a bad effect upon the English language? Addison, in his 'Dialogues on Medals,' writes: 'There is no inscription fitter for a medal, in my opinion, than a quotation that, besides its aptness, has something in it lofty and sublime.' His reputation for elegant English would be sustained better if he had written: 'No inscription is fitter for a medal,' etc. Carlyle, in 'Past and Present,' writes: 'Who can despair of Governments that passes a soldiers' guard-house or meets a red-coated man on the streets?' He should have written: 'Who that passes a soldiers' guard-house or meets a red-coated man on the streets can despair of Governments.'

"This has to do with the arrangement of words in a sentence, which is one of the first things to be learned in the proper use of a language. We all admire Thackeray, and some give him the highest place among modern writers of fiction, but look at the first sentence in his masterpiece, 'Vanity Fair,' and say whether it could possibly be more clumsy or ill-contrived: 'While the present century was in its teens, and on one sunshiny morning in June, there drove up to the great iron gate of *Miss Pinkerton's* academy for young ladies, on Chiswick Mall, a large family coach, with two fat horses in blazing harness, driven by a fat coachman in a three-cornered hat and wig, at the rate of four miles an hour.'

"It would have been quite as easy to make it compact and periodic by writing it thus: 'One sunshiny morning in June, while the present century was in its teens, a large family coach, with two fat horses in blazing harness, driven at the rate of four miles an hour by a fat coachman in a three-cornered hat and a wig, drove up to the great iron gate of *Miss Pinkerton's* academy for young ladies, on Chiswick Mall.' Perhaps it is fortunate for us that Thackeray was an Englishman, and not an American. Otherwise I do not see how we could have escaped drastic criticism.

"Henry Hallam is considered a classic historian, but he writes, in his 'History of the Middle Ages': 'There seems little reason to doubt that gunpowder was introduced through the means of the Saracens into Europe.' As the thought concerns, not where gunpowder was introduced, but who introduced it, this sentence should read: 'There seems little reason to doubt that gunpowder was introduced into Europe through the means of the Saracens.' . . . . . .

"Every critical reader of English knows that illustrations can be taken from many others, among the best of British writers, showing faulty use of the language. I do not say that American writers are purists above their brothers across the water, but it must be apparent that they are not the only ones that offend. Also, please observe that in this discursive talk I have not once alluded to Lowell's famous essay, 'On a Certain Condescension in Foreigners.'"

RELIGION AND SOCIAL SERVICE

MAN'S MORAL PROGRESS DENIED

LESS THAN a year ago Dr. Alfred Russel Wallace, talking to a group of journalists on his ninetieth birthday, uttered a sentence which, caught up by the press of the world, startled and shocked an age accustomed to regard itself as the onward-pressing vanguard of progress and reform. "I have come to the general conclusion," said this last of the Victorian giants, who shared with Darwin the discovery of the epoch-making theory of natural selection, "that there has been no advance either in intellect or morals from the days of the earliest Egyptians to the keel-laying of the latest dreadnought." In his last book, "Social Environment and Moral Progress," published only a few months before his death, this thesis is maintained and elaborated through nearly a score of chapters, and the present system of society is denounced as "rotten from top to bottom." "It is not too much to say," he asserts, "that the social environment as a whole, in relation to our possibilities and our claims, is the worst that our world has ever seen." In support of this judgment he cites the condition of the slums in great cities, the struggle of millions for the bare necessaries of life, the extortions of middlemen, the remorseless greed of capital, and the maladministration of justice.

ALFRED RUSSEL WALLACE,

Who believed that our "social environment as a whole, in relation to our possibilities and our claims, is the worst that our world has ever seen."

By morality Dr. Wallace does not mean conduct, which is directly influenced by environment, but those inherent qualities which constitute character, and which he believes have remained unchanged in the human race since the dawn of history. He says:

"All the evidence we possess tends to show that altho the actions of most individuals are to a considerable extent determined by their social environment, that does not imply any alteration in their character. Every one's experience of life, and especially the example of his friends and associates, leads him to repress his passions, regulate his emotions, and in general to use his judgment before acting, so as to secure the esteem of his fellows and greater happiness for himself; and these restraints, becoming habitual, may often give the appearance of an actual change of character till some great temptation or violent passion overcomes the usual restraint and exhibits the real nature, which is usually dormant.

"Now, it is this inherent and unchangeable character itself that tends to be transmitted to offspring, and this being the case, there can be no progressive improvement in character without some selective agency tending to such improvement."

Glancing over the list of great moral teachers in very early times, Dr. Wallace reminds us that the race produced Socrates and Plato about 400 B.C., Confucius and Buddha, one or two centuries earlier; Homer earlier still; and the author of the great India epic, the Mahabharata, about 1500 B.C. "All these," he says, "afford indications of intellectual and moral character quite equal to our own; while their lower manifestations, as shown by their wars and love of gambling, were no worse than corresponding immoralities to-day." He explains this by the theory—rejected by Darwin—that when man, as a mere animal, had reached the required degree of perfection, he received "within a strictly limited period, perhaps of a very few generations, or even one generation," the spiritual influx which started him on his course of purely human development. While standards of conduct have changed with changing conditions and needs, Dr. Wallace believes that, at least within the period of history, men have always manifested about the same varying degrees of devotion to whatever were the accepted standards and ideals of the time and place as they do to-day. And by this test he finds the savage races of to-day "not morally inferior to civilized races." Returning to his indictment of the social and industrial environment which has developed since the beginning of the nineteenth century, he says:

"We see a continuous advance of man's power to utilize the forces of nature to an extent which surpasses everything he had been able to do during all the preceding centuries of his recorded history.

"We see also that the result of this vast economic revolution has been almost wholly evil.

"We see that this hundredfold increase of wealth, amply sufficient to provide necessaries, comforts, and all beneficial refinement and luxuries for our whole population has been distributed with such gross injustice that the actual condition of those who produce all this wealth has become worse and worse, no efficient arrangements having been made that from the overflowing abundance produced *all* should receive the mere essentials of a healthy and happy existence.

"We have seen huge cities grow up, every one of them with their overcrowded, insanitary slums, where men, women, and children die prematurely as surely as tho a body of secret poisoners were constantly at work to destroy them.

"We see thousands of girls compelled by starvation to work in such an empoisoned environment as to produce horribly painful and disfiguring disease, which is often fatal in early youth, or in what ought to have been, and what might have been, the period of maximum enjoyment of their womanhood. And to this very day no efficient steps have been taken to abolish these conditions.

"We see millions still struggling in vain for a sufficiency of the bare necessaries of life (which in their misery is all they ask), often culminating in actual starvation, or in suicide, to which they are driven by the dread of starvation. Yet our Governments, selected from among the most educated, the most talented, the wealthiest of the country, with absolute power to make what laws and regulations they please, and an overflowing fund of accumulated wealth to draw upon, do nothing, altho more people die annually of want than are killed in a great war, and more children than could be slaughtered by many Herods.

"And while all this goes on in the depths . . . a little higher up, among the middlemen distributers of the necessaries and luxuries of life, bribery, adulteration, and various forms of petty dishonesty are rampant.

"And higher yet, among the great capitalists, the merchant princes, the captains of industry, we find hard taskmasters who drive down wages below the level of bare subsistence, and who support a more gigantic and wide-spread system of gambling than the world has ever seen.

"And, finally, our administration of what we call 'Justice' (and of which we are so proud because our judges can not be

bribed) is utterly *unjust*, because it is based on a system of money fees at every step; because it is so cumbrous and full of technicalities as to need the employment of attorneys and counsel at great cost, and because all petty offenses are punishable by fine *or* imprisonment, which makes poverty itself a crime while it allows those with money to go practically free.

"Taking account of these various groups of undoubted facts, many of which are so gross, so terrible, that they can not be overstated, it is not too much to say that our whole system of society is rotten from top to bottom, and the social environment as a whole, in relation to our possibilities and our claims, is the worst that the world has ever seen."

But while Dr. Wallace holds to his startling opinion that "there has been no definite advance of morality from age to age, and that even the lowest races, at each period, possest the same intellectual and moral nature as the higher," he does not say that no moral progress is possible in the future. The laws of natural selection that govern purely physical evolution do not operate here, it is true, because "the higher intellectual or moral powers are so rarely of life-preserving value, and are not infrequently the reverse, that they are not *cumulative*, tho they are *hereditary*." For the evolution of man's moral and intellectual nature, then, we must look to some other selective agency. Such an agency will become operative, declares Dr. Wallace, when women achieve real freedom of choice in marriage. "Then we shall find that a system of *truly natural* selection will come spontaneously into action which will steadily tend to eliminate the lower, the less developed, or in any way defective types of men, and will thus continuously raise the physical, moral, and intellectual standard of the race."

REV. A. B. C. DUNNE,

Who has been dubbed "the premier convert-maker of the West."

A CATHOLIC FISHER FOR PROTESTANT SOULS

SO MUCH has been heard of Protestant missionary workers among Catholics that it is perhaps well to have our attention called to a Catholic priest who makes a specialty of bringing his "separated brethren" back into the fold of Mother Church. The pastor of St. Patrick's Church, Eau Claire, Wis., in which a class of 100 adult converts were confirmed by the bishop one day quite recently, is dubbed by *The Catholic Citizen* "the premier convert-maker of the West." During the past five years, says *The Citizen*, this priest, Father A. B. C. Dunne, has received into his Church 268 non-Catholics, "an average of a little more than one a week," and "the total number of converts received by him during his pastorate is 636." The Catholic weekly goes on to outline the methods which Father Dunne has used so successfully. Both Catholics and Protestants will find interesting the enumeration and explanation of the specific means and aids to conversion:

"(1) By the cooperation of the laity in congregational prayers, novenas, communions, and general interest in the spiritual welfare of non-Catholic relatives and friends, through securing for them the grace of conversion.

"(2) Cordial and frequent personal invitations extended to non-Catholics to attend Catholic services, particularly the Lenten course of lectures, which are adapted to mixed audiences, and at the conclusion of which the non-Catholic shares with his Catholic brethren the graces that flow from the Benediction of the Blessed Sacrament.

"(3) Generous distribution of Catholic literature. Within the past ten years more than 1,800 copies of 'The Faith of Our Fathers' have been given to inquirers. Each Protestant minister, shortly after his arrival in the city, receives a copy, with the compliments of Father Dunne.

"(4) Judicious use of the space generously proffered by the local press, to propound Catholic doctrine.

"(5) The easy and continuous opportunity of taking instructions. Father Dunne conducts four courses of instruction annually, each extending over ten weeks, of three hours per week. The opening of each course is announced from the pulpit three Sundays in advance, the faithful being exhorted to notify any non-Catholic acquaintances who may be disposed to attend. On each Sunday during the course the hours of instruction are announced, and candidates are permitted to enter the class at any time, being able to take up on the next course the instructions they have missed.

"These classes are open to Catholics as well as to non-Catholics, and in prospective marriage cases he urges the attendance of the Catholic party, which conduces greatly to the encouragement of the non-Catholic as well as to their mutual benefit.

"The following results of four years of prenuptial instruction will demonstrate its efficiency:

"During that time the priest has had 102 non-Catholic applicants for marriage. Of these, 96 took the instructions, 86 of whom were received into the Church before marriage, nine postponing their entrance until later on account of the bitter antagonism of relatives, and only one declaring that he was not sufficiently convinced of the truth of the Church."

UPSHOT OF THE "RITUAL MURDER" TRIAL

BEILISS IS ACQUITTED at Kief of killing Yushinsky, but the verdict fails to exonerate the Jews from the charge of "ritual murder." This ambiguity, points out the London *Daily Mail's* Russian correspondent, is likely to lead to a revival of anti-Jewish agitation. The long trial has been watched by the whole civilized world, and the position of Russia in regard to the belief banished from Western Europe centuries ago is not an enviable one. That this is felt in Russia also to some extent is seen in the words of one correspondent given in the New York *Times*, that "all enlightened Russians have been stung with a sense of shame and disgust by the exhibition of ignorance, superstition, and want of culture which the proceedings at Kief disclosed to the world."

The Central News correspondent at Kief says that the Court put to the jury the following questions:

"1. Was Yushinsky wounded in the head, back, temple, and neck with some pricking instrument in order to draw out blood, and then murdered with the same instrument, receiving altogether forty-seven wounds?

"2. If this fact is demonstrated, was Beiliss associated with some unknown persons, moved by religious superstition, in the commission of this murder?

"The jury answered the questions as follows: No. 1, 'Yes.' No. 2, 'No.'"

In England and in America mass-meetings and petitions have voiced the feelings of these countries. A remarkable petition addrest to the Czar was drawn up in New York and signed by Cardinal Farley, Bishop Greer, Bishop Scarborough, of New Jersey; Dr. William T. Manning, and many other officials of Christian denominations, says the New York *Sun*, "praying the Czar to avert a grave peril and forestall the possibility of an imposition of injustice on the entire Jewish people." The

petitioners further asked the Czar to confirm the ukase of his ancestor, Alexander I., "who sought to destroy for all time the imputation that the Jews require Christian blood for ritual purposes." Secretary Bryan, through whose department it was sought to forward the document, decided that the Department could not act in this manner, as the Russian Government had taken the stand that it would not accept documents of this character.

Another correspondent writing from Russia reports that in the lobbies of the Duma it is believed that a revision of the Beiliss trial will be attempted by the Kief Police Department "in obedience to the demand that the mystery of the murder shall not remain unsolved." The dispatches quote this correspondent further:

"The first outcome of the Kief trial was seen in the Duma this afternoon (Tuesday), when Mr. Shingareff, on behalf of the Constitutional Democrats, introduced a resolution that a committee be appointed to draft a bill conferring on all Russian subjects equal rights before the law.

"Amid the cheers of the Liberals and angry protests from the Right, Mr. Shingareff declared that the peasant jury at Kief had alone saved Russia from disgrace, yet the peasants of Russia were subordinated everywhere in their rights and citizenship as compared with the vast bureaucratic population, whose political fanaticism had staked all in order to fasten religious fanaticism upon another race."

The correspondent of the London *Daily Telegraph* says:

"The effects of the excitement created over the trial and the consequent revival of certain phases of the Jewish question are noticeable in many ways. We hear again, for instance, of the alleged intention of the Ministry of Public Instruction to extend the percentage of restriction of Jewish students in the universities and other high-class educational institutions to those Jews even who have been converted and baptized in Christian churches.

"It is also proposed again to repress the Jews in Turkestan. These Jews in Central Asia, altho highly recommended as indispensable to local trade and industry, have been marked down as victims of expulsion by the Governor-General of Ferghana. Their plight is a particularly painful one, inasmuch as they can not return to Bokhara, whence they came, except under the penalty of death on account of many having abandoned the Mohammedanism that was forced upon them before they passed under Russian rule.

"The 'Black Hundred' and 'Double-headed Eagle' reactionaries have of course made good use of the opportunity presented by the Kief trial for anti-Semitic propaganda, and, altho no actual pogroms are yet reported, it is evident that there is great danger of the occurrence of such excesses."

The story of this extraordinary trial which has interested all Christendom is reviewed by Mr. George Kennan in *The Outlook*, where he shows that "by a strange chain of circumstances, a common murder, committed by professional robbers in their haunts, has become identified with the policy of the Czar himself." Mr. Kennan's article is admirably comprest by the New York *Times*, and the following account is quoted from its columns:

"According to Mr. Kennan, the lad, Andrew Yushinsky, was murdered in 1911 in the rooms of Vera Tcheberiak simply because the gang of which she was the leader believed that it was he who was responsible for the information which had got them into trouble with the police. The stabs which have played so marked a part in the trial were inflicted merely to extort from the unfortunate boy a confession before he was put out of his misery. Then, when the boy was found, Manzelevski, one of the murderers, set going the hideous calumny on the Jews by writing a letter, signed 'A Christian,' to the mother of the lad, saying that 'The tied hands, the punctured body, and the circumstances generally suggest one of the ritual murders of the Middle Ages.'

"Altho there was some attempt to take up this cry by the anti-Semitic fanatics of Kief, the agitation failed, and so the Jew-haters brought the matter before the Duma in open session. The Liberal leaders, Mr. Kennan says, protested indignantly at the revival of this ancient charge, and declared it to be a disgrace to a civilized Parliament. Even then the matter might have dropt if it had not suited the Imperial Government to revive it. This is how Mr. Kennan says this came about:

"'In February, 1911, only a month before the murder of Yushinsky, 166 members of the Duma, including many Octobrists, had united in the introduction of a bill for the complete abolition of the Jewish Pale of Settlement, and this bill had been referred to the Committee on Inviolability of the Person by the decisive vote of 208 to 138. This seemed to the Czar and his Ministers a very disquieting symptom of disaffection, and when the mysterious murder of the Russian boy in Kief became known and the cry of "ritual murder" was raised, the Government saw in the crime a possible means of disgracing the Jews and of preventing the introduction or adoption of such bills as that for the abolition of the Pale of Settlement. The Czar and his Ministers therefore determined to support the "ritual murder" charge and to justify their anti-Semitic policy, as well as strengthen their position in the Duma, by showing that the Jews really used Christian blood in the preparation of their Passover bread and killed Christian children in order to obtain it. It was a foolish and short-sighted policy, and one which soon involved them in difficulties of the most formidable character.'

"The unfortunate prisoner in the case, Mendel Beiliss, Mr. Kennan says, had not been suspected until it suited the Imperial authorities to find a scapegoat for the crime. There was no evidence against him, but it was manufactured to order.

"As a matter of fact, the murder of the lad was about to be cleared up by a police officer in the ordinary course of his duty. There were certain clues and, says Mr. Kennan, 'Working on these clues, Mishchuk, the Chief of the Kief Detective Bureau, soon got on the track of what he believed to be a gang of common criminals, and formed the theory that the members of the gang had killed the boy in simulation of a "ritual murder," and had then written the letter signed "A Christian" to throw suspicion on the Jews and incite a pogrom, which would give them opportunities for plunder. He laid his clues and proofs before the investigating magistrate, Fenenko, and the latter agreed with the detective's conclusions.'

"This, however, did not please the authorities, and so they laid a trap for the too zealous Mishchuk, convicted him on the trumped-up charge of manufacturing evidence to prove the innocence of Beiliss, and had him and three of his subordinates sentenced to a year in the convict battalions.

"But Mishchuk's work was taken up by yet another detective, Krassovsky, whom Mr. Kennan describes as a man of the Burns type, who combined ability and courage with subtlety and prudence. The Government learned that he was following the right track, and so it first transferred him from Kief and then dismissed him from its service. However, Krassovsky, with a journalist named Brazul-Brushkovsky, continued the investigation on their own account. Mr. Kennan thus states the result:

"'Early in 1912 the official preliminary investigation was concluded, and Beiliss was formally indicted for murder. In May, 1912, Krassovsky finished his own researches and submitted to the Kief gendarmerie, and afterward to the investigating magistrate, Fenenko, the history of the crime. It completely cleared up the whole mystery and showed conclusively that Yushinsky was murdered by a gang of common criminals who had their headquarters in the Tcheberiak tenement-house. Krassovsky's statement was supported by the names of his witnesses, and by a mass of detailed facts. The revelation created a great sensation in official circles, both in Kief and in St. Petersburg, and counsel for Beiliss immediately demanded the quashing of the indictment and a reopening of the preliminary investigation. The Government hesitated, and apparently did not know what to do; but its hand was soon forced.'

"On June 12, 1912, Brazul-Brushkovsky published a four-column article, giving the results of the investigation, and then Vera Tcheberiak proceeded to prosecute for libel all the newspapers which published it. This, says Mr. Kennan, was one of the most curious results of the case. The woman's gang had been broken up; all the other members had been sent to prison. 'Vera herself was the only prominent member of the gang left at liberty, and she, under the protection of the Black Hundreds, the Double-headed Eagles, the Archangel Michaels, the Ministry of Justice, and the Czar, had the hardihood to begin suits for criminal libel against the Kief newspapers.'

"However, the public interest in the case had been aroused, and even the Russian Government found that it must pay attention to the story told by Krassovsky. It found that it could not rely on its original investigator, because he was beginning to sympathize with the detective, and it had to send a special prosecutor from St. Petersburg to take up the case."

REVIEWS OF NEW BOOKS

WHY WE LAUGH—BORIS SIDIS ON THE PSYCHOLOGY OF IT*

Reviewed for THE LITERARY DIGEST by
JOHN KENDRICK BANGS

"QUID RIDES?" asked Horace, and ever since Mæcenas probably confest his inability to reply authoritatively, adding doubtless an assurance of his indifference to the scientific causes of his laughter so long as the laugh came, the world at large has been endeavoring to answer the question, more or less unsuccessfully, be it said. Philosophers, wags, wits, essayists, doctors of divinity, even statesmen, have put their minds upon the problem, and the consensus of critical opinion has been that, when all has been said and done, the only really successful investigator of the exact causes of mirth was Aristotle, whose main generalizations as to humor, if his own assertions may be regarded as authoritative, were set forth in his Poetics, but in a treatise which has unfortunately not come down to us. This is possibly one of the reasons why everybody is willing to accept as all that it should have been Aristotle's view, the sage having proved himself so successful a speculator in all other adventures in human thought.

Whatever Aristotle's conclusions may have been, as one runs over the vast bulk of the literature that has concerned itself with laughter and its causes, one is impressed by the futility of method employed by various investigators to reach definitely acceptable conclusions. For the most part they seem to have worked backward from effects to causes, failing to realize that by so doing their effects become causes and their causes effects. As a result of this method the perplexed reader gains much entertainment, perhaps, but little or no alleviation of his perplexity, and is apt to find himself at the end of each learned disquisition a trifle further from the solution of his problem than he was when he started—which in itself might pass for one of the causes of laughter, since man is prone to smile when he finds himself impaled upon the horns of a paradox. Of the many writers on the subject, Locke, Barrow, Hazlitt, Sidney Smith, Addison, and the lamented "Sunset" Cox, whose work, "Why We Laugh," proved a delectable morsel to our grandfathers, the great English essayist has probably come closer than any to the true family tree of Laughter in his famous genealogy of Humor, which he found to be

TRUTH
GOOD SENSE
WIT MIRTH
HUMOR

But even this, upon careful scrutiny, will be found to be unsatisfactory, since, while Truth may be the grandfather, and Good Sense the father, of Wit and Mirth, Addison leaves us somewhat in the dark as to the maternal side of the proposition. Just whom Truth married that she might bear him Good Sense, and by what legitimate alliance Good Sense was able to father Wit and Mirth, the genial essayist does not so much as intimate; moreover we should have preferred a genealogy of Humor, which at least provided that Wit and Mirth should be cousins, and not brother and sister. The relationship provided for them by Addison is too close to be pleasing to dabblers in eugenics, who are hygienically, not to say morally, opposed to a system of inbreeding which seldom produces offspring of worth except possibly on the operatic stage.

As a matter of fact, the effort to reason out why we laugh on the basis of the act of laughing itself is in the very nature of things bound to fail. Homer tells us that the followers of Ulysses "died with laughter" at sight of Irus gnashing his teeth and writhing on the ground, after Ulysses has broken his skull; and the same distinguished singer, referring again to Ulysses, speaks of his "heart laughing within him" after he had put out the eye of Polyphemus with a burning stick. Similarly the English laugh at the jokes in *Punch*, and Americans roar over the idiocies of the average Broadway musical comedy, in which all elements of real music and true comedy spirit are conspicuous by their absence.

It is obvious from these instances that an attempt to trace causes from effects in an effort to demonstrate the true origin of laughter is futile. Reasoning along the Homeric line one would suppose that heroic ferocity was the basis of mirth. Harking back from a merry jest from the pen of Mr. Punch, the conclusion would be that mirth was a sort of involuntary reaction from the effects of a highly intellectual tension superinduced by the reading of a bit of paragraphic ponderosity remotely affiliated with a deep-seated but unrealized ambition on the part of the paragrapher to be facetious; while he who endeavored to trace the causes of laughter induced by the Broadway librettist would find himself inevitably enmeshed in the miasmatic oozes emanating from the emotional morasses of an unspiritual bedlam. The only common element in the tree is a sort of unwitting cruelty, a certain amount of human suffering being involved in each, frankly in the Homeric instance, insidiously subtly in the other two; but frankly or by indirection, the conclusion that laughter is necessarily sardonic, a sort of safety-valve on our spiritual boilers when the biliary ducts are in danger of exploding from overpressure, would be a half-truth only, and therefore seriously misleading. Whence it has happened that until very recently the literature of laughter scientifically considered has been a literature of half-truth, and hence inadequate.

This inadequacy seems to have been realized of late by some of our deeper thinkers, and the famous Bergson, who is much talked about, and occasionally read in this country, has given us an essay on "Laughter: the Meaning of the Comic." Bergson is now followed by Dr. Boris Sidis, of the Sidis Psychotherapeutic Institute at Portsmouth, New Hampshire, with his recently published work, "The Psychology of Laughter." Both these gentlemen have apparently recognized the mistakes of method in the work of their predecessors, and have deduced laughter from inner causes rather than the reverse, with the result that, whether we agree with their conclusions or not, a first step has been taken to present the subject to popular contemplation, so that we may approach it like upstanding readers, resting on our feet and not standing on our heads.

The American philosopher, in our opinion, is more effective than his distinguished confrère overseas, inasmuch as he recognizes the necessity of simplicity of form in the presentation of recondite matters to minds which, to say the least, are inhospitable to Delphic utterances. Dr. Bergson's effort in translation, or in the original, will never, we fancy, seriously interfere with the popularity of the works of George Ade or Mr. Robert W. Chambers; nor will Dr. Sidis's either, for that matter; but it is nevertheless conceivable that Dr. Sidis's work will be read with appreciation and complete understanding by a goodly proportion of the many thousands who rejoice in Ade, and who clothe the broad shoulders of Chambers with a two-piece garment made of the mantles of Thackeray and Dickens. The Portsmouth psychologist has not disdained, as so many of our writers on abstruse subjects are prone to do, to clothe his thought in popular terms, eschewing the technical, speaking the language of *hoi polloi* rather than insulating the thread of his discourse so deeply in the rubber of idiom that it emits no sparks of meaning as it runs along, and sheds mighty little light when it reaches the bulb at the end.

The primary law which Dr. Sidis discovers in the course of his investigations into the causes of laughter is that "all unrestrained activities of normal functions give rise to the emotion of joy, with its expressions of smiles and laughter," and with this as the initial point of his discussion he begins with a consideration of the play-instinct as it is found not alone in man, but in puppies, kittens, and "in fact, in all young animals." Upon this hypothesis he builds up a tolerably convincing theory that pretty nearly all human activity is based upon the play-instinct, finding that even football and the singing of church hymns are intimately related, "offshoots of the same parent root—the play-instinct." Church services, religious ceremonies, theatrical plays, football and baseball games, "in spite of the processes of metamorphosis through which they have passed in the course of the ages," Dr. Sidis contends, at bottom keep on subserving the same function—the satisfaction of the animal play-instinct in man; the same play-instinct that we find in the kitten, the puppy, the squirrel, and the bird.

"Laughter, smiling, and grinning, are

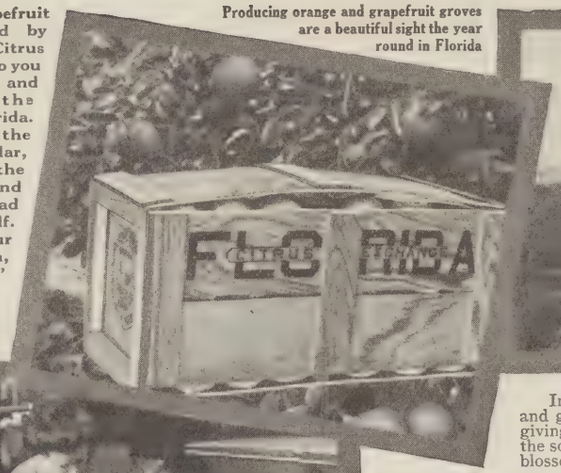
* **The Psychology of Laughter. By Boris Sidis.** 12mo. New York: D. Appleton & Co. $2.

Oranges and grapefruit in boxes shipped by the Florida Citrus Exchange come to you with the flavor and fragrance of the groves of fair Florida. When you open the boxes in your cellar, you will find the fruit as fresh and juicy as if you had picked it yourself. When served, your folks will exclaim, "How delicious!"



Producing orange and grapefruit groves are a beautiful sight the year round in Florida

In Florida the months of delightful sunshine during the time the orange and grapefruit crops are ripening sweeten the juices of these fruits into health-giving liquids confined in globes of gold. The sparkle of Florida sunshine, the softness of semi-tropical breezes and the fragrance of orange and grapefruit blossoms are combined in the citrus fruits grown in this favored state.

Oranges and Grapefruit as in the Golden Groves

The climate and soil of Florida combine to produce oranges and grapefruit of surpassing quality—juicy, sweet and altogether delicious.

Broad-minded Florida growers have organized for the culture of citrus fruits by methods that insure this quality, and for picking, packing and shipping fruit to reach users in prime condition.

This co-operative, non-profit making association works on the theory that whatever is for the good of the consumer of oranges and grapefruit is equally desirable for the grower of these fruits. Its name and trademark—to be found in red on boxes and wrappers—is this:

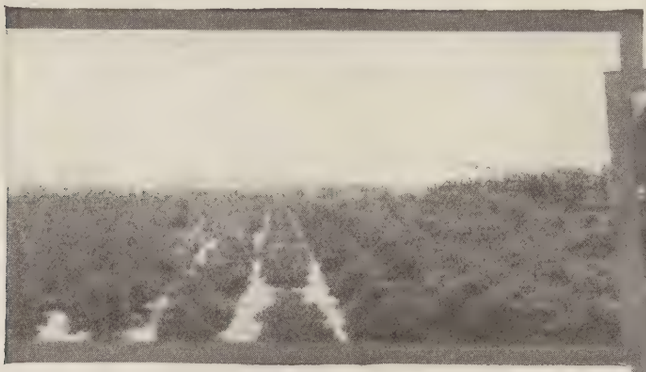
In the great groves and packing houses of the growers who compose the Exchange every person must wear white gloves.

FLORIDA CITRUS EXCHANGE

This rule is one of many enforced by the Exchange to assure to the consumer, juicy, sweet, spicy, tree-ripened oranges and grapefruit. No child labor is employed in the packing houses. Every precaution is taken to prevent damage to the fruit.

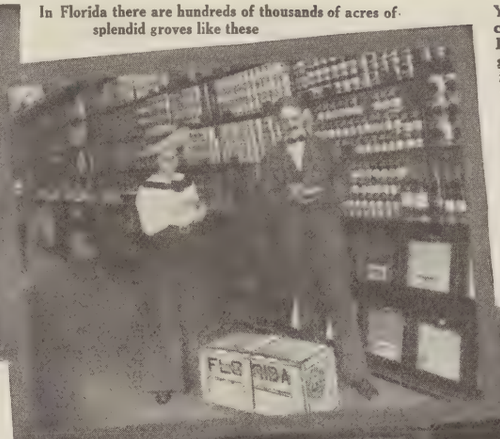
The growers who form the Florida Citrus Exchange believe their interests and those of the consumers of their fruits to be identical and endeavor to put into the markets oranges and grapefruit so good that buyers will want more of them. It is their aim and intention that the "red mark" shall be your guarantee of your money's worth.

Scenes in a packing house of the Florida Citrus Exchange:—First picture, washing the fruit; second, elevator to the brushes. All workers wear white gloves.

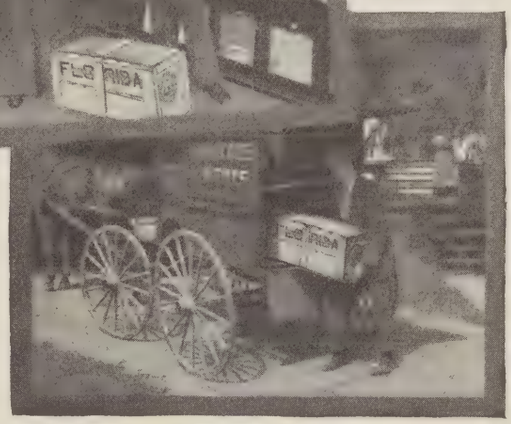


A sometimes rough, uninviting looking globe, the Florida orange or grapefruit is filled almost to bursting with the concentrated essence of spicy dews, jeweled rain drops, balmy airs and golden sunshine. Disregard the mere appearance and drink the juice—delicious, refreshing, healthful, invigorating: a tonic for jaded nerves; indeed a food "truly fit for the gods."

In Florida there are hundreds of thousands of acres of splendid groves like these



Your grocer has or can get Florida Citrus Exchange oranges or grapefruit, and if you insist will deliver it to you in the original boxes. Just tell him that you want this fruit; that while other Florida oranges and grapefruit *may* be good, the Exchange brands are *SURE* to be.

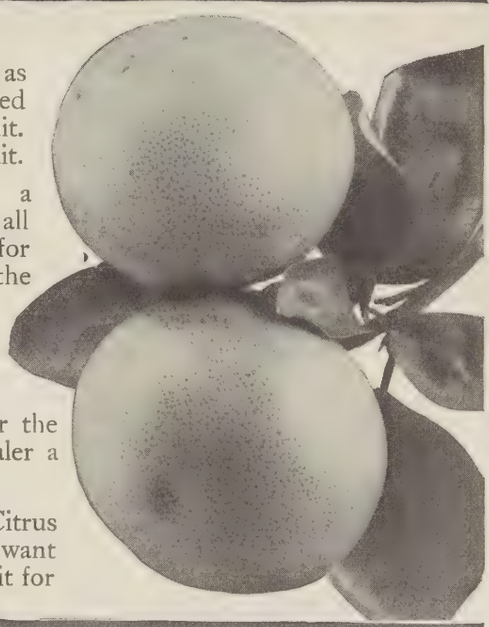


As Juicy, Sweet and Spicy of Balmy, Sunny Florida

"Eat oranges—eat them all the time, as many as you can get. They will save you many a doctor's bill," said Dr. Wiley.

"I believe in the youth-protracting and beauty-making power of oranges," wrote Lina Cavalieri, the beautiful singer. "If I could have only one fruit, it would be the orange."

The juice of tree-ripened grapefruit is almost as strengthening as it is delicious. Thousands of persons with tired stomachs and jaded nerves have been started on the return road to health by this fruit. Many a brain worker finds an ample breakfast in a good-sized grapefruit.

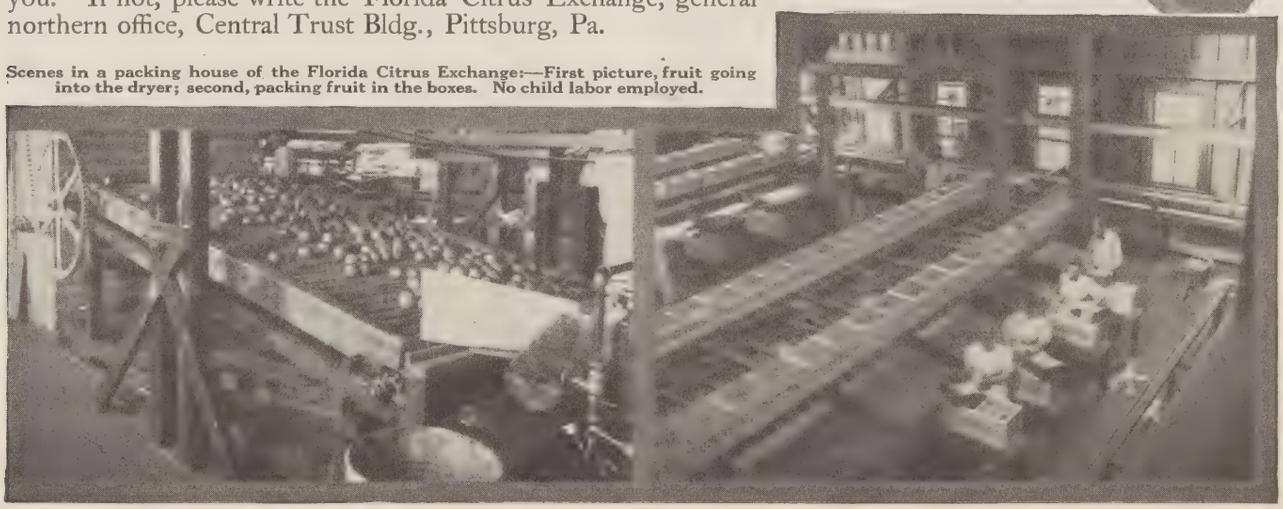


FLORIDA CITRUS EXCHANGE stands for a square deal to all concerned — for the grower, the dealer and the consumer of oranges and grapefruit. Its motto is "fair-play."

It means good fruit at fair prices for the consumer, a living profit for the dealer and a proper return on his labor for the grower. The mark of the Exchange assures to the consumer full value for the money, no matter what grade of fruit is bought, and gives the dealer a minimum of loss in distribution.

Up-to-date grocery and fruit stores generally carry Florida Citrus Exchange oranges and grapefruit. Tell your dealer *now* that you want this fruit during the season, and doubtless he will arrange to get it for you. If not, please write the Florida Citrus Exchange, general northern office, Central Trust Bldg., Pittsburg, Pa.

Scenes in a packing house of the Florida Citrus Exchange:—First picture, fruit going into the dryer; second, packing fruit in the boxes. No child labor employed.



REVIEWS OF NEW BOOKS

(*Continued from page* 1011)

the external manifestations of the play-instinct. Laughter may be sublimated into a barely perceptible smile; the smile in its turn may become sublimated into a grin, or an expression of satisfaction, or contentment, or the inner emotion of joy which accompanies the activity of the play-instinct. Whatever gives us joy makes us laugh, or gives rise to an expression akin to laughter and smiles."

Superficially viewed, perhaps, one would be inclined to dispute Dr. Sidis's contentions as to the relativity of church services and football games, but we judge from the author's intimations that laughter, as he understands it, goes through certain sequences of sublimation and super-sublimation, Ossas of mirth, piled upon Pelions of cachinnation, sublimating, and sublimating, and sublimating again, until from the coarse guffaw of an amused mob enjoying to the full the laughter induced by scenes of suffering, we reach that inner glow of the soul which comes to all reverent worshipers of the divine, which is the ultimate, supreme manifestation of joy, and therefore, tho outwardly indicated only by a rapt expression of the countenance, or by a fire of the eye, is none the less the very essence of laughter.

It would be impossible in the space at our disposal to follow Dr. Sidis throughout his argument, and it would be unfair to both author and reader as well to attempt to do so. Nor could we attempt even to catalog the several points at which we find ourselves at variance with his conclusions, as, for instance, where he advances the idea that "the spent energy, as in all artistic activities, should be felt by the person who exercises it as not tending to any useful aim. The energy must be spent for its own sake, for the love of it." We do not know how such a principle enunciated in a platform would work out in a political contest calling for a pure psychology law, but in a campaign calling for a purer humor, and therefore for a purer cause of laughter, it would drag the candidate advocating it down to well-merited defeat. It is the lack of a conscious useful aim on the part of its purveyors that has made so much of our so-called American humor valueless beyond the moment, and it is an interesting and a most encouraging fact that all humor that has had serious thinking, and a consciously useful aim back of it, has conferred a certain measure of immortality upon its writer. Artemus Ward, whose humor was exercised for its own sake, is read scarcely at all to-day, while that of his contemporary, Bret Harte, who "otherwise," according to Dr. Sidis, "lacks the artistic sense," is more widely read and loved to-day than when it first came to us as something particularly fine and stimulating, because, and we believe only because, that genial humorist recognized his gift as potent for the accomplishment of some useful purpose other than merely to entertain.

The volume is more than valuable in its intimations as to the legitimate sources of laughter, and the author's reflections upon the "Ludicrous," "Ridicule and Social Decadence," "Ridicule, Malice, and the Human"; his differentiations between wit and mere ridicule; and, best of all, his presentation of the truly logical advance of the sentiment of humor from its beginning as a provocative of the laughter of hostility, of unkindness, and meanness, into its relations with the infinite, are worthy of the study not only of the practitioners of the arts of laugh-making, but of lay readers as well, who by their demand consciously or unconsciously influence the quality and character of the supply.

"The highest point reached by laughter," says Dr. Sidis, "is intimately related to the highest intellectual, esthetic, and moral development. The highest development of ridicule, true humor, brings one in touch with the infinite. True humor in its highest stages sees the infinite depths of the soul in the very failures, faults, defects, and imperfections."

It is with these words that Dr. Sidis closes his interesting speculations—words that remind us of the statement of Addison that it troubled him "to see the talents of humor and ridicule in the hands of an ill-natured man"; words which might have formed, truly, the platform of the really great laugh-makers of all time—Cervantes, Addison, Charles Lamb, Dickens, Thackeray, Mark Twain, and in our own day Dunne, Ade, and Herford, who have never forgotten that to laugh with and not at people is the mission of him who would work great ends through the laughter of sympathy, and not through the caustic ridicule which leaves behind it the sting of resentment and a rankling sense of injury and injustice.

LYMAN TRUMBULL, OF ILLINOIS

White, Horace. The Life of Lyman Trumbull. 8vo, pp. 458. 1913. Houghton Mifflin Company. Boston. $3 net.

Lyman Trumbull, who represented Illinois in the United States Senate from 1855 to 1873, was a statesman who did not impose his personality upon the public which he served. In reading the pages of this, the first biography of him, Douglas, Lincoln, Johnson, and Grant seem more life-like figures. This in part was inevitable in the case of an "old Roman" like Trumbull, who "did not carry his heart upon his sleeve for daws to peck at," and hence was esteemed "cold" by all except his intimates. He was an American public man who lacked all genius for self-advertising.

Mr. White, his biographer, does not lose his sense of proportion in his enthusiasm for him. Many a writer thinks it necessary to give the reader an impression that all the history, all the life of the time revolves around the subject of the biography. With a few possible exceptions even men of real achievement are at some time in their lives shadowed by those of greater eminence; they are sometimes not captains, but lieutenants, sometimes mere followers in the ranks. So Mr. White remembers that, while Lyman Trumbull was a statesman of high rank, he was placed among others whose rôles in the Civil War and Reconstruction drama were more important than his.

Yet Trumbull's actual achievements are well worth remembering. He was a Republican Senator from Illinois for eighteen years at the most critical period in our history. In the Senate he was one of that dominant group of Republican leaders who dictated policies and controlled legislation. Some of his work remains; he was, for

True

As the Tick Of a Watch

The healthy heart beats about 72 times each minute. Disturb its regularity and the penalty is to shorten life and lessen one's comfort.

Many persons unconsciously "whip" their hearts into unnatural action by use of coffee, which contains a drug, caffeine. Its effects are subtle, but sure.

If you find an irregularity in your own heart-beat and value future health and comfort,

Stop Coffee

And try,

POSTUM

The breakfast cup will be just as hot and satisfying, and you will have a rebuilder at work in place of a destroyer.

Postum is made of choice wheat; contains genuine nourishment; and has a rich Java-like flavour; but is absolutely free from the coffee drug, caffeine.

Postum comes in two forms:

Regular Postum—must be well boiled.

Instant Postum is a soluble powder. A teaspoonful dissolves quickly in a cup of hot water and, with the addition of cream and sugar, makes a delicious beverage **instantly.**

"There's a Reason"

for

POSTUM

instance, the author of the Thirteenth Amendment and the Freedmen's Bureau and Civil Rights Bills of 1866.

Trumbull helped to found the Republican party in the 50's, was a Lincoln man prior to the convention of 1860, and was a party leader for twenty years. Yet he entered and took leave of political life as a Democrat. He was first elected to office by the Democrats as a member of the lower House of the Illinois legislature in 1840, while just forty years later, at the age of sixty-seven, he was the Democratic candidate for Governor of the State, being defeated by Shelby M. Cullom. He was a leader in the Liberal Republican movement in 1872, and was a candidate for the Presidency before the Cincinnati convention. He voted for Tilden in 1876, and wrote the platform for a Populist convention in 1894.

Throughout this apparently changing course, Trumbull believed himself consistent and true to his party principles. For, as a Northern antislavery Democrat, he naturally found himself among the Republicans in the 50's. In the 70's, disgust at the corruption of the Grant Administration, and at the reconstruction policy pursued by Republican leaders in Congress, threw him into the Liberal Republican movement and, upon its failure, into the Democracy again. Mr. White quotes a letter written by Senator Grimes to Trumbull in 1870 which apparently portrays the latter's opinion as correctly as it does the former's. According to Grimes, the Republican party of his day was the most "corrupt and debauched party that has ever existed. . . . I have made up my mind that when I return home I will no longer vote the Republican ticket, whatever else I may do." Trumbull's later friendship with the Populist movement was due to his conviction that it stood for the rights of the plain people as against well-intrenched privilege.

Trumbull's greatest single service to his country was his appearance as one of the "Seven Traitors" who brought about the defeat of the impeachment proceedings against President Johnson. This act lost Trumbull his seat in the Senate. But he never regretted it. Throughout his political career Trumbull was never afraid of taking an unpopular stand if he thought it right. He was an able worker in committee, and on the floor showed himself a skilful and thoroughly informed debater. In all his political career he was the same earnest, quiet, conscientious gentleman, whose vote and voice were always found in support of what he deemed to be the people's cause.

Lyman Trumbull's career as a member of the Illinois bar was divided into two distinct parts by his service in Washington, tho his legal activities were not entirely laid aside during those eighteen years. Here again his biographer notes his sympathies were always with the least fortunate classes. For the rising Illinois lawyer who defended the "indentured" slaves of Illinois in the 40's was the same man who, in the fulness of years and reputation, appeared for Eugene V. Debs after the railroad strike of 1894 and who paid his respects in no uncertain words to "judicial usurpation" in the use of injunctions.

As a record of Senator Trumbull's public career and as a contribution to the "inside

Build Walls, Partitions, Ceilings, Roofs, etc., Quickly, Easily, Cheaply—with Hy-Rib

¶ A steel sheathing, stiffened by rigid deep ribs, Hy-Rib combines within itself reinforcement, forms, lath and studs. Thus it reduces concrete construction to its simplest terms. The easily handled sheets of Hy-Rib are fastened to the supports, and the plaster or concrete is applied. That is the entire process.

Build to Last with Hy-Rib

¶ Hy-Rib construction is monolithic—permanent, durable and fireproof. Being, moreover, economical, it is the approved modern type of construction for walls, sidings, partitions, floors, ceilings and roofs.

¶ If you intend to build any structure anywhere, tell us about it, and receive interesting Hy-Rib literature and useful suggestions—Free.

history" of the eventful period from 1850 to 1875, Mr. White's book deserves the highest praise. Indeed, it is hard to think of one better fitted to write of this side of Mr. Trumbull's life than Mr. White. Yet after reading the book, interesting as it is, we find ourselves wishing we knew more about the man, Lyman Trumbull. Perhaps Trumbull himself would have preferred to let posterity know of him only by his deeds. But Mr. White skips over the years when Trumbull was out of office. We know little of his home life, except that it was happy. We have the names of his first and second wives and those of his children. Of his interests outside of politics and the law, we are told almost nothing. But it is recorded that those who entered the inner circle of the home and the law office and his more intimate political associates found him a man to love. It is interesting to learn that Lyman Trumbull "never borrowed money, never bought anything he could not pay cash for, never gave a promissory note in his life." Finally, to quote his biographer, "the best blood of New England coursed in his veins and he never dishonored it, in either private or public life."

Trumbull's Judgment of Lincoln

Because Lyman Trumbull and Abraham Lincoln practised law in Illinois at the same time, because they were fellow members of the Illinois legislature, rivals for the Illinois Senatorship, fellow founders of the Republican party, and both, in their respective places, parts of the Federal Government at the time when it was proving stronger than secession, it is interesting to read the Senator's estimate of the President. Trumbull often refused to give an estimate, but he finally wrote out one at some length for his son. From this letter, now printed for the first time in Mr. White's "Life" of Trumbull, we quote the following paragraphs:

"From the foundation of the Republican party till his death we were in political accord. I do not claim to have been his confidant, and doubt if any man ever had his entire confidence. He was secretive, and communicated no more of his own thoughts and purposes than he thought would subserve the ends he had in view. He had the faculty of gaining the confidence of others by apparently giving them his own, and in that way attached to himself many friends. I saw much of him after we became political associates, and can truthfully say that he never misled me by word or deed. He was truthful, compassionate, and kind, but he was one of the shrewdest men I ever knew. To use a common expression he was "as cunning as a fox." He was a good judge of men, their motives, and purposes, and knew how to wield them to his own advantage. He was not aggressive. Ever ready to take advantage of the public current, he did not attempt to lead it. . . . . .

"Some of Mr. Lincoln's admirers, instead of regarding his want of system, hesitancy, and irresolution as defects in his character, seek to make them the subject of praise, as in the end the rebellion was suppressed, and slavery abolished, during his administration, ignoring the fact that a man of more positive character, prompt and systematic action, might have accomplished the same result in half the time, and with half the loss of blood and treasure.

"Mr. Lincoln was by no means the unsophisticated, artless man many took him to be. Another popular mistake is to suppose Mr. Lincoln free from ambition. A more ardent seeker after office never existed. From the time when, at the age of twenty-three, he announced himself a candidate for the legislature from Sangamon County, till his death, he was almost constantly either in office, or struggling to obtain one. Sometimes defeated and often successful, he never abandoned the desire for office till he had reached the presidency the second time. Swett says, 'He was much more eager for it (a second nomination) than for the first,' and such was known to his intimate friends to be the fact, tho his manner to the public would have indicated that he was indifferent to a second nomination.

"While ardently devoted to the Union, Mr. Lincoln had no well-defined plan for saving it, but suffered things to drift, watching to take advantage of events as they occurred. He was a judge of men and knew how to use them to advantage. He brought into his Cabinet some of the ablest men in the nation, and left to them the management of their respective departments. This country never had an abler head of the Treasury Department than Salmon P. Chase. To his skilful management of the finances the country was indebted for the means to carry on the war of the rebellion, and bring it to a successful issue. For the distinguished ability with which the State and War Departments were managed during the rebellion the country is greatly indebted to Mr. Seward and Mr. Stanton. Other members of Mr. Lincoln's Cabinet were men of great executive ability. Lincoln was unmethodical and without executive ability, but he selected advisers who possest these qualities in an eminent degree.

"To sum up his character, it may be said that as a man he was honest, pure, kind-hearted, and sympathetic; as a lawyer clear-headed, astute, and successful; as a politician, ambitious, shrewd, and far-seeing; as a public speaker, incisive, clear, and convincing, often eloquent, clothing his thoughts in the most beautiful and attractive language, a logical reasoner, and yet most unmethodical in all his ways; as President during the great Civil War he lacked executive ability, and that resolution and prompt action essential to bring it to a speedy and successful close; but he was a philanthropist and a patriot, ardently devoted to the Union and the equality and freedom of all men. He presided over the nation in the most critical period of its history, and lived long enough to see the rebellion subdued, and a whole race lifted from slavery to freedom. The fact that he was at the head of the nation when these great results were accomplished, and of his most cruel assassination, before there was time to appreciate fully the great work that had been done during his administration, will forever endear him to the American people, and hand his name down to posterity as among the best, if not the greatest, of mankind."

"The National Drink"

Welch Punch—a holiday favorite

For a dainty unfermented punch, take the juice of three lemons, juice of one orange, one pint Welch's Grape Juice, one quart of water and one cup of sugar. Add sliced oranges and pineapple and serve cold. This punch has become a standard of excellence.

With its rich, palatable flavor is combined fruit acids of great digestive value—truly an appropriate Thanksgiving Day and holiday beverage. Order a case from your dealer today.

—Let the "New Welch Rarebit" be a part of your— Thanksgiving Day menu

Here is the winner of the first prize in our $200.00 "New Welch Rarebit" contest. Serve this and we believe you will say it is a wonderful salad.

1 pint Welch's Grape Juice
3 tablespoonfuls rice
1-4 teaspoonful salt
1 quart freshly roasted peanuts
4 tablespoonfuls grated cream cheese (American or imported)
1-2 pint whipped cream
Crisp lettuce leaves.

Wash the rice in several waters, boil in boiling salted water for seven minutes; drain and cover with Welch's Grape Juice and cook slowly until tender. Shake the pan occasionally to prevent burning. Cool the rice, grind the peanuts and whip up the cream. Arrange some crisp lettuce leaves on a dainty platter, then add the rice and the peanuts mixed with cheese. Use cream cheese that comes in foil packages. Cover with the whipped cream.

Do more than ask for "Grape Juice"—say WELCH'S and GET IT!

If unable to get Welch's of your dealer, we will ship a trial dozen pints for $3.00, express prepaid east of Omaha. Sample 4 ounce bottle by mail 10 cents. Book of a Thousand Recipes for all kinds of dishes, free on request.

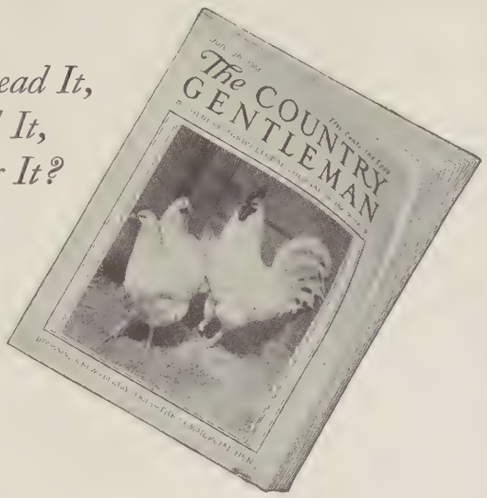
Your Grandfather Read It,
Your Father Read It,
Are YOU Reading It?



Buying the Farm

"What would you consider these places adjoining yours worth?"
"About $30 an acre."
"That is, if you, as a local man, went to buy them you could get them at $30 an acre?"
"That's it."
"But if I, as an outsider, went to buy them——."
"They'd probably size you up as from town, and ask you $80 to $100. I've known two or three places on this road where sales have been spoiled that way."
"Meanwhile they have been in the hands of tenants for thirty years and have gone back in value from $150 and $200 to $20 and $30——."
"Yes, it's that dog-in-the-manger policy that has hurt us."

Here is land lying in one of the most beautiful and fertile valleys of the section between the Hudson and Connecticut—a valley that used to be the seat of an old colonial aristocracy, where most of the buildings could not be replaced now for less than $20,000 or $30,000.

If you have the least desire to own a bit of land of your own and think a farm beyond the dreams of avarice, you should read the series of six articles by A. C. Laut, telling about the bargains in old farms, on good roads, within a hundred miles of New York City, that can be picked up at from $10 to $50 an acre. *A thousand dollars, actual cash, can finance a 25-acre unimproved farm purchase.*

A Living From the Farm

Then, having the farm, if you want to know how to live and to make a living out of it, read **Back to the Farm—Net,** a five-part story of city dwellers who took a chance and made good in the country.

The *Net* is what they got out of it—what you can get out of it: Instruction, health, comfort, contentment, and a heritage of health for the children.

The money end of it? The author paints no iridescent rainbow, but concludes that a good many will succeed along a modest line of hard work, close personal attention, planning one thing at a time and going ahead slowly, being on the job all the year round. *A better living than you get in town and a life more worth while.*

Dividends From the Farm

For several years the Department of Agriculture, through its field agents, has been experimenting with various farms, with the owners' coöperation, along the lines of system and efficiency.

We are able to publish the results in a series of four articles, under the title **Old Farms Made New.** They tell how to replan a farm for economy in time and labor, as efficiency experts plan a factory.

The difference is the difference between a deficit and dividends.

If you actually become your own boss and work at getting a living out of the land. there's no paper in the world you need so much as

REVIEWS OF NEW BOOKS

(*Continued from page* 1016)

superlative degree. All the descriptions are alive with personal interest. The characters come and go, naturally, but are driven by deep and passionate impulses. The story deals with the love and suffering of real human beings, rather than with a calm and natural existence, affected by local atmosphere.

In his love for startling contrasts and dramatic complications the writer is not always logical, but his style is so convincing that we are led to sympathize with the heroine, become indignant at her persecutors and detractors, and weep at her fate without stopping to think that the fault was not wholly on one side, that she was not entirely blameless. The story of Mary O'Neill is told as if by herself, and from her difficult days of persecuted childhood, neglected girlhood, and tragic womanhood, through the years of suffering to the last when Fate solves her problem, we are carried on a wave of intense interest by a narrative frank, explicit, and thrilling.

In the Celtic island of Ellan, Mary O'Neill was born of a tender-hearted, meek, little invalid mother, and a rugged, coarse unsympathetic father, whose disappointment at having a daughter when he wanted a son made him always intolerant, unsympathetic, and brusk in his treatment of the little girl. Aunt Bridget, who acted as housekeeper, in place of the invalid mother, began her abuse of Mary at an early age, always favoring her own daughter, "Betsy Beauty." Poor little Mary led a loveless existence, except for "Father Dan," the priest; "Tommy the mate," and Martin Conrad, the doctor's odd and erratic son, her playmate and youthful companion.

The author's weakest point is where Mary, who acknowledges she is not ignorant of the meaning of marriage, allows herself to drift, without protest, into an arrangement made by her father for her marriage with a profligate young lord. After the wedding, actuated by instinctive disgust and repulsion, she scorns and refuses every advance and evidence of her husband's affection, and, following a stormy scene, is persuaded to accompany him only on condition that he will not consummate their marriage or expect her obedience until she learns to love him. There are stories of repulsive scenes among coarse men and women calculated to disgust any good woman.

In the absence of Lord Raa, her husband, and his gay party, Mary loses her self-control and throws herself into a lover's arms. The lover's character is powerfully and consistently drawn,—a rugged, loving, and whole-hearted man whom fate involved in circumstances which gave him little choice. The book is intense and dramatic.

OTHER BOOKS WORTH WHILE

Knight, A. E. and Step, Edward. Popular Botany. 2 vols., large 8vo, pp. 588. New York: Henry Holt Company. $5 net.

This gorgeously illustrated manual is popular in two senses. It is not a work in which flowers are things to be merely dissected, not a book of mere classifications. It is written in a warm, animated, and enthusiastic style which will make botany intelligible to the people and to the young. It will also be popular in another sense. They will not only understand the teachings of these two clever botanists, they will love their work, which will establish its popularity among a large range of readers. It is, indeed, the most beautiful and attractive work on this subject which has been offered to the public for many years.

James, George Wharton. The Old Franciscan Missions of California. 12mo, pp. 287. Boston: Little, Brown & Co. $1.50 net.

While this book is practically a condensation of the author's "In and Out of the Old Missions of California," the tourist will find it sufficiently full and a valuable guide to the old Spanish missions of the great Western State. The history of the founding, in the second half of the eighteenth century, by the Franciscan, Junipero Serra, of San Diego, San Francisco, and other missions which have grown into great cities, is a narrative of intense interest, and gives the reader a history of the struggles and privations of the early missionary pioneers who strove even unto death to carry the message of Christianity to the Indians, teaching them also the arts of the civilization of that period.

The book contains a wealth of photographic illustrations which adds greatly to its value. An entire chapter is devoted to directions on how to reach the various points of interest, with rates of fare and other useful information.

Home University Library. New volumes—Disease and its Causes, by W. T. Councilman, M.D.; Plant Life, by J. Bretland Farmer; Germany of Today, by Charles Tower; A History of Freedom of Thought, by J. Bury. 16mo. New York: Henry Holt & Company. 50 cents each.

These are the newest volumes in a series well known to many readers. They make the total thus far issued seventy-two. Ten volumes are issued quarterly, and it is the intention to issue in all at least one hundred. Commendation has already been bestowed upon the series as a whole and upon individual volumes in it. The newest issues are quite worthy of having places in the set.

Gill, C. O. and Pinchot, Gifford. The Country Church. Pp. 222. New York: The Macmillan Company. $1.25.

The investigation of the "Commission on Country Life" emphasized the importance of the country church, and led to the inquiry whether in size and power it is growing or declining. In a measure this book gives the result of such investigations. Periods of five years were examined and compared with other periods of five years, twenty years later, selecting representative counties. So much that is interesting and instructive is brought out by this collection of statistics that it will bear close attention. Membership, expenditures, attendance, and incomes need to be understood. More than that, the equipment of ministers for their work, and the weight of evidence seem to prove that the country church is losing its hold on the community. The remedies suggested are suggestive. They involve improvement in all kinds of country life, schools, and social service, and especially in an effective ministry with salaries large enough to be more than "stop-gaps," also organization and co-operation between churches. The book is concise and gives only conclusions based on discovered facts, with reliable suggestions for improvements.

Thousands of folks find real pleasure in Winter weather, for they're protected from cold and discomfort by

Improved

Duofold

Health Underwear

Duofold is really two garments in one—an outer fabric of warmest, long-fibred wool and an inner fabric of soothing cotton. They're inseparably united by strong stitches widely spaced, that permit free air-circulation, and complete absorption of perspiration and moisture.

Why don't YOU enjoy Winter Weather by trying a suit of this famous underwear? You'll know then what it means to enjoy the *warmth* of the finest woolens, with the itchless, scratchless, skin-contact of softest cotton.

Send for a *free sample* of *Duofold* material today. See for yourself the superiority of its scientific construction. Or better still—*experience* its advantages by ordering a set for trial today.

Said the shrewd old merchant:

"Increase Your Brain-Capital"

"The man who puts additional capital into his brains—information, well directed thought and study of possibilities—will surely get increased returns. There is no capital and no increase of capital safer and surer than that."

Marshall Field said that—and proved it.

Practically every big business man is proving it today.

Julius Kruttschnitt, Chairman Executive Committee, Southern Pacific Railway Co.; N. A. Hawkins, Commercial Manager of the Ford Motor Company; Wm. H. Ingersoll, of R. H. Ingersoll & Bro.; and hundreds of others just as big, not only advise their subordinates to get more brain-capital, but themselves subscribe for the Modern Business Course and Service of the Alexander Hamilton Institute.

These men already have knowledge and experience far beyond those of the average man. But they want all the knowledge—all the brain-capital—their ability can use.

You want all the brain-capital *your* ability can use, just as you want all the money-capital your ability can handle.

The Alexander Hamilton Institute Gives You Brain-Capital

Its plan is as sound as the names of the Advisory Council that created and developed it—five educators and business leaders of big ideas and progressive methods.

It is as true, as live, as easily acquired as your own experience. For it is experience, experience of successful men everywhere, experience that no one man could gain in a lifetime—boiled down to the essence.

It has been gathered and analyzed by university investigators and experts in accounting, advertising, financing, managing and every other department of business. They bring it to you crystallized in clear-cut principles, bristling with hard, concrete facts.

It covers the whole science of business, but is so planned that you get consultation with experts on your own knotty problems.

Over fifteen thousand men—including many of the biggest in the country—have adopted the Modern Business Course and Service of the Alexander Hamilton Institute as the best brain-capital they can find. They have tested it in their work, and have proved its practical dollars-and-cents value.

You owe it to your own ability to learn more about it. Our new book, "Forging Ahead in Business," tells the whole story. Aside from giving you details of this great movement, it is a book so full of the real meat of achievement, so rich in inspiration, that you will enjoy it for itself. Let us send you your copy today. Please use business letterhead or the coupon at the left.

CURRENT POETRY

SOME of Miss W. M. Letts's poems, reprinted from various English reviews, have appeared from time to time in these columns. But to Mr. T. A. Daly must be given credit for introducing her work to the American public. To the special autumn number of the New York *Times* Review of Books he contributes an essay in praise of her new volume, "Songs from Leinster," just published in the United States by David McKay, of Philadelphia. And a reading of it justifies his opinion. Miss Letts is a real poet; her verse is simple, sincere, and beautiful. She is not afraid to use the homely idiom; dialect in her poems has dignity, even splendor, sometimes.

The first selection shows Miss Letts in one of her most serious moods The grave beauty of this poem is worthy of Lionel Johnson:

The Crib

(In the Carmelite Church, Dublin.)

By W. M. Letts

Forninst the Crib there kneels a little child,
Behind him in her ragged shawl his mother,
For all the ages that have passed one child
Still finds God in another.

Now, looka how he wonders when he sees
The shepherds with their lambs beside the manger,
The cattle, poor dumb creatures, looking down
Upon the little Stranger.

An' there's our Savior lying in the hay,
Behind Him in her shawl His watchful mother;
Two mothers with their sons, each knows the joys
And sorrows of the other.

The father kneels away there by the door,
The hands he clasps in prayer are rough with labor;
The likes of him that hunger and that toil
Once called Saint Joseph neighbor.

Outside the church the people travel by,
The sick and sad, the needy, the neglected.
But just across the threshold Bethlehem lies,
Where none will be rejected.

Here is a character sketch as vivid as any Synge ever made. Miss Letts puts the observations of the old woman into a rhythm appropriately colloquial. The brief final line of every stanza comes in with delightful fitness.

The Old Wexford Woman

By W. M. Letts

What do I think of the women that's in it?
Och! little enough;
If you offered them flax would they trouble to spin it?
Faith! I've a notion before they'd begin it
You'd wait for your stuff.

Would they pick wool from the hedges and ditches?
We did in my day.
But it's easier plans they have now to make riches:
Why would you sew when machines makes your stitches?
Sure, that's what they say.

'Tis truth I'd no hand for making a letter,
But where was the lack?
An' I couldn't read books any more than that setter.

But for baking or stitching there wasn't a better,
Or making a brack.

The black fasts were kept without hesitation,
I tell you no lie.
Arrah! now there's no manner of strength in the nation,
It's sorra a one but needs dispensation
For fear they would die.

The way they are now they're seeking their pleasure,
The days are too slow.
They'd look twice at a spade were they hunting for treasure,
It's towns that they want and evenings of leisure
To streel to and fro.

What is it they're afther there in the city
That takes them away?
It's new clothes they'll be buying to make themselves pretty;
No value at all—an' sure that's a pity.
They'll know it some day.

What do I think of the race that we're rarin'?
They're not worth my shawl.
For it's sooner they're threadbare an' nobody carin'.
Mine was the days—but there's no good comparin'.
God help us all.

And here is broad farce,—unliterary and delicious.

The Bold Unbiddable Child

By W. M. Letts

Now what is he after below in the street?
(God save us, he's terrible wild!)
Is it stirrin' the gutter around with his feet?
He'd best be aware when the two of us meet.
Come in out o' that,
Come in,
You bold unbiddable child!

He's after upsetting the Widow Foy's pail—
She'll murder him yet, Widow Foy!
An' he's pulling the massacree dog by the tail,
By the hokey! that young one is born for the gaol.
Come in out o' that,
Come in,
You rogue of a villyannous boy!

Go tell him his mother is seeking a stick
For a boy that is terrible wild.
If he cares for his feelings he'd better be quick,
Och! he'll draw in his horns when he sees me, will Mick.
Come in out o' that,
Come in,
You bold unbiddable child!

The Bellman prints a ghost poem of a different sort. The rhythm of Mr. Adams's verses is particularly good; it is reminiscent of the wash and slap of shallow waters.

Fantom Shoal

By J. Donald Adams

Restless are the sunken crew
Last become my prey;
Nightly rising through the blue,
They ward the ships away.

In sun and wind and sheeted rain,
Lurking here below,
Lies my shifting, wreck-strewn plain,
Where weird sea-gardens grow.

Far from flashing beacon rays,
Underseas I hide;
No rhythmic tolling bell-buoy stays
Rocking at my side.

Only twenty cursed hands
Gleaming in the night.
Laying bare my hidden lands
With an eery light.

NATCO·HOLLOW·TILE

THE vast number of **Natco Hollow Tile** buildings is no more notable than the diversified character of the structures which are now effective opponents to fire and other elements, because of **Natco** construction.

Houses, factories, offices, buildings of all sizes and types are each year entering more and more into the fire-safe class—the **Natco Hollow Tile** class. Evidence of its popularity is plentiful in suburb and country as well as city.

There can be only one conclusion. The use of **Natco Hollow Tile** in walls, partitions, floors and roofs does provide the safety from fire which should be uppermost in your mind in making any building plans. In its exemption from deterioration and its insulation against weather extremes, **Natco** further dominates the entire field of building materials—advantages that outweigh many times over the slight increase in original outlay because of its use.

Be sure that all the Hollow Tile Blocks that go into any building of yours bear the trade-mark **"Natco"** and then you can be sure that the building will be all that you expect—safe from fire, safe from weather, safe from time.

Before defining your building plans, send for our 64-page handbook, "Fireproof Houses," fully describing, with illustrations every detail and phase of **Natco** construction. Contains 80 photographs of **Natco** buildings. Mailed anywhere for 20 cents to cover postage.

Overland

The Reigning Electrically Started and Lighted Coupe For Women

IN the electrically started and electrically lighted Overland Coupe the women of America have for the first time their ideal motor car.

Touch a small foot pedal—and the car glides away as smoothly, softly and silently as an electric.

Press an electric button—and the entire interior is flooded with a soft light which comes from a frosted dome sunk in the ceiling.

Press another button—and the side, tail and head lights flash on.

Lighting, starting, stopping, power and speed all easily controlled by the simple touch of a little electric button or lever. That's all.

All the comforts, conveniences and simplicity of a $3500 storage battery electric, ***yet the cost is less than half.***

All the smartness and modishness of a high priced electric, yet the cost of maintenance is ***from 50% to 75% less.*** And in addition you have ***more*** power, ***unlimited*** mileage and a car that will take you, ***with as much comfort,*** on rough country roads as on the smoothest metropolitan macadam.

You and your family should have one of these magnificent 1914 Overland Coupes for the holidays. A new car for the new year! You cannot even imagine a more fitting gift.

Send for our handsome catalogue —illustrated and very descriptive. This tells the whole story. It's gratis.

Also, see this car at the Overland dealer's in your town. Look him up today.

CURRENT POETRY

(*Continued from page* 1021)

Since the time of Emma Lazarus, English poetry distinctly Jewish in tone has been rare. We have many skilful verse-makers of Jewish descent, but they are not patriotic—or they express their patriotism by other means than poetry. *Lippincott's Magazine* prints this passionate tribute to the Jewish race.

The Jew in America

BY FELIX N. GERSON

Wing thee, my song, and in majestic flight
Grace with fair melody the words I write;
That they, in some not too unworthy strain,
With pride and plaint, of glory tell and pain;
Say in what early dawn of history
High fate enmeshed our footsteps—made us be
The burdened bearers of a word sublime—
The portent and the amulet of time.

From that far vale, the cradle and the grave—
Where we beheld God and the world he gave—
We have come hither for that high word's sake,
Bound each to each with bonds that naught could break.

The golden thread along the paths we trod
Gleamed bright from daily contact with our God—
Through labyrinthine gloom of age on age
We knew its radiance as our heritage—
And tho in strange, far lands enforced to roam,
The broad earth held for us no alien home.

Spain saw us—Holland—and th' intrepid crew
Of the famed caravel whose captain knew
Where sky and ocean melted in the west
A new world waited for his wondrous quest.

A new world—with great portals far outflung—
Holding a hope more sweet than time had sung,
To which the Jew, of life's high quest a part,
A pilgrim came, the Torah in his heart.
Of his endeavor, how he thrived and came
To give new glory to his ancient name
And wore as diadem the thread of gold,
On many a page the chronicler has told.
A land of promise, and fulfilment too;
Where on a sudden olden dreams came true
Man was man's equal—unto every race
The path was leveled to the highest place.
Here grew we part of an ennobled state,
Gave and won honor, sat among the great,
And saw unfolding to our 'raptured view
The day long prayed for by the patient Jew.

. . . . . .

Fain turns my song unto some fairer note—
We guard a promise voiced in days remote,
The words of prophets, and our deathless hope,
That in dark hours when we despairing grope
In ever clearer accents shall be heard:
No tyrant's perfidy may kill God's word.

Still trembling, in the valley, in the gloom,
About us frowning rocks strange shapes assume;
But unto faith that fears nor wreck nor storm
There dawns a golden day that shall transform
These specters of a long and cruel night
To ministering friends in new-born light,
When tried by travail and by fire and rod
We shall emerge, unchanged, to face our God.

Here (from *The Independent*) is the epigrammatic expression of a great truth.

From All the Fools Who Went Before

BY MARGARET ROOT GARVIN

From all the fools who went before
I learned a wealth of wit!
For over Wisdom's darkest door
Some fool a lamp had lit.

Ye shun, O Sages overwise,
Experience's school,
And lose the lore—for which he dies—
Gained by some gallant fool!

PERSONAL GLIMPSES

MR. ALTMAN'S PECULIARITIES

BY quitting his position as assistant manager of the late Benjamin Altman's big store in New York a few years ago, Robert J. Campbell lost a quarter of a million dollars. In 1902, Mr. Campbell's health broke down and Mr. Altman sent him to California on a three-months' vacation with full pay. Mr. Campbell liked the Golden West so well that he decided to stay there—so well, in fact, that he fell for a mining scheme that did not pan out. He would have returned to New York at the end of his vacation had he known that Mr. Altman was going to bequeath three-fourths of his $40,000,000 estate to his employees. During thirteen years' service in the Altman store, where he saw the merchant many times a day, Mr. Campbell came to know pretty fully his employer's business methods and personal peculiarities, and he writes some of his intimate impressions for the Chicago *Tribune*, from which we quote:

Unlike most big-store owners, Mr. Altman, instead of making it a practise to tour his big store frequently during business hours, confined himself to his private office, where he would see only the heads of departments. Having been with him constantly as assistant manager for so many years, I must say that those who were remembered in Benjamin Altman's will deserved all they got. He was a hard worker and he expected hard work from his employees. Why, the first month after I left for the West I gained twenty-two pounds. Yet for $250,000—

Still, the terms of Benjamin Altman's will, declared to be the most remarkable document of its kind ever prepared, in which he distributed $30,000,000, three-fourths of his property, to his employees, were not a surprize to me. For Benjamin Altman, taskmaster tho he was, not only paid the highest salaries to his employees of any merchant in the United States, but in cases of sickness among his workers he made certain that there should be no suffering through lack of funds, and that the mind of the unfortunate one should be entirely relieved of worry. He left even his housekeeper $5,000, and his valet $1,000, providing they were in his employ at the time of his death. So impulsive that he often did the men under him injustice, I recall numerous occasions when I went to him in behalf of an employee he had misjudged, and upon convincing him that the man was loyal to his interests, found him only too glad to reconsider.

Mr. Altman was an indefatigable worker, arriving at the store at 9 o'clock in the morning and remaining until far into the night. After dinner he devoted his time to going over notations with the aid of two assistants. These notations laid out his work for the following day and upon arriving at his office he would summon the person whose name first headed the list. During the entire day, with the exception of five minutes to give him time to eat a

This is The Bissell

Electric Suction Cleaner

It does its work just as well as $500 to $600 built-in suction cleaners, yet costs much less than any portable cleaner that even approaches its power, size and efficiency. It moves 80 cubic feet of air a minute at terrific speed, picking up everything from the finest dust atoms to ravelings, lint, big cuttings and heavy refuse that less efficient cleaners cannot lift.

It's The Speed and Volume of Rushing Air That Count

Those two things give the measure of a suction cleaner's quality. The Bissell Electric Suction Cleaner excels because it has the most powerful motor ever put in a portable suction cleaner of anything near its lightness. Its 1¼ in. hose has four times the suction space of the usual ¾ in. hose. It has an 80 ft. circle of operation from any lamp socket. Weighs only 33 lbs. Is easily carried up and down stairs by any woman.

You Don't Have To DRAG The Bissell

It runs lightly beside the operator on large, rubber-shod wheels without conscious effort. It's not like pushing a heavy motor on a stick. Both tube and flexible rubber hose are extremely light, though large and strong. The tool slips easily over rug, hardwood floors, draperies or upholstery, requiring much less exertion than the handling of a broom.

You need not hesitate a moment in ordering by mail. The name "Bissell" has stood for extraordinary efficiency in high grade electrical machinery for over twenty years. We will pay the freight and let you test this wonderful cleaner for a month for a ridiculously small payment, without any obligation on your part. Decide leisurely—alone. Then you can own it, if you wish, for

Only $1.75 Per Week

Practically unbreakable, it gives complete satisfaction in the largest office buildings, churches, hotels, theatres, restaurants, etc., as well as in private homes.

With special appliances, which are furnished free, the Bissell Electric Suction Cleaner polishes silver, sharpens knives, etc., and at slight extra cost can be equipped to run washing machines, meat choppers, bread mixers and other light machinery.

Write today. Ask about our Easy Payment Plan.

Two-Sash Frame

YOU WILL FIND JOY

in the possession of a miniature glass garden. With it you can create an artificial summer for your garden in winter.

Many of your favorite flowers flourish abundantly in these frames. You can keep your table supplied during the winter months with a large variety of home grown vegetables. Very little time and effort are necessary to secure most gratifying results. The double glazed sash provides a glass compartment within the sash in which the warmth of the sun is stored. Hence no additional covering is necessary even when the thermometer drops suddenly to zero.

Start Spring seedlings of vegetables and flowers early and have large healthy plants weeks before your neighbors who must wait for moderate weather to plant in the open.

Lutton Sash Frames made in 2, 3 and 4 sash sizes, each sash 3 x 6 ft., single or doubled glazed. Any size shows a profit on the first crop and will give years of service. Carefully crated and shipped ready for immediate use. Frames sold with or without sash.

Make use of these frames this season. Write today for descriptive pamphlet D.

WILLIAM H. LUTTON
Office and Works Jersey City, New Jersey

sandwich, he pulled the wires—delving into this and that branch of the business.

The men under Altman soon learned that if they made a mistake, the thing to do was to go directly to him and explain. He was always considerate then, but if he learned of the mistake from other sources his sarcasm was withering.

As one particular employee who could not stand for Altman's criticism, I recall Barnes, a buyer who is doing well now in business for himself. The particular interview which put Barnes out of the running for shares of stock in the business was over the poor sales of cotton Bedford cord. Altman, by a system of his own which I will refer to later, discovering that customers were buying the striped and checked ginghams and leaving the Bedford cord on the shelves, called Barnes into the office at a time when I happened to be present.

"What's the matter with the Bedford cord?" he snapt.

"I am sure I don't know, Mr. Altman," answered Barnes, "I—"

"You bought it, didn't you?" interrupted Altman. "Are you in the habit of buying stuff that you don't know anything about?"

"I try to buy judiciously," apologized Barnes. "I thought the Bedford cord would sell, and I believe it will later."

"Later!" fumed the merchant. "What do you mean by later? Summer's all but gone now. What's selling in the place of Bedford cord—the striped and checked ginghams? Take the striped and checked ginghams off the shelves until the Bedford cord is gone."

"Yes, Mr. Altman," bowed Barnes, leaving the room.

When Barnes had gone I turned to Altman and said: "I trust you will pardon me, Mr. Altman, but I believe it would be a mistake to take the ginghams off the shelves. There are many customers who would come into the store purely to get ginghams, and they would not be satisfied with the Bedford cord. Both sales would be lost."

Altman thought for an instant and then prest the button for Barnes. When the buyer reentered the room Altman burst out with: "Why didn't you tell me it would be a fool move to take the ginghams off the shelves?"

And Barnes answered by on his putting hat and leaving the place for good.

Mr. Altman gave more attention to some of the departments than to others. When a shipment of women's clothes arrived he had them conveyed to his office. Models donned the gowns and paraded up and down before the merchant. The saleswomen were asked to write down what they thought the articles could be sold for, and when this was done, Mr. Altman looked over the prices and put down his own figures. He contended it was not what an article cost, but what it could be sold for, that should determine the price. Mr. Campbell goes on:

Every article that entered the Altman store was registered in books, showing the quantity received, the date of entry, the cost price, the selling price, etc. When the goods had been in stock four weeks and they

had not been sold they were transferred to what was called the "slow list" and watched closely. After being on the "slow list" two weeks, they were then entered on the "give-up list."

These "give-up lists" were taken to Altman's office every Friday, and if any article on that list had not moved since the previous Friday it was reduced in price every Friday until sold. It was Altman's idea to sell the article for what it would bring and reinvest the money in other goods that would make a profit.

During the years that Altman was struggling to lift his store from a popular one to one catering to the high-class trade, he used every effort to get perfect merchandise and perfection from employees. I recall a William Leys, a Scotchman, who had served his apprenticeship in the black-goods department with A. T. Stewart & Co. Leys was about 30 years of age and had left A. T. Stewart & Co. to go behind the counter in the Altman store, when Altman happened to stop to ask him a few questions one day. Leys gave answers so cleverly and showed his knowledge of customers to be so keen that Altman immediately made him a floor-walker on the same floor where he had been clerking.

A few years later Leys was promoted from floor-walker to manager, and of all the managers in the store Leys was the only one who ever could be dogmatic with Altman and get away with it.

I want to cite an instance to demonstrate Altman's willingness to undergo hardship himself, as well as his intense interest in the business. Some years ago he had an attack of muscular rheumatism which resulted in the shortening of one of his legs. His physician told him that if he would consent to remain in bed for six months with weights attached to the afflicted limb it would be restored to its normal length.

Mr. Altman immediately made arrangements whereby he could undergo the treatment, and yet, notwithstanding the agony, attend to the most minute details of his business by having messengers go to and fro between his store and his home. At the end of six months he returned to his store with his limb in good form.

There was nothing Altman wouldn't do for the man who was able to meet his requirements precisely as he would have met them himself. Such a man was William Leys, whom he promoted from a clerk to a manager. When Leys died Altman chartered a special train to convey the employees of the store to New Rochelle, where the funeral was held, and upon the grave he had thrown a blanket of violets costing $600. To the widow he gave a check for $50,000.

Twice a year Altman went over the salary ledgers with the managers and asked questions briskly, as follows: "How about Mr. M—? Is he entitled to an advance? Why?"

Mr. Altman was of stocky build, being about 5 feet 6 inches in height. He was always well groomed. He was not a proud man; he was only too glad to take a tip from a cash-boy if he thought the suggestion would aid his business. To make his store as nearly perfect as possible was a mania with him.

It is not to be wondered at that his art collection was unique, altho he cared little for the pictures in themselves. What he

Indian Made Slippers as Gifts

Genuine Indian slippers made in gray or suede leather, trimmed with real Otter fur and toe decorated with colored beads. Unique and practical gift. Serviceable and always appreciated. Misses' and Ladies' sizes, $2.50; Men's, $2.75; delivery free. Mention size. Write for booklet showing many Adirondack Christmas novelties.

E. L. GRAY & CO., 101 Main Street, Saranac Lake, New York

6%

This Christmas Gift Will Last Ten Years

IDEAS on Christmas giving are changing materially. Many persons who formerly sent expensive, and even extravagant remembrances, are now confining themselves largely to cards or simple presents. There is even an organization whose avowed object is to discourage useless giving.

In a few months many millions of this year's holiday offerings will be worn out, lost or forgotten. Then why not consider the elements of permanence and actual merit when selecting gifts for your wife, your son, or your daughter?

These qualities are well embodied in A-R-E Six's, the American Real Estate Company's 6% Gold Bonds. They are issued in denominations of $100, $500, $1000 and upward, pay interest semi-annually and return principal in 10 years.

They are ideal Christmas gifts for any member of the family. They never wear out, they are always fashionable, and twice each year for ten years they bring a happy reminder of the gift and giver. Moreover, they teach a forceful lesson in thrift and business management—a priceless gift in itself.

You will be interested in our new map of New York City and book of views showing the location and character of property on which A-R-E Six's are based. You are welcome to them for the asking.

American Real Estate Company

INVESTMENTS AND FINANCE

THE VIEWS OF SIR GEORGE PAISH AND MR. SCHIFF

ABOUT a month ago, Sir George Paish, editor of the London *Statist*, the leading English financial weekly with perhaps one exception, who has been in this country before on a tour of economic investigations, again arrived in New York. He came for the special purpose of looking into our financial state, in its relations to the present strained condition of foreign financial markets, and about two weeks after his arrival he cabled his paper an interesting and optimistic summary of conditions as he found them. These conditions he declared to be "fundamentally sound." Nowhere did he find anything "to indicate inflation," but there was present a "disposition to go slow," and this had created "an atmosphere of suspended animation." To this slackness in trade some impetus had been given by "uncertainties as to events in Mexico."

Trade was found by Sir George to be "remarkably good, despite hand-to-mouth buying of all commodities." Should the Mexican question be solved peaceably, the country was likely to reach "a high degree of prosperity." He noted the hopes entertained by the railroads for an increase in freight rates and the importance an increase would have for them in raising the capital they require. This country was "still able to take a large amount of gold from London," the trade balance being favorable, but, while we are able to take gold, he thought little or no gold likely to be taken, inasmuch as the New York bankers realize "the disturbing effect it would have on the international money market, including the danger of an advance in the Bank of England rate of discount to 6 per cent."

Sir George's cable dispatch was followed within a few days by a statement from Jacob H. Schiff, before the New York Chamber of Commerce, as to the need for early action by Congress on the Currency question, in which he recalled his own prediction of the panic of 1907 while predicting that, unless monetary reform took place soon, the country would now have to face "a serious situation." This statement was at once interpreted, in financial and other quarters, as an intimation that in 1913 a panic, in his opinion, would again occur. Mr. Schiff, however, did not intend his remarks to imply this. He declared the next day, with emphasis, that there was nothing like a financial panic, or crisis, in sight. What he meant by "a serious situation" pertained mainly to a tightening of the market for loans.

The Wall Street Journal, commenting on the incident, said the difference between 1913 and 1907 was "as wide as the difference between contraction and expansion, between sound and unsound banking." It believes that the banking position is now "strong as never before." In 1907, many of the banks were "overloaded with unmarketable securities," but the contrary is now the case. Since the beginning of the year caution has been so much the watchword that the country is "prepared to withstand a period of depression with more than customary equanimity."

Prominent bankers, interviewed after Mr. Schiff had made his remark, agreed with the latter view. Mr. Vanderlip "saw no evidence whatever that we are now facing a crisis in business, or in the money market." And Henry P. Davison, of the Morgan house, could see "no indication of a panic." Several other bankers of prominence exprest similar views.

THE STATE OF TRADE

Reports from many quarters still indicate hesitation in trade. There is "an absence of buying power," due, it is believed, to a waiting attitude as to what the new tariff may bring forth and to political uncertainties. The Mexican situation, currency legislation, the policy of the Administration toward trusts, are much in the public mind. That any long-continued trade depression is before us, good authorities do not believe. "Existing conditions do not favor this view," says *The Wall Street Journal*, the mercantile world being "too well liquidated." Moreover, there is "an absence of expansion." Trade has long been conducted on a hand-to-mouth basis, so that the foundations "have become strong." With the incoming of the new year many believe that conditions making for activity and prosperity will be ushered in. A look at the steel, copper, rubber, leather, and some other important manufacturing interests shows that operations now, as compared with the high level of several months ago, are not more than 10 or 20 per cent. less, while some other lines have not suffered to any noticeable extent, if they have suffered at all.

Dun's Review finds "a condition of irregularity," but no evidence of a general reaction. In dry-goods markets transactions have "noticeably increased," and in some quarters have been "heavier than at any time in the past three years." *Bradstreet's* finds that the distributive trade "continues to expand," altho there is further "slowing down in the wholesale trade." Among retailers, the volume of business, according to *The Wall Street Journal*, is "very strong." Leading department stores say it is "steadily pushing ahead of last year," and this is true, not only of New York stores, but of those in the Middle West and Far West, where, in some localities, trade in certain lines "is more active than ever." In the Western live-stock business, the traffic gains are "slightly over those for 1912." From Kansas City the feeder movement "increased 36 per cent. over a year ago," and the younger cattle shipped back to the farm in feed lots are "150 per cent. greater than in the year 1912."

ANOTHER BIG GENERAL RAILWAY MORTGAGE LIKELY

The Erie Railroad is the latest of the large systems to consider the putting out of one huge mortgage in which to embrace eventually all existing mortgages and other mortgages that may be issued in the

future for extensions and betterments. Just how far the matter has gone with the management of the Erie does not appear. That a scheme of this nature has been under consideration, however, seems no longer to be questioned in financial circles. The Erie would thus become the seventh or eighth railway system having plans for one huge mortgage either well under way or in contemplation. Earliest of them was the Great Northern, which in 1911 decided to put out one for $600,000,000. More recently the step was undertaken by the St. Paul, Pennsylvania, and Southern roads.

The amount of the mortgage contemplated by the Erie is said to be $500,000,000, to be put out in instalments extending over a term of years as needed. For its immediate needs the Erie requires only $27,000,000, that sum to meet short-term obligations falling due within the next year and a half. Before 1920 Erie's bonds totaling in amount $61,733,000 will mature. In general, the purpose of the proposed mortgage is to provide a security which will be, so to speak, a "marketable commodity," and one which, at the same time, will simplify and consolidate the finances of this road.

These finances have always been complicated. They have also been a source of disquietude and confusion among investors. Late years have seen marked improvements in the condition of the Erie in most other respects. With the completion of its double track to Chicago, its earning capacity has been greatly advanced. This, with other improvements in grades and cut-offs, has so materially reduced the cost of hauling trains as to give ground for confidence that the proposed new mortgage could be successfully issued. Once it has been authorized it is believed that sales of bonds could be made on much better terms than Erie bonds now bring or have recently brought. Erie still has bonds on hand available for sale, but as the rate of interest on them is limited to 4, they could not now be sold in the open market for more than 80, if so much as that.

The plan is to have the new monster mortgage authorized under conditions which would permit the rate of interest to be fixt by the directors each time a portion of the great sum were offered to the public, this rate to be determined by the conditions that prevail in the market at the time. In general, it may be said of these huge mortgages that higher prices could be obtained for them than for bonds under the methods now employed. Conditions differ with different roads, but it may be said that a single mortgage for some hundreds of millions of dollars would materially benefit the finances of any one of them. Bankers are believed to have encouraged several railroad managers to issue bonds hereafter in this way.

PROFIT-SHARING IN BIG BUSINESS

The plan of Benjamin Altman, under his will, by which employees are to share in the profits of the Altman business, and steps in the same direction taken by a manufacturing concern in Youngstown, Ohio, are noted by *The Wall Street Journal* as "the latest adoptions by large companies of a practise which has become general among industrial corporations in the last decade." With corporations this has not

Barrett Specification Roofs

Are Recognized as Standard

THE Barrett Specification prescribes the exact procedure for using pitch, tarred felt and gravel (or slag) so as to make the most economical and satisfactory roof known, and defines with precision the proper quantity and quality of materials to be used.

The procedure demanded is the one which gives the least chance for careless workmanship.

The Barrett Specification is practical and is used regularly by the best architects, engineers, roofers and builders.

It is recognized by them as standard.

A Barrett Specification Roof will usually last at least twenty years and rarely requires any care or attention during that period. The maintenance cost, therefore, is nothing. No other form of roofing is so economical.

A copy of the Barrett Specification in full sent free on request. Every owner, builder and engineer should have it.

BARRETT MANUFACTURING COMPANY

been wholly an act of beneficence or even of intended justice. Combined with motives of this character are others more in the nature of selfishness, since, by means of the cooperative efforts thus secured from employees, manufacturing and mercantile concerns expect to increase their business. The practise some time since was followed by the big Steel Corporation, by one of the great rubber concerns, the Harvester enterprise, one of the biscuit companies, and by a famous powder company. Pioneer among corporations in the movement was the Steel Corporation. It was as far back as 1902 that this company allowed its 55,000 employees (the number then) to acquire preferred stock at a price below current quotations; in 1909 it began to permit its employees to acquire common stock. Both offerings are believed to have been "very successful."

Men favoring these profit-sharing schemes have been influenced in notable degree by the fact that present-day industrial corporations are the result of combinations of several smaller concerns that were formerly controlled and often managed by one individual. This combination into one great corporation led to the elimination of that close personal element and large pecuniary interest which were formerly responsible for the prosperity of any business. Some scheme therefore was needed by which could be revived the old personal incentive to efficiency and energy, and by which it could be distributed throughout the organization.

It is believed that profit-sharing provides this needed element in the business of great corporations. In several cases the belief has become so great that, in order to induce employees to become shareholders, extra payments have been made to them annually, provided they have been in continuous service for a number of years and have proved themselves efficient. In the case of the Steel Corporation, when both preferred and common stock were offered in 1911, it was provided that an employee, in subscribing for stock, must present a certificate that he has been "continuously in the employ of the corporation for five years and has shown a proper interest in its welfare and progress," in which case he may receive a payment of $5 per annum per share on the preferred he subscribed for and $3.50 per share on the common. The Harvester company offered a similar plan, the special payment per share of preferred being $4, and per share of common $3.

OUR TARIFF AS AN ISSUE IN CANADA

That our new tariff will have an important bearing on the next parliamentary election in Canada is amply foreshadowed in reports received from that country. Conditions promise to cause a lively demand—indeed they have already caused one—for reductions in the Canadian tariff on importations from this country. Sir Wilfrid Laurier has given emphasis to this sentiment in speeches he has made.

How important the matter has become will best be understood by reference to the great growth that has taken place in recent years in the commerce between Canada and the United States. In spite of former

tariff restrictions by each against the other, their commerce back and forth has grown at what is called, by a correspondent of the London *Economist*, "an astonishing rate." In fact, it has become greater than the combined commerce which Canada carries on with the United Kingdom and all other parts of the British Empire. For the fiscal year ending in 1913 the actual figures were—with the United Kingdom, $316,000,000; with the rest of the British Empire, $44,000,000—a total of $360,000,000. Against this is set a total commerce with the United States of $608,000,000.

The writer believes that, under the new tariff, this trade between Canada and the United States "will advance even more rapidly than heretofore." Since 1897 Canadian imports from this country have increased from $62,000,000 to $441,000,000. It was in 1897 that Canada first gave a preference to British goods, but in spite of this the increase in imports from the United Kingdom was far less than the increase in those from the United States, the figures being, in 1897, $29,000,000; in 1913, $108,000,000. The prospect is that "before long we shall sell far more to the States than to the mother country, besides purchasing several times more from them than from her." Every year American manufacturers "are strengthening their hold on the Canadian market." Other items in *The Economist's* interesting letter include the following:

"Last year, they sent us $115,000,000 worth of dutiable iron and steel goods; altho not long ago our iron men considered it an outrage that they should be permitted to send a modest $20,000,000 worth. It is now believed that our sales of farm products to the States will be very much increased on account of the lower American duties. We have a superabundance of wild land, while the Americans have comparatively little left outside the irrigated areas, where cost of production would be higher than with us; in time, therefore, Blaine's prophecy may be fulfilled, and, with the assistance of the Argentine, we shall feed their vast population, and make more money out of the business than by shipping to England or other distant markets.

"The farmer in the older Provinces will derive substantial advantage from the Underwood tariff. His cattle, formerly taxed 27½ per cent., are now admitted free into the States; but at present he has not many to ship. Meats of all kinds are also free, but in this case, as well as in that of cattle, he will have to face the competition of Mexico, the Argentine, and Australia. The free admission of eggs, milk, and cream, and the reduced duties on butter and cheese are bound to encourage the dairy industry of Ontario and Quebec; and the farmers there likewise expect to 'make good money' by the freeing of hogs and sheep, and the lowered tariff on horses, oats, barley, hay, poultry, fruit, and vegetables.

"The exports of Canadian-grown wheat to the States last year were only 8,350,000 bushels, and have never been higher, as compared with an export of 75,000,000 bushels to England. The former American duty was 25 cents a bushel. There is little doubt that if we remove our wheat and flour duties, the Minneapolis millers will forthwith import large quantities of our hard grain for mixing with their softer varieties; but the opinion of a leading Manitoba farmer that within ten years the West will send more wheat to the States than to England is surely oversanguine.

ATWOOD GRAPE FRUIT

No other Grape Fruit equals it in Flavor

"*American Medicine*" *says:*

"Realizing the great value of grape fruit, the medical profession have long advocated its daily use, but it has only been within the past few years that the extraordinary curative virtues of this "king of fruits" have been appreciated. This dates from the introduction of the ATWOOD GRAPE FRUIT, a kind that so far surpasses the ordinary grape fruit that no comparison can be made."

E. E. Kecler, M.D., in the "Good Health Clinic," writes:

"In all cases where there is the 'uric acid diathesis' you will see an immediate improvement following the use of grape fruit."

A well-known physician writes:

"I prescribe grape fruit for all my patients, and tell them to be sure and get ATWOOD GRAPE FRUIT, as other grape fruit to the Atwood is *as cider apples to pippins.*"

If you desire, your grocer or fruit dealer will furnish the ATWOOD Brand in either bright or bronze. It may be procured at first-class hotels, restaurants and clubs. Ask for ATWOOD Brand. For home use buy it by the box; it will keep for weeks and improve.

ATWOOD Grape Fruit is always sold in the trade-mark wrapper of the Atwood Grape Fruit Company

THE ATWOOD GRAPE FRUIT CO., 80 Maiden Lane, New York

THE ATWOOD GRAPE FRUIT COMPANY. MANAVISTA, FLA. TRADE MARK.

"The consumer in the cities and towns says he feels the effects of the new American tariff already, the price of several food commodities having risen, owing to the wholesale shipment of them from Canada to the States. This may be true in some places, but it is some comfort to know that what he loses the Canadian farmer gains. Had he voted for reciprocity in 1911 we should have had to lower our tariff there and then on a good many articles of food coming from the States, and he would not have been hurt.

"Of course, if trade should grow bad there would be the usual cry in the States that the Democrats were responsible, and the protected interests in Canada might escape by the skin of their teeth from more or less drastic reductions. If, however, all goes well, the Canadian Parliament will be obliged, not at the coming session in January, but at some time in the near future, to buckle to the task of lowering the tariff; and that will, indeed, be a day of wrath for the home manufacturer, who has trusted too much to it, and not exerted himself sufficiently in the improvement of his machinery and business methods."

ENGLISH INVESTMENTS ABROAD

Current returns in England for income-tax purposes give interesting clues to the growth in British investments outside the home country. Incomplete as they are, these returns show such investments for 1911–12 of over $500,000,000. There was a moderate gain in takings of colonial and foreign government securities, but a much larger one—in fact, the chief increase—of miscellaneous investments. The total of $500,000,000 shows an increase over the previous year of about $15,000,000. In comments on these figures *The Financier* (London) prints the following table and comments:

Year	India Gov'ment stocks, loans, and guaranteed rys.	Colonial or foreign Gov'ment securities	Colonial or foreign Securities, other than Gov'ment not included in column 2	Total
1886–7...	£7,793,097	£16,243,321	£20,471,584	£44,508,002
1902–3...	9,048,777	19,935,643	34,844,295	63,828,715
1903–4...	8,695,929	20,263,072	36,906,305	65,865,306
1904–5...	8,760,185	20,880,837	36,421,087	66,062,109
1905–6...	8,862,807	22,069,260	42,967,198	73,899,265
1906–7...	8,768,237	22,270,846	48,521,033	79,560,116
1907–8...	8,925,692	23,414,624	*52,775,930	*85,116,246
1908–9...	9,037,209	23,204,471	56,595,713	88,837,393
1909–10..	9,455,519	24,618,988	†59,189,497	†93,264,004
1910–11..	9,654,846	25,073,446	†66,224,431	†100,952,723
1911–12..	9,753,113	25,296,700	68,844,854	103,894,667

*Estimates for the full year.

†Owing to the delay in passing the finance bill for 1909–10 the figures are lower for 1909–10 and higher for 1910–11 than they would have been under normal conditions.

"The data are exceedingly interesting, for they go to show that in the past twenty-five years there has been an enormous growth in the income received from British investments in the colonies and in foreign countries, while at the same time the revenue derived from British Government securities has shown an actual shrinkage in the same series of years. Bearing in mind the fact that the quarter-century covered has been a period of steady expansion in the foreign trade of these islands, it is, we think, a fair assumption that the growth of our overseas trade has been immensely stimulated by the great volume of British capital employed in foreign countries, whose development has thereby been accelerated, and who have consequently become better customers to the British manufacturer and merchant. The investment of capital abroad has notoriously received a pronounced stimulus during recent years, owing to the decline in

the popularity of British Government stocks, home railways, breweries, and other securities, which, for a variety of reasons, have ceased to make their former appeal to the capitalist. A still more potent factor has been the creation of a large and steadily growing mass of colonial and foreign securities bearing higher rates of interest than those to which the British investor had previously been accustomed."

FEWER BUILDING ACTIVITIES

Reports for October received by *Bradstreet's* from ninety-four cities show in building activities "a heavy decrease," both from September this year and from October a year ago. The total expenditure showed a decrease for the month, from September this year, of 22.4 per cent., and one of 17.1 per cent. from October last year. Commenting on the returns *Bradstreet's* says:

"The September total this year, it might be recalled, showed a gain of 11.7 per cent. over the like month a year ago, but the heavy drop in October shows that the operation of new building laws in many cities was to cause something like a hot-house movement in the filing of permits in September, which ceased with the passing of that month. Only thirty-eight cities of the ninety-four showed gains in October over the like month a year ago, while fifty-six showed decreases. The record of building expenditures at leading American cities reporting monthly, quarterly, and yearly from January, 1911, down to and including October, 1913, shows the ebb and flow in the building industry in the past thirty-four months, as follows:

	1912	1911	Change per cent.
Jan., 132 cities	$41,411,871	$48,555,636	D. 14.7
Feb., 134 cities	54,607,238	42,842,495	I. 27.4
March, 141 cities	78,588,240	80,470,184	D. 2.3
First quarter	$174,607,349	$171,868,315	I. 1.5
April, 140 cities	$99,561,328	$83,339,805	I. 19.4
May, 141 cities	93,105,947	79,960,920	I. 16.4
June, 140 cities	94,707,643	87,946,080	I. 7.6
Second quarter	$287,374,918	$251,246,805	I. 14.3
Six months	$461,982,267	$423,115,120	I. 9.1
July, 141 cities	$85,720,991	$78,407,023	I. 9.3
August, 142 cities	81,900,934	91,268,999	D. 10.2
Sept., 142 cities	67,921,024	72,225,168	D. 5.9
Third quarter	$235,542,949	$241,901,190	D. 2.6
Nine months	$697,525,216	$665,016,310	I. 4.8
Oct., 143 cities	$72,275,680	$66,746,617	I. 8.2
Nov., 141 cities	69,935,837	66,049,706	I. 5.8
Dec., 146 cities	73,370,322	54,315,166	I. 35.0
Fourth quarter	$215,581,839	$187,111,489	I. 15.2
Twelve months	$913,107,055	$852,127,799	I. 7.1
	1913	1912	
Jan., 145 cities	$54,340,563	$48,692,024	I. 11.6
Feb., 145 cities	61,141,275	51,494,295	I. 18.7
March, 146 cities	81,220,557	79,409,845	I. 2.2
First quarter	$196,702,395	$179,596,164	I. 9.5
April, 145 cities	$96,918,246	$103,189,722	D. 6.0
May, 146 cities	88,706,252	95,008,769	D. 6.6
June, 146 cities	80,859,953	96,958,920	D. 16.6
Second quarter	$266,484,451	$295,157,411	D. 9.7
Six months	$463,186,846	$474,753,575	D. 2.4
July, 145 ities	$75,501,375	$87,580,278	D. 13.7
August, 146 cities	63,720,880	83,462,183	D. 23.6
Sept., 143 cities	76,720,050	68,680,476	I. 11.7
Third quarter	$215,942,305	$239,722,937	D. 10.0
Nine months	$679,129,151	$714,476,512	D. 5.0
October, 94 cities	$45,378,512	$54,765,902	D. 17.1

For the ten months of the year 1913 the aggregate value of building was $724,507,663, a decrease of 5.9 per cent. from 1912, which year, however, showed a gain of 7.1 per cent. over 1911."

Champion Priming Plugs Start Any Motor, In Any Weather

You'll have to prime your motor if you run your car or motorcycle this winter.

With **Champion Priming Plugs** it is easy. They will start **any** motor—**any** time—on the first quarter turn.

It doesn't make any difference how cold your cylinders are. You don't have to worry about the lean mixture that low temperatures produce.

You are independent of weather conditions and low grade fuel troubles if your car has **Champion Priming Plugs.**

They put the few drops of gasoline needed for starting right where you want them—then fire them with a hot, fat "Champion" spark.

You can't get the same effect with priming cocks; they admit the gasoline too far away from the firing points.

With **Champion Priming Plugs** the fluid goes down through a channel in the wall of the plug itself, making gas at the point of greatest heat.

Study the picture. Our system is so simple that you can **see** it easier than we can **tell** it.

Champion Priming Plugs won't leak compression and they won't "soot up."

They are the best spark plugs made; that's why the manufacturers of three-fourths of all the cars made in America use them today.

We guarantee them to work perfectly—or your money back.

See that the name "Champion" is on the porcelain

CHAMPION PRIMING PLUG
Open needle valve slightly (you needn't remove glove) and inject gasoline. Passing through its own channel to plug base, it vaporizes directly at spark point.
New steel needle valve hardened and ground to a perfect compression tight seat. Steel cone-lock washer holds valve securely against vibration.

Sold everywhere at $1.25 each. If your dealer is not yet supplied, use the coupon and send us $5 in any safe form, for a set of four Champion Priming Plugs—prepaid.

Made in a special size for motorcycles. Disregard coupon when ordering them for that purpose. Send name of motorcycle with your remittance.

What a Dollar Bill can do

for your backyard and the high cost of living.

IF you have a backyard or a garden that is not working for you to the limit of its possible efficiency, here is the best investment you can make. The intensive culture of gardens can be so developed by the "Garden Profits" System that small plots will frequently produce as much as the average small farm does now.

In this book, by one of the Agricultural Editors of *Country Life in America*, the best stories of 1000 garden successes are gathered together, reduced to simple terms and systematized for your ready use. Every phase of gardening is discussed comprehensively and expertly. Fifty illustrations and scores of plans and planting tables point the way to as many economies of time, work and money. A carefully prepared index adds great value as a ready reference guide throughout the planting season.

THE GARDEN MAGAZINE

is the final authority on all things horticultural. It aims to interest people in gardening by showing them how to get results in the most attractive and practical way. It has helped to decrease the cost of living in hundreds of homes by encouraging the use of once-neglected backyards for truck gardens.
It has brought health and joy into households by bringing their members into closer touch with nature. Among the leading features for the next year are the following:

Efficiency in Backyard Gardening

By Adolph Kruhm. These articles will help you make your garden produce more. They deal with the following subjects: Preparation of the soil, sowing and seeds, the cultivation of crops, crop rotation and the keeping of records.

New and Better Plants for the Hardy Garden

A series of articles written by experts dealing with improved types, races and varieties of shrubs, herbaceous plants, etc.

The Home Fruit Garden

By J. R. Mattern. These articles will show you which orchard fruits are best suited to your soil, climate and needs and how to plant them.

The Months Reminder

What to do right now and why and how to do it in *your* garden. The timeliest practical advice, warnings and explanations.

$2.00 worth for $1.00

A well-printed, strongly bound book of over 200 pages. It retails at one dollar. And *eight* issues of the *Garden Magazine*.

Lit. D. 11-22

did was give a man who did know about pictures the money, with orders to go out and find the best. I do not believe that Altman cared for anything outside of his business. When a rest was absolutely necessary he took a trip to Europe.

A GIANT ON A GIANT'S JOB

BERKELEY, the university city of California, is said to be one of the cleanest towns, morally and physically, in the world, and the giant chief of police, Gus Vollmer, gets most of the credit. Chief Vollmer learned to fight during some campaigns against rebellious clans in the Philippines, and when he laid aside his sword and firearms and returned home, J. Stitt Wilson, the Socialist mayor, made him commander in a war on ordinary thieves, desperadoes, rowdies, loafers, weeds and all kinds of uncleanness. In 1905, when the population of Berkeley was 25,000, property amounting to $21,780 was stolen from good citizens. In 1912 the population was about 50,000, and the loss through theft was $12,000. His work is described by Harold French in *The Sunset Magazine:*

Gus Vollmer grew up with the college town. Altho six feet, plus, with dignity to match his commanding stature, he still answers to his boyhood name. He is an intuitive reader of character.

Vollmer won his spurs in the quelling of the Philippine insurrection. Early in the outbreak, the Gugu guerrillas had been having a gay bit of glory in sniping the Americanos along the Pasig River. Vollmer was detailed with a platoon of artillerymen to break up their game. Commandeering a scow, he installed improvised machinery upon it and sheathed its sides with iron. With a handful of daredevils manning rapid-fire guns, he cruised up and down the river scaring and scattering the bushwhackers until he had completely pacified the pirates of the Pasig.

Shortly after his return from the wars he was given charge of the police department of Berkeley. The city was growing rapidly, new tracts were spreading all over the map, and as a consequence the slender force of police was unable to patrol the entire territory. Vollmer mounted his men on bicycles, which enabled them to come swiftly and silently wherever they were needed. He next arranged a system of signals whereby he could communicate with his patrolmen at a moment's notice. By touching a switch, an electric current flowing through wires in various districts flashed red signals at the intersections of certain streets, and when they winked their warnings the officer on that particular beat would catch this high sign and rush to the nearest police-telephone box, where he would receive his instructions. This installation has proved to be such a signal success that many other municipalities have since adopted its features.

Vollmer transformed his offices into a technical laboratory where he and his subordinates studied every phase of crim-

THE GIANT HEATER CO., 1464 Temple Street, Springfield, Mass.

inology, specializing upon the evolution of systems of identification.

All the data obtainable upon the means of identifying criminals he has cross-indexed in a system of filing-cabinets. In other indexes are the records of all articles sold to pawnbrokers in the Western cities, by which means he is enabled to trace stolen goods to their more or less innocent purchasers, and thereby he secures their return. Between one-third and one-half of the loot that is pilfered from Berkeleyans is restored to its owners by this systematic method of conducting searches for its recovery.

Chief Vollmer has been very successful in deterring crime by treating delinquents who have come into his custody as patients to be cured rather than bad people to be brutalized by rough handling. We read on:

Many a young man who is now leading a clean and honorable life blesses "Golden-Rule Gus" for his practical help.

Here is one illustration of the way the chief of "Spotless Town" combines science, efficiency, and humanity in the practise of his profession. An ex-convict who was released from San Quentin prison a few months ago came to Berkeley to begin a new life, and engaged in the occupation of a huckster. Wearied with the plodding of a long, laborious day, he slept for seven hours in his lonely room, unmindful of the fact that a bandit had held up three trolley-cars near his new home. Vollmer's men joined in the hunt and when the carmen described the appearance of the desperado they turned to the almost infallible card index and traced the scent to the unlucky ex-convict. They got their man and found he could not prove an alibi. The conductors and motormen "positively identified" the huckster as the "hold-up man." He was arraigned for the crime, and the prospect of prison walls for life seemed certain. But Vollmer felt intuitively that his department had committed a cruel error. Altho the direct evidence was deemed conclusive, he busied himself looking for other clues. On the night of the robbery a boat disappeared from its moorings on the Berkeley water-front. Later it was found on the San Francisco shore and in it lay a razor on which were blond hairs. These faint traces convinced Vollmer that the person who stole the boat with which to cross the bay had a good reason for getting out of Berkeley's back door instead of leaving it on the brilliantly lighted electric trains. He followed up this clue until a few weeks later a midnight thug who held up a San Francisco car was shot and killed by the metropolitan police. His hair matched the wisps on the razor as exactly as other evidence proved him to be the real criminal. Finally, the Berkeley carmen identified the dead bandit as the man who had robbed them, and the innocent man was freed. Vollmer had on his own account engaged a lawyer to defend the man who had been unjustly accused of crime, so confident was he in his innocence.

"Big Brother" Gus is the term of endearment applied to this charitable chief by the boys of Berkeley because of his successful policy of dealing with juvenile offenders. When they fall into his hands, after committing some such offenses against the

Analysis of Income Tax Law

For Distribution to Investors

Anticipating many inquiries regarding the Income Tax Law, we have prepared a handbook on this subject. It contains an analysis of the practical operation of the law and a résumé and history of income taxation in this country and abroad; also the full text of the law and the regulations issued by the United States Treasury Department. Later rulings by the Treasury Department and decisions by the Courts will necessarily affect the law's interpretation and application. The analysis has accordingly been expressed in general terms and it is presented to the investing public in the belief that it will prove of interest and help.

A copy of the Handbook (No. 5) will be sent upon request.

The man who is "Always Tired-Out" will soon be worn out.

If the day's work fags you—

If an ill-chosen meal upsets your digestion—

If a sleepless night spoils the next day—

Then you are *not normal*, but are below par, unnecessarily, yes, and shamefully.

You were given a body that had an abundant *reserve fund of energy* to draw upon in just such hours of need.

The Thompson Course

of Exercise is a rational, pleasant and easy means of securing and maintaining that reserve power which your body originally had and which you have dissipated by unthinking neglect.

My Course is different from any other treatment in that it benefits (by natural movements scientifically applied) the *governors* of the bodily machine, i. e., the heart, stomach, intestines, etc. All these are *muscular* and can be strengthened by proper exercise. Yet, as far as I know, until my Course was evolved, no systematic treatment existed that was based on this axiomatically natural method.

The clearness of your mind, the strength of your nerves, your hopefulness and joy in living, all depend on the tone and vigor of your vital organs.

I offer you something that will benefit every inch of your body and your brain through every minute of your life, and I offer it on free-trial terms that make it impossible for you to lose a penny.

Are you interested enough in making yourself a normal human being to send for and read my book, "Human Energy" (sent free and postpaid)? You will find it very startling yet obviously true.

J. EDMUND THOMPSON

Suite 73, Exchange Bldg., Worcester, Mass.

Clark Heaters for WINTER DRIVING

In Auto, Sleigh or Carriage

During coldest weather a Clark Heater will always keep you warm and cozy. **It supplies the heat without flame, smoke or smell.** We make 20 styles of these heaters—**from 90c to $10.** Most of them have attractive carpet covers with asbestos lining. They fit in at the feet of any vehicle, occupy little space and are just the thing for real comfort. You cannot bend or break them—they last forever. We guarantee that you will be well satisfied or your money will be refunded. **Ask your dealer for a CLARK HEATER.**

CHICAGO FLEXIBLE SHAFT CO.

88 La Salle Avenue Chicago, Illinois

propertied classes as "swiping" fruit and other mischievous misdemeanors, he first communicates with their folk, and then, instead of putting them in jail, where they would be exposed to contaminating influences, he puts them on their honor to amply atone for their wrong-doing, or in extreme cases he exercises the right of eminent domain, *in loco parentis*, and applies salutary spankings. As a result, these minor offenses have become so infrequent that now it's a long time between spanks.

"Spotless Town" was appropriately applied to Berkeley about a year ago, when the Chief and his men carried on a crusade against weeds and unsightly litter, requiring property-owners to clean up their premises and giving the city the appearance of neatness that has not since worn off.

"Golden-Rule Gus" bears an enviable record for nerve. On numerous occasions he has appeared as tho led by intuition upon the scene of some near-tragedy, and has captured desperate criminals just in time to prevent their committing murder or great bodily violence. If any one is injured, it is almost always the Chief that rushes first to the aid of the stricken one. Even on his vacation trips Vollmer is a champion life-saver. Having saved two girls from drowning in the Russian River during the summer of 1907, he was impelled by fate to repeat history for a third time in the same place, three years later. The third girl, Miss Lydia Sturtevant, whom he saved from drowning, proved the charm, for she became his bride.

WHO CARRANZA IS

SINCE talk of lifting the embargo on arms for the Mexican revolutionists was started at Washington, General Venustiano Carranza has become an international figure. Everybody has been curious to find out just what kind of a man the Constitutionalist leader is. It would certainly be difficult to get an unprejudiced view of his personality from non-sympathizers, to use a mild term, and his partizans would doubtless place a halo over him, so we look to an outsider for an impartial sketch. The London *Times* sent a correspondent to Carranza's headquarters at Hermosillo the other day, and this is a part of what came up in print:

Whatever excesses may be laid to the charge of his subordinates, there is no uncertainty in my mind as to the sincerity or the personal honor of the General himself. He may be, like Madero, an idealist, but he is certainly an honest man. Like Madero, whose own words I quote, he lived, until toward the end of the long reign of President Diaz, "tranquilly occupied, in common with the immense majority of Mexicans, with private business and the thousand futilities of social life." He belongs to the land-owning class in the State of Coahuila, where he was Governor and where he had spent most of his life. He is a great reader; his serious, studious face, with deep, vertical lines between the brows, betrays "the pale cast of thought." His eyes gleam patiently and kindly through spectacles. His hair is dark still,

but mouth and chin are hidden by a heavy gray mustache and beard, tho the cheeks are shaved. His voice is gentle, and his movements are deliberate. He sits perfectly still listening to questions, and answers them without hesitation, in an even tone, his hands loosely clasped, his eyes searching his interrogator's face to see if his meaning is made clear.

It is hard to understand how a man of this professorial student type can have gained such an ascendency over the Revolutionists. At this moment he is suffering a little from the effects of bad water and short rations of food during his three months' journey on horseback from Piedras Negras, in Coahuila (which was formerly the insurgent capital), to this place. But he can scarcely be a man of overflowing physical vitality at any time. It must be by force of character and intellect that he has reached his present dangerously high position. "I am the only leader recognized as supreme by all the chiefs of the revolution," he told me in his quiet, measured speech, not with pride, but as one upon whom a heavy responsibility lay. "What we fight for is the Constitution of our country and the development of our people. Huerta outraged the Constitution when he overthrew and murdered President Madero. He continues to outrage it by attempting to govern despotically as Diaz did, and refusing to administer fairly the laws, which are equal for all. This revolution can not cease until either we, the Constitutionalists, triumph, or until Huerta triumphs completely over us. Even in the latter case it would only cease for the moment. It has its roots in social causes. The land, which was formerly divided among the mass of the people, has been seized by a few. The owners of it compel those who are working for them to buy the necessities of life from them alone. They lay a burden of debt upon the poor people and make them virtually slaves, for as long as the poor people owe them money they can not go away. If they try to go away, they can be brought back. They can be put in prison. Another cause of the revolution is the growth of a middle class. Formerly there were only the rich and the poor. Now there is a class in between which does not like to see the poor opprest; which knows what democracy and social reforms mean in other countries, and which is resolved to take successive steps forward in the direction of complete self-government."

"Have you any definite plans for land reform and other reforms?" I inquired.

He thought a moment. Then he replied: "The first necessity is the fair and free election of a President. The election which is proposed now will be a farce. In the disturbed state of our country it is impossible to hold a proper election. Large numbers of voters will not know anything about it. We Constitutionalists refuse to recognize any President who may be returned at the fraudulent election. We shall execute anybody who does recognize him."

The *Times* man thought he must have misunderstood what Carranza said about executing people, and asked him to repeat the statement. The General did so with added emphasis. To continue:

To hear this amiable, scholarly old gentleman define so bloodthirsty and, to us, so utterly unreasonable a line of action

made me feel as if I were dreaming. It threw a strange light upon his profession of belief in democracy. I have no doubt that he sincerely imagines himself a believer in that creed. I am sure that the best of his followers are equally sincere, tho of course there are many who fight simply because they prefer disorder and make a profit out of looting. The very fact that the party calls itself the *Constitucionalistas* and not the *Carranzistas* proves that it follows a principle rather than a man. But the discrepancy between their professions and their avowed policy shows how far the mentality of Mexico is distant from that of Europe and the United States, and how impossible it is to apply to it, as President Wilson persists in doing, the same tests and the same standards which obtain in countries where the idea of self-government is a plant of mature growth.

It is the custom of the Constitutionalists and Federals alike to execute all the general and field officers who are captured; sometimes other officers, and even privates. They justify this by reference to a law of 1862 against fomenting treason. Each side calls the other side "traitors," and the only course to take with a "traitor,"—that is, a man who differs from your view,—is to shoot him. Several Mexicans have quite seriously told me that Madero failed simply because he tried to make terms with supporters of the old régime of Diaz and his *cientificos* (so his Ministers were derisively called) instead of killing them. They are mistaken. Madero failed chiefly because he was a bundle of nerves and what Americans call a "crank," and because he promised what he could not possibly perform.

A BRITISHER'S GLIMPSE OF THE PRESIDENT

BRITISH newspaper men have a way of writing personal sketches that is seldom practised in this country except in a few magazine articles. Instead of diving right into the essentials of a story, they describe many details that an American reporter ordinarily would leave to his readers' imagination, and yet their articles do not seem padded. Most of the stories which appear in the big English dailies have a completeness of detail that gives the reader an impression that he has been on the spot and seen and heard everything that the reporter saw and heard. A good sample of this kind of journalism is found in a recent issue of the London *Daily News*. It is an account of a visit to the White House with the small army of American correspondents, and the writer, H. Hamilton Fyfe, got a cinematographic impression of President Wilson. Here is his story:

Dim and cool the corridors, spacious and airy the hall, in which some twenty men were standing or sitting about, chatting and evidently waiting. Exactly at the hour of three there was a movement. Some signal was given, and we all walked informally into a large, pleasant room where, behind a big writing-table, with his hands on the back of a chair, the spare-

featured master of the house, a man of middle age and middle height, was standing ready to receive us.

The house was the White House; the master of it, the President of the United States, and he was holding one of his weekly receptions of newspaper men, receptions which have no parallel outside the United States, I believe, and which mark a point worth notice in the history of relations between governments and the press.

There stood the chief magistrate of one of the world's most powerful nations, the President, chosen upon his merits by ninety millions of people to hold the highest office in the Republic. There he stood to be questioned, heckled even, by the men who made public opinion. Every Thursday at three he meets writers for morning journals. Every Monday at ten the evening papers can send their representatives to see him.

President Wilson enjoys it. He feels like a professor again, with a class of eager students round him asking questions, calling upon him to straighten out difficulties, suggesting possible solutions of tangled historical skeins. He likes to set his wits against those of his questioners. A master of dialectic, he is glad to exercise his gift.

The reception has no formality about it. The President has just come in from the garden, it seems. He wears white trousers and rubber shoes. Just behind him is a big bay window. The glimpse I get of leafy alleys and smooth lawns and glowing autumn borders makes me fancy he will be glad to get back to it again. For the moment, however, he is entirely at the service of the newspaper men. While they move in and form a half-circle before him, he looks down at his table, at the neatly arranged papers, the jar of carnations, the green-jade shaded lamp which tells of work far into the night. As soon as the noise of feet ceases he glances up and around—a keen glance through his glasses. He is trying to judge their temper. Have they come in hostile mood? Are they going to demand information which he has no idea of giving them? Do they want to discuss questions upon which he has not made up his mind? Clearly he is satisfied as to their mood at present. He smiles genially and opens the conversation himself.

This is unusual. As a rule he waits for one of his visitors to begin. They are always quite ready. There is no shyness about speaking. Often two or three start together. But to-day he is pleased by a piece of news from Mexico. The affairs of that country have been occupying him for many weeks past. His policy has been severely criticized. Some blame him for making the United States ridiculous; others for exposing them to the risk of a war for which they are unprepared. To-day he can claim that, after all, his method looks like being successful. Yet instantly he is put on the defensive.

"What would you do, Mr. President, if . . . . . ?"

"Supposing, Mr. President, that there should be . . ." He smiles with an odd little twist of his lips.

"We won't deal with 'ifs' and suppositions," he answers. "Let us keep to the situation as it is to-day."

Mr. Fyfe found that President Wilson talked with good humor and frankness, and with freedom from official pomposity and intellectual hauteur. He is kindly

Did you ever see a more beautiful wood than this? It is Douglas FIR "trim"—for all interior woodwork, sash, doors, chair rails, baseboards, cornice, mouldings, stair rails, newel posts, paneling, etc. For all such purposes it is "the Aristocrat of Woods."

Douglas FIR Flooring
(Edge Grain)
also called "Vertical Grain" and "Riff Sawed." A dense, fine non-splintering flooring. Its remarkable resistance to wear is proven by long service it gives for shipping platforms, freight house floors, factory floors and similar uses where heavy trucking is done.

FOR EVERY BUILDING PURPOSE, HOME TO WAREHOUSE

Douglas FIR LUMBER gives superior service. The United States Government, in Forest Service Bulletin No. 88, issued June 17th, '11, says: "Douglas FIR may, perhaps, be considered as the *most Important of American Woods.* (★) As a structural timber it is not surpassed, and probably it is most widely used and known in this capacity."

★ *WHY does the ultra-conservative Govt. Report thus describe Douglas Fir?*

The reason for the superiority of Douglas FIR for building purposes is that *in proportion to weight* it is the

Strongest American Wood

U. S. Government tests show that with an airdry weight of only 33 lbs. per cubic foot, Douglas FIR has a strength parallel to its grain of 3500 pounds, per square inch.

This great strength with light weight, makes Douglas FIR the ideal wood for all framing purposes, from the studding and joists of a cottage to the beams and columns for large mill-construction buildings. And Douglas FIR is as beautiful as it is strong, and for interior finish its "watered silk" effect is most pleasing, and its texture is adaptable to any finish.

The U. S. Gov't Bulletin also says: "Douglas FIR sawed 'flat grain' shows pleasing figures and ..... has been considered *as attractive as the grain of quarter-sawed oak.*" (★)

(★ *Quarter-sawed oak costs about two and one-half times as much.*)

You will appreciate a copy of the booklet on "Douglas FIR—Its Value to Builders." It is free. Put your name on a postal. Also put on your address. Then mail it. (You'll be glad you did.)

and courteous so long as a reporter is honestly seeking information, but whenever any veiled hostility is shown, he stiffens, his tone becomes sharper, and his eyes gleam frostily. And—

With tight-lipped sarcasm he riposts, and generally scores a hit. It might be thought that a gathering of newspaper men (who are not remarkable for reverence anywhere, least of all in the United States) would sometimes in such conversations try to "pull the President's leg." But they know too well his aptitude for biting retort. From topic to topic the discussion ranges.

"Shall you do so-and-so, Mr. President?"

"No, sir" (very emphatic).

"Will you tell us what action the Administration means to take in X-land?"

"When the time comes" (with a smile).

"Do you think it is true, Mr. President, that certain things have happened in Y-many?"

"All our information is to that effect."

Of course, the President must not be quoted directly. The reception is in no sense an "interview." He puts his visitors upon their honor to use what he tells them with discretion. And they are discreet. Each one knows that if he were not he would be received no more. Sometimes they may chafe at knowing more than they can say, or rather more than they can quote the President as saying. But that is not often, for he is adept at seeming to be communicative when he is really not telling them anything at all. Still, in a general way, the meetings are useful. Men who are in personal touch with the head of the State are not inclined to hasty or violent criticism. It is an advantage that the Washington correspondents, upon whom the country depends for its political news—and views—should be able to seek information at the fountainhead, even if they do not often get it. For the President the benefit is more obvious. He can prepare public opinion for measures which might otherwise be startling. He can correct mistaken judgments. By skilfully dropt plummets he can sound the depths of national prejudice or sentiment.

President Wilson is known to live very much within himself. He is a man of few friends. He entertains little. Even those who are closest to him seldom pass within his barrier of reserve. The country knows scarcely anything about him. Everywhere people ask, "What sort of a man is he?" If they could see him at these press receptions they would drop the notion that he is a pedantic, "professorial" person, as most of them believe. They would discover him to be one upon whom a natural dignity sits with ease; who is not afraid to measure his wits and his information with those of his critics; who is willing to discuss his policies with patience and good temper, never playing Sir Oracle or taking up the "I'm not a-arguing with yer: I'm a-telling of yer" tone. Everybody has a mental image of Colonel Roosevelt, not often correct, but, so far as it goes, clear. Everybody knew "Big Bill" Taft. The President is still an enigma. To him, therefore, personal relations with those whose business it is to inform the nation are specially useful—more useful indeed than they are to the newspaper men. They gain indirectly, by having

The Burlington Special *19 Jewels Fully Adjusted*

AND WHAT IT MEANS

By John Foster Fraser

The only story covering every phase of every thing connected with the great Canal, from an Englishman's point of view. Beautifully and profusely illustrated.

"The men, the machinery, the accomplished work, will be sharply defined and real to him who reads the story."—**The Scientific American, New York.**

Large 12mo, cloth, $1.75 *net*; by mail, $1.85.

FUNK & WAGNALLS COMPANY, New York, N.Y.

their sense of responsibility heightened, and by realizing more vividly the burden laid upon one who is a man even as they are, not an executive machine.

So, after lingering behind the others for a hand-clasp and an exchange of civilities (for the President and I are old acquaintances) I go out again into the sunlight, the richer for a vastly interesting experience and wondering what the Emperor William would think of it, or Mr. Asquith, or President Poincaré.

THE SPICE OF LIFE

Likely.—Every poor man thinks a good deal of how generous he would be if he had the price, which may be one reason he hasn't.—*Atchison Globe.*

A Brute.—WIFE (at dinner)—"You don't seem to like rice."

HUSBAND—"No, it's associated with one of the greatest mistakes of my life."—*London Sketch.*

"Mine frendt, every fire company in the city, but two, has squirted water on dot suit!"—*Life.*

A Harsh Answer.—HE—"Do you think obtaining the vote would make women masculine?"

SHE—"Why, no. It hasn't had that effect on you."—*London Opinion.*

Smart Youth.—HISTORY PROF—"Why are the Middle Ages known as the Dark Ages?"

WISE FROSH—"Because there were so many knights."—*Wisconsin Sphinx.*

Sharp.—"Have you ever noticed one odd thing about blunt people?"

"What is that?"

"They are the ones who generally come to the point."—*Baltimore American.*

Too Painful.—ST. PETER—"Awfully good of you to come! Walk right in and I'll introduce you to the company."

BASHFUL YOUNG MAN—"Are you quite s—sure that this is h—heaven?"—*Life.*

Went Too Far.—QUIZZER—"What's the matter, old man? You look worried."

SIZZER—"I have cause to. I engaged a man to trace my pedigree."

QUIZZER—"Well, what's the trouble? Hasn't he been successful?"

SIZZER—"Successful! I should say he has! I'm paying him hush-money."—*Yale Record.*

Balky Tom.—"Run up-stairs, Tommy, and bring baby's nightgown," said Tommy's mother.

"Don't want to," said Tommy.

"Oh, Tommy! If you are not kind to your new little sister she'll put on her wings and fly back to heaven."

Tommy's reply came.

"Well, let her put on her wings and fly up-stairs for her nightgown!"—*New York Mail.*

Saves a Business Day
On Your Trip to California

The ***Overland Limited*** takes you from Chicago to San Francisco in ***64 hours and 30 minutes***. Leaves Chicago every day at 7.00 p.m., arrives in San Francisco at 9.30 on the morning of the third day. Providing, in addition, every luxurious feature of equipment and service devised by modern transportation experts to make travel delightful.

Passenger list is limited, so that all can be accommodated in uncrowded comfort.

OVERLAND LIMITED

PERSONAL POWER

By Keith J. Thomas

A cool and logical analysis of the question of personal success. The author explains processes of mental development and gives ideas for the discovery and enlargement of natural talents. Throughout the book he suggests the pleasures of life, of hope, of friendship, and all the enjoyments to be derived from culture and wisdom.

"Mr. Thomas's suggestive book avoids the error common to books of its kind, most of which acknowledge no limit to the possibilities of any man who is convinced of his own powers. He shows how to develop the natural talents, explains the uses of failure, and suggests the best ways in which to make sure of the pleasures of life."—*The New York Times.*

A Sign.—A bundle on the end of a stick is a pretty sure sign that the man who carries it has lost his grip.—*Puck.*

A Regular Job.—Mr. Hinshaw will keep headquarters at Spirit Lake. He is now a State fool inspector.—*Tipton (Iowa) Advertiser.*

Business Difficulty.—Many a woman finds it exceedingly difficult to give her husband a liberal allowance out of his salary.—*Chicago Record-Herald.*

Why Not?—TEACHER—"Now, who can tell me what political economy is?"

MIKE (embryo Tammany statesman)—"Gittin' the most votes for the least money."—*New York Tribune.*

Different.—"I suppose your elections are intended to decide who shall hold office?"

"Sometimes. But this one is to decide who shall be made to let go."—*Washington Star.*

Ambitious.—"Has your son any particular ambition?"

"I should say he has. He hopes that sometime he'll wriggle himself free from the bunch and make a ninety-five-yard run for the winning touch-down."—*Detroit Free Press.*

Scientific Management Again.—"Our boss is a crank on efficiency."

"What's he up to now?"

"Trying to teach the stenographer to chew her gum in two movements less per minute to the lower jaw."—*Washington Herald.*

Deceived.—"What's the matter, little boy?"

"M-maw's gone an' drownded all the kittens."

"Dear, dear! Now that's too bad."

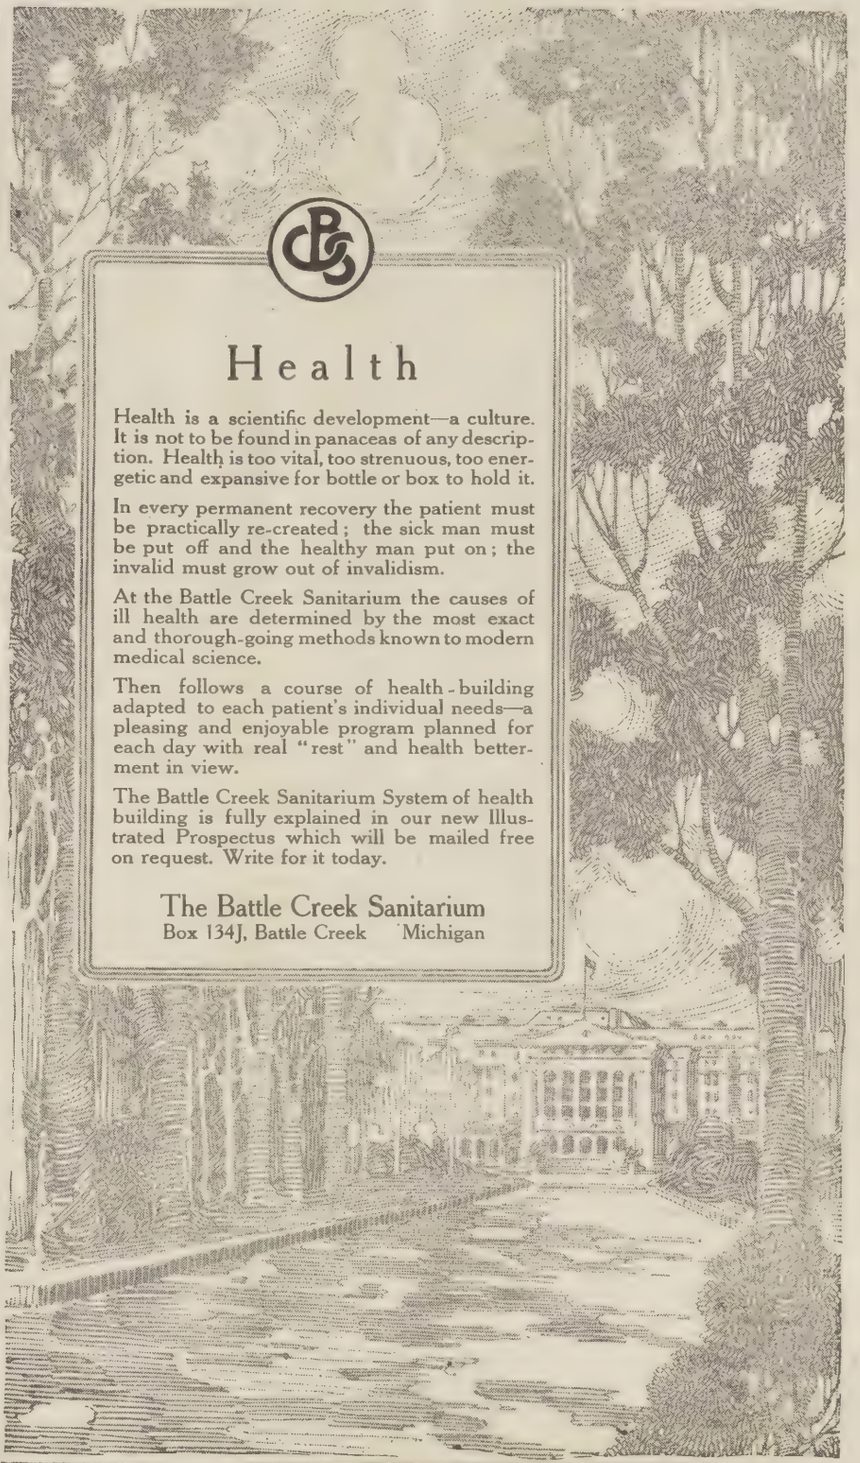
"Yep, an' she p-promised—boo-hoo—that I cud do it!"—*Everybody's Magazine.*

After the Dollar.—EFFIE'S BROTHER—"Do you love my sister Effie?"

EFFIE'S STEADY COMPANY—"Why, Willie, that is a queer question. Why do you want to know?"

EFFIE'S BROTHER—"She said last night she would give a dollar to know, and I'd like to scoop it in."—*Puck.*

Pitiful, Pitiful.—Somebody in town with a plausible claim to plutocracy persists in frying bacon, the forty-cent kind, cut particularly thin, every morning for breakfast, and when the savor is wafted out to mingle with the crisp air of these early autumn morns and it floats in upon the lowly devotee of the print-shop as he extracts the lacteal fluid from the cow with both horns missing, hunger springs eternal within the human stomach, and as we sit down to our morning repast of rye bread and liver, with nostrils still attuned to the odor of sizzling swine, the curb that the high cost of living ought to have on a man's appetite fades away like a ten-cent piece wagered on the Giants in the first game of the world's series.—*Oswego (Kan.) Independent.*



Health
Health is a scientific development—a culture. It is not to be found in panaceas of any description. Health is too vital, too strenuous, too energetic and expansive for bottle or box to hold it.
In every permanent recovery the patient must be practically re-created; the sick man must be put off and the healthy man put on; the invalid must grow out of invalidism.
At the Battle Creek Sanitarium the causes of ill health are determined by the most exact and thorough-going methods known to modern medical science.
Then follows a course of health-building adapted to each patient's individual needs—a pleasing and enjoyable program planned for each day with real "rest" and health betterment in view.
The Battle Creek Sanitarium System of health building is fully explained in our new Illustrated Prospectus which will be mailed free on request. Write for it today.
The Battle Creek Sanitarium
Box 134J, Battle Creek Michigan

A neat, compact bronze placque—lies flat against the wall. Automatically keeps an even temperature, saving fuel and care. Most reliable in action, simplest in construction. No electric batteries, contacts or motors to get out of order. No winding—*generates its own wonderful power from room temperature. Gradually* operates the dampers of any heater direct from thermostat.

$16.00 delivered complete, including all appliances for installing

Why pay more for complicated mechanisms that are less reliable and effective?

Time attachment $5.00 extra. Raises temperature to 70 degrees in the morning. Thermostat holds it at 70 degrees all day long.

Write for descriptive booklet "D" It is free.

HALSEY MFG. CO., 1213 Filbert Street, Philadelphia.

You may forget—It can't forget

A Perfected Picture Machine for Home Entertainment

The foremost lens makers of America have solved the problem of satisfactorily projecting enlarged pictures from the pictures *themselves* as well as through lantern slides.

Bausch and Lomb HOME BALOPTICON

Shows colored pictures, photo prints, type matter or solid objects, such as coins, minerals, etc., with a clearness and brilliancy heretofore impossible except with lantern slides.

Shows Type Without Reversing. With no other popular priced instrument can you project written or printed matter without the extra expense of a reversing mirror. You will realize how this increases the opportunities for pleasure and entertainment.

Shows Solid Objects. Owing to the fact that the object holder is on the *floor* of the light chamber rather than on the wall as in other home instruments, it is possible to show solid objects. The works of your watch, pieces of jewelry, botanical specimens are all subjects possible to project readily in the Home Balopticon only.

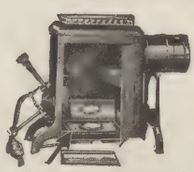
Scientific Illumination. The fact that the Home Balopticon is equipped with one of the famous B & L *achromatic* lenses and that years of laboratory experiment are behind its wonderful system of illumination and reflection, accounts in a large measure for the superior clearness and brilliancy of its pictures.

Another advantage is that each outfit includes two adjustable picture holders and an aluminum coated wall screen which makes the image many times more brilliant than can the ordinary sheet.

That this is the best of all home picture machines will be apparent if you compare demonstrations with any other similar projector at any price. At photographic dealers—not toy stores.

For lantern slide users the Home Balopticon can be supplied in a model combining lantern slides with opaque pictures giving instant interchange between the two.

"Fun—and Better" *Free*



Note the possibilities of the flat object holder

A book about the possibilities of original home entertainment with the Home Balopticon. If you doubt that this picture machine is to the eye what the talking machine is to the ear, send for this book and read how the Balopticon can be used for pleasure and profit in scores of different ways.

FRENCH TOBACCO CO., Dept. 23, Statesville, N. C.

Going Nowhere.—"What sort of platform is this candidate running on?"

"I think it's a treadmill."—*Birmingham Age-Herald.*

Better Early.—"Your salary isn't enough to support my daughter."

"I'm glad you've come to that conclusion so early, sir."—*Boston Transcript.*

One Virtue.—"When you proposed to me you said you were not worthy of me!"

"Well, what of that?"

"Nothing: only I will say for you that whatever else you were, you were no liar."—*Houston Post.*

Tip for Husbands.—SWEET YOUNG THING—"Let us go into this department store until the shower is over."

SUFFERING HUSBAND—"I prefer this undertaker's. You won't see so many things you want."—*Brooklyn Life.*

A Real Reason.—"Why do so many young men leave the farm?"

"Well," replied Farmer Corntossel, "in most of the cases I have observed it was because they couldn't earn their salt as farm hands an' wasn't fixt to pay board."—*Washington Star.*

Willing to Help.—Percy Noodles says that when he told the capitalist's daughter if she didn't name their wedding-day at once he would go out West and sow wild oats, she said she guessed her father would be glad to lend him some bulletins from the Agricultural Experiment Station.—*Dallas News.*

Kicking Back.—Hon. Alex Appleby, editor of the Leesville (Colo.) *Light*, is tired of being criticized.

"Many people kick because the papers never tell the truth," he says. "Let the man or woman in Leesville who wants us to tell the truth about him or her stand up and we'll try to be accommodating."—*New York Telegraph.*

Post-card Politics.—"Why is there such a hot fight over the appointment of a postmaster in this little town?" asked the stranger. "The office doesn't pay anything much, does it?"

"That ain't it, mister," replied the native. "You see most of us are particular as to who reads our postal cards."—*Cincinnati Enquirer.*

Bare Facts.—The teacher of the class in English demanded that the pupils all write for their daily exercise a brief account of a baseball game.

One boy sat through the period seemingly wrapt in thought, while the others worked hard, and turned in their narratives. After school, the teacher approached the desk of the laggard.

"I'll give you five minutes to write that description," he sternly said; "if it is not done by that time, I shall punish you."

The boy promptly concentrated all his attention upon the theme as the teacher slowly counted the moments. At last, with joyful eagerness, he scratched a line on his tablet, and handed it to his master. It read:

"Rain—no game."—*Detroit Free Press.*

CURRENT EVENTS

Foreign

November 6.—Gen. Felix Diaz, recently a candidate for President of Mexico, is stabbed by would-be assassins at Havana.

Dr. Paul S. Reinsch, the new American Minister to China, takes up his duties at Peking.

November 7.—Alfred Russel Wallace, the famous English scientist, dies in London in his ninety-first year.

Brazil has appropriated $500,000 for representation at the Panama-Pacific Exposition at San Francisco, and the Venezuelan Government has asked an appropriation of $350,000.

Ecuador decides to seek a $33,000,000 loan in Europe for the sanitation of Guayaquil and for railroads.

Maurice Chevillard, at Buc, makes a series of upside-down flights and spiral loop-the-loops in a 50-mile gale, outclassing Jules Pégoud, the original topsyturvy airman.

November 10.—Mendel Beiliss is acquitted at Kief, Russia, of the ritual murder of the Christian boy Yushinsky.

The Chino-French Bank signs a contract for a loan of $30,000,000 to the Chinese Government.

Sir T. Vansittart Bowater is installed Lord Mayor of the city of London.

Domestic

WASHINGTON

November 6.—Colonel Goethals and the other engineering officials of the Canal Zone estimate that it will cost $36,394,000 to complete the work on the Panama Canal.

November 8.—A caucus of Democratic Senators is called to end a deadlock of the Committee on Banking and Currency.

November 10.—Dudley Field Malone is nominated by the President to succeed Mayor-elect John Purroy Mitchel as Collector of the Port at New York.

November 12.—The Democratic Senatorial caucus decides to give the Committee on Banking and Currency an extension of time to report on the Glass-Owen Bill.

GENERAL

November 7.—The strike of the employees of the Indianapolis Traction Company is settled through the efforts of Governor Ralston.

Dr. Charles McBurney, first great authority on appendicitis, dies in Brookline, Mass.

November 8.—Striking miners ambush and kill three guards and two strike-breakers at Laveta, Colo.

November 9.—A heavy snowstorm strikes Western Pennsylvania, Maryland, Ohio, West Virginia, and Michigan. A hurricane on Lake Erie wrecks several ships and more than sixty lives are lost. Damage to property in Cleveland is estimated at $2,000,000.

November 10.—The New Jersey Supreme Court reverses the Paterson Recorder's Court which sentenced William D. Haywood, Carlo Tresca, and Adolph Lessig, I. W. W. leaders, to six months' imprisonment for disorderly conduct. The Supreme Court says that the evidence shows that the defendants were marching in the streets in a peaceable manner, and that they are not guilty of disorderly conduct merely because a crowd of strikers followed them.

The Vice Committee of the International Purity Congress, at Minneapolis, presents a report holding the problem novel to be the chief cause of immorality in this country.

The corn crop in this country for 1912 is valued by the Department of Agriculture at $1,741,353,019, the most valuable ever produced in the history of the world.

November 11.—Senator Bankhead, of Alabama, submits to the United States Good Roads Association in convention at St. Louis a bill which he plans to introduce at the next session of Congress, to appropriate $25,000,000 as Federal aid for road-building.

Remote.—OLD GENTLEMAN—"And so your name is Hooligan? Are you any relation to Tom Hooligan?"

HOOLIGAN—"Very distant. I wuz me mother's first child an' Tim wuz the twelfth."—*Brooklyn Eagle.*

Finding Money in New York City

Have you $10.00?—Can you save $10.00 a month? If so, write today and we will show you how in our opinion you can pick up $1,500 or more.

On September 30th the New York Municipal Railway Corporation entered into a guaranteed contract to have within 17 months a magnificent subway completed from the heart of Manhattan Island to within four minutes' walk of 25 lots that we can sell for $1,390 each, with others at higher prices.

Nearly two months have elapsed since the contract was signed—so that in 15 months from now you should be able to go from these lots to Canal Street in less than twenty minutes. In 15 months New York's teeming population will pour over this property, and each lot will become the abiding place of three, six or more families.

Out of 2918 lots—the original number in Marlboro—25 are all that are left at the above figures. The balance range as high as $4,000 each, and if you saw them you probably could not tell the difference between one and the other, although admittedly the difference is there.

This is the last advertisement on Marlboro that will ever be published in The Literary Digest. All lots left will be sold at much higher prices than these quoted, and practically all of them are reserved for local builders. It is a curious thing, but we usually sell only our cheapest lots through advertising.

It is your last chance on instalments to get next to this, the first subway to be finished under the $337,000,000 program on which New York City has embarked. In five years these lots should bring $3,000 or more each, and at that time you will only have invested in instalments about $700.

MONEY BACK IF NOT SATISFIED

Come to New York at any time within 90 days after date of your purchase; visit our properties with our representative; keep what you have if you think it is the best bargain in our $10,000,000 holdings; change it for any other lot if you will, or go to our cashier's desk and get back every dollar you have paid us if you are not satisfied with any of our lots.

FREE TRIP TO NEW YORK

We want every customer to visit New York and inspect his purchase, and we therefore make the following offer, viz.: We will allow your entire railroad fare to New York City and return, not to exceed $36, crediting the full amount on your purchase. We only require that your inspection be made with our representative and within one year from date of purchase.

Now, won't you write today, and let us tell you more of the wonderful story of the profits our customers have made and are making in New York City real estate?

Or, better still, send $10 and we will make the best selection from the lots remaining unsold.

Tee Up! Smoke Up!

AS satisfying as the sounding smack of the perfect drive, is the open-air relish of the perfect smoke—Tuxedo. Both go together, too. When you grab your bag and start for the links, grab up your tin of Tuxedo and take it along.

"*Follow through*" the snappy afternoon with Tuxedo. Put Tuxedo in your pipe and you will "*put*" the best. And at "the nineteenth hole" rest up and relax with a good, solid smoke of Tuxedo. That's the advice of good golfers everywhere.

Next time you want added flavor, zest and enjoyment to your game, try the Famous Green Tin with America's favorite tobacco in it. When you get to *that* green, the going's good.

J. J. McDERMOTT

J. J. McDermott, Professional, Country Club of Atlantic City, N. J., National Open Champion, 1911 to 1913, second in 1910, known as the famous "Home-bred" Champion, says:

"*Pipe smoking gives added pleasure to a golfer when the pipe is filled with Tuxedo. Tuxedo provides more keen enjoyment than any other tobacco I know.*"

J. J. McDermott

ALEX. ROSS

Alex. Ross, Professional, Brae Burn Country Club, Auburndale, Mass., Open Champion of Massachusetts six times, National Open Champion 1907, says:

"*Tuxedo, cool and mild, is essentially the smoke that satisfies. Many of my fellow golfers agree with me in giving preference to Tuxedo.*"

Alexander Ross

ALEX CAMPBELL

Alex Campbell, Professional, The Country Club, Brookline, Mass., second in Massachusetts Open Championship in 1906 and 1908, says:

"*I am always glad to speak a good word for Tuxedo tobacco. Constant use of it only serves to make it better liked. Its fragrant, soothing flavor makes it the choice of many golfers.*"

Alex Campbell

Tuxedo

The Perfect Pipe Tobacco

When hundreds of men of national repute say frankly and emphatically that Tuxedo is by far the most satisfactory tobacco made—and naturally they have tried the others—one thing is *certain:* It's worth *your* while to *try* Tuxedo.

Especially is it worth your while if a sensitive tongue prevents pipe smoking. Tuxedo positively *cannot bite*—not even if you smoke pipeful after pipeful, as many as you can crowd into a day or a week.

Tuxedo is made of only the finest, choicest selected leaves of perfectly aged Burley tobacco. It is made by the original "Tuxedo Process" which removes *every trace* of *bite* and *sting* and develops *all* the wonderful mildness, fragrance and flavor of the Burley leaf in a way that no other brand of tobacco has ever successfully imitated.

YOU CAN BUY TUXEDO EVERYWHERE

WILLIAM H. POTTS

William H. Potts, Professional, Apawamis Club, Rye, N.Y., well-known instructor and player, says:

"*The absolute purity and mild fragrance of Tuxedo make a great hit among golfers. I'm for Tuxedo.*"

W. H. Potts

TOM VARDON

Tom Vardon, Professional, Onwentsia Club, second in British Open Championship, 1903; second in French Open Championship, 1906, says:

"*Tuxedo is an agreeable companion to the golfer. We are old friends.*"

J. Vardon

JACK HOBENS

Jack Hobens, Professional at the Englewood Country Club, N. J.; Metropolitan Open Champion, 1908, and second in 1911, says:

"*I smoke Tuxedo tobacco because it suits me, and I have no desire to change. The best is always good enough for me. Tuxedo is the golfer's smoke.*"

John Hobens

Not Bleached

GOLD MEDAL FLOUR is not artificially bleached or whitened chemically nor adulterated in any way whatever. Its color is a rich, creamy white—not a dead, artificial white.

GOLD MEDAL FLOUR retains all the best properties of the natural wheat. It is scientifically milled and dependable in every respect.

ADVANCE OF THE GRAND ARMY

NAPOLEON'S name fills more pages in the world's solemn history than that of any other mortal. The advance of his Grand Army into Russia is the turning point in his career and marks the beginning of his downfall. The picture shown herewith from Ridpath's history, the original of which was displayed at the World's Fair at Chicago, marks but ONE EVENT out of THOUSANDS which are fully described in the world-famed publication

Ridpath's History of the World

LITERARY DIGEST readers have shown wonderful appreciation of our remarkable offer. We have shipped this splendid work to delighted readers living in every state of the Union, and every purchaser is more than satisfied. We offer the remaining sets of the last edition, brand new, down to date, beautifully bound in half-morocco,

AT LESS THAN EVEN DAMAGED SETS WERE FORMERLY SOLD

We will **name our price** only in **direct letters** to those **sending the coupon** below. **Tear off the coupon,** write **name** and **address** plainly and **mail now before you forget it.** Dr. Ridpath's family derive their income from his History, and **to print our price broadcast** for the sake of quickly selling these few sets would cause **great injury to future sales. Send coupon today.**

Leslie's Weekly
says: "Dr. John Clark Ridpath is one of the ablest of American historians. He combines a beautiful literary style with wonderful accuracy and completeness. His great History of the World is a library in itself. There is no better set of books to place in the hands of youth than this notable work."

Boston Post
says: "John Clark Ridpath is above all things an historian. His historical works are accepted as standards in schools, colleges and homes. His style is simple, his manner charming."

Christian Herald
says: "No other work of its kind has ever supplied a history so well suited to the needs of all classes and conditions of men. We cheerfully commend this most popular and complete of all world histories to our readers."

William J. Bryan
says: "Dr. Ridpath's History of the World is a lasting monument to the author's intelligence and industry. It is thorough and comprehensive and will be a permanent help to an increasing number as a reference library."

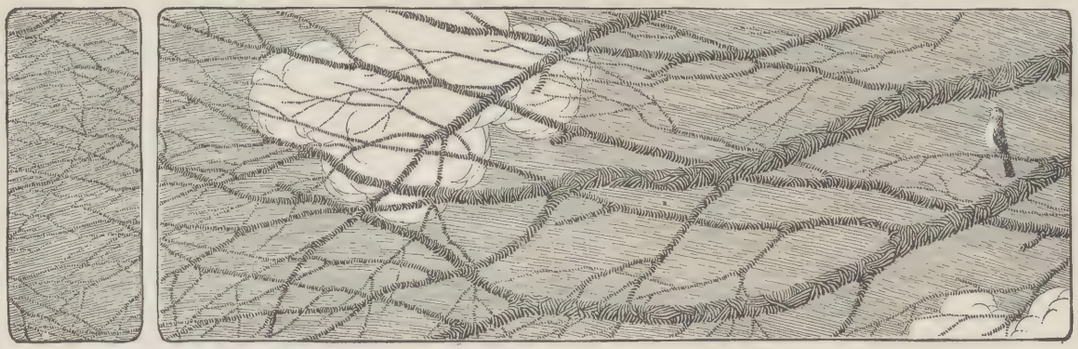
THE REASON

for Dr. Ridpath's enviable position as an historian is his wonderfully beautiful style, a style no other historian in any generation has ever equalled. He pictures the great historical events as though they were happening before your eyes; he carries you with him to see the battles of old; to meet kings and queens and warriors; to sit in the Roman senate; to march against **Saladin** and his dark-skinned followers; to sail the southern seas with **Drake,** to circumnavigate the globe with **Magellan.** He combines absorbing interest with supreme reliability.

Send Coupon Today

RIDPATH throws the mantle of personality over the old heroes of history. Alexander is there: patriot, warrior, statesman, diplomat, crowning the glory of Grecian history. Xerxes from his mountain platform sees Themistocles with three hundred and fifty Greek ships smash his Persian fleet of over a thousand sail and help to mold the language in which this paragraph is written. Rome perches Nero upon the greatest throne on earth and so sets up a poor madman's name to stand for countless centuries as the synonym of savage cruelty. Napoleon fights Waterloo again under your very eyes and reels before the iron fact that at last the end of his gilded dream has come. Washington is there, "four-square to all the winds," grave, thoughtful proof against the wiles of British strategy and the poisoned darts of false friends, clear-seeing over the heads of his fellow countrymen, and on into another century, the most colossal world figure of his time. **Mail the Coupon.**



The Victrola satisfies your love of music

The love of music is born in every one of us, and we naturally come to love the kind of music we hear the most.

Be Prepared

YOU CAN DO IT WITH A REO

BY equipping with REO Motor Trucks today you will be preparing for the business and competition of tomorrow.

No business man can reject the policy of paying heed to the small economies of his business. In plain words, competition has reached that stage which makes the transportation end of every business a vital issue.

The man who motorizes his delivery facilities places himself beyond the competition of those who cling to the antiquated methods of other days.

REO Model J Two-Ton Truck is a real solution of the transportation problem.

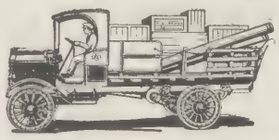
The efficiency of this two-ton truck is not confined to one particular line of industry. Its use is as general as the many lines of business in which it is employed.

We are pioneers in the manufacture of popular-priced trucks. We want that point recognized. Your REO dealer (1500 in the United States and Canada) can demonstrate, convincingly, the capacity and efficiency of the REO two-ton truck, and only await your invitation. You will note more liberal equipment and conveniences than on most other trucks; and several exclusive features not possessed by others of any capacity or price.

Here is ample size, full capacity, every useful convenience, reliable and economical, at three-fifths of the average competitive price.

We can cite many instances in all lines of business where REO Motor Trucks are more than doing their share towards reducing overhead costs.

$1650



Reo Model J Two-Ton Truck chassis, includes driver's cab, body extra

REO MOTOR TRUCK COMPANY

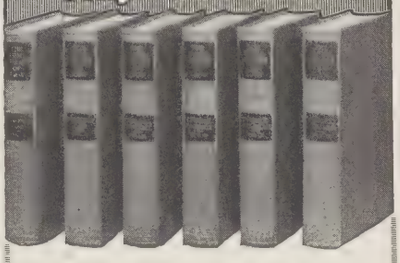
This Complete Library of

LAW

IN 6 HANDY VOLUMES

Only $1 a Month



"IGNORANCE of the law excuses no man." THAT'S LAW. You can't always "guess" the law. You may not have time to "study" law. Lawyers come high—especially some of them. BUT YOU MUST KNOW LAW.

THIS splendid little handy LIBRARY OF LAW is prepared for the average man—the business man—the doctor—the teacher—the minister—the man who works for others—the man who works for himself—the man who writes—the man who has money and the man who has not—EVERY MAN. This Library is a work to read at odd times and a reference work combined. The language is simple, direct, plain, and it covers every subject you need to know about. Here are just a few of them. "Wills"—"Mortgages"—"Deeds" "Farm Laws"—"Landlord and Tenant"—"Leases"—"Copyrights"—"Trade Marks"—"Partnerships"—"Letters of Credit"—"Trustees" "Corporations"—"Stockholders"—"Dividends"—"Marriage"—"Parental Relation"—"Employer and Employee"—"Assault"—"Defamation"—"Libel"—"Criticism"—"Self Defense"—"Automobile Laws"—"Patents"—"Contracts"—"Fraud"—"Damages"—"Negotiable Paper"—"Indorsements"—"Promissory Notes"—"Checks"—"Bills of Exchange"—"Bonds"—"Agents"—"Banks"—"Bankruptcy," etc.

Low Price and Easy Terms

WE can't begin to tell you all about this splendid set of books, so we are not going to try. We want to send you the books themselves—the COMPLETE SET of 6 handy volumes, measuring 6¾ by 4½ by ⅞ inches, so that you can examine all the volumes and decide for yourself if they are just the books you want—AND NEED. If you decide to keep them, just send us $1 as first payment, and $1 a month thereafter for 8 months. But if you do not wish to keep the books after seeing them, then you may send them back at our expense. That's fair. Isn't it?

MAIL THIS COUPON AT ONCE

(11-13)

THE THOMPSON PUBLISHING CO.

"A Book of world-wide interest"

Col. Roosevelt's Own Story of His Life

THEODORE ROOSEVELT: AN AUTOBIOGRAPHY

This exceptional story of a life replete with human interest, told in Col. Roosevelt's characteristically vigorous and easily flowing colloquial style, is one that will make a strong and satisfying appeal to every class of readers.

To the lover of the strenuous life as well as to the student of contemporaneous history, to the young people of the country particularly, who all find a special attraction in personal narrative of active achievement, this autobiography will afford keen satisfaction and high inspiration.

From his boyhood days in New York, his adolescent youth at Harvard University, his young manhood days in the Wild West, and through a diversified public career which led to the Presidency of the United States, Col. Roosevelt was a learner as well as a born leader. In this book he tells of the many things which he learned and how he learned them, relating them primarily with a view to the help they may give others.

Taking the initiative in many of the most important events of our times—both national and international—his autobiography is a unique record of men and events, and of a career of almost unparalleled interest.

Decorated cover. Gilt top. Richly illustrated. Octavo. $2.50 net; postpaid $2.75

Unvisited Places of Old Europe

By ROBERT SHACKLETON

Places worth visiting, but that few tourists ever see—because they lie just off the beaten track.

The Scillys, the quaintest corner of England; the Norman "Cotentin," where the Bruces and other great families come from; ancient Rothenburg and independent little Liechtenstein; Moresnet, the country with two kings; the Forest of Arden, are all places of real interest—and you find them delightful as you visit these out-of-the-way corners with Mr. Shackleton, for he writes with charming intimacy and humor.

Beautiful colored frontispiece, twenty-six full-page sepia plates of photographs, and many decorative drawings. 300 pages. Handsome cloth binding. Boxed. $2.50 net.

Words That Cost $10 Each

In advertising we sell to the millions. And the word cost will average at least $10 each.

Done in competent ways it's the cheapest of salesmanship. The cost, in some cases, is two per cent. But let us consider what a problem it presents.

Ten dollars per word, and each word reaching millions.

Sometimes conditions are measured correctly. The plan is well thought out—based on ample experience. The words strike home.

The appeal brings instant, overwhelming response. A nation-wide sale is created.

Sometimes the plan is faulty, experience is lacking, the viewpoint mistaken. Sales are meager. In time, perhaps, this golden field is abandoned.

Both had the same chance, both paid the same price, but they had not the same men behind them.

Big Men Needed

Send out small salesmen if you will when the cost is $50 weekly. But for salesmen to the millions at $10 per word *you need master men.*

Don't start until you get them. Or, if you have started, stop.

After decades in advertising, let us assure you that this is no field for incompetents.

How shall these men be known?

Not by glittering promises, not by showy service. Not by pleasing copy nor alluring plans.

The only way to judge them is by records of results.

Find the men who outsold others in a hundred hard-fought fields. Ask the men they sold for.

Big men grow bigger with every experience. Their success becomes more and more certain. But we find that unproved men, however promising, nearly always disappoint.

Reject all sophistry. Class promises with dreams. Bar the tempting word-pictures; get down to realities.

This field requires the rarest capacity. A ten-foot ring could easily encircle all the qualified men in America.

When you buy salesmanship at $10 per word it is time to look facts in the face.

We Have the Men

Lord & Thomas dominate in advertising *because they have the men.*

It took decades to get them, to train and develop. They culled them from hundreds who promised but fell.

In this vortex of advertising, with its countless experiences, these men attain maximum powers.

They command enormous incomes. There are nine men on our pay-roll whose aggregate salary is $227,000 per year.

These men can prove their supremacy. Some of their records cover dozens of years.

They can cite successes which every man knows. They are doing today the biggest things done in advertising.

If you will judge by actual sales and profits, they will fairly overwhelm you with proofs.

Safe and Sure

These men are safe. They move slowly. They investigate markets, canvass homes, make utterly sure of their ground.

They make limited tests before large risks are assumed.

And they are sure—as sure as business can be. No other corps in this field can show comparable capacity.

They serve for the usual agent's commission. The rate is the same on small accounts as large.

Small beginnings are as welcome as are seasoned undertakings.

Thus you are offered this maximum service at the price of mediocrity.

They wish to meet advertisers who are dissatisfied. Men who see others outsell them.

They seek interviews with all men who are seeking the light.

We don't send solicitors. We send the actual result-getters. Tell us when and where you will meet them.

Just Out in Book Form—"Money Makers"

WILLIAM HARD
AUTHOR OF

"Better Business"

A highly constructive new series in

Everybody's Magazine

Are you interested in America's industrial progress? Read "Better Business." Are you anxious to see our business supremacy maintained? "Better Business" tells how to do it. This brilliant young sociological investigator commences a splendid new series of constructive articles on the great business enterprises of this country.

In his first article—"Brains Across the Sea"—in the December EVERYBODY'S the author shows precisely where America leads, and also where she can learn very helpful lessons from her European rivals.

This highly valuable *upbuilding* contribution will appeal to every business man interested in the progress and prosperity of the United States.

If you wish to get the full benefit of the information Mr. Hard has "dug up," mail $1.50 and get EVERYBODY'S for a year, including this series.

Choosing a School for the Winter Term

Do you know that many of the best private schools will be open to receive your children after the Christmas holidays?

Schools which had a full roster in September frequently have a few vacancies at this time, due to change in parents' plans, illness, and other causes.

If you were unable, for similar reasons, to place your son or daughter in a school at the Fall opening, take advantage of this opportunity. Place them in the right school after the holidays. Many schools devote special attention to students who enter at this time, helping them to rapidly make up the three months which they have lost. Principals also arrange special prices for the rest of the year.

In these columns appear the announcements of the leading schools and we would suggest that you write at once to those which seem to meet your requirements.

If you do not see the one you are seeking among the schools advertised here, we will be glad to advise you promptly and fully. This service is impartial and is offered without charge.

Simply tell us the kind of school desired, location, and approximate tuition, addressing your letter to

Based on the Final Report to Congress of the U. S. Immigration Commission.

The Immigration Problem

THIRD REVISED EDITION NOW READY.

By Prof. JEREMIAH W. JENKS, Ph.D., LL.D.

Professor of Government, Director Division of Public Affairs, New York University

and

W. JETT LAUCK, A.B.

Formerly Assistant Professor of Economics, Washington and Lee University

Dr. Jenks was a member, and Mr. Lauck superintendent, of Field Agents of the United States Immigration Commission which recently gave the question of immigration a searching investigation. In this book the authors put into shape for the public, without prejudice, the gist of the four years critical work of the Commission collected in the forty-two volumes published by Congress. The book will give to the public, for the first time, every phase of the great problem of Immigration.

Lyman Abbott's Reminiscences

will be published as a serial feature of The Outlook during nineteen fourteen

Dr. Abbott says of these reminiscences: "I count myself, not to have been a leader discovering and teaching new truths, but an interpreter, with some understanding of the age in which I lived and some capacity to interpret with clearness to itself the growing thought of the age. Whatever I write will have reference to the present and the future. By indicating the direction in which America has moved during the last fifty years, I hope to do something to indicate to the coming generation the direction in which it may be expected to move in the next fifty years."

Among other important features will be a series of Stories of Russian Life by George Kennan

THE

Heart and Blood-Vessels

Their Care and Cure

AND

The General Management of the Body

By I. H. HIRSCHFELD, M.D.

In ignorance lies the greatest danger!

Do you understand yourself, and how to manage your body and mind to get the best out of life?

This book discusses the correct management of the body in regard to work, play, sleep, food, sex, climate and the different values in life; and shows the way by which to reconstruct one's system after it has been mismanaged.

As an illustration: the really interesting story of the heart is told and how to lead a happy and efficient life even when the heart is sick and the blood-vessels are hardened.

One chapter treats the points which should guide in the selection of a physician, nurse, hospital, and places for recreation in America or in Europe.

THE SOUL

By J. W. Corey, M.D. 40 years' Study and Research. THERE IS NOTHING LIKE IT IN THE WORLD. The Soul is no longer a mystery. Its organ has been discovered and can be developed with mathematical exactness. Scientific, interesting and attractive. Transforms Man into Superman. It is the first scientific Text-book on the Soul ever published. Do you know anything about the Soul? If not, you can know if you desire to know. It is happiness, peace and joy to those who do know. The Soul is as superior to the Mind as the Sun is to the Moon. The Soul soars, the Mind grovels. Doctors, Lawyers, Preachers, Teachers, Psychologists, Sociologists and general readers should have a copy for reference. It solves life's problems. The Soul keeps us young. Good paper; Clear type; 12 chapters; Silk cloth binding; Gold letters. Booksellers and Librarians say it is first class. The Soul should be well clothed. Can be consulted with profit every day. $1.00 Postpaid. Prospectus 2 cents. **Order Now.** Money back if not as described.

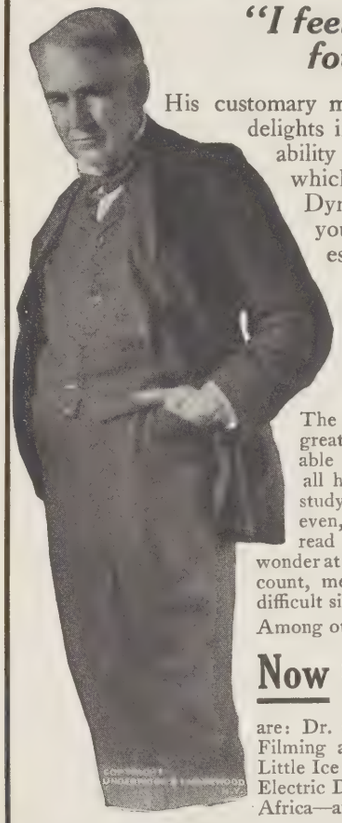
A Day with Edison



"I feel bully today, I slept only four hours last night."

His customary morning greeting after one of the *big* days he delights in, gives an insight to Mr. Edison's marvelous ability to "come back" constantly with renewed vigor, which has earned him his soubriquet of "the Human Dynamo." To realize how fully he lives up to it, you must read Mr. Meadowcroft's intensely interesting account in

POPULAR ELECTRICITY AND THE WORLD'S ADVANCE *for December*

The author has worked for years side by side with the great inventor and enjoys his confidence. He is, therefore, able to give you an intimate view of Mr. Edison throughout all his long and strenuous day. You will be with him in his study, laboratory, shop and test room; get a glimpse, even, of his wonderfully interesting mail from all over and read the freakish propositions submitted to him. You will wonder at the many things he does and how he makes every second count, meeting constantly and squarely a staggering number of difficult situations and intricate problems.

What a Dollar Bill can do

for your backyard and the high cost of living.

IF you have a backyard or a garden that is not working for you to the limit of its possible efficiency, here is the best investment you can make. The intensive culture of gardens can be so developed by the "Garden Profits" System that small plots will frequently produce as much as the average small farm does now.

In this book, by one of the Agricultural Editors of *Country Life in America*, the best stories of 1000 garden successes are gathered together, reduced to simple terms and systematized for your ready use. Every phase of gardening is discussed comprehensively and expertly. Fifty illustrations and scores of plans and planting tables point the way to as many economies of time, work and money. A carefully prepared index adds great value as a ready reference guide throughout the planting season.

THE GARDEN MAGAZINE

is the final authority on all things horticultural. It aims to interest people in gardening by showing them how to get results in the most attractive and practical way. It has helped to decrease the cost of living in hundreds of homes by encouraging the use of once-neglected backyards for truck gardens.
It has brought health and joy into households by bringing their members into closer touch with nature. Among the leading features for the next year are the following:

Efficiency in Backyard Gardening

By Adolph Kruhm. These articles will help you make your garden produce more. They deal with the following subjects: Preparation of the soil, sowing and seeds, the cultivation of crops, crop rotation and the keeping of records.

New and Better Plants for the Hardy Garden

A series of articles written by experts dealing with improved types, races and varieties of shrubs, herbaceous plants, etc.

The Home Fruit Garden

By J. R. Mattern. These articles will show you which orchard fruits are best suited to your soil, climate and needs and how to plant them.

The Months Reminder

What to do right now and why and how to do it in *your* garden. The timeliest practical advice, warnings and explanations.

$2.00 worth for $1.00

A well-printed, strongly bound book of over 200 pages. It retails at one dollar. And *eight* issues of the *Garden Magazine*.

READ aloud on Christmas Eve, while the Yule Log is burning bright, a wonderful new kind of Christmas story, with the true Christmas flavor—

Miracle Mary

by JOHN A. MOROSO

in the Holiday Fiction of THE AMERICAN MAGAZINE. It is a story of faith in God and faith in man—the supreme faith that moved a mountain—of a miracle that happened on Christmas Day, and gave back to Miracle Mary the man she loved. It is a touching, beautiful story—an exquisite expression of the deeper significance of Christmas.

Christmas is reflected throughout the entire December AMERICAN. Beginning with the most appealing of Christmas covers; out to Homeburg with George Fitch; up to Boston with Frankie and Jennie; in a gorgeous palace of an editorial sanctum with Stephen Leacock, into an uproarious fight with a mountain-lion with Red Saunders; straight on through to the splendid Interpreter's House and a delightfully intimate talk with David Warfield, the Christmas spirit lends to every page and article and picture its wholesome fun, its beauty and charm and good will.

Nelson's Topical Helps Bible

The only way to really *know* the Bible so as to intelligently teach or discuss it, is to take its leading topics, and study every reference in the Bible to that particular subject; then you will know it thoroughly.

This Topical Helps Bible, which is the only one of its kind published, gives complete references on nearly 300 leading topics. For instance, on the subject of Christ, there are 844 separate references, all properly classified; on Prayer and Prayers, there are 125 references; on Prophecy and Prophets, 213 references; on Faith, 62 references; on Promises, 105 references, etc.

In fact, on any topic that you may seek light, you will find all Biblical references to it in the alphabetically arranged index—answers to your questions, Promises for your comfort and Illustrations in the lives of Biblical characters, in the plain and understandable language of the American Standard Bible.

Just let us send you, free, sample pages of the book and its references, so that you may see for yourself what a remarkable Bible it is.

What 15c Will Do

The little matter of **15c** in stamps will bring you the **Pathfinder** for **13** weeks on trial. The **Pathfinder** is an illustrated weekly, published at the Nation's Capital, for the Nation; now in its **21st** year of increasing success. The paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send the **Pathfinder** on probation **13** weeks. The 15c does not repay us, but we are glad to invest in New Friends. **Or send $1 for full year; money back any time if not satisfied.** Address **Pathfinder, Box L, Washington, D. C.**

A Practical Home Book —Free

INEXPENSIVE HOMES OF INDIVIDUALITY

This handsome and commonsense book is chock-full of ideas about planning and building, in an economical yet distinctive way. It is not mere theory, but is fact and experience right straight through. There are 108 photographs and floor plans of selected homes from all over the country, showing houses that have actually been built, costing from $2,000 to $8,000. The book is artistically made and will prove a mine of useful information to the prospective home-owner. We will be glad to send you this book with our compliments, to introduce the Magazine of Distinctive Homes—

House & Garden

Each month this beautiful magazine will visit you with its wealth of timely illustration and suggestion—the December number redolent of Christmas cheer; the January Building number crammed with home planning and furnishing suggestion; and a little bit later the April Gardening Guide to help you to outdoor success.

To introduce HOUSE & GARDEN to you, we will send five issues, including the special January and April numbers, for a trial subscription of $1.00 and include INEXPENSIVE HOMES OF INDIVIDUALITY with our compliments. The regular price of the magazine alone is 25 cents a copy, $3.00 a year—so you see you get a big dollar's worth. All you need to do is

TOPICS OF THE DAY

IS THE NEW TARIFF HURTING BUSINESS?

WITH MANY of the main currents of business running below flood-level and showing signs of continued recession, one might expect a chorus of voices arraigning the new tariff as the culprit. Yet a canvass of the leading trade and industrial organs by THE LITERARY DIGEST reveals a surprizing absence of any such accusing chorus. Instead, we find not only a prevailing note of optimism as to the future, but a tendency to look elsewhere than to the tariff schedules for an explanation of any present slackening of business activities. Thus it is pointed out that the hesitation which causes concern in this country is evident also in Germany, Canada, India, and Brazil, and is accounted for by the experts as the result of an overstrained condition of the world's money markets. Despite the partial demolition of the tariff wall, reports one financial editor, "thus far there has been no invasion of the American market in any line." Commercial failures in the United States during October of this year, it is true, were more numerous than in October of any other year since 1895, but no less an authority than the editor of *Dun's Review* (New York) confesses himself unable to discover any connection between the increase in failures and the tariff. Even the depression in so basic an industry as the manufacture of iron and steel seems to be causing little immediate worry to students of our economic conditions, who point out that the trade is still a long way from the state of prostration that afflicted it three years ago, and find a reason for its present slowing up in the poverty of the railroads. The Cleveland *Iron Trade Review*, it is true, couples the new tariff with the proposed Currency Bill as contributing to "uncertainty in the iron and steel trade," but in *The Iron Age* (New York) we find a long editorial on the business shrinkage, in which the tariff comes in for only a casual reference. Says the latter authority:

"Those who are engaged in the manufacture or sale of iron and steel products do not need to be told that the volume of business is steadily declining, that prices are crumbling, and that working forces are being diminished. . . . With the possibility of unsatisfactory currency legislation, the expectation of drastic antitrust legislation this winter, and the continued indisposition of capital to make new investments, it would appear that little hope is to be entertained of much improvement in business in the winter months. On the other hand, if intervention in Mexico should be decided upon, this might have a slightly stimulating effect on some branches of activity. The war with Spain was one of the causes contributing to a revival of prosperity in 1898. While war is to be deplored, nevertheless it causes large expenditures for all kinds of supplies, and the effect of such expenditures by the Government is stimulating to general trade. Again, if the Eastern railroads should be successful in securing from the Interstate Commerce Commission permission to advance their freight rates, this would be a strong factor in bringing about purchases of needed equipment and supplies by numerous railroad companies.

"It is difficult to conceive how a depression can be prolonged under the conditions prevailing now. Stocks in consumers' hands are undoubtedly low as the result of conservative buying for the whole period during which the tariff was being revised. There has been no overspeculation either in stocks or in real estate for a long time. New construction has by no means been so active this year as in times when money was abundant and capitalists were free in either making investments of their own or furnishing the means to others. The country has been accumulating for a long time, and there must be a great deal of idle capital awaiting a favorable opportunity for investment. The readjustment of domestic prices to meet conditions brought about by the revised tariff will not be so serious as to cause great disturbances in manufacturing industries, and it is to be expected that such readjustments will be accomplished within the next few months. It is therefore reasonable to suppose that with the advent of the spring months it will be found that most of the unfavorable influences now confronting us shall have either passed over or else shall have been deprived of their power for evil. The coming few months may prove to be a period of more or less business disturbance, but it is difficult to see how such a state of affairs can extend beyond next spring."

Because of the alleged inability of the railroads to enter the market with any vigor until they have been allowed to increase their rates, we are told, their purchases of steel rails this year have been less than a third of what they were last year. "But with all this," points out the financial editor of the New York *Evening Post*, "the iron and steel trade is far from being in a weak position," for "nobody is sending in cancellations, nor is anybody holding up shipments on contract," and "the threat of foreign competition is pooh-poohed by the trade."

Turning to the automobile industry, we are assured by the editor of *The Automobile Trade Journal* (Philadelphia) that the new tariff has had "no effect whatever on the automobile trade," with the "possible exception" of an increased importation of tires. He qualifies this statement, however, by going on to say that the trade has been indirectly affected by "the slump in general business, which is undoubtedly due to the new tariff, one of the results of which is that the bankers have curtailed

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

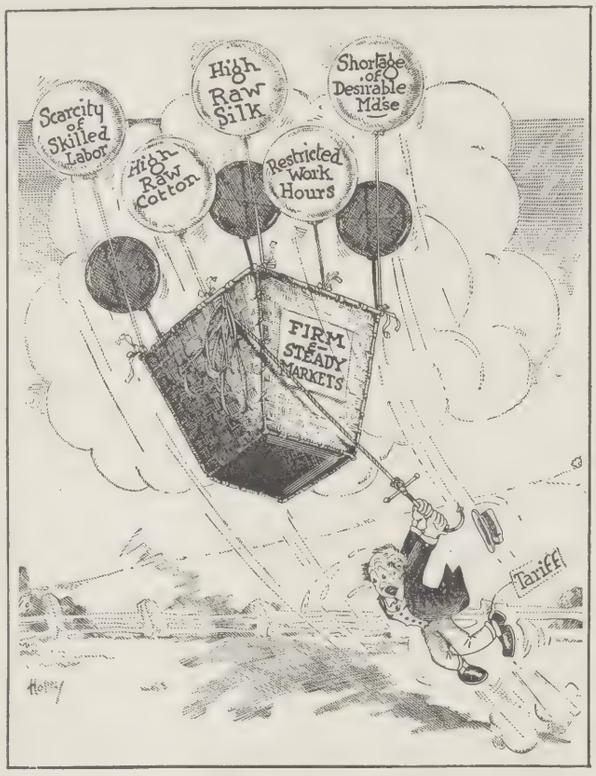
Entered at the New York Post-office as Second-class Matter.

loans, forcing a number of automobile manufacturers to the wall." To *The Automobile Dealer and Repairer* (New York) it seems that the new tariff gives the foreign manufacturer an unnecessary advantage, but S. S. Taback, general manager of the A. Elliott Ranney Automobile Company, is convinced that the American manufacturer need not fear European competition. He says in part:

"At the opening of the automobile salon in Paris a week ago, according to cable dispatches, eleven makes of American cars were represented in a total of one hundred and fourteen exhibits from all over Europe. It would seem from this showing that the concern of the American manufacturers might justly be reversed, and that in place of the foreign cars invading the American markets, the product of this country is making greater inroads in motor-car centers of Continental Europe.

"For the past four or five years the automobile manufacturers of this country have concentrated on export selling, and, with few exceptions, if any, have met with success in competition with all foreign makes in their respective classes. It has never been claimed that the American car was not the equal of the product of any other country mechanically. But where foreign car-builders excelled was in body design, detail of finish, and appointments for the comfort and convenience of the motorist. And having a car at least as good as the American car in every other respect, they made the strongest bid for the American trade on style, and whatever success is claimed for the foreign car in this country may be credited to its superior body construction.

"This year and for the past two or three years the American makers have improved so materially in body building that the American car this year has reached the pinnacle of success and will take its place alongside any foreign car for style and completeness. This advancement in motor-car manufacture alone will do more to stave off foreign invasion and competition than anything else, for the looks of the car is more than 50 per cent. of its selling value."



CAN'T HOLD 'EM DOWN!

—Hopf in *The Dry Goods Economist.*

Organs of the farm-implement trade report that industry entirely unaffected by the tariff changes. "The American manufacturer of agricultural implements," writes the editor of *Farm Implements* (Minneapolis), "has no foreign competition," because "American-made implements are the best made anywhere." He continues:

"We export implements instead of importing them. Our manufacturers have the most advanced ideas, and no farm machinery made elsewhere is fit for the use of the American farmer. Therefore, by no possibility, so long as that condition prevails, can foreign manufacturers of implements gain a foothold in the United States. The only way they could secure trade in this country would be by inventing something better than the machines made in our own factories, and in the very few isolated cases where such genius has been displayed abroad the American manufacturer has adapted the idea to his own uses, or else factories have been equipped in this country for the manufacture of those specific articles."

No less emphatic is the tribute paid to American implement manufacturers by the editor of the Kansas City *Implement Trade Journal*, who goes on to say:

"If the new tariff shall have the effect of lowering the price of steel and other raw material entering into the manufacture of implements, it will aid rather than injure American implement manufacturers."

Reports of increased rather than diminished activity in the textile trades are explained by some observers on the theory that they are reacting from a long period of dulness and abstention from buying while the revision of the tariff was in progress. In the woolen trade, whose "Schedule K" formerly represented the keystone of the protective arch, the test has not yet been actually applied, since the new rates in that schedule—with the exception of raw wool, which becomes free on December 1—do not go into effect until January 1. Nevertheless, we find in *The American Wool and Cotton Reporter* (Boston) the confident statement that "with the wool supply of the world open to us on equal terms with other manufacturers, it is folly to attempt to maintain that we shall not be able to hold our markets on the majority of fabrics." And from Berlin dispatches we learn that the German manufacturers of woolen goods regard our new tariff with disappointment, failing to discover in it the advantages to themselves which they had expected.

"In the cotton-goods market," reports *The Textile Manufacturers' Journal*, "there is little, if any, evidence of weakness." And in *Cotton* (Atlanta) we find assurances that the cotton manufacturer is not going to succumb to the changed conditions, but "may be counted upon to keep his machinery in operation to the best of his ability and to remain the important factor he now is in the marts of American industry." In this connection it is interesting to read in a Memphis dispatch that American cotton-spinners are buying more cotton than they did at this period last year. On the other hand, we read in a Fall River dispatch to the New York *Evening Post*:

"Various manufacturers of cotton goods in this section of New England, when asked for an explanation of the apparent fact that the tariff reduction had not caused great falling off in domestic business, and had not been followed by the predicted great increase of imports, declared that it is too early to judge the results which may come.

"Manufacturers agree in saying that, at the present time, there is no trading except on what they call a 'hand-to-mouth' basis. They say that if the mills were dependent upon the orders received since the passage of the Tariff Bill, there would have been a slackening of operations in the mills which would attract attention, and they claim that the present operations are in the production of goods to take care of deliveries in the next two months.

"One of the manufacturers of cotton goods said to-day that, in view of the situation which confronts the domestic manufacturer, the present condition of the market does not offer any great inducements to foreign manufacturers to rush goods into this country. What the foreign manufacturer may do later appears to be a problem that no one can foresee, and on which one encounters no definite prediction."

"Manufacturers of desirable silks," says *The Dry Goods Economist* (New York), "have orders that will keep much of their machinery busy well into next year." The same trade organ assures us that the great majority of those engaged in

IN MEXICO.

the dry-goods business are optimistic about conditions under the new tariff because they realize that "the changes in merchandise values will be brought about gradually" and that "to-day the influence of supply and demand is paramount to that exerted by a lowering of our scale of customs duties." Further:

"What many will consider even more important, there is no serious apprehension of large increase in the imports of foreign merchandise. Foreign manufacturers are busily engaged in supplying other markets which they have built up throughout the world. And they, too, have to cope with the higher cost of production and, in some cases, with unrest on the part of their employees."

"Aside from the fact that it makes a political factor of him," writes Fred Stockman in *The Interstate Grocer* (St. Louis), "the tariff experts see no reason why the grocer should be unduly exercised over the probable effect upon him of the new Tariff Law." For while "it may enable him to obtain the goods he sells at a slightly reduced figure, and therefore to sell them at a reduced price," the change "will probably be so small and gradual that it will hardly be noticed."

The effect of removing the duty on soft coal, we learn from *The Coal Trade Journal* (New York), will be "almost imperceptible, taking the trade of this country as a whole," altho there are "a few points where imports will probably show more or less of an increase." And from Mr. Floyd W. Parsons, editor of *The Coal Age*, we get a more detailed account of the bearing of the tariff on the coal trade. Under the new schedules coal and coke join anthracite on the free list. "We need never fear," says Mr. Parsons, "that European coal-owners will successfully enter our local markets," and he goes on to say that "the only competition of a serious nature is that from Nova Scotia and British Columbia, in Canada." The Nova Scotia mines produce about 7,000,000 tons annually, of a kind similar to that mined in northern West Virginia, and most of it is consumed in Eastern Canada. Some of this coal reaches the New England market. But—

"The output of the Nova Scotia field, however, is limited; the area of the entire district is not as large as any one of the important fields in our Eastern States. Practically all of the American coal that now seeks a market in New England is superior to the Nova Scotia fuel, so that, so far as quality is concerned, the advantage lies with the American operator."

But a more serious competition, he goes on to say, is felt in Montana and Wyoming, where the removal of duty invites British Columbia coal into the American market:

"Coal in the Crow's Nest field of British Columbia is not only equal, but is superior in many ways to our Montana and Wyoming lignites. The British Columbia field is quite extensive and can provide a considerably larger output if a market can be found. There is no doubt that Canadian coal will prove a strong competitor in our Northwestern States. We feel confident, however, that American operators can produce at a cost as low, or lower, than their competitors across the line, and we predict that whatever change in the markets occur will be only temporary and certainly not fatal."

Turning to the general business situation, we find certain facts to balance against the reported slowing of activity in the Middle West, the recession of the steel trade, and the railroads' plea of poverty. Conspicuous among these is the report of the Controller of the Currency showing the condition of the 7,509 national banks. Commenting on this report, a Washington correspondent of the New York *Sun* says:

"If the bankers, country and city, of the United States are deeply perturbed over coming changes in the American financial system, visual demonstration of their reported nervousness is not reflected in the loan account. The comparison of totals shows that the loans on November 26, 1912, were $201,895,824 less than on October 21 this year. The loan account shows also an increase over the statement rendered on August 9, 1913, of $92,322,328.

"The banks of New York City report decreases since August 9 in loans of $26,272,715 and in cash of $29,059,727, but there is an increase in deposits of $79,102,171. Compared with a year ago, loans, however, have increased $36,019,010."

EGGS

MEXICO, currency, the tariff, and other worries may rag the nerves of statesmen, but the price of eggs is causing housewives much more concern. In New York a competent investigator reports that retail prices run thus: "Fancy, from 70 to 75 cents; fresh, selected, and mixed, from 37 to 67 cents; cold storage, everywhere classed as 'No. 1,' from 30 to 50 cents." And in the "astounding" medley of prices and classifications there are noted sales at 80 and 84 cents, bringing in the "7-cent egg." "It's a shame, the price we have to pay for eggs," says Mrs. Julian Heath, of the National Housewives' League. To which, piously observes the New York *Sun*, "the country says Amen!" "We are going to have eggs, especially cold-storage eggs, much cheaper," continues Mrs. Heath, and she has a very definite plan of action, which is to be mentioned again. But the campaigners of the Housewives' League, and the rest of us who share their indignation, are reminded by *The Sun* "that whatever liberties are taken by warehousemen with the law of supply and demand it rules in the case of the egg reasonably fresh from the hen at this time of the year," and "the 'fancy' egg can not be made much cheaper." And *The Sun* goes on to defend the hen:

"HIS MASTER'S VOICE."

Efforts of the American military to soothe and civilize a Filipino chief and make him fit for the ballot and, in time, for a Government job.

"Any owner of a private chicken yard will testify that the veterans are molting now and the spring pullets have not yet begun to cackle about their achievements. The youngsters must be six or seven months old before they produce the pioneer egg. Hereabout that interesting event occurs in December. Chickens that come into the world in this latitude as early as the last week in March are likely to molt in the end of the year. Such is the testimony of the poultry yard. It is better to have them born in April or May, and sometimes in December they will begin the business of their lives with credit.

"No affidavit is needed to support the statement than many an owner of 100 hens and pullets is now getting no return in eggs for his outlay, not more than one or two a day at the most. . . . It is only a step from kicking about the high cost of fresh eggs to traducing the feathered friend of man. If hens and pullets won't lay they won't, and there's an end of it. Invest and bombard the cold-storage despoilers, ladies, but don't expect to see the price of fresh eggs go down before Christmas week, when the hens cease from molting and the pullets begin to earn their keep."

The Republican Philadelphia *Inquirer* sees in this time of doubt—and doubtful eggs—but one certainty: "The hen refuses to do more work for the Democratic Administration than she did for the Republicans; hence the Democratic promise of cheap food was a myth." True, the Democrats have taken off the duty on eggs, but, as the New York *Press* notes, egg prices keep rising. The tariff has nothing to do with it, we are told. "When there are plenty of hens—something there is not—and when those hens will stick to their business of laying eggs—something they are not doing now—eggs will be cheap." "All over the world," another daily informs us, "the hen is sulking about the yard instead of attending to business on her nest." Tho the New York *Evening Mail's* explanation of the failure of relief from Europe is that "the egg dealers of Russia, Belgium, and Germany have raised their prices in harmony with the American market."

What are consumers going to do about it? is the question the press raise, and in some cases attempt to answer. The suggestion of the Albany *Argus* is that "we should raise more hens, in the first place, and in the second place we should inaugurate better methods of handling the eggs so that the loss from breakage due to bad methods of handling would be very small." Distribution, observes the Brooklyn *Eagle*, "can be much less wastefully and more cheaply done than it is now." Indeed, it seems to the Brooklyn paper that "if the present mounting prices lead to a general system of city market, so distributed as to reduce the cost of cartage and cut down the number of middlemen, our pockets will not have bled in vain." But all these suggestions point to the future, as does the Government's plan to utilize the parcel post for the elimination of the middleman. In the present difficulty the public, says the Washington *Post*, is more likely to "look for relief to the 700,000 members of the Housewives' League, who are preparing to compete against the middlemen's trust, confident that eggs can be sold as low as 30 cents a dozen." "For, a similar plan put in operation in New York and Philadelphia last winter effectually broke the prohibitive prices then quoted, thus compelling the middlemen to dump their cold-storage stocks on the market at any old price."

Mrs. Julian Heath, president of the League, says that so far it has not been deemed necessary "to call a boycott or sell eggs ourselves." But she adds:

"We are advising every one to get storage eggs for thirty cents if they can, and not to pay more than thirty-two cents for them. . . . The way to enforce our demands for reasonable prices is simply refuse to buy of dealers whose prices are too high. Some men are selling at normal prices, and the others can do what they can do. One of the principal objects of this campaign is to teach the housewife that storage eggs from honest groceries are good enough for any one."

A final word in defense of the hen comes from the Census Bureau at Washington, which gives figures to show that the annual production of eggs is more than keeping pace with the increase of population. As a New York *Globe* dispatch interprets these figures, "each person in the country this year ought to be enabled to eat about eight eggs more in 1913 than in 1909 and not have the price increase a bit."

AMERICANIZING THE FILIPINO.

GIVING JOBS TO FILIPINOS

IF President Wilson's Philippine policy should ever prove a disappointment, he at least can not say that he was not warned in time. The warnings, too, have come from men with such expert knowledge of Philippine problems that many editors think the President and his advisers can not ignore them. Mr. Dean C. Worcester's strictures upon the Wilson policy are found self-contradictory by the anti-imperialist New York *Evening Post*, and set down as "maunderings" by the Democratic Philadelphia *Record*, but his thirteen years of service as Secretary of the Interior in the Philippines convince many other dailies that what he says is worth listening to. Then when William H. Taft adds the weight of his experience as President of the United States, as Secretary of War, as Governor-General of the Philippines, to criticism of the present Administration's course, the Republican press, at least, are fully satisfied that Democratic folly has been clearly exposed. Mr. Taft feels that he knows "so much more about the problem and its difficulties than any of the gentlemen in this Administration" that he has "a duty and a right to call their attention to some of the dangers that beset them and to some of the mistakes" that he hears have been made. He thoroughly disapproves of the "steps toward Filipino independence" that have been taken, as part of the declared Democratic policy of early freedom for the islands. As he puts it, in a speech delivered in Brooklyn:

"It is the inability of the common people to understand what is their own interest that justifies our staying there, and to say that they would prefer the independence of the islands under the present conditions is only to demonstrate their lack of capacity to receive it. By going in and doing what we have done we are pledged to stay there until that good shall become not only substantial, but permanent."

The "one criticism" that ex-President Taft thinks can be made of our government of the Filipinos is that possibly we have given them too much share in their control. He says:

"The great body of the adult Filipinos to-day, steeped in ignorance, do not know their own rights under the government under which they are now living. The supreme difficulty of maintaining a government of free civil institutions there is in giving the uneducated and the poor an understanding of what their rights are. They do not know enough to vindicate those rights by the methods secured to them now, of appeal to the courts and to the constituted police authorities. . . . . .

"It was wise and right to give them a partial autonomy in order that they might be educated in the problems of government and in the problems of popular control, but the gift of one power only feeds a desire for other increases and never satisfies.

"Therefore, our friends in this Administration will find that while for a time there will be quiet satisfaction in the supposed increase of power that has come from enlarging the number of Filipinos in the commission who constitute the second chamber of the government, there will be an ultimate demand for an election of that commission, and soon will come the demand for a definite time for announcing when independence is to be had."

Mr. Taft also fears the return of the spoils system in the Philippines. He does not like the report from Manila that immediately upon his arrival Governor-General Francis Burton Harrison called for the immediate resignations of the heads of six or seven of some of the most important bureaus "and announced his intention of appointing Filipinos to some of these places and Americans from the United States to others." Among these bureaus, notes Mr. Taft, are those of Customs, Public Lands, Internal Revenue, and Health, which "require for their proper administration a thorough knowledge of the islands and a technical familiarity with especial statutes and bureau regulations." Our former President hopes "that this sweeping removal of most competent officers is not the result of a tendency toward the spoils system," and declares that "if the American civil service in the islands breaks down, disaster will certainly follow."

These are the changes that also rouse the ire of Mr. Worcester, and in statements made just before leaving Manila and just after reaching San Francisco on his return from the Philippines after his voluntary resignation from office, he speaks more plainly and pointedly than does the former President. In particular, he says, it was "very bad policy" to discharge a man like Charles A. Sleeper, who had been for thirteen years Director of Lands, and "whose competency had been noted by every expert who visited Manila." He is succeeded, continues Mr. Worcester, as reported in a San Francisco dispatch to the New York *Tribune*,

"by Manuel Tinio, a young Filipino lawyer with no special training for the work. An utterly inexperienced youth is to administer the affairs of the public domain, mineral lands and agricultural lands, including the 7,000,000 acres of friar lands.

"This appointment alone will result in a lot of trouble which may be far-reaching, for the natives are frankly antagonistic

to the plan of settlement adopted when the difficulty over the friar lands came along."

Other cases are cited, and Mr. Worcester waxes particularly indignant over the "contemplated removal" of the head of the Department of Public Health. He is quoted in the press as saying:

"No living sanitarian has a better record for ability and efficiency in coping with great sanitary problems than Victor C. Heiser, of the United States Public Health Service, who has been Director of Public Health in the Philippines for nine years. He has practically eliminated smallpox, bubonic plague, and cholera, and has excluded beri-beri from public institutions; has built the best general hospital in the tropics, and has isolated the lepers while arousing only a minimum of opposition by so doing. He has reduced the death-rate of American officers and employees to less than five in 1,000, and among Filipino officers and employees to four in 1,000; he has made Manila more healthful than many of the larger cities of America and has materially reduced the death-rate throughout the islands. His place simply can not be filled for years. Should Dr. Heiser be transferred to make way for a politician, he doubtless would heave a sigh of relief, but it would be a sad day for the Philippines."

Copyrighted by Brown Bros.

IS THIS "NEGLECT OF DUTY"?

Mrs. Peixotto, who is shown here with Helen Esther, argues that "it is quite absurd to say that it is impossible to give the proper attention to your work when one has a baby or that it is necessary to neglect the baby to give the proper attention to work."

If men like these, declared Mr. Worcester at a farewell banquet in Manila, "are to be removed from the service to make room for political appointees of whatsoever nationality, let it be done promptly. The sooner it is over with the sooner the inevitable day of reckoning will come." Now that he has left the Government's service, Mr. Worcester's business, so he says, "is to endeavor to bring home to the people of the United States the truth about the Philippine Islands." He expects that there will be plenty of interesting data soon available. He is certain that the placing of the balance of power in the hands of natives will produce serious and unwelcome results, and he regards the promise of early independence as a very grave mistake.

There is only one satisfactory aspect to the present situation, the New York *Sun* quotes Mr. Worcester as saying:

"It will result in speedily demonstrating to the American people certain important facts relative to the present fitness of the Filipinos to maintain an independent government, one for which the United States could afford to be responsible. Unfortunately, while the demonstration will be highly instructive, it is the poor 'tao' in the fields who will pay the freight. If the consequences could be made to fall on the Filipino politician only, one might welcome the demonstration."

Editorial critics of the present Administration are glad to find in Mr. Worcester's statements a verification of their worst doubts and fears. They present his views with all the emphasis at their command; and if they are Republicans, they remind their readers that it is all a consequence of the awful mistake the country made last November. The New York *Tribune* (Rep.) points to the apparent Democratic "intention to make the insular service, like the diplomatic and the internal revenue, a gleaning field for party loot." And the change in the Land Bureau, thinks *The Tribune*, "threatens to impose upon the Philippines one of the worst evils from which Mexico is suffering—that is, the monopolizing of the land by a sort of feudal aristocracy and the degradation of the masses into a tenancy scarcely distinguishable from peonage." The new Governor-General, thinks the Philadelphia *Public Ledger* (Ind.), "is inviting a catastrophe which will react upon the Filipinos and postpone their ultimate independence." The New York *Sun* (Ind.) wonders if we are not making in the Philippines the same mistake that England made in Egypt "when Sir Eldon Gorst was sent to replace the Earl of Cromer." The New York *Times* (Ind. Dem.) is not so sure that we are on the road to ruin in the Philippines, but it is nevertheless worried. Further changes in the same direction, it says, "will inevitably undermine the whole system of administration."

A timely exhibit, remarks the Columbus *Dispatch*, was the action of those Mohammedan Moros who asked Governor-General Harrison to send them an American Governor—

"They have fared well at the hands of the American soldier, but they have no faith in the Christian Filipinos, or the Tagalogs of Luzon, who are the chief agitators for Philippine independence. . . . The lesson of the incident is that not all the Filipinos are speaking at Manila."

Yet the supporters of the Administration's policy are also being heard from. The New York *Evening Post* (Ind.) points out that much work which must take many years to carry out, and which directly affects the Filipino people, must inevitably be left to representatives of that people to execute. "To deny natives of character and tested ability the right to acquire experience, on the ground that they now lack it, is the very acme of imperialist self-contradiction." The Philadelphia *Record* (Dem.) sees no point at all to Mr. Worcester's "Philippine maunderings." It reminds him that, after cleaning up Havana, we turned it over to the Cubans, and it "is still a quite healthy place to live in." It notes Governor Harrison's declaration that the present competent staff of civilians employed in governing the Moros and other wild tribes will be preserved intact. It observes that while slavery and peonage grew or continued under twelve years of Republican administration, "one of the first acts of the Filipino Assembly since the arrival of Governor Harrison was the passage of a bill incorporating into the native law all the antislavery provisions of the Spanish as well as the American *corpus juris*." *The Record* similarly replies to other Worcester charges, proceeding to the conclusion that "most of the ominous anticipations of Mr. Worcester seem to be of the category of troubles that never come."

THE TEACHER'S RIGHT TO MOTHERHOOD

BY ORDERING the reinstatement of Mrs. Bridget C. Peixotto, a school-teacher dismissed by the Board of Education for "absence from duty for the purpose of bearing a child," Justice Seabury, of the New York Supreme Court, not only establishes the right of teachers to be mothers, but also their right to appeal to the courts from a decision of the Board. Mrs. Peixotto's case and the principles at issue were discust in THE LITERARY DIGEST of November 1. Now, unless an appeal is taken from Justice Seabury's ruling, the legal status of the mother-teacher is established, but the question of the relationship between motherhood and teaching efficiency still awaits an authoritative answer. After all, says the Indianapolis *Star*, the only test should be one of competency, and "no sweeping rule should ever exist in such matters"—a view which seems to be shared by Mrs. Peixotto herself, who is quoted in the New York *World* as saying:

"A teacher who has had years of experience in her work and is in every way efficient should be allowed leave of absence, without pay, for the purpose of motherhood. The very fact of being a mother broadens one's comprehension and increases instead of decreases one's efficiency.

"I think each case of motherhood should be taken up separately by the Commission on Elementary Schools and the Commission on High Schools, and the actual worth of the teacher should be taken into consideration. I most certainly do not think that unlimited time should be allowed all teachers for this purpose, but rather that all absences should be regulated."

In rendering his decision Justice Seabury said in part:

"If Mrs. Peixotto's absence was caused by 'serious personal illness' of a temporary character, she could not be dismissed, either upon this ground or upon the ground of 'neglect of duty.' It requires no strained or forced construction of the law to hold that the words 'serious personal illness' includes illness caused by maternity.

"The fact is the legislature has sanctioned the employment of married women as teachers. Married women being lawfully employed as teachers and excusable for absence caused by personal illness, the idea that because the illness resulting in absence is caused by maternity, it therefore becomes 'neglect of duty,' is repugnant to law and good morals."

Alfred J. Tulley, Mrs. Peixotto's counsel, points out that the decision "establishes the principle that the teachers have a right to go to the Supreme Court for redress." He says:

"The legal members of the Board of Education have repeatedly said that we had no remedy except in the State Commissioner of Education: in other words, an appeal from one educational body to another educational body. So the decision establishes a very important right."

We find unqualified approval of Justice Seabury's ruling in such papers as the New York *Tribune*, *World*, and *Herald*, and the Chicago *News*, but in the New York *Times* commendation of the decision is coupled with the statement that "the law that compels such a decision, however, needs amendment." Says *The Times:*

"Obviously our public-school system is a victim of that comparatively new and distressing malady called feminism. Time was when women who married and took up the burdens of the conjugal relation expected thereafter to devote themselves to the care of their homes and the training of their children. This woman is the representative of a new order. She claims the right to hold her place in the public service when she is obviously unfit to perform the duties attached to it. That a law prohibiting the employment of married women as teachers is indicated does not necessarily follow. There are plenty of widows and women with living husbands who are exceptionally well fitted to serve as teachers. But the action of the Board of Education in the case of Mrs. Peixotto was in the public interest, and the present law should be so amended as to render any interference of the courts with the just conduct of the business of the schools by the Board of Education impossible."

SECRETARY WILSON FOR THE UNIONS

LITTLE RELISH appears to be felt by the more conservative press for the rather advanced stand taken in regard to trade-unionism and the rights of private property by Secretary of Labor Wilson in his speech at the Seattle convention of the American Federation of Labor. His remark that "the Department of Labor as now organized and directed will be utilized to cooperate with the great trade-union movement in its effort to elevate the standard of human society" is construed as an official declaration committing the

HE PLEDGES GOVERNMENT AID TO THE UNIONS.

Secretary of Labor William B. Wilson declares that his Department will "cooperate with the great trade-union movement in its effort to elevate the standard of human society."

Government to the side of the unions in labor controversies. That the Secretary holds strong unionist sentiments should perhaps not be surprizing to those familiar with his career. He was a coal-miner from 1871 to 1898 and president of a Pennsylvania District Miners' Union from 1888 to 1890. He was a member of the National Executive Board which organized the United Mine Workers of America in 1890, and from 1900 to 1908 he was secretary and treasurer of that body. Most of the votes that elected him to the Sixtieth, Sixty-first, and Sixty-second Congresses are said to have come from union labor. These facts were all known before he entered the Cabinet, and he could scarcely be expected to come out now as a foe of union labor or even as a neutral onlooker. William Barnes's Albany *Journal* refers to the Secretary as "a labor agitator in the Cabinet," and says that, while talking mediation and conciliation, "he has given encouragement to the most radical of labor agitators." Secretary Wilson did not stop with mere generalizations about the duties of the Government in labor disputes and the rights of corporate private property; he went into particulars, alluding pointedly to the strike in the Michigan copper-mines. His attitude is thought all the more pronounced because he addrest the delegates as "fellow unionists." Beginning with reference to the copper-mine strike, Secretary Wilson said in part:

"The little bit of confidence that I am going to give you is an advanced statement of one of the items in that situation—that the largest corporation engaged in the production of copper in Michigan district was organized in 1870 under the laws of Michigan; that the face value of its capital stock is $2,500,000. The shares are $25 each. They were purchased at $12 each, so that the actual investment is $1,250,000.

"From that time until one year ago, the last fiscal report that we had, a period of forty-two years, that corporation declared in dividends $121,000,000, and made reinvestments out of its earnings of $75,000,000.

"Nearly $200,000,000 of actual net profits in a period of forty-two years on an investment of $1,250,000, and they not only protest against meeting committees of their workmen, but refuse to accept the good offices of the Department of Labor in negotiating the difficulty.

"They say their property is their own; that they have the right to do with it as they please. Maybe they have; but those who take that position have a false conception of the titles to property. . . . . .

"If any individual or corporation takes the ground that the property is his own, that he has the right to do with it as he pleases, and fails to take into consideration the fact that the title has only been conveyed to him as a trustee for the welfare of society, then he is creating a condition that will cause society to modify or change these titles to property, as it has a perfect right to do whenever in its judgment it deems it for the welfare of society to do it. . . . . .

"There can be no mediation, there can be no conciliation between employers and employees, that does not presuppose collective bargaining, and there can not be collective bargaining that does not presuppose trade-unionism."

The Philadelphia *Public Ledger* remarks that Secretary Wilson "has apparently overlooked the fact that he is the representative of the Government and of all its people, and has constituted himself an active and aggressive agitator of union labor." It condemns his allusion to the Michigan strike, in which Federal mediation was declined by the operators, as being in the "worst possible taste," and proceeds:

"This remarkable official is apparently surprized that having shown his complete hostility to one side of the controversy, the pilloried party to the proposed bargains should hesitate to invite as a mediator a prejudiced man, an avowed champion of the opposition, who has already prejudged the case.

"His position in this case is untenable, and his general position is indefensible. He espouses, as a representative of the Government which consists of 95,000,000 people, the cause of about 2,500,000 to 3,000,000 members of labor-unions and treats with contempt not only the interests of the employers but of that enormous army of 30,000,000 workers engaged in gainful employments who are not members of the union. He says in effect to employers and to the great mass of the workers that his is a union-labor Department of a union-labor Government which is devoted to unions and is not concerned with any who maintain the open shop or with those who work in it. He is using the influence of a department of the Government which belongs to the whole people in a propaganda in the interests of the relatively small class of unionists."

"The Boston *Transcript* says that his speech "was simply a proclamation that in any matter demanding action by his Department only the organization with which he was affiliated need expect any consideration, no matter on which side justice lay." Tho disagreeing with Secretary Wilson as to what he considers the impossibility of collective bargaining without trade-unions, the Dallas *News* agrees with him in part:

"Much that Secretary Wilson said . . . at Seattle is undeniably true. There is growing up a public opinion, not only in this country, but all over the world, that conditions the private ownership of industrial properties on the obligation to deal in a spirit of fairness with those whose labor makes so large a part of the value of that property, and whose welfare is so vitally dependent on the right use of it."

FOREIGN COMMENT

HOME RULERS CHALLENGED TO A VOTE

THE LATEST TURN in the Home-Rule fight is a challenge by the enemies of the measure to let the people vote on it. Some of the recent by-elections have encouraged them to think that a general election would overthrow the present Government, restore the Unionists to power, end all the reform schemes of Lloyd-George, and kill the Home-Rule Bill. The Ministry, however, are very well satisfied as they are, with a large majority behind them in Parliament, consisting of Liberals, Laborites, and Irish Nationalists, and naturally have no desire to risk their power in the uncertainties of a general ballot. True, the present Parliament was elected nearly three years ago, but Home Rule was one of the main issues of the election, and the Ministry feel they have a popular mandate to carry the reform through. The challenge to a general election was made by Mr. Balfour in a speech at Aberdeen on November 3. Describing the condition of things in Ulster as "tragic" and the coming of rebellion there as a "catastrophe," he urged immediate dissolution of Parliament and a new election. To quote his words:

KITE-FLYING.
Mr. Balfour whistling for a wind.
—*Westminster Gazette* (London).

"I say, whether Home Rule is right or wrong, be you a Home Ruler or not a Home Ruler, don't you think that with the problem of Ireland as it is presented at the present moment you can not proceed even with the Home-Rule policy unless you have the opinion of the people of this country behind you?

"I would rather see the constituencies consulted, the constituencies give a verdict, a large verdict, in favor of Home Rule, and the Home-Rule policy, therefore, be carried out by a Government representing the constituencies, with all the force of the Crown—I would far rather see that—it would be better for the country—it would be far better for everybody, than an attempt to force upon Ulster this abominable system, when nobody could have any security that the Government doing it really represent the people of the country, and when at least half of the voters in England and Scotland are firmly and absolutely convinced that the whole thing is one of the most scandalous—if you take it from the beginning of the Parliament Act down to the present moment—that the whole thing is so far one of the most scandalous transactions in all British history."

"In such a crisis there is only one course, that indicated by Mr. Balfour in his fine speech at Aberdeen," says the London *Daily Mail*. "It is to put the issue to the test at a general election. If the Government contemplates forcibly driving a loyal and contented community [in Ulster] out of the Kingdom, it must at least have the consent of the British people." The Bristol *Morning News*, another Unionist paper, says of the proposal:

"The time seems to have arrived to statesmen to reconsider the whole subject, and if through the obstinacy of Liberals or Nationalists they can not compose the differences that exist, turmoil and bloodshed can only be prevented by an appeal to the country. In the interests of peace, in the interests of Ireland as a whole, Mr. Bonar Law holds open the door beyond which lies the destiny of Ireland."

In fact, it is Ulster's threat of armed rebellion against Home Rule that inspires this challenge to a vote, for the Unionists believe it puts a new face on the matter. England and Scotland, they think, would never vote for a Home-Rule Bill that would put Ulster out of the Union against its will. As the London *Times* argues:

"The Ulster movement is impressive because it comprizes every class of the Protestant community. It has now arrested and engrossed the attention of England and Scotland. It must continue to absorb the thought of every patriotic Briton until the Government is forced to ask the country whether Ulster is justified or not. We have no fear about the answer."

But the Liberals regard the challenge as a "last-ditch" appeal of those who grasp at any straw in the hour of defeat. Says the London *Westminster Gazette:*

"When a question has reached this stage it has got past the point at which an appeal can properly be made to the public on any broad and simple principle, and got to the point at which it must be settled by statesmen. That we believe to be the prevalent view in the country at the present moment, and, if we are right, the electors will be equally severe upon the Government if it appeals helplessly to them for a way out of its difficulties."

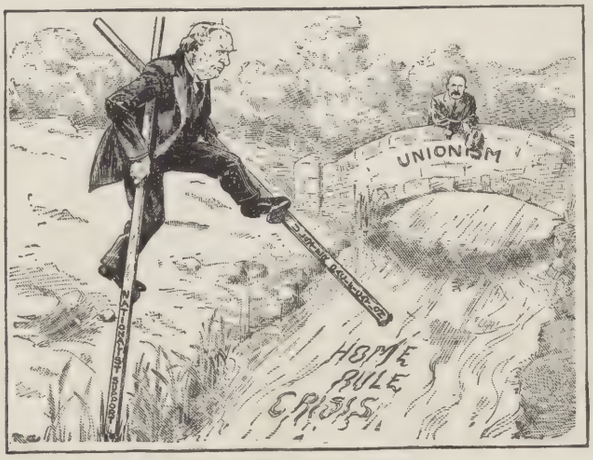
The London *Daily News* dismisses the plan thus:

"Mr. Balfour, pathetically loyal to a venture of his own which cost him dear, asks for a referendum on Home Rule. At this time of day it is hardly worth while recounting in detail the arguments against the referendum."

Meanwhile a great deal of talk of a "compromise" is heard, but nothing has been suggested that suits both sides to the dispute. One plan is to have Ulster control its own police and other local affairs, another is to exclude the Protestant counties from Home Rule temporarily, and so on, but what pleases one group enrages another. The London *Morning Post* shows the difficulty of compromise in these words:

"Whatever may be the wishes of individual Ministers, it is difficult to see how the Government as a whole could accept any proposal for the exclusion of Protestant Ulster. The most they can offer would be a compromise of the kind suggested by Sir Edward Grey, a sort of 'Home Rule within Home Rule, as regards administration, police, and matters of that kind.'

"Its author no doubt is sincere in his belief that such a scheme



NEGOTIATING THE "STICKS."
—*Pall Mall Gazette* (London).

THE THREE ROADS.
—*Pall Mall Gazette* (London).

ASQUITH'S DILEMMA.

would provide a reasonable and satisfactory solution. But unfortunately it suffers from one vital defect: it would not be acceptable to the Ulstermen. They would resist any arrangement which left them under the rule of a Nationalist Government."

The Nationalist *Irish Independent* is just as positive that its side will accept no half-way measure, and insists that "Mr. Asquith must realize that a settlement is only possible by conceding the broad principle of Home Rule for the whole of Ireland."

ENGLAND'S "RETRIEVABLE ERROR"

IT IS NOW generally admitted in England by the newspapers of all parties that the Government made a mistake in declining to take part in the Panama Fair at San Francisco. But, as the London *Times* declares, "the error is retrievable." A strong committee of manufacturers, merchants, and others has accordingly been formed with the object of seeing that Great Britain shall be represented at San Francisco. This committee will prove to the Government, says *The Westminster Gazette* (London), that circumstances have changed since the original negative decision was made. While it appeared at first that British manufacturers were hanging back, this committee feels certain that a really representative exhibit is possible. On this question *The Times* remarks:

"When Sir Edward Grey made his statement in the House of Commons on August 5, he was careful to limit his explanation of the Government's decision. He then said that 'in present circumstances' they did not feel justified in asking the country to incur the heavy expenditure which they were informed would be necessary. He estimated the grant required at £250,000; and a week later Mr. Acland, replying for the Government, referred to this sum as being 'two-and-a-half times greater than the amount that the United States Congress was voting,' the suggestion being that this was a consideration which had influenced the decision. It was also intimated that inquiries by the Board of Trade indicated that manufacturers generally in this country were not anxious to participate. But a good deal of new light has been thrown on the situation since then, and the circumstances present to the mind of the Government have been altered on both these points. It was shown in a letter which we published from Sir Robert Balfour that no proper comparison could be made between the £100,000 voted by the United States Congress and the £250,000 which Sir Edward Grey thought too large an amount for us to spend. The State of California is appropriating £1,000,000 toward the exhibition, the City of San Francisco £1,000,000, while private subscriptions toward its expenses have been made to the extent of £1,300,000 more, and contributions are also certain from many of the other States of the Union. Moreover, there is now no doubt that the Government's advisers overestimated the amount required. . . . The first idea prevalent in America, that the Government's decision reflected British pique at the dispute over the Panama tolls, has, we are convinced, been removed. The first idea prevalent in the mind of our own Government, that there was no sufficient desire here for British representation, and that the occasion would not justify the cost, must be disappearing with further knowledge. It will be for the newly organized British committee to provide the Government with an opportunity to retrace its steps."

That Sir Edward Grey was too much taken up with European politics to give proper attention to this question is the opinion of the London *Standard*, which adds:

"Even the most distracted and preoccupied statesmen need not be puzzled to find means of withdrawing from a false position with the air of people who only made a mistake through inadvertence and hasten to retrieve it directly they are better informed."

Of the arguments likely to be employed by the committee the London *Evening Standard* says:

"The eminently practical consideration is the extent to which the Panama Canal and the reduced American tariffs may increase trade between the Pacific Coast and the United Kingdom. The Exhibition is a business enterprise, and should be regarded from a business point of view so long as this does not conflict with the national point of view.

"Possibly the Government will want very little persuasion to see the lack of wisdom in persisting in an obstinate policy of negation."

From a moral and not merely a commercial point of view British participation is absolutely necessary, declares the London *Pall Mall Gazette*, in which we read:

"The immediate monetary return is not always the most valuable gain to be won from any enterprise. To foster the growing good will between this country and the United States is, to both, one of the most important objects their Governments can set before themselves. We do lip-service to this sentiment every day. Are we to wave it aside when we are asked to prove our sincerity by the expenditure of a comparatively trifling sum of money? Were the result of the San Francisco Exhibition never to show itself at all in the trade returns, we should still think the Government right in being the first of foreign nations to aid in making the Exhibition a success."

Finally, the passing of the American Tariff Bill has altered the whole situation and made non-participation impossible, declares the London *Daily News:*

"The conditions have radically altered since, in August last, Sir Edward Grey announced the Government's decision not to participate in the exhibition. The American tariff, with its solid wall of duties erected in the path of British trade, has been modified, and the duties have been lowered so as no longer to exclude our goods. This in itself is a development which revolutionizes the position,"

IN THE AIR.

"I wonder when I shall come down."

[*Mr. Bonar Law, in a pessimistic speech at Newcastle, warned his audience that a Tory return to power was very doubtful.*]

THE ROMANTIC AND THE REAL.

The Ulster resister has the choice of two forms: (1) the Active and (2) the Passive. The resister may be either a man-at-arms or a man in an easy chair, declining to consume anything taxed by a wicked Liberal Government.

—*Westminster Gazette* (London).

HIS FOES' DILEMMA.

AS FRANCE SEES OUR MEXICAN POLICY

THE DISTURBANCE in Mexico "is having a world-wide influence," says Paul Leroy-Beaulieu in the *Économiste Français* (Paris). The bourses of the world are affected by the little battles of the ragged regiments of the Mexican chiefs. Paris feels the strain, because France has a trade with Mexico running into millions of dollars, and French citizens have large investments there. Mr. Leroy-Beaulieu speaks in a rather airy tone of the idealism with which our President and Secretary of State are trying to handle the situation. After noting the "singular development" of the Monroe Doctrine in recent years, he goes on to say:

"The United States have as President to-day a doctrinaire, very eager for the people's good. Mr. Woodrow Wilson is a university professor and the author of some interesting books. He consequently has the advantages and disadvantages pertaining to a life long devoted to learning and teaching. His mentality is elevated, but rigidly unadaptive; his honesty is above suspicion. He is, however, deficient in experience. He considers himself called upon to regenerate the public morals not only of the United States, but also of other countries. He once uttered the following fine sentiment: 'I declare that the United States are not seeking to conquer by force a single square inch of foreign territory,' yet at the same time that he uses language so worthy of full commendation, he appears to be sliding down the slippery path which will rapidly lead to armed intervention in Mexican affairs. He is undoubtedly raising up the United States to be Mexico's guardian and undertakes to deny the countries of Europe any influence in that territory; he makes them mere subordinates of the United States. He says he will not permit Mexico to initiate such and such a governmental solution of the deadlock or put forward such and such a candidate for the presidency. But neither Mexico nor the nations of Europe can possibly submit to these North American injunctions. Mexico is an independent state and it is desirable she should remain so."

The great danger of the present moment, we are told, is that President Wilson will drag the United States into armed intervention:

"It certainly would be easy for the United States to occupy Lower California and even all the northern provinces of Mexico; possibly it would be easy for them to march into the City of Mexico. A century ago the French entered Moscow and Madrid; but after that? To subjugate fifteen millions of Mexicans scattered over a territory four times the size of France would be an adventurous undertaking, uncommonly long in duration and onerous in execution. It would need years and hundreds of millions of dollars to complete the task, and still final success would not be certain."

But the editor of the *Soleil* (Paris), one of the ablest of French dailies, does not agree with Mr. Leroy-Beaulieu. He thinks the United States has the approval of the European Powers in the assertion of its rights under the Monroe Doctrine:

"We wish to state that it is not our business to blame the American Government. It lies within its program to exercise a policy of Pan-American expansion, and it carries out that program well. It is, however, proper to consider what other Governments think about it.

"Since the United States requested the other Governments to keep their hands off, it seems that the Union has special rights over Mexico. Now we learn that France, England, and Germany have given favorable replies to this request. They therefore acknowledge the special rights which America claims. We consider this to be a very important event.

"But there is another fact of much more importance. We can not doubt the truth of it. Going much further than either England or Germany, France has asked the United States to send a war-ship to the Mexican port of Mazatlan, for the protection of the French citizens who live at San Ignacio, forty miles from the coast. The New York papers have declared that this proceeding of the French Government is equivalent to a recognition of the supremacy to which American influence in Mexico is entitled. It is, of course, a proceeding inimical to Mexico. It will create a sensation not only in that country, but throughout Latin America. France has long been looked upon in Europe as the patron and friend of the Latin countries of the New World. We feel ourselves bound to confess that France has shown herself readier than either England or Germany to deliver these countries into the hands of the United States. . . . If to-morrow trouble breaks out, as is frequently the case, in the French possessions of Martinique or Guadeloupe, and some foreign Power demands of the United States that the President send a war-ship to protect its subjects, what would France think of it? But what pretext could she have for opposing the proceeding?"

The *Liberté* (Paris) quotes Senator Bacon as declaring that Europe has relegated to the United States the work of regulating affairs in Mexico, but adds guardedly:

"As for France, this country waits to judge American policy by its actions. France considers the personality of the Mexican President a secondary matter. She merely desires that order be restored in Mexico, in whatever manner, so long as foreign interests are respected. It is only to this extent that in all things concerning herself France relegates to the United States the task of regulating affairs in Mexico."—*Translations made for* THE LITERARY DIGEST.

THE AMERICAN DOLLAR THREATENING MEXICO

IT IS EASY for Europe to see that all the Latin-American republics are threatened by the American dollar. In Mexico, where one party is supposed to be friendly to British interests, the other is regarded as the agent of American capital. The London *Times* has a long article on this line that recalls the days when British gold was heavily invested in this country and was held up as a bugaboo and a "peril" at election time. *The Times* never warned us of the awful danger we were in at that time, but now that American gold is playing the same rôle, the British discern its peril to the smaller republics. *The Times* links up Carranza and Wall Street as follows:

"The identification of Wall Street's 'big interests' with the cause of humanity and the ideals of democratic government is bound to raise grave doubts in the minds of many sensitive Latin-Americans, and eventually to create serious diplomatic problems. For behind the fierce economic struggle for markets and the exploitation of Mexico's natural resources, behind these 'concessions to foreigners,' which Mr. Wilson desires to abolish, there lies the certain prospect of insuperable differences on the subject of moral ideas, differences which might even unite the warring factions of Mexico to resist dictation from without."

Our financial penetration of Mexico has been the work of years, and is sketched thus:

"To appreciate the attitude of the *de facto* Government in Mexico toward the United States, it is necessary to consider certain features in the relations of the two countries during recent years, and particularly the development of American political finance which, under Mr. Taft's Administration, came to be generally known as 'dollar diplomacy.' This phase of American activity was a natural, and indeed an inevitable, consequence of the growth of the United States as a world Power and a creditor nation; of its intelligent anticipation of industrial and commercial developments; of the making of the Panama Canal; and, above all, of its perception of the value of Mexico as a market and a field for enterprise. In 1900 the total number of the United States citizens in Mexico was about 15,000; just before the present troubles it was estimated at over 50,000, and a very large share in the direction of Mexico's business activities is concentrated in their hands. By their intelligence and energy these peaceful invaders have been firmly established in positions which the native-born can hardly hope to recover; and the fact is sufficient in itself to explain much of the patriot's sensitiveness and of the Government's anxiety to distribute more evenly the weight of alien pressure."

The memory of Texas is a warning to Mexican statesmen, who dread further encroachments that might end similarly:

"The Standard Oil Company, the Southern Pacific Railway, and other powerful American companies came to be feared, because they became identified, in the minds of Mexico's rulers, with resistless forces of economic and geographical gravitation. Three years ago the amount of American capital invested in Mexican enterprises was about equal to that of Great Britain (roughly £50,000,000 sterling), but its expansive tendencies were so clearly indicated that the policy of Porfirio Diaz, naturally enough, inclined to encourage capital from European sources. When first elected to the Presidency, in 1877, Diaz realized that public opinion was strongly opposed to American enterprise in Mexican railways and mines. Señor Romero, Ambassador at Washington, put the case fairly (in his work entitled 'Mexico and the United States') when he said:

"'Our experience of what took place in consequence of the liberal grants given by Mexico to Texan colonists made many fear that a repetition of that liberal policy might endanger the future of the country by giving a foothold therein to citizens of the United States who might afterward, if circumstances favored them, attempt to repeat the case of Texas.'"

LATIN-AMERICAN THRUSTS AT OUR DIPLOMACY.

SCIENCE AND INVENTION

IMPROVING THE STAFF OF LIFE

THE Government of the United States has undertaken to conduct a bakery in the city of Washington. The Department of Agriculture has been testing flours, and as "the proof of the pudding is in the eating," it has just naturally been obliged to bake bread. If things keep on in this way at Washington, says John L. Boyd, writing in *The Forecast* (Philadelphia, November), we shall be having our Government called a "maternal" one, or hearing it rumored that our esteemed old Uncle Samuel has taken unto himself a wife; for not being content with telling the people of the country how to raise crops scientifically, the Department of Agriculture is teaching the housewives of the land how to prepare foods for their tables. He goes on:

"For some years the Department has been testing flours—all grades, all brands, and all mixtures—not only as to their purity and cleanliness, but also as to their quality. Now, there is only one way to really test the quality of flour, and that is to bake something with it and eat it. All the chemical analyses and protein and carbohydrate tests are of course useful, but the principal question is whether it will make good bread or not.

"When the flour experts realized this, they set out to find a bread-maker who would be able to make the best possible bread from a given flour—to give the flour under examination the best chance of making good, as it were. These experts did not search for one that was able to make delicious bread by a hit-or-miss system of 'pinches of this and handfuls of that, and stir till it looks right,' that had been handed down from mother to daughter for generations—but for a woman who would be enough of a scientist to conduct her bread-baking accurately, and yet produce a delicious and nutritive product. This woman was found a little over a year ago, in Miss Hannah L. Wessling, at that time connected with the branch laboratory of the Bureau of Chemistry in Chicago. Now she is Chief Bread-maker and Tester of Flours for the United States Government.

"Miss Wessling began her work in Washington by testing the various flours, samples of which were continually coming in from all parts of the country—the tests being made to determine what sort of wheat grew best in certain locations. The baking of bread from the specimens followed the chemical tests naturally as part of the operation.

"Miss Wessling set up her baking laboratory in the Bureau of Chemistry, and began to bake bread scientifically, and when she has finished her experiments the results will be gathered together and given to the bread-makers of the country, in the shape of a simple yet scientifically efficient recipe for making good, wholesome bread.

"The laboratory consists of a number of stone mixing-jars with glass covers, so the fermentation of the dough may be watched without disturbing its temperature, a kneading-knife, a raising-closet, and a number of ovens, both gas and electric.

Photo by G. V. Buck, Washington, D. C.

SHE WILL TELL US HOW TO BAKE.

Miss Wessling is our "Chief Bread-maker and Tester of Flours," and her experiments may give us better and cheaper bread.

"Miss Wessling considers that the temperature under which bread-making is conducted is the most important part of the proceeding, excepting of course good flour to begin with, so she is extremely careful about the amount of heat that comes in contact with her dough, even to the watching of the temperature of her mixing-bowls and other implements.

"When the materials have been mixed and made into dough Miss Wessling puts the batch into the raising-closet, wherein a certain temperature (86° F.) is maintained constantly. During the raising process the dough is carefully watched, as is also the temperature, and the dough is three times taken out and kneaded. After the third kneading the loaf is placed in a baking-pan, covered with a damp cloth, and put into the closet. Alongside of it, in a graduated glass, is placed a tiny loaf pinched from the larger portion. When this little sample loaf has risen to the desired amount, the large loaf is taken out and at once placed in the oven. The temperature in the oven is about 400° F., and forty minutes is generally allowed for baking.

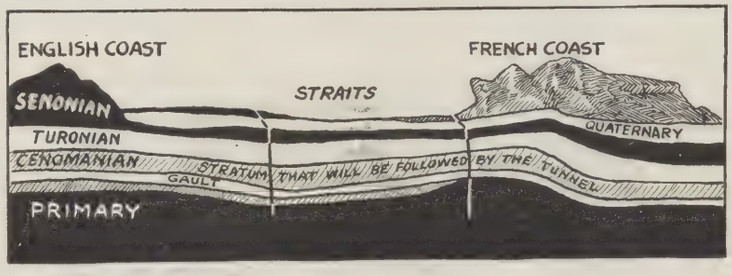
"When the bread is baked it is tested by experts of the Department, among them Dr. LeClerc, Chief of the Bureau of Plant Industry; Benjamin R. Jacobs, of the Plant Physiological Bureau, and Miss Wessling, the bread being scored for its weight, its volume, its color, texture, and flavor. After the loaves have been tested they are distributed among the needy employees, janitors, scrub-women, and the like, of the Department.

"Not only is Miss Wessling testing out the various flours made from wheat, but those made from other cereals are being experimented with, especially the cheaper varieties, for it is hoped that some less costly flour for bread-making may be discovered, so that the cost of bread to the poor may be reduced, and also that good bread may be made in localities not suitable for the profitable growth of wheat.

"Extensive experiments are being made with banana flours, potato flour, and meals made from dasheens, soy beans, kafir corn, chestnuts, and other products. Delicious breads have been made from these substitutes for the more expensive cereals. In this way Uncle Sam's helpers are working for the good of the country."

FROM LONDON TO PARIS BY LAND

TO-DAY express trains would be passing between Paris and London under the English Channel if it were not for that strange national antipathy that not only causes wars, but blocks the industries of peace. In other words, the obstacles have been political—not mechanical. Napoleon proposed such a tunnel to Fox over a hundred years ago, on plans submitted by the engineer Mathieu, whose scheme was for a submarine carriage-road and was probably impracticable. About 1876, a railway tunnel began to be seriously proposed, and the engineering features of the work have now been well worked out. So long as France was looked upon as Britain's hereditary enemy, the project was forbidden by the English Government as facilitating invasion, but now that the two nations are friends, opposition seems to have been withdrawn, and there appears to be some likelihood that the tunnel may really be constructed. Says the writer of an article on the subject in *Je Sais Tout* (Paris, November):



GEOLOGICAL SECTION OF THE STRAITS OF DOVER,
Showing the stratum destined to carry the Channel tunnel.

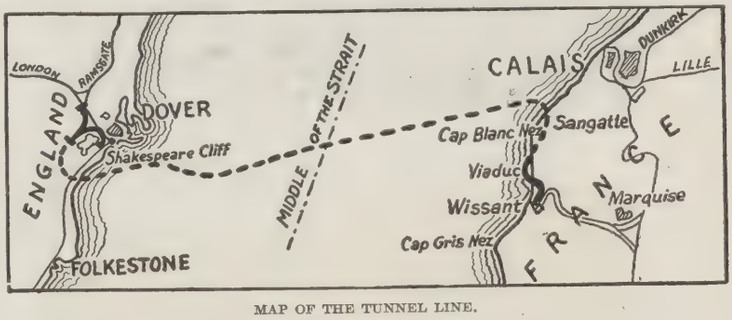
"The defense of Great Britain would be in no way compromised by a Channel tunnel; on the contrary, such a tunnel would effectually contribute to the success of the English armies in a conflict with any Continental power except France.

"It is an open secret that England does not live on the products of her own soil, and that she is obliged to import from abroad the larger part of the supplies necessary to feed her citizens. Now, in case of war a large part of the English fleet would be occupied in protecting the vessels that carry food to the United Kingdom. Suppose, on the other hand, that a tunnel existed; this supply would be effected through the submarine route, and the British fleet would no longer be obliged to employ part of its vessels in guard duty.

"The opponents of the tunnel, however, do not consider themselves beaten. If the transportation of supplies follows this route in time of war, they say, there is no reason why it should not be used also in peace, so that a Channel tunnel might ruin the British merchant marine.

"Really, however, all these reasons have for a basis a sentiment that will hear no arguments, but is inspired by the desire of the English to preserve their traditions. . . . . .

"Despite the efforts of railroad and steamship companies to lessen the duration of the passage, one can not yet travel from Paris to London with the same ease as from Paris to Brussels. The sea voyage will always constitute, in the view of many, an obstacle to the rapid growth of friendly relations with England. While the number of passengers between France and Germany reaches annually nearly 3,000,000, that of the travelers between England and the different ports on the Channel, the North Sea, and the Baltic scarcely exceeds 1,500,000. . . . . .



MAP OF THE TUNNEL LINE.

"The Channel tunnel would cause these impediments to disappear. . . . It is calculated that it would lessen by two hours the present quickest passage between London and Paris. . . . . .

"It is evident that shortly the movement of travel between the two great western capitals would be doubled or trebled, and that business between France and England would increase in the same proportion. . . . Everything goes to show that the building of a submarine passage would cause an increase of commerce between the two great nations and that new prosperity would arise from the effort necessary to create it.

"Would not this effort, however, be too great? Is it not folly to think of exerting it? Are not the obstacles insurmountable? We put these questions to Mr. Sartiaux, engineer in chief of the Northern Company, who has made a deep study of the Channel-tunnel plan. . . . . .

"The first condition of success for a Channel tunnel, he replied, is the existence, in this submarine region, of an impermeable geologic stratum through which the tunnel may be driven. Now this desirable stratum does exist. Nearly eight thousand soundings have been made to ascertain exactly the position of the different layers that form the bottom of the Straits of Dover. Among these geologic strata is found that called by scientists the Cenomanian, which has all the necessary qualities. It is nearly 200 feet thick, and the compact texture of its rocks will resist all filtration. The water that must be taken care of while the work is going on will be of vastly smaller quantity than can easily be managed by a moderate pumping plant. . . .

"The tunnel will be composed of two circular parallel passages, about 50 feet apart and each 18 to 20 feet in diameter. . . . The entrance of the tunnel will be near Blanc-Nez and the connecting tracks will leave the main line from Boulogne to Calais in the neighborhood of Marquise. The station and custom-house will be situated at Wissant. At this station the steam locomotive will take the train as it leaves the tunnel, a change which will occupy only a few minutes, in place of the long time now required for emptying the boat and loading the train on the wharf."—*Translation made for* THE LITERARY DIGEST.

SURGICAL BANDAGES OF CELLULOSE—Aviators are well acquainted with the process by which a French inventor succeeded in obtaining an even tension in the wings of aeroplanes by means of saturating the fabric with a solution of cellulose. This process has now been adapted by a surgeon of Tours, Dr. Guillaume-Louis, to the preparation of fabrics for the construction of surgical apparatus. After studying the results obtained by various solvents of cellulose, Dr. Guillaume-Louis finally adopted acetone, with which he obtained a white liquid of opaline luster called by him "pelliculine," a term whose English equivalent would be "filmine." We take from *Le Correspondant* (Paris) an abstract of the report on his experiments recently furnished by him to the *Province Médicale:*

"Pelliculine, which looks like collodion, leaves, on drying, a film which is both incombustible and resistant, and which imparts to strips of cloth impregnated with it sufficient stiffness to permit of their being used to construct light apparatus for holding injured limbs in position. . . . The film can not replace plaster for cases of fracture, since it dries too slowly and is not rigid enough. But when the plaster is removed it supplies a light fabric which gives the support necessary to make walking practicable.

"It is more supple and more resistant than potassium silicate, and dries more quickly. It is much superior to celluloid, since it is incombustible and more easily manipulated, besides being cheaper. It can be used to varnish dry plasters, making them impermeable and pliable. Celluloid becomes incombustible when varnished with it, and finally it furnishes, either pure or with the addition of iodine, a valuable substitute for collodion."—*Translation made for* THE LITERARY DIGEST.

TO CARRY EGGS WITHOUT SCRAMBLING

THE SOARING PRICE of eggs is engaging the attention not only of the housewife, but of the Government. Dr. A. D. Melvin, Chief of the Bureau of Animal Industry in Washington, believes that if he could carry out his scheme of sending eggs direct from the farm to the consumer by parcel post, the advance in the prices of eggs would cease to trouble us. But, as he says:

"I can't find the right carrier. The heavy ones that will protect the eggs in shipment are too heavy and cost in postage more than is saved through the elimination of the middleman. The light ones are too easily crusht. We're living in hopes, however, that the right thing will turn up eventually."

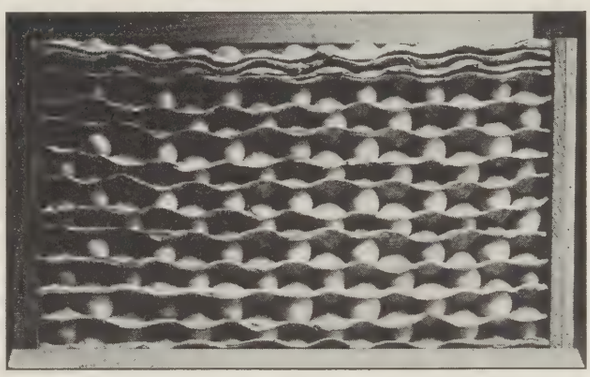
The carrier in the illustration may or may not have been brought to his notice, but it shows interesting possibilities in reducing the price by preventing omelets in transit and economizing space. We are assured that the case may be entrusted safely to the most careless handling, and is so compact that 50 dozen occupy no more space than 30 dozen by the old method. It has been patented by C. J. Voorhorst, of Portland, Ore. Says the Portland *Oregonian:*

"A case so packed has been loaded on an express-wagon, over the hind wheels, and hauled rapidly over the roughest of plank logging-roads for three hours and then dumped, as any unbreakable box of freight might be handled, on to the depot platform. Just one of the 50 dozen eggs was broken, and that was due to a slight imperfection in the hand-made filler. This will be easily overcome when the fillers are turned out by machinery and are all uniform, which was not the case with the preliminary model. The accompanying photograph shows the style of packing, and further demonstrates that a man can walk on eggs when the economy egg-case filler is used. Negotiations are now pending with Western capitalists for the financing of a manufacturing and marketing organization, and investigations are being made with a view to installing special machinery in one of the Pacific Coast paper-mills with a view to producing the economy egg-case filler locally. Attention from abroad has been attracted to the invention, inquiries having come from representatives of the British Government, as well as investigations from representatives of the Department of the Interior of our own nation and from Eastern railroad officials. Not only the breakage and spoilage of eggs in transit will be overcome, but the condensing of space will make it possible to ship and store almost twice the quantity now handled with present equipment, and the method of packing provides better ventilation."

The form of the case was evolved from a mathematical study of various geometrical designs, with the idea of determining how the greatest number of uniform spheroid or ovoid objects could be packed in a limited given space, and at the same time be protected from breakage.

A DEFIANCE TO THE EXPRESSMAN.

As the crate-handlers ordinarily do nothing worse than this to the precious product, the young man may be said to have "proved his case."



EACH EGG HAS ITS OWN NEST.

GOOD ROADS IN THE DESERT

THE SOLUTION of the traction problem in a sandy desert is found in a modification of the old-fashioned plank road, according to *The Motor Age* (New York). In places where the cost of macadam would be prohibitive and its practicality doubtful, motor-cars are now running at speed and with ease. These remarkable results in desert road-building have been secured by W. A. Horrell, of Phœnix, Arizona, on behalf of the Santa Fé-Blythe Motor Transit Co., operating over the great Mojave desert, just across the western Arizona border in California. We read:

"The distance from Blythe Junction, on the Santa Fé Railroad, to the town of Blythe itself is 40 miles. The 40 miles lie across the Mojave desert, where the sands in many places are shifted constantly by the winds. Horrell knew that he would have to overcome those dry sands, and he set about it in a new, original way entirely his own.

"The three most difficult miles of the entire route lie across a sand-wash, just out of Blythe. These three miles have been bridged with the only desert plank road in the world.

"A base of railroad ties first was laid over the sand. Toward each end of the ties two planks, each 3 inches thick, 12 inches wide, and anywhere from 10 to 24 feet long, were laid end on end, with the joints broken to overcome roughness as much as possible. This made 24 inches of trackage on each side, with a 60-inch tread between.

"When the boards were laid sand was shoveled in between the ties. The boards then were oiled to prevent wear. Regular truck service has been given over that road for several months, and the boards have not shown a sign of wear, with the exception of a few defective ones.

"The plank road cost $1,500 a mile, and no one can say how long it will last. Horrell says that the cost of similar road in other localities would not be nearly so great. Owing to the high freight rates, lumber costs $37 a thousand feet laid down at Blythe.

"Nearer the Colorado, Horrell laid a mile and a half of permanent road with a base of arrow-weeds cut from the river bottom. It cost only $80 a mile. Arrow-weeds were laid down on the sand and then a heavy thickness of straw was put on. Sand and gravel were then thrown on the straw. Cheap Mexican labor was used. . . . . .

"Two Saurer trucks are now hauling freight from the junction to the town and one Mack handles passengers. The Mack makes the trip in two hours and each Saurer a round trip a day. Formerly the journey, one way, required five hours by motor-car, as it was very difficult for machines to make their way through the shifting sands. It often took a week for a team of mules to make the round trip. The charge for freighting was $20 a ton, and the Santa Fé-Blythe Motor Transit Co. now gives quicker, better service for $7.50 a ton.

"Under a new California law this company has been recognized as a common carrier. This is the first time that motor-trucks have ever been listed as common carriers. Hereafter the Atchison, Topeka & Santa Fé Railway Co. will publish rates to Blythe as well as Blythe Junction."

A MEDICAL DEPARTMENT STORE

THE WEALTHY PATIENT and the pauper are fairly well off as regards expert medical or surgical service. The former can afford to pay for it and the latter gets it for nothing. The man of moderate means can not afford to pay fancy prices, and it is out of the question for him to accept charity. He is ground between the upper and the nether millstone. The family physician, in many cases, now has no function but to advise his patient which specialist to consult, and he is not always competent to do even this. If he is not overscrupulous, he may get a commission from the specialist to whom he sends his patient. Evidently a reform is needed. It is suggested by Dr. George W. Guthrie, of Wilkesbarre, Pa., writing in *The Journal of the American Medical Association* (Chicago, November 8), that this should take the form of what he calls "group diagnosis"—an application of the department-store idea to medicine. He advocates the association of competent specialists, who, for a reasonable, fixt price, should be prepared to examine a patient in any of a number of different directions, tell him what ails him, and advise him what to do. Says Dr. Guthrie in substance:

"There is no doubt that never in its history was our profession so competent and so willing to give aid and relief to the human family as at the present time. Indeed, the whole tendency of society is toward a broader humanity, which means that the best that the profession can give, the best that charity can furnish, should be shared by everybody.

"The work of the visiting nurse and the hourly nurse, and that of the social-service worker, have carried the charity of the hospital and of the profession in a most intelligent manner to the needy and deserving. Indeed, the humane offices of the well-equipped charity hospitals and the services referred to give the best to the poor and dependent. The wealthy can command this, either in their homes or in private hospitals; but how about the middle-class man, the man who can not, who will not, make himself an object of charity, but who has not the means to command the best the profession can give in all the special lines he may need?

"Let me cite a possible example: A self-respecting artizan, accountant, or teacher, earning $75 to $100 a month, takes his wife to a physician for advice and treatment. It is found as the examination proceeds that the services of an oculist, a cystoscopist, a roentgenologist, a pathologist, and probably other specialists are necessary for a complete diagnosis. How is it possible for this patient to obtain this service in the most complete manner as the profession now operates and have the charges remain within his ability to pay? The poor and the wealthy, as noted above, have the best the profession can give them; why not the eminently respectable and worthy middle class of our people?

"Dr. Richard Cabot, in an address before the Medical Alumni of the University of Pennsylvania, April 18, 1913, in referring to the need of this class of better medical service, advocated the grouping of medical men representing the several specialties, thus securing for the patient what he called a 'group diagnosis,' which should be furnished at a figure within his ability to pay. He referred to clinics in which this feature was present. The most notable example is the Mayo clinic at Rochester, Minn.

"About fourteen thousand patients attended this clinic in the year 1912, all of whom were examined and a careful diagnosis made in each case. About half the number were found to present conditions requiring operation—in exact figures, according to the report for that year, 7,053. All these patients are carefully examined and charged a fee for services, according to their ability to pay, which may be as low as from $10 to $15, or may be as high as $500, if the patient is wealthy.

"This combination of medical men, representing the various specialties, is, to a greater or less degree, possible in every community. Call it what you will, the department-store idea applied to medicine, or any other name, if the end accomplished helps financially to bring the best aid of the profession to the middle class, it is justifiable; ay, more, it is a necessity.

"This grouping of medical men representing special lines of study and work is the only way in which the middle class can command the best services, unless they pauperize themselves and enter charity hospitals. Patients referred to these groups can return for treatment to their family doctors or personal advisers, with a scientific diagnosis, or they may enter hospitals which should be so managed that the expenses may be within their financial possibilities.

"Granted that such a plan is feasible, that the best specialists associate themselves in groups for diagnosing and treating patients; does this do away with the family physician? Not in the least. The family doctor in this proposed scheme must be an up-to-date man. His knowledge must be general and accurate, he must keep in touch with advanced professional ideas.

"After everything possible has been said of the division of medical practise into specialties, of the necessity of the poorly paid combining to secure cooperative insurance and medical treatment in their homes at a low rate, the field of the family doctor is still a large one. . . . . .

"Just as the religious adviser is needed in spiritual matters or the lawyer in the affairs of business, so will the medical adviser, the family doctor, hold his place in the American family. Our great country is a nation of families, and so long as the family life remains the predominant feature of our social organization, just so long will the family doctor be a necessity."

STRANGE EARTHQUAKE LIGHTS

A RUDE SHOCK greets the idea that the testimony of eye-witnesses is especially reliable when one comes to study the laws of evidence. The majority of persons see what they think they ought to see. If a house is reported haunted, it is easier to see a ghost there than not. Possibly this accounts for the wide-spread belief that luminous appearances of one kind or another accompany earthquake shocks. Scientific men do not believe these stories, and they usually dwindle on investigation, yet they continue to circulate on both sides of the Atlantic. Says a writer in *Cosmos* (Paris, October 16):

"What serious, objective truth is there in stories of luminous phenomena—columns of fire and lightning—said to accompany earthquake shocks? Prof. Ignazio Galli has collected 148 observations of such phenomena observed in connection with earthquakes from 89 B.C. up to the month of March, 1910.

"All experts in seismic research are not, like him, convinced of the reality of the phenomena in question. Father Secchi, having gone to study on the spot the effects of the earthquake of August 22, 1859, at Norcia, recognized the inanity of the stories of flames and of fiery columns; besides this, the shock took place in broad daylight. Father Bertelli says that certain wandering lights, noted at the time of the Ligurian earthquake of February 23, 1887, might have been due to the inflammation of sulfureted hydrogen or of hydrocarbons given off from the earth, but he was also inclined to attribute these lights to the entirely subjective impressions of persons frightened by the shock.

"On this same question, Professor G. Agamennone gives, in his turn, this opinion. After the earthquake that devastated Bisignano on December 3, 1887, he learned at Roggeano that a column of fire had been seen; when he sought eye-witnesses he found that the only one was a peasant who, when interrogated, scarcely seemed to speak seriously. After the Calabrian earthquake of September 8, 1905, questionnaires sent out were returned with numerous notes of luminous phenomena, but after sifting the answers it was impossible to conclude definitely that these were in any direct connection with the earthquake. In the neighborhood of Pizzo, cited as one of the most remarkable for the intensity of the luminous phenomena, Agamennone looked up all the eye-witnesses and found that, of all the persons who were at work on the coast that night, one alone had seen lights with his own eyes; they were a kind of shooting stars seen at first three-quarters of an hour, and again a quarter of an hour, before the shock.

"The opinion of Count Montessus de Ballore, director of the Chilean seismological service, may also be recalled. He concluded that all the luminous appearances noted during the earthquake of 1906 at Valparaiso might easily be explained by lightning, contacts between trolley-wires and those of the telegraph or telephone service, and the search-lights of war-ships.

"Thus the possibility of luminous appearances in direct connection with earthquake phenomena can not be absolutely denied; but their reality is not yet demonstrated."—*Translation made for* THE LITERARY DIGEST.

A "HEART-TELEPHONE"

IN FINDING what is wrong with a patient, the action of the heart is a most important thing for the physician to observe. He may examine it in various ways, but he does so most commonly by "feeling the pulse," or by listening to the action directly by means of a stethoscope. A new electrical device will enable a much more accurate idea of it to be obtained; and the testimony of this instrument may be transmitted to a distant point either by sound or by means of a visible record. This invention, we are told by Day Allen Willey, in *The Medical Council* (Philadelphia), enables a physician to hear the heart-pulsations of a patient clearly tho he may be in the hospital ward or in a sick-room a mile away. In the phrase of the layman, this electrocardiograph is called a "heart-telephone." Through the ear-piece the physician can count the pulsations, or notice whether they are regular or irregular, as accurately as if he had his finger on the patient's pulse. In addition, the electric circuit connecting with the patient operates a moving lens by which pulsations are depicted on a moving film roll, thus making a photographic record. We read:

"This original idea in medical science was the achievement of Dr. Lewellys F. Barker, a member of the staff of the noted Johns Hopkins Hospital, at Baltimore. Here it was first demonstrated to be a success by a series of tests conducted under the supervision of Dr. Barker. Since its introduction at Johns Hopkins Hospital, the heart station has been installed in institutions in New York and other American cities, and considered an improvement over the Einthoven method, in vogue in Germany, altho it is similar in some respects."

This detailed description, as prepared by Dr. Barker, indicates plainly the really wonderful advance it makes in medical science:

"In most galvanometers the magnet is the movable part, and the current to be measured passes through the stationary coils. In Einthoven's instrument an opposite arrangement has been made; the magnet is stationary, and the current passes through a movable 'thread' or 'string'—really an extremely fine wire. . . . . .

"In order to study accurately the oscillations which result from the passage through the galvanometer of the feeble action-currents originating in the heart, a magnifying and photographically recording apparatus is essential. The nuclei and poles of the magnet are pierced in the middle and two microscope tubes inserted in the openings. One of these is provided with an objective for focusing a strong electric light upon the string; the other is a projection microscope, consisting of an objective or of an objective and an ocular, which throws an enlarged image of the illuminated string upon the slit of the photographic apparatus, or upon a white ground on which the movements of the thread may be observed with the naked eye.

"Thus it is that the physician can actually see and record, by this image on the screen, the oscillations which the 'string' undergoes as a result of the electric currents which are generated in the human heart during the excitation of its muscles which precedes every beat. The rapidity of the string movements, their extent, as well as the regularity or irregularity of rhythm observed, reveal information desired regarding the condition of the muscle of the heart, altho the patient may be in a distant room connected only by wiring with the heart station.

"The manner in which pulsations are verified and recorded is remarkable. When the string is oscillating to the action-currents of the human heart, only the larger oscillations are discernible by the naked eye even in the magnified projected image. In order to discern the smaller movements and to obtain curves as permanent records, photographic registration is essential. The magnified image of the string is projected, by means of a powerful electric light, upon a slit in a dark box which contains a moving photographic film. The slit opens and shuts when required by electric signal, and the movement of the film can be begun or stopt at will. . . . . .

"In healthy people an electrocardiogram—the film picture—is obtained by leading off the current through the two hands, or one hand and one foot, which, under the conditions outlined above, assumes, in the majority of instances, a certain form. The term 'typical' or 'schematic,' is used instead of 'normal,' since slight deviations from it may occur in people with normal hearts. When any muscle is excited, to contract the active portion is always electrically negative to the part at rest. This is true therefore in the heart, and electrical changes show the course of excitation. . . . . .

"When the record is being made, the patient sits in a comfortable chair or lies on his back with all his muscles relaxed, since muscular tensions and contractions may modify the curve. He should breathe quietly. . . . . .

"The records taken by the electrocardiograph are especially valuable in the analysis of the various forces of irregularity of the heart. They also reveal certain changes in the muscle of the heart difficult to detect by other methods."

SPACE-PERCEPTION THROUGH MOTION

VISION with both eyes at once is generally thought necessary to the perception of space. A German writer, Dr. Fricke-Westend, in an article contributed to *Prometheus* (Leipsic, October), calls attention to the fact that only one eye is necessary, provided it and the objects viewed are in rapid relative motion. On a train, for instance, the traveler gets nearly the same effect when looking at the moving landscape with one eye that he would by looking at it at rest with both eyes. For space-perception, he says, it appears necessary to get views of objects from different points, but these different views need not be perceived simultaneously if they can be seen in sufficiently rapid succession, which happens when the observer is in motion. Says the writer:

"Hitherto, at least in scientific literature, it has not been noted that the grouping of our visual images in space—the true stereoscopic effect—is not entirely dependent on the use of the two eyes. The effect is also very clearly noticeable if we move about and so refer to the eye successively the different visual groupings that, when seen by both eyes, at once produce the spatial effect. This fact appeared to the writer, for the first time, when he was looking at a moving picture that had been taken on a locomotive running through the Scotch Highlands. The effect of this picture was highly stereoscopic, and the peculiar feature was that not only the foreground, but also the remote hills, took on clearly the appearance of relief. The stereoscopic effect also noticeably exceeded that of normal stereoscopy. . . . . Of course the stereoscopic effect obtained through motion, which we may call 'kinematic,' and the 'binocular,' strengthen each other when they occur together."

Dr. Fricke-Westend asserts that this sort of space-vision also admits of what is called "pseudoscopy"—the effect noted when the pictures in a stereoscope are reversed, so that the one intended for the right eye is seen by the left, and vice versa. The result is that the spatial relations of the view are also reversed, the background starting forward and the foreground retiring. He says:

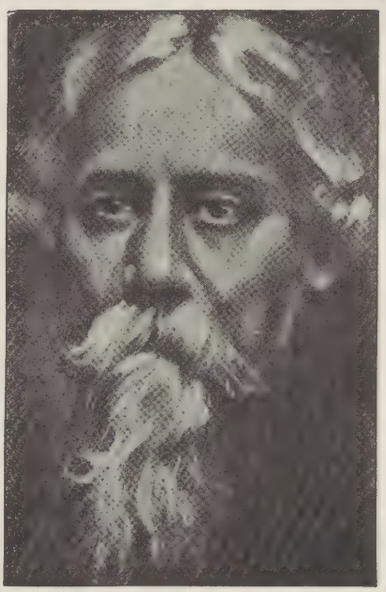
"This pseudoscopic effect also enters into kinematic stereoscopy, as observation shows. The writer once sat at the window of a railway-car and looked at a freight-train traveling on a neighboring track at equal speed. He used only one eye, the other being obscured by his arm. He then saw objects that were behind the train at which he was looking, such as telegraph-posts, iron gratings, etc., appear clearly in front of the train in the open air. This was a pseudoscopic effect, and is to be thus explained: The movement of his own train produced the stereoscopic effect noted above. As the other train, moving with equal speed and in the same direction, behaved exactly like an infinitely distant point, it appeared as infinitely distant, while the objects behind it appeared in their proper places, and therefore nearer than the train. This pseudoscopic effect almost wholly disappeared when both eyes were used. . . . . .

"It can be seen that the stereoscopic perception of space seems to depend on the existence of different viewpoints. It comes into play if the sensations occur simultaneously or so close together that they meet, one into the other. 'Binocular' stereoscopy would thus seem to be only a special case of a more general stereoscopy. With this extension of the concept not all readers are familiar."—*Translation made for* THE LITERARY DIGEST.

LETTERS AND ART

ANOTHER ANGLO-INDIAN NOBEL PRIZEMAN

THE LATEST AWARD of the Nobel prize for literature points to the interesting fact, remarks the New York *Evening Post*, that "the East can contribute to the West something more than a burden for the white man to bear." Rabindranath Tagore, the Bengali poet, who is now honored, is the second Anglo-Indian to be thus crowned, but he stands in sharp contrast to his predecessor, Mr. Rudyard Kipling. Instead of Kipling's "shallow pronouncements on East and West," we have the work of a poet with the "consciousness of a humanity which is a unit in itself and a unity with the universe." "His emphasis," continues this writer, "is entirely on the soul of man, on its universal sensations and passions." The strong antithesis between these two commanding figures is one of the chief elements of interest for the *Evening Post* writer in the new situation created. The term Anglo-Indian is applied to Mr. Tagore on the ground that his fame is based upon his work in English verse. The poems were originally written in Bengali, but the author himself has turned them into "an idiomatic and felicitous English which gives them a place in the literature of the West." *The Post* observes:



HE WINS THE NOBEL PRIZE.

"Rabindranath Tagore's mysticism brings him fairly close to Maeterlinck and the dreamers of the new Celtic School."

"That the administrators of the Nobel Foundation, in making its award to the Hindu poet, based its action upon Tagore's achievements in his native tongue is, of course, not impossible. The Nobel prize has hitherto been distributed with an admirable catholicity. The little nationalities have not been cast into the shade by the Great Powers of literature. Sweden has been honored in the person of Selma Lagerlöf, Norway in Björnson, Poland in Sienkiewicz, Italy in Carducci, Spain in Echegaray, the comparatively obscure Provençal literature in Mistral, and, if we classify Maeterlinck by nativity and not by language, little Belgium appears on the roll of honor. Thus it is natural that the attention of the Nobel Committee should be directed in the course of time outside of the boundaries of Western civilization to a people and a literature by no means lacking in importance. The Bengali tongue is spoken by nearly fifty million people, a number larger than the population of France or Italy, and surpassing the combined populations of Spain, Portugal, the Scandinavian countries, Holland, and Belgium. The roots of the Bengali literature run back into an antiquity that easily compares with the classic sources of the modern European literatures. The new laureate's title, therefore, would be sound even without the support of his English reputation, tho there can be little question that it was his English writings which brought him to the attention of the Western world."

For all this, it is thought a fair question whether, a dozen years ago, Tagore's poems would have aroused anything like the attention they have won to-day:

"In the dozen years that have elapsed since the foundation of the Nobel prize, the Orient has imposed itself mightily on the imagination of the West. Asia has been shaken by forces of political change from its easternmost fringe in Japan to the coasts of Asia Minor. A new Japan, a new China, a new Persia, a new Turkey, and even a new India have entered into the field. The ideas of the West have played their part in the political reconstruction of Asia and in the processes of social reconstruction that are now under way. But the East in turn has affected the trend of European thought, if not the molding of European political and social ideas. The spirit of romanticism in European literature has found its latest phase in a mysticism, a concentration upon the inner nature of man, which has paved the way for a closer understanding between Europe and the ever-brooding East. Rabindranath Tagore's mysticism brings him fairly close to Maeterlinck and the dreamers of the new Celtic school; and perhaps all the closer because the Bengali poet has consciously done something to adapt the deep-rooted mysticism of his native land to the dilettante taste of the West.

"It adds to the piquancy of the Anglo-Indian origin of England's two Nobel prize-winners that the one should be so completely the opposite, and to a very valuable extent the antidote, to the other. Of the thirteen European writers upon whom the prize 'for idealism in literature' has been bestowed, Kipling is the only one whose work does not really answer to the spirit of the founder's testament. The word idealism is, of course, capable of any interpretation, and we may speak of Kipling's idealism of service, of self-sacrifice, of obedience, of strength. But it is stretching the common meaning of the term to use it of one who has so emphasized the harshness and brutalities of life—combat, material success, the domination of the weak by the strong, and all that we associate with the Kipling gospel of the strenuous life. Nor does the mind consent to describe as idealism a preachment like that of Kipling, which sets up barriers between race and race, which divides the world into permanent inferiors and permanent superiors, into predestined masters and predestined slaves, to the obliteration of the common heritage of humanity in men."

In England also it is seen that Mr. Kipling's India is not reflected by this poet of the people. Mr. F. Ashworth Briggs writes in the London *Daily Mail:*

"Mr. Tagore's originals were, of course, in Bengali. He has translated them into rhythmical English prose. One can not tell what they have lost in the translation, but as they stand they are of extreme beauty. And they shatter an illusion. Mr. Kipling and memories of the Mutiny have left in the English mind a strange impression of India—an effect of harsh, bright colors, vast spaces, hardness and treachery, suttee, bombs, and plague. The Englishman traveling in India feels a vast gulf between white and brown. The poet bridges it. No one who reads him will be able to think of India in the same light as before. They say these are the songs the natives sing with those strange rhythms which baffle the Western ear. Mr. Tagore sets them to the measures of our harmony. They are simple, exalted, fragrant—episodes and incidents of every day transposed to faery. Here is a village lyric:

The yellow bird sings in their tree and makes my heart dance with gladness.
We both live in the same village, and that is our one piece of joy.
Her pair of pet lambs come to graze in the shade of our garden trees.
If they stray into our barley field, I take them up in my arms.
The name of our village is Khanjanā, and Anjanā they call our river.
My name is known to all the village, and her name is Ranjanā.
Only one field lies between us.
Bees that have hived in our grove go to seek honey in theirs.
Flowers launched from their landing-stairs come floating by the stream where we bathe. . . . . .
The stars that smile on their cottage send us the same twinkling look.
The name of our village is Khanjanā, and Anjanā they call our river.
My name is known to all the village, and her name is Ranjanā.

"These poems were written at an earlier age than the 'Gitanjali,' tho they are published in English later. There is less of mysticism and religion in 'The Gardener,' but one perfect song of earth:

Infinite wealth is not yours, my patient and dusky mother dust!
You toil to fill the mouths of your children, but food is scarce.
The gift of gladness that you have for us is never perfect.
The toys that you make for your children are fragile.
You can not satisfy all our hungry hopes, but should I desert you for that?
Your smile, which is shadowed with pain, is sweet to my eyes.
Your love, which knows not fulfilment, is dear to my heart.
From your breast you have fed us with life but not immortality, that is why your eyes are ever wakeful.
For ages you are working with color and song, yet your heaven is not built, but only its sad suggestion.
Over your creations of beauty there is the mist of tears.
I will pour my songs into your mute heart, and my love into your love.
I will worship you with labor.
I have seen your tender face and I love your mournful dust, Mother Earth.

"The Gardener" is his latest volume, and contains many songs of passion. "They capture the ecstasy of first love and sound the maturer depths":

"As our country lovers have seen a lovely face in the contours of the moon, so a shy girl in 'The Gardener' 'gazed at the sky and wove in the blue the letters of a name I had known, while the village slept in the noonday heat.' It is all simply and easily exprest, without the slightest pose or shadow of affectation. Emotion wells out into words with the artlessness of all great poetry. The verses are not scholarly or intricate, but plainly human and unadorned. In our more artificial world what an elaborate drawing-room ballad would be manufactured round this theme:

Hands cling to hands, and eyes linger in eyes; thus begins the record of our hearts.
It is the moonlit night of March; the sweet smell of henna is in the air; my flute lies on the earth neglected, and your garland of flowers is unfinished.
This love between you and me is simple as a song.

"They know the joy of living, too, the people of Tagore's songs. They chant upon a fine morning praises of the cloud-shadows sweeping over the crops, of the bees 'drunken with light,' and of 'the ducks in the islands of the river,' which 'clamor in joy for mere nothing.' They sing the refrain:

Let none go back home, brothers, this morning; let none go to work.
Brothers, let us squander our morning in futile songs.

"In the Bengali philosophy of life, as Mr. Tagore reveals it in his songs, there is no hatred, envy, or malice. His world is serene and beautiful as one of our calm autumn days, when the mist lies opalescent under the golden sun in the valleys, and on the hillsides the great trees stand expressive and immovable like eternal monuments. Truly he says: 'My songs share their seats in the heart of the world with the music of the clouds and forests.'"

LEGAL ENGLISH MADE MORE HUMAN—To the lay mind nothing seems to come nearer sheer barbarism than the way the legal profession have of stating their cases. Whether it is due to a feeling of mercy for the layman or a desire for the economy of time, at all events, the District Attorney's office of King's County, New York, has thrown its useless verbiage to the winds in framing indictments for murder and other crimes, and now the essential facts are stated plainly. District Attorney James C. Cropsey sends to the New York *Times* two forms of murder indictment—the first being, in part, the one now discarded which contained 911 words. It ran:

"The Grand Jury of the County of Kings, by this indictment, accuse John Johnson of the crime of murder in the first degree, committed as follows:

"The said John Johnson, late of the Borough of Brooklyn, of the City of New York, in the county aforesaid, on the 15th day of October, in the year of our Lord one thousand nine hundred and nine, at the borough, city, and county aforesaid, with force and arms, in and upon one Peter Smith, wilfully, designedly, premeditatedly, feloniously, and from a deliberate and premeditated design to effect the death of said Peter Smith, did make an assault.

"And the said John Johnson a certain pistol then and there charged and loaded with gunpowder and one leaden bullet, which said pistol he, the said John Johnson, in his right hand then and there had and held, then and there wilfully, deliberately, premeditatedly, feloniously, and from a deliberate and premeditated design to effect the death of the said Peter Smith, did discharge and shoot off, to, at, against, and upon the said Peter Smith, and the said John Johnson, with the leaden bullet aforesaid, out of the pistol aforesaid, then and there by the force of the gunpowder aforesaid, by the said John Johnson shot off and discharged as aforesaid, then and there wilfully, deliberately, premeditatedly, feloniously, and from a deliberate and premeditated design to effect the death of the said Peter Smith, did strike, penetrate, and wound him, the said Peter Smith, in and upon the side, chest, lung, body, and vital parts of him, the said Peter Smith."

The form now adopted and in use for some time reads as follows:

"The Grand Jury of the County of Kings by this indictment accuse the defendant of the crime of murder in the first degree committed as follows:

"'The defendant on October 15, 1909, in the County of Kings, wilfully, feloniously, and of malice aforethought, shot Peter Smith with a revolver, thereby inflicting injuries of which he died on Oct. 18, 1909.'"

This statement contains 60 words. Similar changes have been made in the other forms, says Mr. Cropsey, "the object always being to have the form contain all that is essential and at the same time be brief and plain."

THE TRANSFORMATION OF FRENCH

THE STRANGE SPECTACLE of a language that has outgrown its grammar is seen in France, according to one of the ablest French reviews. The grammar has stood still, the language has gone on; one is dead, the other is living. It will come with something of a shock to those who have always believed French to be the most scientifically tended and nurtured of languages to learn from an article in the *Revue Bleue* (Paris) that there is no language of which the grammar gives so false an idea. As the grammar has remained in a fixt state, he says, while the spoken language of the people has been in a state of change, no account or record of the advance is to be found even in the best and most advanced manuals. As a consequence, the traditional method of instruction hardly in any wise bears upon the actual use of the language, and to a great degree written usage remains far removed from oral usage. Also, the writer adds, written French suffers by comparison with spoken French in that it is "unexpressive and lifeless." The changes that have affected French he ascribes in part to the spread of education or half-education among all classes and to the invasion of Paris and Central France during the nineteenth century by "immigrants from all sections." They come from the provinces or from countries where French is not the language of the people, as, for instance, Flanders, Alsace, Brittany, and especially from the Midi of France itself. While he is willing to admit that the French of these people may show an exactitude of grammar above that of the Central Frenchmen, nevertheless, he maintains, they have not the "intimate feeling" of the language and bring to it an alien accent and grammatical tendencies that are also alien. To make clear the fact of remoteness between French as it is and the grammar, he points out that the grammar was formed in medieval times, has been altered only in matters of detail since the thirteenth century, and for the past two hundred years has undergone almost no alteration whatever. To prove his case, he cites various examples of the parts of speech and their modifications which are written one way and spoken another; and also certain idiomatic expressions that may be used orally, but actually are used only in writing, and he adds:

"Thus from day to day the breach widens between the spoken language, which is constantly renewing itself and full of 'bite,' and the written language, which remains almost unchanged and gradually becomes flat and dull, of service only as an intellectual medium. Turns of phrase, while appearing the same from the outside, as it were, are constantly losing their value of expression and feeling to retain merely a value that is abstract and intellectual. And it follows that the more a language is used in a literary sense, the less suitable it grows for literature, or, at least, for poetic literature and literature of the imagination, which have their life in the expression of feeling. From the

day it is fixt as a literary language its resources begin to be used up, and as it possesses only a halting and limited faculty of recuperation, it loses its value, in time, for the poet. The history of past ages shows that, however well endowed may be the men who work in a language, it fails after a few centuries to be able to afford the living product of poetry. Latin poetry falls swiftly to painful or artificial versification from Lucian or Silius Italicus to Claudian, who wrote 'Latin verse.' If Greek poetry resisted for a relatively longer period, it was because it drew strength from divers dialects; but in the Alexandrian epoch its poetical resources were wholly exhausted. One may question whether all the great literary languages of modern Europe have not reached the same condition of exhaustion."

As for any hope of France profiting of the stores that sustained Greece for a time, the writer argues that:

"It would be futile to hope for rejuvenescence from popular speech or from dialects. Popular speech, while of necessity

A SHEPHERDESS,

From a design by Léon Bakst
For one of the figures in the ballet "Daphnis and Chloe."

more expressive, is corrupt with platitudes of style and with the catch-phrases of the penny papers and of school-books. As for dialects, they are degenerating from day to day and are being infused with French."

Turning then to a peculiarity of the French language, which to a certain extent it shares with English, namely, that so many derived words are taken, not from the mother tongue, but from written Latin with slight adaptation, the writer affirms that even a cultivated Frenchman who is unacquainted with Latin must find a large portion of the French vocabulary quite "inexplicable." As for revivifying or reenergizing the language with the introduction of new Latin words, he goes on to say, the authors who make such an effort only aggravate the present evil.

"They who write *renover* instead of *renouveler* (to renew) may communicate to their readers the impression always produced by a word little used, but they are on the wrong track. The sensation of novelty is always fleeting, for one thing. Then if through usage words of this order be retained in the language, they do not really enrich it, but rather encumber it, because the majority of French people have no feeling for them and a great many do not know their precise meaning. . . . As long as literary French was in use only among a certain class of people, who were highly cultivated and for the most part knew Latin, this borrowing of derivatives and new formations from the written Latin did not matter. Indeed, it had its advantages in that it afforded at will terms to which might be attached a precise meaning. But now that everybody reads and literary French is the language of everybody, while the greater number of those that use it do not know Latin, the artificial and alien cast of the French vocabulary renders it of vague comprehensibility to a vast number, so that they are led to the misuse of words. Some amusing examples of such misuse are to be found in the literature circulated about election time.

"The fact that so many young persons scarcely know how to write their own language is in part proof that the condition of the language is no longer normal. The grammar applied to it does not adjust itself to actual practise and the vocabulary is laden with artificialities. To correct so profound a disorder demands a remedy not easy perhaps to discover, yet as long as the old order endures the worse the case becomes."

WHERE BAKST LEADS

GREEN ROOMS, white and gold decorations, and all the other neutral colors that were supposed to express the height of good taste appear to have had their day. They are called "too dull," "too restful," "too much akin to mere nature." "As our civilization becomes more refined," says Mr. W. L. George, in the London *Daily Mail*, "we react against it and become more savage." We are at the beginning, apparently, of the age of color, and the chief disciple thereof is the Russian, Léon Bakst. He was born in St. Petersburg in 1868, but he has found a freer and more congenial atmosphere for the development of his powers in Paris and the West of Europe. His full acclaim followed the visits of the Russian ballet to the French capital in 1909, when the riotous productions of "Cléopatre" and Schéhérazade caused that city of sensations a new thrill. On this side of the water we have had echoes of his effects in the scenic accompaniments of traveling ballet troupes. But the first authentic presentment is furnished us this season in a collection of his work arranged by the Berlin Photographic Co., and designed to pay a round of visits to the large cities of America after the New York show. This and the *mise en scène* of one or two ballets to be shown this season by Mme. Anna Pavlowa will bring to the test whether we, like England, shall treat him "with greater solemnity than he himself would consider appropriate." Since everything Russian seems to go down in England at present, it is not unnatural that an English writer, Gerald C. Siordet, in *The International Studio* (November), should see his countrymen overdoing Bakst. According to this writer, Bakst's artistic creed is a simple enough affair. "Art," as he says, "is a plaything, and an artist's work will be good only when it has been great fun doing it." For all that—

"Bakst is a real student, a genuine scholar in costume. His designs are no mere archeological resuscitations of the wardrobes of the past; neither are they the summary, impressionistic stock in trade of the quick-change artist. He is, indeed, a kind of bright, particular chameleon. He will settle into the strange, distorted glamor of the East, or the simple graces of archaic Greece, or the fierce, gay medley of the Middle Ages, and presently will bring you forth not dresses merely but personages who move with ease and certainty each in his own time, and yet retain the stamp of their creator.

"This peculiar receptivity of mind, which at the same time recreates and rearranges, is of all qualities that most fitted to adapt itself to the art of the theater, in which scenery and costume are most telling only when they make no attempt to conceal, rather welcome, the presence of conscious recognized

artifice—in fact, when the art that makes them is considered as itself a plaything. It is hardly possible to find a single design by Bakst which is not from this point of view 'amusing.'

"Of course, some have greater value than others. The last exhibition of his drawings contained a number of designs which, admirable as they were as working indications of costume and color, would by themselves have carried little proof of the exuberant and at the same time fastidious power of design which, among other qualities, gives a permanent value to his more finished drawings. One critic said of him, apropos of his drawings for 'Schéhérazade' and 'Le Dieu Bleu,' that he had 'rediscovered the luscious female line bequeathed by the early Orientals.' I am not sure that I know what he meant: historically the remark seems to mean nothing; yet it is very true that Bakst shows a passionate enthusiasm for the flesh, for the contours of form, for strange poise and counterpoise of limb, for furious, abandoned movement, that sets an Eastern stamp upon his art, and reminds us that he is of the nation that long ago watched King David dance before the Lord 'with all his might.'"

Copyrighted by the Berlin Photographic Co.

SETTING FOR AN OPERA.

How Bakst sees the rococo background of Wolf-Ferrari's "The Secret of Suzanne."

Bakst, says Mr. Martin Birnbaum, in the introduction to the catalog of the exhibition, has "extracted the poetry hidden in every epoch," and has shown that he possesses in an amazing degree "what Matthew Arnold called 'happy flexibility'—the power to properly adapt his varied talents to any subject on hand." We read further:

"In 'Cléopatre' and 'Salomé,' he was, of course, Egyptian. In 'Narcisse,' 'Daphnis and Chloë,' 'L'Après-Midi d'un Faune,' and Verhaeren's 'Hélène de Sparte,' we saw his Greek inventions, and his designs crystallize forever our happy memories of delicate archaic maidens in light draperies with golden ornaments in their hair, of dancing satyrs, and, above all, of Nijinsky as the perplexed Faun, 'nympharum fugientum amator.' Bakst's fresh, sparkling drawings are not copies from antique vases, statuary, or bas-reliefs in the sense that Thorwaldsen's or Canova's works are. Instead of making weak imitations or classically correct drawings, Bakst first assimilates and then transforms everything he touches. We derive greater pleasure from his works than from any Greek restorations, because he has absorbed the essentials of the ancient style and has breathed the breath of life into them. In 'Le Dieu Bleu' he treated Anamese and Javanese styles after the same fashion, his prodigious exotic imagination calling to mind the art of Gustave Moreau and Odilon Rédon. These drawings have the glamour of the Indies, but retain the stamp and style of Léon Bakst. The detail is amazingly intricate, but he has learned the secret of subordinating it to the main lines of his design, just as an Eastern artist would have done. 'Thamar' is hybrid, showing trans-Caucasian and Chinese origins. Then there are a series of ballets—'Les Papillons' and 'Le Carnaval,' among others—where sauterie plays an important rôle. For these the costumes do not differ so radically from what any other clever decorator might have designed. Among operas we have the brilliant rococo setting of Wolf-Ferrari's 'The Secret of Suzanne' and superb national costumes and scenery for 'Boris Godounow,' in which the Byzantine note predominates. The medieval period furnished inspiration for D'Annunzio's 'Pisannelle' and the same poet's 'St. Sebastien,' from which we carried away a vivid mental picture of the martyred saint, impersonated by the morbidly graceful Mme. Rubinstein, who made the sophisticated Paris audience exclaim, 'Mais, elle va mourir!' Quite recently Bakst startled his admirers with the athletic ballet 'Les Jeux,' and then delighted them by making a number of fantasies on modern costumes which were quickly seized upon by purveyors to women of fashion who made his color harmonies the latest cry. His most recent work, the 'Orientale,' will have its première in America with Mlle. Pavlowa in the leading rôle. We have every reason to believe that the singular charm of the world's greatest dancer will not be more wonderful than the harmonious setting of Bakst, whose genius it is hoped will reveal itself as it did in the ballet 'Schéhérazade,' still regarded as his masterpiece and most characteristic work."

MR. BENSON IN CHICAGO—Chicago had a fine opportunity to rebuke New York by flocking to see Mr. Benson's Shakespearian company. Mr. Benson scorned New York and passed it by, and a Chicago success might have made New York envious. But Chicago seems to be giving Mr. Benson some of the same treatment he gave us. At least there are people writing to the Chicago papers to rebuke them for "missing a high pleasure and a rare opportunity for enlightenment in their failure to attend the performances of the Shakespearian plays," given by the Stratford-on-Avon Players. Mr. Joseph A. Milburn writes to the Chicago *Evening Post:*

"Mr. Benson and the company which he has admirably tutored are presenting Shakespeare with a veridicalness, with a distributive excellence, with a scholarship, and with a fulness of beauty that make their performances assume almost the dignity of a revelation.

"Mr. Benson may be canonical in his elocution—and at times, no doubt, he merges the stage in the chancel—but every great actor or actress has had an idiosyncrasy. Garrick, Rachel, Mrs. Siddons, Booth, Barrett, Irving, Mansfield—all had mannerisms in delivery and bearing, and as we think back these mannerisms are part of the charm of memory. So let Mr. Benson have the right to his canonical elocution! Personally, I like it. . . . . .

"But Mr. Benson's mannerisms, whether good or bad, are of slight significance. The thing of real importance to Chicago is this—Mr. Benson is a master of the lore and tradition of the Elizabethan drama and a high priest of the cult of Shakespeare. He knows his ground with the accuracy and thoroughness of a scholar; and, because he knows, he speaks with authority. And his message to us would not be more authoritative if his stage manner were colloquial rather than canonical.

"Let us get this fact firmly fixt in our minds. Mr. Benson did not come to us as a sun with the Stratford-on-Avon Players as satellites. It is the Stratford-on-Avon Players, 'including F. R. Benson,' that are in our midst. You see, Mr. Benson is not only an actor, he is also an artist; and because he is an artist, he denies himself the meretricious emphasis of the star."

RELIGION AND SOCIAL SERVICE

A UNION OF RESCUE MISSIONS

IT WAS a "very large night in Chinatown" when the first "rally" of the New York Federation of the newly organized International Union of Gospel Missions was held in the old Chinese Theater in Doyer Street, now the Doyer Street Midnight Mission. For the founders of the new world-wide body —less than two months old—have an enthusiasm which sees more immediate results than the normal benefits of joint action and interchange of ideas, and they are moved by more practical motives than the mere desire to get into harmony with the present trend toward unity of action in Christian endeavor. What they wish to do is to interest the Christian churches in mission work to a larger extent than hitherto. And they are looking for results to appear first in the new impetus to be given to mission work in different cities through the local federations. The first local body, organized at the same time with the International Union, takes in the missions in New York City and vicinity. And, according to leaders in the movement, the optimism of the organizers was justified by the enthusiasm shown a few weeks later at the public "rally" described in our opening phrase quoted from the Brooklyn *Eagle's* account of the meeting. The converted theater has a good-sized auditorium, but, according to *The Eagle:*

SIDNEY WHITTEMORE,

President of the International Union, which aims to merge all the gospel missions of this and other countries.

"One-half hour before the appointed time for the meeting to open there was not a seat to be had in the body of the edifice, and every extra chair which had been crowded upon the platform was in use. All through the evening, until after eleven o'clock, parties of well-drest men and women, some parties accompanied by ministers of the gospel throughout Greater New York, would squeeze into the back of the hall, look around, comment on the crowd present, and retire, only to be replaced by another delegation."

On one side of the hall, we are told, sat "about 150 members of the 'Brotherhood,' all converted habitués of the Bowery, Chinatown, and their environs"—"they gave their famous war-cry, 'Amen, Hallelujah! Glory!' and they sang with such a vim and enthusiasm that the old Chinese rookery, formerly one of the most notorious opium-dens of Chinatown, shook and rang and reverberated with the volume of song."

The principal speech was made by Dr. J. C. Hallimond, the head of the Bowery Mission, who has been chosen president of the New York Federation. He emphasized the idea, according to *The Eagle*, that in a critical, perilous time like ours, when the strong as well as the weak feel the pressure, the men who are down and out need especially the help of Christian people. It is the gospel missions which are bridging the chasm between the Church and the masses. Hence Dr. Hallimond calls upon Christians to support their work. As he puts it:

"The workers in gospel missions do, in a special and peculiar way, represent some of the fundamentally distinctive features of the Christian religion. . . . . .

"In the gospel mission, Christianity is not presented as a mere philosophy, or as a mere systematized body of dogmatic truth, but as a vital force, a living principle in human life, a fact in human experience. Herein it differs from other religions.

"Christianity as a philosophy, in the pulpit or at the altar, is very little different and very little superior to other religions or schools of thought, but Christianity in the slums or saloon, in the brothel or at the bar, in the bread-line, the hospital, or the penitentiary; Christianity in the Congo or Cannibal Islands, in Whitechapel or the Bowery; Christianity knocking unceasingly at the doors of the sinner's heart is, like its peerless Christ, sublimely unique and original.

"Christianity, as we see it in action in the gospel mission, is an actual, spiritual energy, just as real as electricity. It acts upon the spirit, and, through the spirit, on outer lives and conduct. It enters into the very texture of character, and transforms it, and transfigures it, sometimes instantaneously. It actually performs miracles—palpable, undeniable miracles.

"And it is this regeneration of the individual that we are after; and working from the individual unit out to the body politic, we seek to bring upon earth the glorious Kingdom of God."

DR. J. C. HALLIMOND,

Who aims by the gospel mission to bridge the chasm between the masses and the Church.

So, through this Federation, and the other Federations to be formed, the Church will be kept in better touch with rescue work and will, it is hoped, cooperate more effectively with it. And the International Union, according to Mr. Sidney Whittemore, its president, "came into existence for the purpose of bringing together, if possible, all the gospel missions of this and other countries, to the end that by an interchange of thought and Christian fellowship their great work may be more effectively prosecuted." Representative mission workers from the principal cities of the United States and Canada make up the Union's board of trustees. The first annual convention will be held in Cedar Rapids, Iowa, next May. In the meantime, new local federations are being formed in a number of American cities, and the leaders of the International Union are showing their fellow mission workers in other lands the benefit of cooperation and are working to bring them into the new organization.

WHERE THE EAST GAVE WAY TO THE WEST.

The famous old Chinese Theater in Doyers Street, the scene of so many tong fights and killings, is now transformed into a gospel mission.

OUR DUTY TO THE UNEMPLOYED

WINTER is the time when the ache of unemployment is felt most keenly and when the charitable agencies are nearest despair. Dr. Josiah Strong has chosen this time to suggest in his department in *The Homiletic Review* that we might use more intelligence than we do in handling the problem in this country. He looks forward to a time when men will not go into business for selfish reasons, but for the common good. When that time comes, there will be no problem of unemployment, but just now there is such a problem, a pressing and vexatious one. What are we to do about it? Dr. Strong, after discussing the conditions and causes of non-employment and the remedies in use in other countries, says rather axiomatically that "undoubtedly the first thing to do for the unemployed in this and every other country is to lesson their number by getting work for any for whom work exists." To this end, he continues:

"Perhaps the main need in this country is a system of employment bureaus working in connection with each other and covering as rapidly as possible the whole land. This does not of necessity mean the creation of a wholly new system. It could be developed to a large extent by simply uniting, coordinating, and bringing into practical cooperation the various agencies which already exist for securing positions for men or women or for securing men or women for positions.

"The German agencies for securing employment for the unemployed are varied, yet they work together. . . . The different German states, such as Prussia, Bavaria, etc., take all these varied agencies and unite them into one general system. All are in daily, sometimes in hourly, connection with each other by telegraph, telephone, or bulletins through certain central bureaus. The result is that any laborer, artizan, servant, or even those seeking commercial positions in any one city or even small town, can know of the need for labor, to a large extent, throughout the whole German Empire. The system is by no means complete, but it has already developed results sufficient to make it a pattern to be copied throughout Europe.

"We could copy it in this country. It does not mean a vast government system. . . . It is contrary to our traditions for government to develop a vast system of employment bureaus. It would probably be impossible to do this, if it were desirable. But our State Labor Bureaus could investigate all agencies which obtain positions for men or women, or men or women for positions, exclude the dishonest or utterly inefficient, and then coordinate the rest into a system covering the State, while our Federal Labor Bureau could create a norm, or standard, for such agencies and gradually unite all of them into one system for the whole country.

"In many large towns no new agencies would have to be created; in small towns and villages the suggestion has been made that the school building could be used as a social center, and that one of its functions should be to serve as an employment bureau. In small villages or hamlets the local postmaster could act as agent. It is of the utmost importance to cover the field, and probably more especially the small towns and villages, because opportunities for labor here are the most likely to be overlooked, and because of the desirability of getting as many workers from the city into the country as can be provided with situations.

"Beyond this what could be done broadens out into wide channels. Any action which develops work helps solve the problem of unemployment. Tariff reform, tax reform, the payment of higher wages, all come in here."

There is, however, a large class of "unemployable" that need a different treatment. It is the class out of work and willing to work, but "by reason of deficiency, mental or physical, through their own fault or other circumstances, unable to do, at least permanently, work of appreciable economic value."

"They must not be confounded with the vagrant, incorrigible, or more or less vicious, who, tho able to work, are not willing to do permanent honest labor. It is true that these classes often merge into one another. Not seldom characteristics of all classes of the unemployed are found somewhat mixed in the same person. There are men, according to their moods, employable, unemployable, or vagrant. There are other persons of character so unpronounced or so complex that it is impossible to say to which class they belong. Nevertheless, the distinction on the whole is clear. . . . . .

"For the actually unemployable we undoubtedly need the development of farm homes or colonies where they can partly earn their keep and be kept from preying upon the community and reducing the wages of those who are employed."

RUSSIAN COMMENT ON THE "RITUAL-MURDER" TRIAL

THE SPECTER of "ritual murder" is not laid by the verdict at Kief declaring the Jewish defendant not guilty. The Russian bureaucratic press had foreseen some such result and anticipated it by framing their comment accordingly. They argue in effect that Jewish money and Jewish journalism influenced the outcome, hence the acquittal proves nothing. The *Novoye Vremya* (St. Petersburg), the leading anti-Semitic journal in the dominions of the Czar, pointed out before the trial that an acquittal would not convince anybody that Jews did not use Christian blood for religious purposes. Broadly classing all the radical and liberal press as "Jewish," because they are not anti-Semitic, it said:

"Long before the trial all literate Russia read almost daily on the pages of the Jewish newspapers warm speeches proving the absolute innocence of the accused, favorable opinions of foreign experts, . . . sensational telegraphic reports, now about the finding of material evidence that the murder had been committed by some thieves, now about the discovery of the real perpetrators of the crime made by a Kief Pinkerton from among the local progressive journalists. For over two years the trial

was continually postponed, and in the meantime a campaign was waged in favor of the acquittal of Beiliss. . . . . .

"People capable of being influenced by newspaper clamor and accepting for sacred truth what is being daily and ceaselessly repeated by Jewish journalists who have a personal and blood interest in the matter, may be found among the jury who will have to try Beiliss. They will enter the trial chamber and take their places as jurymen with a ready-formulated judgment suggested to them by the Jewish press. Very likely such judges . . . will be found to be not one and not two, but a majority of the twelve, and they will render a verdict of not guilty. But the question is, Will such a verdict put an end to the 'evil legend' about the murder of Christian children by Jews for ritual purposes existing among the people, or will it tend to fix it more firmly in the public mind?

"The Jewish agitation is being conducted openly and without the least reserve; but all know that any agitation costs big money, and therefore will see in its triumph, above anything else, a proof of the immense power of Jewish capital. The too zealous agitators do not realize that their exceedingly frank zeal . . . will inevitably cast reflections on the authoritativeness of the verdict they desire to secure. In order that the public may have implicit confidence in the judgment of the court, it is necessary that they should believe in the absolute freedom of the jury from any external influences. And here . . . a million of literary, detective, and various other Jewish workers, not awaiting the court's decision, create a terrible racket all over the world, turn all Europe upside down, and declare the innocence of the accused, pointing to their own experts . . . to the detective exploits of their journalists, and the cheap testimony of undoubtedly false witnesses who live by thieving. Let such means make to a certain degree probable the acquittal of Beiliss, —but it ought not to be forgotten that it discredits such a verdict in the eyes of the people, undermines its social significance, gives boundless vitality to that 'evil legend' which it is sought to kill."

Mr. V. Nabokov, the eminent Russian jurist who went to Kief as the special correspondent of the *Ryetch* (St. Petersburg), writes more favorably:

"There have been instances in the past when the investigating authorities, having strayed from the right path and laid hold of some chance evidence, . . . placed in the prisoner's dock people whose only fault was the fact that the actual perpetrators of the crime had not been discovered. Beiliss is not the first nor the last one. Of course, there is something fatal and tragic in his case. . . . But if not he, somebody else of his coreligionists would have been the lever necessary to raise the accusation of ritual murder. And in this is the key to the understanding of the world-significance of Beiliss's trial. . . . . .

"For the first time since criminal procedure emerged from the star-chamber into the light of day has the Government ventured to declare openly and directly that it admits the existence of ritual murders. As we know, it did it not without hesitation. In the first indictment there were not the sinister words about 'motives of religious fanaticism' and 'ritual purposes,' altho even then various witnesses like Pranaïtiss, were ready to oblige with their services. . . . Now all covers are thrown off. On the side of the accusation, to which all the efforts of the rabid anti-Semites could attract only a discredited priest, is thrown the weight of governmental authority. . . . They do not at all consider the ruinous consequences of this monstrous charge, should the country believe it even for a minute. For form's sake, the question is put in the usual manner: Is it proved that a ritual murder has been committed? In reality, representatives of the Government ask plain and ignorant men if they believe in the existence of ritual murders. . . . And let them not say . . . that the accusation is not flung in the face of all Jewry, but some unknown sects, or even individual religious fanatics. Pranaïtiss and the whole black flock and the indictment do not speak of sects. The 'blood dogma' is attributed to the whole Hebrew race; it is the 'terrible mystery' of the Jewish faith. And there is no attempt to prove that Beiliss is a sectarian. For that would be futile."

Mr. Nabokov concludes with these solemn words:

"We believe in the power of truth, of the convincing word of Beiliss's counsel; we believe in common sense and in the final triumph of justice. But the poison injected by this horrible accusation will not soon lose its effects. And the responsibility of those who inspired and directed the ritual trial will not soon be forgotten by the country."—*Translations made for* THE LITERARY DIGEST.

NEW FAITH OF ENGLISH POETS

MR. WILLIAM WATSON'S recent confession, "with deep thanks," that he has "now at last regained that faith in God which I did lose so long," leads *The Guardian* (London) to inquire where the other poets stand. If the auguries as to the rise and fall of a nation's faith can be deduced from the songs of its bards, observes the writer, those auguries at the present time are distinctly favorable. A poet or two may still be found in the camp of unfaith, he admits, yet among English poets "we have at any rate traveled more than a stage beyond the Shelleys and the Swinburnes." It was not long ago that we quoted a similarly triumphant note from a French source regarding the younger poets of France. Some earlier poetry of Mr. William Watson and nearly all of Mr. Thomas Hardy strikes the negative note, but "when they express the skepticism of their writers, we feel that it is the *lacrymæ rerum*, that sense of transitoriness, of loss, of mystery in life, which has affected all poets as poets, which moves them, only it moves them more deeply perhaps than their fellows." Moreover:

"Their diction befits their theme—it is sonorous and stately with Mr. Watson, mordant and epigrammatic with Mr. Hardy; but at least they do not dance amid the supposed ruins of the Christian shrine, and sling stones at the divinity whose face is carved there. Rather their concern is the pity of it all for those who, as they think, hoped and believed and worshiped in vain.

"The business of the poet is always in part that of the seer and prophet. He tries to read the meaning of life, and to discern the true significance of wayside happenings; then he tells what he has seen and felt in language which is as remote from ordinary speech as his vision is different from that of ordinary men. Therefore, it is impossible for the poet to pass Christianity by, since that is at least a certain interpretation of life.

"Of late the Christian Faith has seemed to affect the poetic temperament in two very different ways. Either it offends its sense of the unfathomable mystery of things, the looming yet unknowable existence of God, by presenting too clear-cut an explanation or too formal a system of belief, or else the sheer beauty and divine contours of that explanation and of the life, once positively lived, seize on and capture the poet so that he revels in them in their extremest form and their most striking if not startling exposition.

"Of the former state of feeling with regard to the Christian creed, reverent, yet never quite decisive, quite explicit in its acceptance, Tennyson in earlier days was a good example; but what in him was hesitation or reticence passed into sheer agnosticism with contemporaries like Arnold and Clough. Nevertheless, even their agnosticism was a very different thing from the exultant revolt and denial of Swinburne. To-day we find the agnosticism of these earlier masters of verse bearing fruit in the gentle and questioning sadness of much of the poetry of Mr. A. C. Benson, in the somber and stoical recognition of the insoluble in life and fate so often reiterated by Mr. Watson (tho now, we are glad to think, mellowed into a truer note), and in the grim and sardonic courage of Mr. Hardy's verdicts on things in general. Swinburne has no obvious successors. He rejoiced to do without the Christian's God, and liked to let the world know it; with the others we feel what a sad place the world would be without the old Faith, and in that felt loss, or in the fidelity with which facts are faced, men are forever stealing back, if all unconsciously, to the throne of God. There is no escaping the thought of him in these troubled voices that half, but only half, deny him.

"But what of the other sort of poetic temperament to which Christianity makes an almost startling appeal? The fact of this is one of the signs of our age, and at least carries this significance, that Christianity is in no danger of being discarded by our younger race of poets. Men like the present Laureate and Mr. Newbolt, and in their own heartier fashion, but often with strange nobility and long-remembered pathos, Mr. Noyes and Mr. Rudyard Kipling, have kept the name and claims of the Faith before an age that worships many strange gods, but always means, in its heart of hearts, to come

Home to its God at last."

MOTOR TRUCKS

THE RUBBER SUPPLY

THE largest of the rubber companies recently put out an offering of more than $9,000,000 new stock at par to present holders of stock in the company, proceeds of the sale to be used mainly in the development of new rubber plantations in Sumatra. A circular to stockholders declares that the company expects before long that its plantations in Sumatra, which are known to be extensive, "will provide the company with sufficient crude rubber to meet a substantial part of its requirements at actual cost of production." With these outlays made, it is believed that the company's plants will be able to take care of the increased business which lower prices for crude rubber will stimulate.

Automobile Topics learns that the estate owned in the Far East by this company comprizes at present 85,000 acres, of which 35,000 acres have already been planted with more than 4,000,000 rubber-trees. Within the next two years, it is the intention of the company to plant 18,000 acres more, which will give it 53,000 acres in trees, leaving 32,000 acres for future planting. These items show how ambitious are the plans of this company as to its rubber supply. Returns from the investment are not expected at once; in fact, a considerable part of the money put out will be unproductive for several years, but when returns begin to come in from the trees, it is believed that the investment will have a notable effect on the rubber business of this country.

The South American rubber properties "have been hard hit by the extraordinary development of the plantation product," says another writer in the same paper. No longer are rubber producers in Brazil able to dictate prices, nor is there any indication that Brazilian rubber "will ever again touch the high record prices of three years ago," when the crude product of the best Para grade sold for over $3 a pound. This writer presents many interesting facts in reference to this whole subject of the source of supply for rubber.

"That the conditions in Brazil are viewed with alarm in that country is amply proved by the reduction of taxes and export duties on crude rubber, by the frantic appeals sent to other countries for workmen willing to gather

From "Motor Age."

PRIMITIVE FERRY IN USE IN CANADA. A SIMILAR ONE IS USED ON THE DELAWARE BELOW THE WATER GAP.

latex in the forests, and by appeals for funds for financing advance parties into districts not yet explored. The low price for the crude product has caused a reduction of wages in the Amazon valley district, and laborers are not at all anxious to work in the forests for the small pay offered by the rubber companies.

"Not so long ago the product of the East India plantations was considered a mere makeshift, to act as a poor substitute or adulterate for the Para grades gathered in the primeval forests of Brazil. Continued importation of South American trees and proper cultivation, however, have improved the plantation latex to such an extent as to make the resulting crude product as good as the best grade of Para rubber.

"As is but natural, the automobile is generally considered the chief cause of the present instability of the rubber market. Its enormous demands on the crude product several years ago caused a flood of speculative money into the rubber-plantation business, and the large quantities of the raw product gathered in the last three years forced the price down to a point where the collection of the crude material is profitable only under especially favorable conditions. The following figures, compiled by a well-known British rubber expert, show the shifting of production and consumption as based on past experience and areas available for collection of the crude material:

	World's production	Consumption
1914	124,000	126,000
1915	142,000	142,000
1916	161,000	159,000
1917	181,500	179,000
1918	196,000	197,000
1919	213,000	216,700
1920	228,000	238,370
1921	239,000	262,200

"It will be seen from these that while next year (1914) there will be a shortage of 2,000 tons, the jump in cultivated rubber brings the supply up to the demand in 1915, and drives it above the demand in 1916 and 1917. From 1918, however, a sharp rise in demand and slower rise in supply bring the former above the latter, and rubber prices are bound to go up again. A London paper tabulates the production of crude rubber, from 1905 to 1914, as follows:

	Plantation tons	Brazil tons	Remainder tons	Total tons
1914**	65,000	35,000	15,000	115,000
1913*	45,000	40,000	30,000	115,000
1912	27,500	42,500	30,000	100,000
1911	14,500	38,000	23,500	76,000
1910	8,200	40,500	21,300	70,000
1909	3,600	42,000	23,400	69,000
1908	1,800	39,000	24,200	65,000
1907	1,000	38,000	30,000	69,000
1906	510	36,000	29,500	66,010
1905	145	34,000	26,800	60,945

FIRE ENGINE, MADE IN CINCINNATI, AND NOW USED IN FALL RIVER, MASSACHUSETTS.

In a recent trial, this engine, in a successful competition with eleven others during twelve hours, increased its pumping capacity at the end of every hour, and was in continuous operation during the whole twelve hours. During the test it had from fifteen to twenty per cent. of its power in reserve. Water was pumped for six hours at the rate of 44,760 gallons an hour. It is sold with a guaranty of pumping capacity of 700 gallons an hour, carries 1500 feet of hose, and is capable of transporting twelve men standing.

MOTOR-TRUCK USED IN A SUBURB OF NEW YORK TO CARRY DIRT, A LOAD OF PALMS, AND A LOAD OF BALED HAY.

Vantine's
The Oriental Store

PRICE $1 POST-PAID

Oriental Ash Receiver

MADE in Japan, and imported direct by us. Lacquer finished and artistically decorated with hand-painted Oriental design. 3½ inches high, 4 inches wide. Heavy nickel top with 3 cigar holders and circular disk which automatically drops ashes, cigar or cigarette stubs into a heavy, removable, tin receptacle, excluding all odor.

An artistic and unique ornament for your office desk or library table.

Send now for one or more, and if when received you are not entirely satisfied, we shall promptly and cheerfully refund your money.

Broadway at Eighteenth St., New York

After Jan. 1st, 1914, at Fifth Ave. and 39th Street

Established 57 Years

The IDEAL XMAS GIFT

Folds and Unfolds in a Jiffy. Will fit in a 15-inch bag.

LIGHT STRONG SIMPLE PRACTICAL

Sent Post-paid on receipt of Price, $5.00, $4.00, $3.50.

Can be carried in small bag, suit-case or pocket. Indispensable when traveling. Does away with the umbrella-carrying nuisance.

AN UMBRELLA FOR EVERYBODY

WRITE TODAY FOR FREE ILLUSTRATED CATALOG

MANNING'S FOLDING UMBRELLA

43 Winter Street BOSTON, MASS.

"It will be seen that while the production of Brazil in 1914 will be only 1,000 tons larger than its production in 1905, the plantation product is estimated at 65,000 tons for next year, as compared with only 145 tons in 1905. The total extinction of the wild rubber as a factor of any importance is looked for within a few years.

"The mistake is sometimes made in figuring the demand for new crude rubber to be exactly proportionate to the demand for manufactured rubber goods. In other words, if it were shown that in 1913, 85,000 tons of crude rubber were necessary, and that the increase in motor-cars and the growing demand for other rubber goods required for the year 1914 about 120,000 tons, then this increase of 35,000 tons would have to be supplied entirely from newly imported crude material. This is, of course, not true, as a considerable quantity of manufactured rubber is reclaimed for use in cheaper grades of rubber goods of all kinds. The amount of reclaimed rubber may reach as high as 50 per cent. of the crude imported product, and therefore has a noticeable influence on the entire rubber market. Were it not for the reclaiming feature, the quantity of crude rubber produced annually could not begin to meet the demand.

"The crux of the situation in the plantation field is that the well-managed companies can earn dividends with rubber at present prices, while the extravagantly managed concerns will practically go out of business. The low price of rubber will automatically reduce the production, and then the well-managed companies will be able to reap the reward of foresight and economy. That is why they refuse to join in the recently proposed schemes for artificially putting up prices for the benefit of the extravagantly managed concerns. It is highly improbable that the proposals for boosting prices will lead to any definite result. The laws of demand and supply and economical production will prevail in the end, in the opinion of the leaders of the industry."

NIGHT WORK FOR TRUCKS

It is believed by *Motor World* that "there are many possibilities in night trucking from a purely economic point of view." All this depends, however, on the conditions being such as to "permit the necessary work at the beginning and the end of trips." One particularly great advantage in night trucking is that the familiar daytime delays incident to traffic congestion can be avoided. There is no doubt that more work can be done in a given time at night than during the day, provided all the conveniences for doing it are at hand. More or less night trucking has for years been done in all cities; even when motor-trucks had not come into use this was the case, and the larger the city the more the night work done.

Night work, in addition to the absence of obstructions, permits of a continuous run from starting-point to terminus. It is thus far less wearing on a truck than runs during which the truck is frequently stopt and started. All this means a gain to tires and brakes in particular, but further gain to the transmission system and the machinery in general. At present work at night is usually done from necessity rather than from economic reasons. Milk, for example, is hauled at night, in order that it may be had at central depots in time for the early morning distribution. So also is coal often delivered at night, because the delivering places are so located as to make deliveries in the day interfere with other traffic. The loading and unloading of steamers make necessary considerable night trucking. The writer in *Motor World* says further on the subject:

"What trucking can be done during the night does not have to be done during the day, so that the streets would be relieved of a certain amount of traffic at a time when relief is most needed. And if the machines are kept standing during the day, they can be cared for under better conditions than if such work were done at night. From an electric-vehicle point of view it is an advantage to charge during the day when the central station load is light.

"Obviously there are objections to night trucking. Night work is distasteful to many men, and occasionally darkness interferes with operations—tho not often. A certain amount of rearrangement of details might have to be effected to suit the new order of things. And there is the possibility that night work might bring about some increase in the wage scale. It would seem, however, that the advantages considerably outweigh the disadvantages, and that there is an opportunity to work out an improvement that has received too little consideration in the past."

FINANCING THE MOTOR-TRUCK

P. D. Wagoner, president of a company which manufactures electric trucks, writes in *Business America* of interesting phases of the financial side of the motor-truck industry. He notes that business men of this country have already invested $138,000,000 in 60,000 trucks, which have displaced about 300,000 horses and mules. These 300,000 horses and mules he believes are not more than 2 per cent. of the total number in the country. He estimates further that there is a possible future market in this country for about 1,000,000 motor-trucks, the value of which would be not far from $1,000,000,000. These figures may be an extreme limit, but the country during the next decade should need at least one truck to every fifty horses, and the outlay each year over a period of ten years might be $125,000,000. Large as that sum is, it does not look so large when weighed against an annual horse mortality of $130,203,000. That this is the cost of our horse mortality he estimates on a basis of 1,041,600 deaths per year of animals valued at an average of $125 each. If business can stand so large a loss in motive-power of the horse kind, Mr. Wagoner thinks "a way can be found to raise the funds necessary to install machinery, which has double the life and treble the efficiency of a horse." He says further on this interesting subject:

"Motor-truck efficiency contemplates much more than the substitution of perhaps six 5-ton trucks for sixteen 3-horse wagons. It contemplates adaptability not only in rated load capacities, but in type of machines used. Electric trucks and gasoline trucks each have their economic field and the discriminating buyer with the aid of a broad-gage manufacturer's engineers can now readily determine which type is best adapted for his work. Then, there is the matter of a suitable garage on as cheap land as circumstances will permit. Furthermore, there is the matter of scientific routing—the advisability of combining, for example, five horse-wagon

routes into three motor-truck routes, and so on. All these things, while making for greater economy and efficiency, also enter into the cost of motorizing a delivery system.

"Some firms have as much as $150,000 represented in stable and wagon yards alone, and by building a garage on cheaper ground-rents are able to release real estate sufficient to make the turnover from horses to motors not only without increased cost, but at a profit, due to the fact that horse equipment requires from 300 to 500 per cent. more space than equivalent motor-vehicle equipment. Of course, not all firms are so enviably situated, but nearly every large firm will find undreamed-of economies in the adoption of the motor-truck. The saving in time and space at the loading platforms is another phase I might mention.

"'How shall the motor-truck be financed?' How shall we convert each year horse equipment and its allied investments into $125,000,000 worth of commercial-motor vehicles? One authority has stated that 'financiers must either support the manufacturer so that he can extend credit to the buyers, or they must place the buyers in a position to make their purchases without credit.' I am not in accord with this suggestion so far as it affects immediate sales, as I think that by gaging production by cash demand sales of a high-grade product can be made on a cash basis for some time yet, but the need for more trucks is rapidly becoming emphatic, owing to competition and to freight congestion at terminals and elsewhere, so some happy medium of financing the situation will soon be urgent.

"There remains, then, the final court of appeal—the banker; or more properly, the bank. Why shouldn't the firm which desires to motorize and has not sufficient working capital to do so consult with its nearest and best business adviser? It will be understood that the larger corporations with ample resources have set the pace in this matter, and that, for example, after the strongest wholesale grocer in a given city has motorized, it becomes almost a matter of business life and death for the others to do so. Assuming that the White Star Grocery Company have been in business for twenty-four years and that they have a clean business record involving normal earnings, what is to deter the bank which they have patronized for, say, sixteen years from coming to their assistance in this important matter?

"When a man owning a large machine shop needs to expand he goes to the bank for assistance in financing a growing business. The bank may look over his books, and then decide for or against the proposition. If the plant shows net earnings in keeping with increased business it will be regarded as a good risk up to a certain point. The bank may say in substance: 'We don't think you should enlarge your plant 100 per cent. at the present time, as some of your work is competitive and contracts are somewhat uncertain, but we are disposed to loan you $75,000 to build and equip that proposed right wing at the usual terms.' He tenders his note properly executed, and his account is augmented accordingly. Thousands of such transactions occur constantly. Why can't this general principle of approved credit be extended to the motor-truck buyer? I can see nothing irregular about it, and it seems to me the bank is the logical source of credit."

Sixteen, Perhaps.—"He claims to understand all women thoroughly."

"My! isn't he any older than that?"—*St. Louis Republic.*

"Why not have Campbell's?"

Yes, why not?

You are planning a company dinner perhaps, or a ladies' luncheon. It may not be an elaborate affair but you want it inviting, of course. And you would like it a little out of the ordinary.

Just the occasion for

Campbell's TOMATO SOUP

Serve it with a little minced parsley sprinkled over each plateful, or serve it in bouillon cups topped with whipped cream. Sprinkle parsley over that, if you like. Or prepare it as a cream-of-tomato or bisque by adding milk instead of water. The simple directions on the label make it perfectly easy.

There are many attractive ways to prepare this nourishing soup. And you needn't wait for a special occasion to enjoy it. Have it for the family dinner *today*.

"These soups so fine,
Folks think are mine.
I undeceive them?
Never!
For every guest
Is quite possessed
To kiss the cook so clever."

REVIEWS OF NEW BOOKS

JOHN BIGELOW'S REMINISCENCES

Bigelow, John. Retrospections of an Active Life. 8vo, Vols. IV and V, pp. 572 and 459. New York: Doubleday, Page & Co.

These two volumes, which cover the period 1867–1879, presumably close the series of the late John Bigelow's "Retrospections." No one can read them without admitting the author's claim that his life was "active." Of course, Bigelow's greatest literary achievement was his discovery of Franklin's Autobiography, with which he deals in the opening chapters of his fourth volume. This is certainly one of the greatest finds in the history of modern literature, and for this, if this alone, his countrymen owe a debt of gratitude to the discoverer. But the energy, enterprise, and boundless curiosity of the man are shown in his visit to the Abbé Migne, whom he found in the Ateliers Catholiques, just outside the Barrière d'Enfer in the Rue Petit Montrouge. The Abbé was at work on that monumental "Patrologia" to which scholars have since been indebted for the most complete collection of Greek and Latin Patristic writers which exists. Of the Abbé himself he writes:

"I found him a remarkably fine-looking man, and withal, as I had reason to expect, an intellectual man. He noticed instantly, from my French probably, that I was not a Frenchman, and he immediately said that he talked French or Latin, but that he talked Latin with greater facility than any other language. I was obliged to confess that in that, as in many other respects, he had the advantage of me, and we continued our discourse in his native tongue."

Could it be possible that there was a tinge of irony in the learned Abbé's mental mood? Then follows Mr. Bigelow's account of the Franklin Autobiography—highly interesting, but now passed into history. Yet he has a light vein running through his Retrospects, and relates the following story, told to him by Roscoe Conkling as coming from Elkridge, M.C. from Michigan. On one occasion, when the Congressman had reached home, he met "a ragged boy with one of the ugliest pups that ever was born."

"What do you call that dog?" he asked.

"He isn't a dog."

"Isn't a dog? What is he, then?"

"He's a pup."

"Well, why don't you give him a name?"

"I hain't got no name to give him."

"Why don't you call him General Grant?"

"I wouldn't insult General Grant by namin' such a looking pup after him."

"Why don't you call him General Butler?"

"I wouldn't insult the pup by namin' him General Butler."

The newspaper training of John Bigelow admirably fitted him to inquire into, appreciate, and recount the various incidents with their chief actors which he came across in France, Germany, and San Marino—the meeting-place of celebrities. Hence we find in these lively volumes anecdotes and estimates of Thiers, Bismarck, and Moltke. He is much interested in the retirement of Dupanloup, the eloquent bishop of Orleans, from the Academy on account of the election of Littré, the great French lexicographer, and he gives in full the bishop's letter of resignation in which the Academy is said to be looked up to by the French people as setting the standard, and that standard was lowered by the admission of an avowed atheist and unbeliever such as Littré. In this olio of retrospection there is a curious story of the son of the Khedive of Egypt when he was a student at Oxford. This story was told by Lord Chancellor Cairns at a dinner party in London. He tells how the Egyptian attending the consecration of a church was much offended by the lesson of the day which dealt with the "Burden of Egypt," and thought that had been chosen especially to take a cut at him. A curious instance of Mr. Bigelow's untiring energy, keen curiosity, and love of work is shown in his last visit to Abbotsford, of which he writes:

"At Abbotsford we were required to wait for some minutes in the reception-room for our conductor to dispose of another company, and invited by a placard to subscribe our names in a book and pay the guide 1s. for each member of our party. As I was already sufficiently familiar with what there was worth seeing, I did not care to incur the fatigue of another *tournée*. I improved the interval to gather the following statistics:

"1 name on each ruled line of each page of the register,
"27 lines on each page,
"160 pp. since the 1st of January, 1877,
"26 pp. since 1st of August, leaving
"134 pp. for seven months from January 1st to August 1st,

which at 27 signatures to a page gives 3,216 visitors; that is, 3,216 shillings, 517 shillings a month, which would amount for the year to £310 or say $1,500 a year income from visitors alone. That is 5 per cent. on a capital of $30,000, which is more than the property is worth without its *reliquiæ* and library.

"At the rate of visitors for the half of August just expired the income for a month would be 1,404 shillings, or £842 8s. for a year, or over $4,000, being 5 per cent. on $80,000. So that on the whole Scott did not make such a bad investment. This income, I understand, is an important resource to the family."

It may well be understood that a large portion of these "Retrospections" is taken up with correspondence, for Bigelow's pen never seems to have been idle. We not only have reminiscences of Lord Chancellor Cairns, but many witty letters from William H. Huntington, *Tribune* correspondent in Paris, whose chosen lunching-place was the Café Procope, the favorite café of Voltaire. "Mr. Huntington was a Bohemian, so far as indifference to social conventions could make him such. He did not possess a dress coat nor a top hat. . . . But he was not a Bohemian in the selection of his associates. He sought and won the heart of every American that came to Paris." He was turned off for some un-

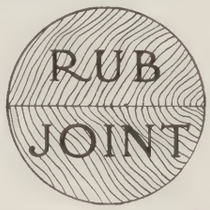
How the trip seems to the average luggage

Below are some of the points which explain why "Likly" Luggage is the most durable made.

Read these best of reasons why "Likly" Luggage "Asks no favors of the baggage man."

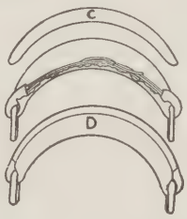
To back leather in hand luggage, cardboard is used. Plain pulp pasteboard is commonly employed.

The board used in "Likly" Hand Luggage is of a jute composition. We import it and are the only American luggage makers who use it. In the cut above, one end of a piece is pulled loose to show the 17 to 25 layers of stout paper, which pressed together give it exceptional strength. This board bends but never breaks. We would not dare to guarantee all "Likly" Hand Luggage for *five years* if we used the ordinary pulp pasteboard.



Makers of fine furniture taught us the rub-joint method of joining board. We use it entirely in making the foundation boxes for "Likly" Trunks. Unlike the usual tongue-and-groove joining, *it does not warp or split.*

Every protecting slat used on "Likly" Trunks is carefully varnished before it is put on. When the trunk is completed, another coat of varnish is given the entire surface. This insures a permanent and smooth finish.



The handles on "Likly" Hand Luggage never grow limp or wear out with old age or mauling.

We use steel-form handles on practically all our bags and suit cases. "D" shows the finished handle. Note how securely the two steel ends are turned inside and wired together. The top part "C" is clamped on. Another thing: This steel handle is riveted to the bag. A seaman's tug of war couldn't yank it out.

The paint used on "Likly" Trunks is made of pure linseed oil and special colored leads ground in pure oil. Our paints cost us 60% more than the kind commonly used for this purpose. The extra wear is more than worth the difference.

FIG. 1

FIG. 2

The top of every "Likly" Wardrobe Trunk consists of two layers of 3-ply basswood, filled between with a solid block of wood cut to a tight fit.

A common way of making these tops is shown in Figure 2. A small block is nailed between the upper and lower veneer. Both finished tops look the same, but the skimped one would never stand a head-on collision with a "Likly" Top.

Amateur sewing circles sometimes make good-looking hand luggage—but may the Express Companies and Father Time be merciful when the travel comes!

All "Likly" Hand Luggage is given double flat side sewing. The one edge is folded against the other. Through stitches make them practically one piece. (See Figure 1.) Figure 3 represents the old welt method of workmanship. Figure 2 pictures the common so-called "French" edge—certainly nothing for France to boast about.

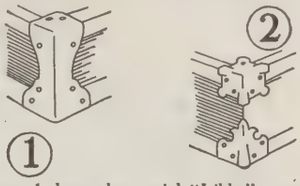


Figure 1 shows the special "Likly" corner protector used on our upper trunk lids. It is a one-piece device. It makes the whole top rigid. Commonly two small caps are used. They are dashing and brassy, but shaky in the joints. See Figure 2.

When we say that a "Likly" Trunk is "fibre bound" we mean the best hard *vulcanized* fibre—not the common pulpy kind. A fireman's hose couldn't wet "Likly" fibre through. Nor could it defy fire more completely.

We place this brass trademark upon each piece of our luggage. It promises almost endless service.

Our catalog, which gives details of the widest and most durable line of luggage produced, has often been referred to as "The Luggage Encyclopedia." Send for a copy. It will help you in your Christmas planning.

We will also tell you the name of the nearest "Likly" dealer.

Henry Likly & Co., Rochester, N. Y.

Gew-gaws are losing vogue as Christmas gifts. This bag will make you an up-to-date Santa Claus.

THIS bag—"The Likly Country Club"—is probably the most-talked-about, most-asked-for oxford made. It is of genuine imported pigskin, embossed with a walrus grain. The frame is of English wrought steel. The concealed lock is also English.

Interior is lined with plaid serge. Look at the 3 folio pockets on one side. The other side has 8 moisture-proof pockets. They make snug containers for comb, brush and other toilet articles.

Every "Likly Country Club Bag" is tagged with our trademark and accompanied by the "Likly" FIVE YEAR GUARANTEE. Two sizes. 18-inch, $15.00; 20-inch, $16.50. A real bargain and a brute for wear.

Out in the East Indies, the water buffaloes grow hide which has no equal for wear. We have secured some of this handsome Caraboa hide and from it make a de luxe "Country Club." You should see this bag at your dealers. Two sizes. 18-inch, $25.00; 20-inch, $27.50. You will find this leather only in the de luxe "Likly Country Club Bag."

"LIKLY" LUGGAGE

Asks no favors of the baggage man

Only One Thing Ever Starts a Gasoline Motor—*Hot Vapor*—Gasoline in Liquid Form Never Started Anything!

For Use On Any Auto Whether Equipped With Self Starter or Not.

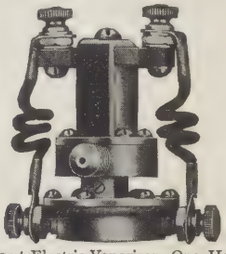
SURE-START Electric Vaporizer

Easily and Quickly Attached to Any Auto

This New Invention Fills Your Manifold With *Hot Vapor* Delivers *Hot Vapor* Direct to Firing Chamber.

Sold on Guarantee to Satisfy. Return After 30 Days if You Can Do Without It. Money Back. Price $8.00 Complete. Ready to attach. When ordering, mention make of car, size of gasoline feed line and whether gravity or force feed.

Turn small switch on the dash; then crank your motor in the usual way and an *immediate* start is *assured* regardless of weather conditions or poor gasoline.



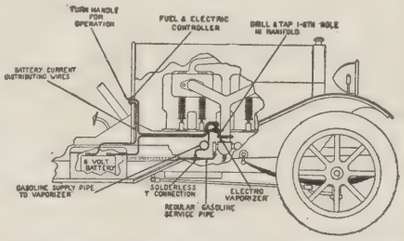
Sure-Start Electric Vaporizer—One Half Exact Size—Weight 10 ounces.

What Sure-Start Electric Vaporizer Does

Gasoline from main feed line is admitted to vaporizer by an electrical valve. Gasoline runs through an electrically heated compartment and is then admitted into the intake manifold in the form of a hot vapor. **Sure-Start** fills the manifold with Hot Gasoline Vapor —that assures a start.

A Wonderful Invention

The **Sure-Start** Electric Vaporizer has been pronounced the most important new idea or invention in motor equipment for 10 years. It eliminates all starting troubles—all liquid priming—long-time cranking—and all starting troubles caused by cold weather or low grade gasoline.



TURN HANDLE FOR OPERATION
FUEL & ELECTRIC CONTROLLER
DRILL & TAP 1-8TH HOLE IN MANIFOLD
BATTERY CURRENT DISTRIBUTING WIRES
6 VOLT BATTERY
GASOLINE SUPPLY PIPE TO VAPORIZER
SOLDERLESS T CONNECTION
ELECTRIC VAPORIZER
REGULAR GASOLINE SERVICE PIPE

(Sketch illustrating application of **Sure-Start** Electric Vaporizer. This is not drawn to scale—the Vaporizer being exaggerated in size.)

Note These Points

Sure-Start Electric Vaporizer needs no attention after being once attached to your car. Can be used or not, at your discretion. Does not interfere with the regular workings of the car.

Sure-Start gives the vital impulse—creates real engine-energy, to **start** your motor. The **Sure-Start** Electric Vaporizer is a NEW, proven-practical **fuel vaporizer** which effectively overcomes the deficiency of all carburetors—it **insures instantaneous vaporizing of fuel.**

The common practice of priming with ether or gasoline through spark plugs or pet cocks is eliminated. A simple turn of the switch is all that is necessary. **Sure-Start** Vaporizer does the rest.

Sure-Start Used in Connection with Electric Self Starters

Sure-Start saves your batteries because it eliminates the prolonged strain. Order it now and end your starting troubles. Your Self Starter—no matter what style it is—is really a self cranker. It relieves you merely of the engine-turning burden. So far—all right! But Starting Troubles still bother you, particularly in cold weather. That's because your gasoline is not vaporizing. **Sure-Start**, used in connection with a Self Starter, makes a start **absolutely certain. Sure-Start** really saves your batteries when so used and is a big economy. Its consumption of current is insignificant.

Sure-Start is economical in its operation. A very small amount of electric current from any ordinary 6 volt battery supplies vaporizer.

Sure-Start Electric Vaporizer in conjunction with electric, air or mechanical starters makes the operation ideal and gives results that make it indispensable.

Get a sure dependable start with a **SURE-START** and avoid broken arms. **Money Back** After 30 Days' Trial if you wish it. Order Direct. Address

REVIEWS OF NEW BOOKS

(*Continued from page* 1072)

known cause, by the *Tribune* people, for which John Hay, Secretary to the American Legation, styled them "idiots." It is not too much to say that John Bigelow came, either directly or indirectly, into contact with every man of note, European or American, of the nineteenth century, and his work bristles with interest on every page. It is generously illustrated with portraits and has a good index.

GERMAN CLASSICS

Francke, Kuno [editor-in-chief]. **The German Classics of the Nineteenth and Twentieth Centuries: Masterpieces of German Literature Translated into English.** In 20 volumes. Illustrated. Vols. I, II, and III. New York: The German Publication Society.

The appearance of this work makes a new event in the book-making history of this country, which owes so much to Germany both in the past and the present. All who love books will welcome its appearance, the first three volumes of twenty being now in our hands. The work has been wisely and skilfully laid out. Professor Francke, of Harvard, is a first authority in this country on German literature. His contributions to its study are known to every scholar. He is assisted here by Prof. William Guild Howard, his coadjutor at Cambridge, and a large staff of translators.

These three volumes prove how thoroughly the collaborateurs are doing their work. The first contains a general introduction to the whole series by Richard M. Meyer, of Berlin University. Naturally the works of Goethe lead off the series of bards. We have a lucid and eloquent life of the poet by Professor Thomas, of Columbia University. The lyric poems and ballads of Goethe precede his "Herman and Dorothea," his "Iphigenia in Tauris," and his "Faust." To each drama is prefixt an illuminative introduction. The second volume opens with Goethe's celebrated novel, "Elective Affinities," which has been the occasion of so much discussion. The essays follow. The Goethe matter closes with the "Conversations," and the poet's letters to Wilhelm von Humboldt and K. F. Zelter. The third volume introduces Schiller. We have here the most brilliant of his ballads and lyrics and of his dramas "Wallenstein" and "William Tell."

The work so far has been done with judgment and completeness. The manufacture of the books, the paper, printing, and binding are excellent, while the illustrations are lavish and beautiful. An anthology of fine translations has been brought together. The editors and publishers have given to America that which no country in Europe has yet acquired—a complete English version of a great literature which, tho it appeared on the horizon later than that of either France or England, developed so rapidly and grew to such power and beauty that it almost eclipsed the contemporary literatures among which it flourished. The "German Classics" must find a place in every important library in the Union. The collection will do for Americans what Carlyle did for too tardy

England when she had long neglected German letters. It was the Sage of Chelsea who first revealed to his countrymen the marvelous charm of the authors translated in this fine set of books.

OTHER BOOKS WORTH WHILE

Van Kleeck, Mary. Women in the Bookbinding Trade. Pp. 290. Survey Associates (Russell Sage Foundation). $1.50.

All the books published by this association are written to aid the work of bettering social conditions and aiding human progress. Naturally, to accomplish the task of improving social and industrial conditions by deliberate and purposeful action, we must first have knowledge of the conditions to be improved. It was for that purpose that the Committee on Women's Work appointed Miss Van Kleeck to investigate conditions in the bookbinding trade, a trade which has been for years conspicuous as an occupation in which women work at night. This volume gives the results of her investigation—a clear and interesting description of the industry itself, specially considered from the standpoint of the woman worker, her duties in the binderies, her home conditions, and the sanitary conditions existing in most binderies. These pages do not outline any single method of reform, but prove the complexity of the problem and the varied methods of approach possible. In her final summary, Miss Van Kleeck indicates certain definite changes which would be required to establish proper standards. Her hope is to enlist the interest of those who, as employers, as workers, as teachers, as legislators, as voters, or as buyers, share responsibility for the welfare of wage-earning women.

Younghusband, Sir Francis. Within. Pp. 189. New York: Duffield & Co.

The theories and principles expounded in this series of self-examinations were evolved by the writer out of his inner consciousness during a long period of convalescence from a most painful and exhausting illness. As his mind was alert and active, he worked out a philosophy of action and belief that to some will seem shocking, to others most consoling. "In all cases," he says, "we find that that view of life which would maintain that we, either as individuals or as a race, are under the protection of some external Providence, will not fit the facts of our experience." In place of the kingdom of God in heaven, he claims that the kingdom is within us. We see everywhere "evidence of an inherent, impelling spirit, and evidence that that impulse strives for what is good." It would be dangerous to quote too freely from the theories advanced on the pursuit of the ideal of happiness and freedom, but, read carefully, the book will give us many helpful thoughts. "Our highest aim of all will ever be to enrich our own lives and the whole life-blood of humanity by cultivating love—by making it purer, richer, nobler, sweeter, more intense."

Lippert, Frieda E., and Holmes, Arthur. When to Send for the Doctor. Pp. 257. Philadelphia and London: J. B. Lippincott Company. $1.25.

This little book is preeminently for parents, teachers, social workers, and all who work with children. It is written from actual medical and psychological ex-

No Hill Too Steep **Jackson** *No Sand Too Deep*

Olympic Forty $1385

A Dream Come True

It seemed impossible—that so much quality, so much sturdy dependability, so much beauty, such completeness in equipment, could be sold at $1385, yet—here it is for your inspection and admiration—ready at your dealer's for *any* test to *prove* its merits.

Every requirement you ought to look for in the car you buy—you will find in this new Jackson model

Is It Bigness? Then here is a 115-inch wheel base; extra roomy body; wide doors; 34 x 4-inch wheels.

Is It Comfort? Then here are wide deep cushions, curled hair upholstering under the best quality of leather, full elliptic spring suspension both front and rear, big tires; a quiet, vibrationless motor.

Is It Power? Then here is a motor with forty rugged horse power, that instantly answers your slightest pressure. "No Hill Too Steep—No Sand Too Deep."

Is It Safety? Then here is a low hung, well balanced body that limits skidding and side sway to a minimum; big, powerful brakes that can lock your wheels quick as a flash.

Is It Complete Equipment? Then here is a complete Electric Cranking and Lighting System, Electric Horn, mohair top with hood, ventilating windshield, speedometer, gasoline gauge on dash, Firestone demountable rims, with one extra rim, tire holder, footrail pump, jack, and tool kit.

Is It Durability? Then here is a car in which every piece of material is carefully chosen, rigidly inspected, tested and *proved* for durability.

Is It Beauty? Then note the sweeping curves of the body, the graceful lines of hood and dash, the harmonizing sweep of the fenders, the clean, unencumbered running boards. Especially note the beautiful finish.

Is It Responsibility? Then here is a car backed and guaranteed by an organization with a record of Eleven years of success behind it. A business owned and managed today by the same men who started it eleven years ago.

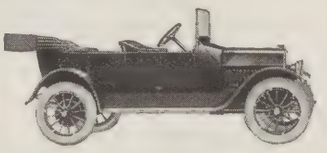
Every requisite of the complete, up-to-date, satisfaction giving car, is there, and some that others lack. Where can you find so much mechanical excellence at such a price? Jackson cars take the heart out of competition.

Three models comprise the 1914 line. Each possessing qualities and features that make it a leader in its class.

Write for catalog to factory at Jackson, or see your local dealer

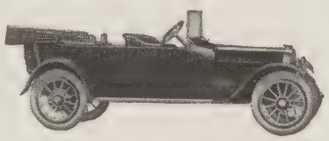
"Majestic" $1885

Long stroke, four cylinder motor, 4½ x 5¼; 45 H. P.; electric cranking and lighting. Wheel base 124 inches. Tires 36 x 4. Full elliptic spring suspension front and rear. Full floating rear axle. Extra roomy body. Wide seats, wide doors, 10-inch cushions. Completely equipped.



"Olympic Forty" $1385

115-inch wheel base and wide seats; full 40 horse power. 34 x 4 tires. Beauty of design second to none; full elliptic springs front and rear; smooth, quiet running closely approaching *silence*; electric cranking and lighting, and complete general equipment. Price $1385.



"Sultanic" $2150

Long stroke, six cylinder motor, 55 H. P.; electric cranking and lighting. Wheel base, seven passenger, 138 inches; five passenger 132 inches. Tires 36 x 4½. Full elliptic spring suspension front and rear. Full floating rear axle, ball bearing throughout. Completely equipped. Seven passenger model, $2300.

REVIEWS OF NEW BOOKS

(*Continued from page* 1075)

perience, and arranged and worded so that any one without technical training can gain the requisite knowledge concerning the common ills and habits of children, whether they affect the mind or body. Well-known ailments are cataloged by their common names, their symptoms are described, also the marks that distinguish the harmless indisposition from the more serious that need a doctor's care and advice. The authors have given as good a list of things not to be done, as of things to be done. Any one equipped with this handbook and the chest of medical material which is advocated and listed here ought to be capable of handling any emergency that needs quick wits, careful observation, and speedy action. The book is comprehensive, compact, and concise, with an index which makes it easy to use it.

"Outing" Handbooks. New volumes.—Ice Boating, edited by Herbert L. Stone; Pigeon Raising, by Alice McLeod; Intensive Farming, by L. C. Corbett; Taxidermy, by Leon L. Pray. New York: Outing Publishing Company. 70 cents each.

It is the intention of the publishers of these handbooks to compile a series of about 200 volumes. The purpose is to cover all phases of outdoor and home life. Among the topics already announced, in addition to those covered by the volumes above mentioned, are apple-growing, the Airedale, boat-building, camp cookery, fencing, fishing, horses, motor-boats, and outdoor photography. Under the auspices of *Outing* the matter included in each book should be received with confidence.

Cambridge Manuals. New volumes—English Monasteries, by A. Hamilton Thompson; Beyond the Atom, by John Cox; The Wanderings of Animals, by Hans Gadow; Wireless Telegraphy, by C. L. Fortescue; Submerged Forests, by Clement Reid; Mysticism in English Literature, by C. F. E. Spurgeon; Theory of Money, by D. A. Barker; Copartnership in Industry, by C. R. Fay; Plato—Moral and Political Ideals, by A. M. Adam; Bees and Wasps, by C. H. Latter. Small 4to. New York: G. P. Putnam's Sons. 40 cents each.

These ten volumes are the latest additions to the "Cambridge Manuals," devoted to science and literature, and issued by the Cambridge University Press, with Dr. P. Giles, Master of Emmanuel College, and Professor A. C. Seward, of Cambridge, as general editors. Sixty volumes have already appeared, the present ones making the number now seventy. The little books have been generally commended as admirable treatises on the many subjects embraced by them.

Frothingham, Jessie Peabody. Success in Gardening. Pp. 333. New York: Duffield & Co. $1.25.

"So far as is humanly possible, this book offers practical suggestions to beginners who are wholly ignorant of gardening"—so writes the author. Flowers grow for those who love them, and the secret of success is in the worker. The only exception to the purely "practical facts" here given is found in the delightful and apt quotations from well-known writers on the fascinating subject of flower culture. This manual of well-tried information assumes a large degree of intelligence on the part of the reader and offers him an ingenious mechanism on which he must use his brain. The author takes up the months in sequence and week by week, and chronicles the work necessary and the results to be expected in a well-cared-for garden, so that the book becomes a practical guide and help for beginners and garden-lovers.

CURRENT POETRY

MAURICE HEWLETT'S "The Man on the Hill," which fills an entire page of a recent issue of *The Westminster Gazette*, is a good poem, graphic, passionate, strong. But it seems to us that Mr. Hewlett succeeds at length in saying no more than Mr. Edwin Markham said in "The Man with the Hoe," and in saying it far less forcibly. Still, it is interesting verse, and especially appropriate in the England of to-day. We quote some striking passages.

The Man on the Hill

BY MAURICE HEWLETT

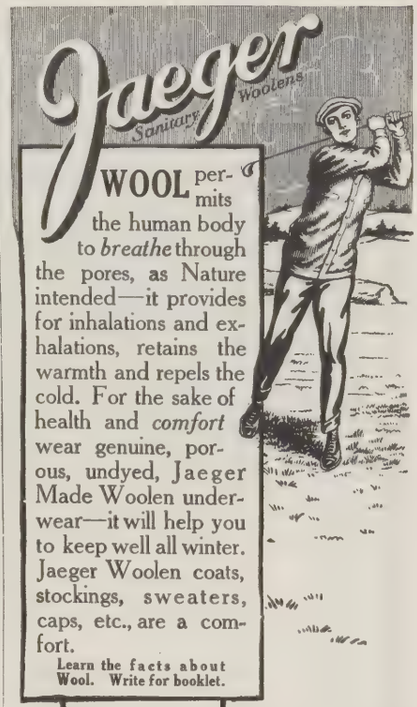
[This poem, which is the Prelude to a long one dealing with the history of the English Peasant for the last thousand years, is in conception some six years old. It was finished in its present form three days before Mr. Lloyd-George spoke at Bedford. So much it seems fair to say. It happens to be upon a subject at present, and none too soon, in debate, and I don't think that it is any the worse for that.—M. H.]

I sing the Man, I sing the Plow
  Ten centuries at work, and Thee,
  England, whom men with pence enow
Profanely call Home of the Free:—
  Enslav'd, back-broken, driven afield,
  Ask him I sing how this may be,
Him that the slipping share must wield,
  And wring his brow that others eat,
  And see them fatten on his yield,
And by his pain derive their meat:
  Hodge, hireling for a thousand years,
  To whom the burden and the heat
To reap in sweat the sown in tears
  Must be, whatever else betide;
  Pinn'd to his rood thro' hopes and fears
Till they he serv'd, unsatisfied
  With having all but that, took care
  To get that too—he is crucified
Like Him, Who on His rood hung bare!
  Of those his muted aeons of pain,
  Dumb child of suffering and to spare,
I sing the grumbled low refrain,
  The broken heartstrings' undertones
  Which thro' the clash and gallant strain
Of warring legions, thro' the groans
  Of them they war on, thro' the blent
  Organs and trumpets creaks and drones
The lordings' way to tournament,
  To love of women, pride of men,
  To crowning or to parliament.
Here's homespun for your hand-selling then,
  You who have fingers for such thrums:
  Let the dark angel teach my pen
The underchant which all the drums
  That go before to cry our lord
  Can never stifle; that which comes
A bourdon from the tilth and sward
  Not to be quenched, outshrill'd in vain
  By clarion trumpet or bare sword—
Nay, but like thudding nights of rain
  Heard thro' the thunder of the guns,
  Adown the hillside, o'er the plain,
Across the river. Ah, patient ones!
  They heard it then, they hear it now;
  Say, shall it speak in vain their sons,
The creaking of thy driven plow?

  O to whom all my song must be
  If it would thrive, receive it Thou,
  This epic of an agony!

  . . . . . .

  O what see you from your gray hill?
  The sun is low, the air all gold;
Warm lies the land, slumbrous and still.
  I see the river with deep and shallow,
  I see the ford, I hear the mill,
I see the cattle upon the fallow;
  And there the manor half in trees,
  And there the church and the acre hallow
Where lie your dead in their feretories
  Of clay and dust and crumble of peat,



Jaeger
Sanitary Woolens
WOOL permits the human body to *breathe* through the pores, as Nature intended—it provides for inhalations and exhalations, retains the warmth and repels the cold. For the sake of health and *comfort* wear genuine, porous, undyed, Jaeger Made Woolen underwear—it will help you to keep well all winter. Jaeger Woolen coats, stockings, sweaters, caps, etc., are a comfort.

The Saybrook Invalid's Tray

A Pleasing Xmas Gift

This little table affords the greatest comfort to those obliged to take their meals in bed. It stands rigidly on the bed, allowing free use of the arms. Not only for meals, but as a reading stand or writing desk it is equally convenient. With the legs folded under it makes an ideal service tray. Built of selected oak and handsomely finished. An ideal Xmas gift that will be instantly appreciated and not liable to be duplicated. Each $2.75 delivered.

Descriptive circular on request

THE CHAPMAN BROTHERS CO., Saybrook Point, Conn.

With a stone or two to their memories,
Your dead who with their sweat kept sweet
This heritage of gray and green,
This England now the richer for it.
I see the yews and the thatch between,
And smoke that tells of cottage and hearth;
And all is as it has ever been
From the beginning of this old earth.
And so it is even as it was
From the beginning in Hodge's garth
While kings and statesmen flaunt and pass,
Kings and lords and knights of the shire,
Bishops in lawn (rare flesh to be grass!)
Priest and schoolman, clerk and esquire;
Danes and Normans and Scottishmen,
Frenchmen, Brunswickers, son after sire,
They come and conquer, they ruffle and reign,
They rule, they ride, they spend, they grudge,
They bicker their threescore years and ten,
They slay, and thieve, and go; but Hodge
The Englishman stoops to fork and flail,
And serves Saint Use, and will not budge,
But drives the furrow and fills the pail,
Raining sweat lest the land go dry:
He sees his masters, he gives them hail
With hand to forelock as they ride by—
They that eat what he doth bake,
They that hold what he must buy,
They that spend what he doth make,
They that are rich by other men's toil,
They of the sword and he of the rake,
The lords of the land, the son of the soil!
O Christ, the Patron of the Poor,
Thou Who didst suffer harlot's oil
Anoint Thy feet, O narrow Door!
Thou Who didst sanctify our dearth
With bitter pain and anguish sore,
A barefoot King held nothing worth—
Here's misery for Thy chrism to mend;
A thousand years to plow the earth
And be worse off at journey's end!

. . . . . .

Is it not his yet, this dear soil,
Rich with his blood and sweat and tears,
Warm with his love, quick with his toil,
Where kings and their stewards come and go
And take his earnings as tribute royal,
And suffer him keep a shilling or so?
They come, they pass, their names grow dim;
He bends to plow, or plies his hoe,
And what are they to the land and him?

They shall perish, but he endure
(Thus saith the Scripture old and grim);
He shall shed them like a vesture,
But he is the same, his tale untold;
And to his sons' sons shall inure
The land whereon he was bought and sold.

From this stern song of social injustice it is a far cry to Miss Driscoll's delicately mournful measures. Yet, in its own way, its beauty matches the rugged strength of Mr. Hewlett's poem, and its effect is obtained by more economical methods. We take it from *Poetry: A Magazine of Verse.*

"Passe Rosa"

By Louise Driscoll

[Cecelia del Balzo, wife of Amadeus IV., Duke of Savoy, was so called in the twelfth century throughout all Europe.]

More beautiful than roses! Eight centuries have rolled
Their hundred cycles o'er you,
And still we may adore you,
Reading the printed pages where your history is told.

More beautiful than roses! O lady, dear and dead,
The daughters of a strange new race
Ponder on your amazing grace,
And picture your white hands and sunny head.

More beautiful than roses! You have been dead so long!
Where is the sweet, white breast of you?
And where the golden crest of you?
And where the men who bled for you, fighting through right and wrong?

More beautiful than roses! Upon your grave to-day
The violets that were your eyes
Are smiling to Aosta's skies,
Eight hundred years ago you went that way.

More beautiful than roses! Sometimes your eyes were filled
With bitter tears you might not shed,
And now your griefs and you are dead.
And yet, through Time, the crucible,your perfume is distilled.

The following poem is rather unconvincing toward the end. The last stanza, and the last two lines of the third stanza, have little significance. But the first half of the poem surely is effective. Miss Davis makes us feel the loneliness of the house and hears the storm outside. It appears in *Harper's Magazine:*

Ghosts

BY FANNIE STEARNS DAVIS

I am almost afraid of the wind out there.
The dead leaves skip on the porches bare,
The windows clatter and whine. I sit
Here in the quiet house, low-lit,
With the clock that ticks and the books that stand,
Wise and silent, on every hand.

I am almost afraid; tho I know the night
Lets no ghosts walk in the warm lamplight.
Yet ghosts there are; and they blow, they blow,
Out in the wind and the scattering snow.
When I open the windows and go to bed,
Will the ghosts come in and stand at my head?

Last night I dreamed they came back again.
I heard them talking; I saw them plain.
They hugged me and held me and loved me; spoke
Of happy doings and friendly folk.
They seemed to have journeyed a week away,
But now they were ready and glad to stay.

But, oh, if they came on the wind to-night
Could I bear their faces, their garments white
Blown in the dark round my lonely bed?
Oh, could I forgive them for being dead?
I am almost afraid of the wind. My shame!
That I would not be glad if my dear ones came!

Few poets are courageous enough to write about fairies nowadays. Mrs. Conkling has the necessary delicacy and imaginativeness; her "Fairy Music" (which we take from *The Craftsman*) is charming.

Fairy Music

BY GRACE HAZARD CONKLING

TO ELSA AND HILDA.

Oh, you shall play a seaweed harp,
And you, a beechnut violin,
Till your thin music silver-sharp
Invites the vagrant fireflies in.

And you shall play a moonbeam flute,
And you, a mullein-stalk bassoon,
Till all the crickets gather mute
To criticize beneath the moon.

And you shall play the shepherd horn
That calls white fancies home like sheep:
And you, the oboe all forlorn
That Oberon gave you to keep.

For you will both be fairies then:
And one shall sound a coiléd shell
To pilot fairy sailormen,
And one shall ring a crystal bell.

And you with yellow hair will need
A willow whistle cut at dawn:
But you shall play a river-reed
Like any little nut-brown faun.

And Syrinx will forget to flee,
And Pan, what mischief he had planned:
And she with you will dance while he
Pipes up the moon of Fairyland.

The Economical Electric

EVERY motor car uses energy in some form to produce motion. The simple, safe, silent Electric is run by electric current—constantly decreasing in cost.

Here are facts; a recent country-wide census of Electric owners showed the average cost of storage and service in public garages—including current, washing and polishing—to be $23.50 per month. In private garages the average monthly cost for current was $5.73. The average cost of tire renewal—ranging from 48 months' to 15 months' experience—was $2.78 per month. The Electric gives you all the luxury and distinctiveness of a limousine at far less expense.

Send Today for This Book

"THE STORY OF THE ELECTRIC VEHICLE"

PERSONAL GLIMPSES

A JURIST AND A GRIZZLY

JUSTICE JOHN FORD, of the New York Supreme Court, returned recently from the Cassiar country in the British Northwest with a lively story of how he came very near being a square meal for a huge grizzly bear. The Cassiar country is reached by going to Rangle, Alaska, and up the Stickeen River to Telegraph Creek, and then back into bleak mountains, where the lower places are covered with scrub pines and the high ground is usually under thin snow. Justice Ford got five caribou, three Osborn, and two big-horn, but no Alaskan sheep. He was very anxious to kill some sheep, and postponed his departure three times on reports from his Indian guides, Bob and Harry, that herds had been sighted. Each time he found that all the sheep in sight were does, which are protected by the chivalry of the Canadian law. As the guides were packing up on the last evening before starting back to civilization Bob sighted a bear high up on the mountain-side above the timber line. The jurist's story was told to a New York *Evening World* reporter:

If I had known that it was a grizzly I would have told the boys to go right on packing. But I didn't. I thought it was a whale of a big brown bear. So Little Bob and I set out to stalk it. We made a long climb—a very long climb for one who sits on the bench for a living and has begun to deprecate mention of his waistline—and reached a point where the wind was away from the bear and toward us, and there was a big rock between, which gave us a chance to close down on him.

When I was close enough to think of making a shot, I took a peek over the rock. My brown bear was a grizzly. I don't think I showed my emotions. But Little Bob did. I thought he was going to dig a hole in the ground and crawl into it and cover himself up.

The Supreme Court of the State of New York, it flashed over me, can not be backed down by any bear. Besides I had a British rifle, a .333 caliber, which had been given to me by a friend in New York who had bought it with the belief that it was the most deadly and unerring weapon ever made by man for big-game hunting. It would have been treachery to the man who gave me that gun not to have used it on that bear. It carries one cartridge in the chamber and three in the magazine. Remember it was a British rifle. Ever since I have blamed myself for taking out anything that had on it the stamp of the Sassenach.

Aiming very carefully, I let go one at the big brute's shoulder. It hit him. He snapt his head around and bit at the sting of the wound, as a beast always does when a bullet strikes him. While he was still biting and snarling with his head turned back, I hit him again, on the other shoulder this time.

Little Bob was chattering and laughing like a child with a new toy. "You kill him, all right, Mr. Judge," he said. "You kill him. Just one more and he fall dead."

The bear differed with Little Bob. He swung around and took one long angry look at us, and then staggering a little, but with all the evidence of sincere persistence in the world, started across the ridge for us. There was no use in running away. If he were able to run at all he could surely beat us, and he was between us and the camp. I took a third shot. It struck the rock behind which we had stalked the bear and glanced off. Mr. Grizzly was almost at the rock and we were about twenty-five feet away. I could not throw in the fourth cartridge quick enough. It jammed in the breech! I never knew the County Court House to seem so far away. Not another shot, a mad grizzly and a fool of a noble red man who was begging me to save him, as tho I knew how to save myself.

Down in the valley, at the camp, about three hundred yards away, was another noble red man of the Thal-tan tribe, Harry, with two perfectly good Winchester 38's right at his hand, in clear sight of what was going on. And what was the son of the red warrior aborigines doing? Was he charging up the mountain, a rifle in each hand, to distract the bear? He was not. He was waving his arms and telling us to run.

That big brute of a beast stumbled as he rounded the rock, and that changed his direction. He made one or two efforts to keep on his straight path toward us, and each time went down hill instead of up, and while I stood there with the cold sweat rolling down my backbone and listening to Little Bob's teeth chatter, the bear, apparently unable to control his direction, wandered past us and down through the jack pines toward camp.

"You get him, Harry!" I yelled, when I got voice enough to yell with. "Take other gun. Kill him!"

Once more the historic coolness and courage of the Indian showed how they compared with those of the effete Caucasian. Harry disappeared around a corner of the tent, and when I saw him next he was climbing up the tallest jack pine there was within a mile. He went clear to the top and did not even stop to take a Winchester with him. He stayed there too until Little Bob and I climbed down the mountain-side and I told him I would shoot him out of the tree unless he came down.

The grizzly? We stayed over another day and tried to trail him. We could follow a little way by blood on the rocks. But we could not stay long enough to find him. Some other hunter will find his bones out there in the wilderness one of these days and wonder who the foolish hunter was that landed two great soft-nosed bullets into the carcass of a prize bear and did not even take away the head.

But if anybody cares to know, I made then and there two great resolves: one was that never again would I let my Irish system be at the mercy of a British rifle; the other was that if I could not get any other than Indian guides I'd go without guides. There is not in me the slightest ambition to become the breakfast for a Canadian grizzly bear.

"This Six Months' Guarantee Made Me Buy My First Holeproofs

I buy them now for superior quality—for soft comfort and for style"

We made six pairs of hose that wore six months long before a guarantee was thought of. These *hose* suggested the guarantee. You who don't know Holeproof, don't know what you are missing in comfort, style and wear. Simply go look them over.

Holeproof Hosiery FOR MEN, WOMEN AND CHILDREN

More than two million people know that not a single wanted hosiery advantage is sacrificed in Holeproof for wear. Yet six pairs are guaranteed six months and we replace every pair that fails. But 95 per cent *don't fail.*

We pay the top market price for yarn. We get the finest Egyptian and Sea Island cotton. Long-fibred yarn which means strength without bulk—and three-ply, which means soft pliability. Common yarn can be bought for half what we pay. But Holeproof can't be made with any common material.

Get a box today and try them.

Sold Everywhere

The genuine Holeproof are sold in your town. Write for dealers' names. We ship direct where no dealer is near, charges prepaid on receipt of remittance. Write for free book, which tells all about Holeproof.

WHEN THE DRAGONS AGONIZED

THE inauguration of Yuan Shi-kai last month as President of the Chinese Republic was, of course, a great political event, but to many spectators it had another significance of considerable importance. It brought out in bold relief the effect the introduction of Western clothes is having upon the sartorial appearance of many of the people. A New York *Herald* correspondent at the ceremonies writes that in the mind of the imaginative spectator the lithe and graceful dragons carved on the stately marble balustrading and stairways in the Forbidden City squirmed with horror when they saw alpaca frock coats, calico collars, and high hats mixed up with the apparel in vogue since the picturesque days of the semibarbaric Tartars and the artistic Mings. We read:

The Forbidden City, with its imposing courts, its massive carved marble settings, its stately and artistic roofs, its impressive silence and majestic vistas, was designed and built by men garbed in flowing silken robes embroidered with gold, and of striking splendor for the use of men just as impressively begowned. It was not destined by its makers for the somber, uninspiring counterfeit of a frock coat and silk hat into which the Chinese have so foolishly and unnecessarily plunged themselves in their wild search for a veneer of modernism as interpreted by the foreigner in his clothes.

But this is a republic—and republicanism scoffs at the betasseled, peacock-feathered mandarin, the man of the old time whose beads and silks and beautiful brocades of soft or strident hue delighted the heart of the artist in search of the bizarre or stirred even the casual citizen of the outside world with a deep sense of mystery generated by what was described as the barbarity of the collective Chinese costume.

The Forbidden City of Peking was built for rampant color. On inauguration day it was desolate with incongruous solemnity of cloth. The depression was accentuated by rain. The only touch of native color was lent by the appearance of three Buddhist bonzes in their bright yellow robes. Not a Chinese appeared garbed as for the court of a few years ago. All were in foreign-styled uniform, evening dress or frock clothes. The uniforms of the Presidential Guard were a bright blue, with white-plumed caps, which, combined with the glittering gold and colored uniforms of the members of the foreign diplomatic corps, strove against the blackdrest hundreds to infuse brightness into the scene. The task was almost forlorn. The attention of the visitor was riveted by the marvelous efforts of the Chinese tailor and hatter to copy the foreign dress. Stovepipe hats of all conceivable shapes and of every sort of black material except furry silk appeared. Most sat well back upon the ears of the wearers; some cocked rakishly on the eyebrow. Many, too small for the heads they sat upon, recklessly defied all laws of gravity and wind forces, perched upright or wabbled, their wearers assisting in the brave efforts to sustain perpendicularity by walking like conjurers to sustain the balance.

Clothes were a joy for the caricaturist. Frock coats of ordinary shiny black alpaca lining, of silk, of anything but the orthodox material, large of chest and long of skirt, enshrouded men sizes too large or sizes too small, and dress suits of similar style with tails touching heels or ludicrously docked paraded cheek by jowl with the product of best Western tailors, those sporting them being devoid of any sense of the unfitness of the things, but ravishingly glad in a sense of superiority over the thousands of gowned spectators of their own kind through whom they passed triumphantly into the palace, and preening themselves proudly in the presence of the rest of the select within the exclusive walls.

Collars and ties seemed to cause more trouble than anything else. They were a real problem to those who had never worn the dress of the "outer" barbarian before. Old-time mandarins went without collars to give finish to their alpaca coats. To continue:

Some wore calico cut to the shape of a collar, some studded starched collars above a ready-made tie which was fastened tightly round the neck. Others wore collars thumbed to absolute dirtiness in the effort to get the stud through wrong side up. One man wore no collar at all and made up for the deficiency by pinning a small tie to his neck-band with an ordinary pin. All this to conform to the order that ceremonial dress must be in accordance with that which is *de rigueur* in foreign lands.

Some Chinese, however, drest most correctly and wore their clothes as unto the manner born. Most of these were educated abroad or had had long practise in their own country. Among the latter were Prince Pu-lun, who represented the small Emperor, living in seclusion but a little distance away, and Prince Ka-la-chin, a Mongol. Both these scions of the Manchu and Mongolian clans looked well in uniform.

The President himself wore the field-marshal's uniform of his crack force. He looked well, but a sword encumbered him and shirt-cuffs are the bane of his life. At ordinary times the sleeves of a foreign coat irritate him so much that he rolls them up to the elbow when smoking his cigaret. Altogether he would prefer to be in his old costume, but being a good constitutional republican he is ready to submit to what is believed to be the inevitable consequences of republicanism.

He mounted the throne of the majestic Tai Ho-tien Hall, set upon a beautifully carved marble palisaded terrace in the center of the Forbidden City, sturdily convinced that the incongruously garbed crowd about him savored of democratic ideals and thoroughgoing republicanism. Clad as in the days of old, the effect would not have been the same.

The President stood upon the selfsame throne dais that many an emperor has occupied before him. He gazed below on spectators penned in different groups. On one hand were the uniformed foreign Ministers and their staffs. Near by were the somber-clad members of China's Parliament; alongside of them representatives of the military, and, close by, the enclosure

Sliced Oranges with a dash of Abbott's Bitters are appetizing and healthful. Sample of bitters by mail, 25 cts. in stamps. C. W. Abbott & Co., Baltimore, Md.

A BURROUGHS for Every Business
A PRICE for Every Man

Some people don't realize that they can buy a Burroughs for as low as $150.

Perhaps you, too, didn't know that we have scores of different styles from $950 *down*, like some of those described here—made to suit your business.

Perhaps you think you don't need a Burroughs? Well—a Massachusetts grocer boosted sales 400% with his Burroughs! A Pittsburgh general storekeeper lets his Burroughs take care of his books while he takes care of the sales! A Western wholesaler saves $1,560 a year in reduction of time and labor, by getting out statements which bring in 6,000 remittances *on time*—with his Burroughs! A manufacturer we know saves $372 weekly by using a Burroughs!

Don't be like the man who wrote us, "After I had used it one week, I was sorry I hadn't bought it five years ago." Ask us—Now—to give you a free demonstration, to put a Burroughs in your office at our expense and without obligation and *prove* that it will do for your business what it has done for 150,000 others.

Send for the new Burroughs book called "A Better Day's Profits," and learn how Retail Business benefits by Modern Methods and Burroughs Department of Systems Service.

A **9-Column Burroughs** (Style 124) **$325**—Visible adding dials and visible writing keyboard; paper carriage for wide sheets; total, sub-total, error, repeat, non-add and column correction keys.

B **7-Column Visible Burroughs** (Style 310) **$175**—Paper carriage for roll paper; visible printing, adding and writing; total, sub-total and repeat keys.

C **7-Column Burroughs** (Style 114) **$250**—Paper carriage for wide sheets; visible adding dials and visible writing keyboard; total, sub-total, repeat, non-add, error and column correction keys.

D **9-Column Visible Burroughs with Column Correction Keys** (Style 324) **$325**—Paper carriage for wide sheets; visible printing, adding and writing; has two-color ribbon; total, sub-total, non-add, non-print, repeat, and column correction keys.

E **7-Column Visible Burroughs** (Style 312) **$225**—Paper carriage for wide sheets; visible printing, adding, writing; total, sub-total, non-add, non-print and repeat keys.

F **Duplex Shuttle Carriage Burroughs** (Style 224) **$500**—Carries two totals at once, each 9 columns, literally one machine that works like two; paper carriage entirely automatic, greatly increasing speed. Equipped with all regular features.

for foreigners in the employ of the Chinese Government. The foreign correspondents occupied a different spot, and provision was made elsewhere for other guests.

On the dais with the President-elect were several functionaries who assisted in the inauguration. Two of them wore silk hats, tipped back on their ears, throughout the ceremony. One handed the President the scroll containing the oath of office; the other received it from him after he had read it out. The President made three bows, the spectators followed suit, and Yuan Shi-kai thus became President of the Republic. As such he read a lengthy address, "banzais!"—the equivalent of cheers—were shouted, and he retired. The spectators trooped out, wandered about the courtyard till the President had received the foreign diplomatic corps, and later followed him to the embattlements of the South Gate to watch a march past of troops.

That China has entered upon a new time, with new men and new ideas, or old men with new manners, was driven home forcibly every second one remained within the Forbidden City walls.

THE "DODGERS'" NEW MANAGER

AS manager of the Brooklyn "Trolley Dodgers" "Wild Bill" Dahlen was regarded as a first-rate baseball executive and field tactician, but it seems that the rabbit's foot he carried came from an animal of the common weed-field variety, one that had never been within three-quarters of a mile of a graveyard. Nearly everybody became convinced that "Wild Bill" could not break the streak of hard luck which the Dodgers couldn't dodge, and President Charles H. Ebbets the other day hired Wilbert Robinson, formerly coach of the New York Giants and right-hand man to Manager John J. McGraw, to take Dahlen's place. "Robbie," as he is called by players and fans in the National League cities, has had an exceptional opportunity to qualify himself for his new undertaking. The New York *Tribune* tells about his career and the ambitions of the Brooklyn club:

The veteran catcher, who has played a big part in helping the New York team win three consecutive National League pennants, received his unconditional release a month ago. It was commonly reported that he was to take hold of the Federal League team in Baltimore, but the present move must have been under consideration.

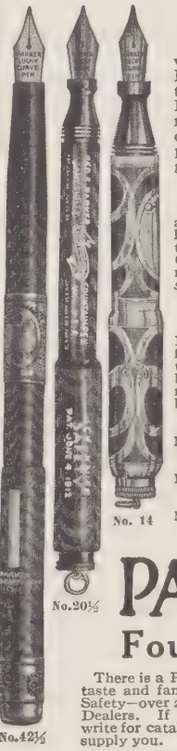
McGraw, following his practise of never standing in the way of advancement for his men, let Robbie go, as he did Fred Tenney to the Braves and Roger Bresnahan to the Cardinals.

Robinson had a talk with the owners of the Brooklyn club yesterday and signed a contract. He will have absolute charge of the players on the field and will receive the authority to run the team such as is demanded by McGraw and all of his school.

The choice made by Mr. Ebbets is a wise one in many ways. He will have a

For Christmas

what better gift than a handsome Parker Pen?



Everybody who writes will appreciate the handy Parker Jack Knife Safety or the new Parker Self-Filling Fountain Pen as a Christmas gift. It would be difficult to select a more appropriate and more enduring gift.

Jack Knife Safety
Can be carried anywhere in any position—in any pocket, lady's purse, or tossed into trunk or suit case. The Lucky Curve and special ink lock make it safe—*can't leak or smear!*

New Self-Filler
Nothing like it in the world. Looks just like a standard fountain pen, but fills itself in three seconds by pressing the button. Has smooth barrel—no obstructions. Anyone will be delighted with this pen.

Pens Illustrated
No. 42½—Standard or Self-Filling $4.50. With gold filled level lock clip $5.
No. 20½—Jack Knife Safety with ring for suspending by chain $2.75.
No. 14 —Jack Knife Safety (with ring). Sterling Silver $5. Gold filled mountings $6.

PARKER LUCKY CURVE
Fountain Pen

There is a Parker Fountain Pen for every taste and fancy—Standard—Self-Filling—Safety—over 200 styles—for sale by 15,000 Dealers. If you cannot locate a Dealer, write for catalog or send price and we will supply you.

leader rich in baseball experience who knows the McGraw methods that have proved so successful in the National League. Robbie has been more closely identified with the manager of the Giants than any other man connected with baseball, and he will carry to Brooklyn all the knowledge gleaned from careful observation of the tactics of one of the unquestioned geniuses of the game.

Robbie rose to fame in the ranks of the players years ago as a catcher on the famous Baltimore Orioles, having as team-mates Willie Keeler, McGraw, and Hughie Jennings, among others. When his playing days were over he went into partnership with McGraw in a bowling alley and café in Baltimore, which he ran with success for several years. McGraw stuck to baseball and jumped to the Giants in 1902.

Five years ago the Little Napoleon, always on the alert to adopt some new scheme to increase the efficiency of his men, conceived the idea of a pitching coach, something that has now been taken up by every big league team. He persuaded Robbie to go to Marlin Springs during the spring training, and for two seasons the veteran catcher made the trip, doing great work in developing the recruit pitchers and sorting out the wheat from the chaff, so that McGraw could devote his attention to the other men.

He met with such signal success that the leader of the Giants finally induced him to sign a contract to remain with the team through a full season. So Robbie sold out his business interests in Baltimore and joined the New York club in 1911.

Taking hold of Rube Marquard, who had been sitting on the bench, a rank failure, for two seasons, the new coach made him the leading pitcher of the league that year, and as a result the Giants won the pennant. The following season he devoted his attention to Jeff Tesreau, and made him a star, while in the last campaign Al Damaree got the benefit of his coaching, with remarkable results.

In the absence of McGraw, Robbie assumed charge of the team and did a lot of work on the coaching lines with the Little Napoleon.

Both Ebbets and the McKeever brothers were against the idea of a playing manager for the Superbas, so Daubert and Bresnahan were eliminated. Robinson seemed to be the right man for the job. The Brooklyn club has a host of promising young pitchers in tow and the need of an experienced hand to develop them was apparent.

Robbie has yet to earn his spurs as a tactician and strategist, but he undoubtedly knows the art of pitching through and through, and can be depended upon to bring the twirling staff of the Superbas to full perfection. There are those who believe that he will make a high-class leader in all other respects.

He is one of the most popular men in the game among the players who know him intimately, and he is a master-hand in promoting good feeling on a club. He has been of no small service in this regard with the Giants when things have been going badly and the men were working at high tension in the heat of a campaign.

He will be missed by the Giants next

INVESTMENTS AND FINANCE

NATIONAL DEBTS AND NEW NATIONAL LOANS

MUCH comment has been made in financial circles on the great size of the world's national debts, as disclosed in figures recently compiled by the Department of Commerce in Washington. These debts now aggregate the colossal sum of $42,000,000,000. They show an increase of 20 per cent. in the last decade. They have doubled within forty years. The annual charges involved by these debts amounted last year to $1,732,000, which was an average of slightly more than 4 per cent.

In many cases, especially among nations having the best credit, the interest rates were lower than 4 per cent., but with the weaker nations the rates were much higher. The average rate paid by the United States ranged from 2 to 4 per cent.; in Great Britain it was from 2½ to 2¾ per cent.; in Russia, from 2 to 6 per cent.; in Japan, from 4 to 5; in the German Empire, from 3 to 4; in China, from 4 to 5; in Nicaragua, 6; in Panama, 7; in Ecuador, from 4 to 10; in Honduras, from 5 to 10. Of course, these rates do not accurately indicate what the loans cost the governments, inasmuch, as in many cases, especially with countries of weak credit, the securities were sold at less than par. Our country has the distinction of being one of the few nations in the world which is able to decline to sell its securities at figures amounting to less than their face value.

It appears from these figures that the nation having the largest national debt is France. Russia comes next, and then in order are the United Kingdom, Italy, Spain, British India, Japan, and the United States. Following are the figures for these and a few other countries showing the change last year over 1902, except for Austria and Hungary, when the totals for 1912 only are given:

	1912	1902
France	$6,284,000,000	$5,857,000,000
Russia	*4,553,000,000	†3,414,000,000
United Kingdom	*3,486,000,000	†3,885,000,000
Japan	*1,242,000,000	262,000,000
German Empire	1,178,000,000	699,000,000
German States	3,736,000,000	2,688,000,000
British India	1,475,000,000	1,103,000,000
Italy	2,707,000,000	2,561,000,000
United States	*1,028,000,000	†925,000,000
Austria-Hungary	1,051,100,000	.....
Austria	1,434,000,000	.....
Hungary	1,268,000,000	.....

* 1913. † 1903.

In 1850 the total debts of these nations was $8,500,000,000; in 1800 it was only $2,500,000,000.

In connection with these figures, a compilation made by *The Wall Street Journal*, as to loans now being arranged or contemplated by foreign governments, is particularly interesting. These loans reach a total of $1,450,000,000. Much of this sum will go to pay for the Balkan War and to finance the military expansion plans of France, but nearly one-half of it—that is, over $600,000,000—will be expended in railway construction, chiefly in Russia and Japan, while a further sum, but comparatively small, will be used for various other internal improvements. None of the large total, however, will go for the refunding of outstanding national obligations. The total represents a 3 per cent. increase for the year in the aggregate of the national debts in the world. This is a very large increase, being nearly twice the average increase in national debts during the past ten years. It is to be remembered, however, that some of the loans represented in the stupendous aggregate of $1,450,000,000 are still in the contemplation stage, and may fail of accomplishment, or, what is more likely, may be considerably cut down. Following are the amounts in loans now sought by the different countries and the purposes for which they intend to use the money:

Country	Amount	Purpose
Russia	$500,000,000	Railroad construction.
France	280,000,000	Military expenses and Morocco.
Turkey	140,000,000	Balkan War expenses.
Japan	100,000,000	Railroad construction.
China	50,000,000	Railroad construction.
China	30,000,000	Internal imp. and finances.
Bulgaria	80,000,000	Balkan War expenses.
Servia	50,000,000	War expenses.
Roumania	45,000,000	War expenses.
Greece	50,000,000	War expenses.
Ecuador	33,000,000	Internal imp. and railroads.
Cuba	30,000,000	Internal improvement.
Guatemala	25,000,000	Readjustment of finances.
Colombia	20,000,000	Internal improvements.
Argentine	16,000,000	Internal improvements.
Total	$1,449,000,000	

A few other countries seem likely to seek to borrow money soon. One of these is Spain, but the size of the loan desired by that country has not yet been made known. Meanwhile, portions of some earlier national loans still remain in the hands of bankers unsold. Of a New Zealand loan, amounting to $17,500,000, comparatively little has been disposed of. Last June about one-half of a loan made by Prussia, amounting to $56,250,000, was still unsold. Of $55,000,000 which Brazil put out only a small percentage has been taken. Slow sales were also reported for Australian and some other government loans. As offsetting these discouraging items, is a statement that a 4½ per cent. Hungarian loan, offered at 95.60, only a few weeks ago, was at once oversubscribed.

A country from which no reports of financial needs, or financial stringency, have emerged for some years is one of the smallest in Europe—Switzerland. R. E. Mansfield, American Consul-General at Zurich, who was recently transferred to Vancouver, declared on arriving in New York that while other countries were suffering from financial stringency, Switzerland had become "the old stocking of Europe." Plenty of money was sent there from outside, so that a plethora exists in the banks. Because of extreme care and conservatism in the social and industrial life of Switzerland, the Swiss people are "prepared for any emergency." Mr. Mansfield regards this country, in which he has lived for seven years, as "the most remarkable industrial country in the world." With no natural resources of its own, it competes successfully, in many lines of manufacture, with all the great nations. Switzerland has no coal or minerals, and, besides importing these, must import other raw materials of manufacture such as cotton and silk. But it has built up successful industries in several lines, and all through industry combined with habits

of real and intelligent economy among all classes of the population.

COST TO EASTERN ROADS OF THE WAGE AWARD

The arbitrators who recently awarded to conductors and trainmen larger wages had under consideration Eastern railroads only—that is, roads east of the Mississippi and north of the Ohio. Just how the increases work out, as affecting the payrolls of these roads, is shown by a writer for *Railway News and Statistics*. It appears that the chief sufferer is the Pennsylvania east of Pittsburg, and the next heaviest the New York Central. Following are the figures for the principal roads affected:

Pennsylvania Railroad	$862,000
Pennsylvania Company	288,000
Pittsburg, Cin., Chicago & St. Louis	214,000
New York Central & Hudson River	550,000
Lake Shore & Michigan Southern	266,000
Michigan Central	164,000
Cleveland, Cin., Chicago & St. Louis	161,000
New York, Chicago & St. Louis	60,000
Baltimore & Ohio	486,000
New York, New Haven & Hartford	347,000
Erie	254,000
Boston & Maine	241,000
Philadelphia & Reading	234,000
Lehigh Valley	194,000
Delaware, Lackawanna & Western	186,000
Wabash	148,000
Central Railroad of New Jersey	135,000
Delaware & Hudson	111,000
Père Marquette	87,000
Pittsburg & Lake Erie	86,000
Chicago & Eastern Illinois	80,000

As a comment on these figures, it is noted that, if the increase had been in effect during the fiscal year 1911–1912, the surplus that was carried to profit and loss by two of the roads—the New York Central and Eastern Illinois—would have been completely wiped out. In the case of weaker roads, like the New Haven, Wabash, and Père Marquette, which already had deficits, these sums would have swollen the volume of the deficits just so much. It is believed that the increase in operating expenses since that time has put the roads now in an even poorer condition to meet these new charges than they were in before.

THE FALL IN GOVERNMENT BONDS THE WORLD OVER

What is declared by a writer in the New York *Times Annalist* to be "the lowest average level in 20 years" now exists in the market for stocks and bonds. The writer adds that "never before in the financial history of the world have conditions been so awry in so many countries as now." The most carefully selected investments in all conditions have "proved vulnerable." Some bonds are quoted at from 15 to 25 per cent. below the values of ten years ago, and cases are known where they have declined 30 per cent. The decline has extended not only to railway and industrial bonds, but to government bonds, long regarded as the safest of all investments. The writer presents a list of about 35 government bonds, with the low price of this year contrasted with the mean price of 1910. Added to these figures are the highest prices reached within ten years and the percentage of shrinkage in market value during the same ten years. It all makes an extremely suggestive presentation:

	Low Price in 1913	Mean Price in 1910	Highest Price in Ten Years	P. C. of Decr'se in Ten Years
Argentine 5s	99	103½	105	5.7
Austrian 4s, rentes	79	93½	102½	22.9

There Are 106 Cents In Every Dollar

—to the man or woman who understands the advantages of safe investment. By the purchase of sound bonds bearing 6% interest, one may realize the truth of this statement and experience the satisfaction, profit and freedom from care with which a carefully chosen bond investment endows its owner.

¶ Every dollar invested at 6% interest amounts to $1.06 at the end of a year, and if the interest is re-invested regularly, one's funds increase in amount with surprising rapidity.

¶ Thoroughly safeguarded First Mortgage Bonds yielding 6% interest, which we have purchased outright with our own funds, are available in denominations of $100, $500, $1,000 and $5,000, placing them within the reach of almost every purse.

¶ The value of our recommendation of these securities is attested by the fact that no investor has ever lost a dollar of principal or interest on any security purchased of this House in the 31 years of our business life.

¶ Forehanded investors, planning January purchases, should send for our January list early. Call or write today for our latest investment offerings and The Investors Magazine. In writing specify Investment Circular No. 247 M

Income Tax Record

For the convenience of investors we have devised a simple form of pocket memorandum book in which may be kept a complete record of your income tax deductions or exemptions on bond interest.

With this record at hand certificates of ownership, which under the law must accompany all coupons presented for payment, may be filled out at any convenient time or place without reference to the bonds themselves.

The booklet also contains clear instructions for filling out certificates of ownership and other helpful information regarding the new Income Tax Law.

We shall be glad to send copies of this booklet J-37 on request and in every possible way to assist investors in complying with all the complex features of the law.

A Concise Digest of the New Banking and Currency Bill

The new banking and currency bill known as the Federal Reserve Act, now under consideration in Congress, is of vital interest to every American citizen.

It is necessarily technical in its nature and therefore hard to understand.

We have prepared a Digest of the bill, concise, compact, and so arranged as to enable the busy man to grasp its essential features in a few minutes. A copy of this Digest will be sent to anyone on request.

Ask for Booklet F-944

* Were converted from 2¾ to 3½ per cent. after 1911.

Perhaps the most remarkable feature of the declines here shown is the shrinkage in bonds of the best class, including Austrian Rentes, British Consols, German Imperial 3s, Hungarian 4s, and United States Government 4s. All show a contraction of about 22 per cent. The bonds enumerated represent a par value of $12,550,000,000, or about 30 per cent of the combined debts of all nations. The shrinkage shown in the table amounts approximately to $2,500,000. These countries, thirty some odd in number, have all had in the past three years an economic or political crisis; some have passed beyond the acute stage, and others are now approaching it. The writer adds on this point:

"In South America anxiety is felt for the future because of the enormous overexpansion and extravagance in national undertakings coincident with a heavy contraction of exports and a fall in the price of commodities. In China, owing to the radical changes in the form of government and inability to borrow, one commercial panic has succeeded another, and it is estimated that the country's deficit this year will be over $300,000,000. Egypt has had a succession of panics for three years, but is beginning to recover from them. France has been affected mainly by a shrinkage in her outside investments estimated at over $500,000,000. India is today unsettled by panic among her native bankers and merchants. During the war with Turkey and immediately following it Italian exchange was so strongly against the country that Italy would have lost a good part of its gold reserves had not the Government absolutely forbidden exports of the metal. Japan has suffered from and is still clouded by commercial disasters of large magnitude and acute money stringency. Mexico is practically in a bankrupt condition. An authority on Portuguese affairs writes that the country is threatened, within a year, by three different varieties of crises, viz., religious, political, and economic. Russia, possessing the largest gold holdings of any European nation, has been relatively better off than her neighbors, and Spain has shown powers of gradual recovery within the decade and had no overexpansion to deal with when money stringency affected the countries to which she is debtor. The conditions of depression in Turkey are familiar, and so are those in this country. Uruguay has suffered severely ever since August, when the Bank of the Republic suspended credits. Financial difficulties in Venezuela are more or

6% BONDS
Doubly Secured

First, by direct mortgage, being a first lien on Real Estate worth from two to three times the total amount of the loan thereon.

Second, by the entire assets of this Company, which endorses its absolute guarantee on each Bond.

These loans are made on both Farm and City property and for the convenience of Investors are divided into Bonds of $100 and $500 denominations, some of which are payable each year, enabling Investors to place funds for any desired time, and as none of the land is released, rapidly increasing the margin of physical security.

Interest and principal may be collected through any Bank without charge or we will remit direct in New York or Chicago Exchange. Taxes, insurance and every other detail necessary for the protection of the Investor receive our careful attention.

The South is now the most attractive investment field and it will pay you to become familiar with its opportunities without delay.

Send for our Investment Bulletin K, containing the certified financial statement of the Company.

A BOX OF CIGARS SAYS "MERRY XMAS" AS NOTHING ELSE WILL

Here is a brand in which the sentiment has its best expression—**FLORENCIA Straights. By the box of 25, $1.50, delivered all charges prepaid anywhere in the U. S.**

The **FLORENCIA Straight** is made in a shape which more nearly than any other affords a smooth, aromatic and delightful "burn" of the choice tobacco it contains—fine types of Havana and Porto Rican leaf in an exceptionally perfect blend. The result is zest and mildness—a cigar of distinctive character. Attractively packed.

The **FLORENCIA** belongs in the 10c class, and would command that price if sold in the ordinary way, with all the in-between profits and selling expenses tacked on. As an established brand in 800 United Cigar Stores the **FLORENCIA** is sold direct from the factory to the consumer free and clear of all this tax. Hence the price—box of 25, $1.50, delivered. A 10c cigar at the rate of 6c each.

Remit, stating color preferred. With all orders filled our Profit-Sharing Certificates, List of Premiums and a beautifully Illustrated Catalogue.

Money refunded if the cigars are not satisfactory. *The smoker decides.*

less chronic. It will probably be a great many years before another such universal crisis develops as that now responsible for an estimated shrinkage in the value of all listed securities of approximately $5,000,000,000.

"In addition to the specific internal ills enumerated above, and which are remarkable for having been in a sense epidemic, there is one great general cause, namely, the enormous increase in the last few years in the creation of government debt, representing capital spent upon war, armament, and works—especially war and armament in the older countries, and especially works in the new. The Bureau of Foreign and Domestic Commerce at Washington has just published a survey of the national debts of the world. It puts the aggregate at $42,000,000,000, and estimates the increase to have been 20 per cent. in a decade. The aggregate of national debts, it finds, has doubled in forty years. It was 2¼ billions of dollars in 1800, 8½ billions in 1850, 31¼ billions in 1900, and 42 billions in 1912.

"Obviously, the nations of the world, in the last ten years, have been creating debt as fast as it could have been absorbed under the most favorable conditions. Its creation coinciding with a world-wide mood of personal, municipal, and national extravagance, and movements of political unrest, the effect could not have been other than to help advance the prevailing rate of interest and overload the investors of all countries."

THIRTY YEARS OF THE FRENCH "CREDIT" BANKS

Most students of finance, and many travelers in Europe, are familiar with the existence, in all the leading French towns, of branch offices for various "credit" banks. These branches number perhaps a few hundred in France and there are others in foreign countries. The "credit" banks have grown up peaceably alongside the great Bank of France, that institution having refrained from hampering their growth. Their development extends over a period of something not much more than thirty years; that is, it set in a decade or so after the disastrous war with Prussia. It has since become one of the chief developments in European finance. The specialty of these institutions is the investment of French savings in foreign loans. Commercial paper has also been handled largely and so have other loans on securities. The five institutions referred to are the "Crédit Foncier," "Crédit Lyonnais," "Comptoir National d'Escompte," "Société Générale," and "Crédit Industriel."

A correspondent of the New York *Evening Post* has brought out some interesting figures as to the extraordinary growth of these institutions in thirty years. The five banks in 1880 had, in sight and time deposits, $140,000,000; in 1913 they had nearly $500,000,000. The four of them which deal in commercial paper had in 1880 $90,000,000 so invested; in 1913 they had $710,000,000. The securities owned by them increased in the same period from $56,000,000 to $80,000,000; creditors' accounts current increased from $80,000,000 to $611,000,000, and debtors' accounts current from $71,000,000 to nearly $300,000,000.

ANXIETY OVER MONSTER SHIPS

The adoption of monster ships by three of the transatlantic lines is said by *The Economist* to have caused financial anxiety

The Income Tax

affects the investments of Institutions, Trustees and Individuals.

Investors may secure information as to whether their bond interest coupons are payable without deduction for income tax by furnishing us with a list of their holdings. Give full title of such security and date of maturity.

To investors contemplating investments we shall be pleased to suggest securities where the provisions of the mortgages entitle the investor to the full face value of each interest coupon, the corporation paying the normal income tax.

All holders of securities must comply with government regulations. Income Tax Law booklet containing text of the law and an analysis by our attorneys furnished upon request.

MOORE'S
Loose Leaf
RECORD BOOKS

are popular in thousands of business and professional offices, stores, banks and factories, because the bookkeepers and clerks can see at first glance how to use them.

If your present method of keeping any of your records is unsatisfactory, write us what your trouble is and we will work up a sketch for an easy way of handling the matter. The sketch will be mailed to you free and without obligation on your part. Do not hesitate to take advantage of this free service.

MOORE'S MODERN METHODS

Describes and illustrates 40 different loose leaf record forms for all kinds and sizes of business, factory and professional offices, and tells how to use them. We send it free.

Special loose leaf outfits from $1.00 to $18.00, described in our free book.

Moore's charging and billing system affords the best arrangement of the charges for the purpose of posting, and has the advantage that charging and billing may be done in several parts of the premises and the duplicates may be brought together from the various departments at the close of the day's business. Let us tell you about it. Address,

John C. Moore, Corporation
838 Stone St., Rochester, N. Y.

to at least two of the lines no less serious than the anxiety felt by Chancellors of the Exchequer over their monster battle-ships. The writer summarizes the objections which have been found to exist to monster ships in the merchant service. Many of these are equally applicable to war vessels of great size. First, there are few cities in the world that have harbors, docks, and repair yards capable of accommodating ships of more than from 25,000 to 35,000 tons. Hence the voyages which ships of greatest size can make are severely circumscribed. They could not, for example, go through the Suez Canal, where the limit is ships of about 15,000 tons. As regards comfort for passengers, it seems to be generally agreed that a ship of 20,000 tons is quite as steady as one of 40,000 tons, provided it is well buiit.

On the score of safety, the writer believes there is little doubt that a ship of 20,000 tons "is to be preferred to one of 40,000 or 60,000 tons." Again, these monster ships are "so huge that they can not be properly managed and supervised by a single man." A leviathan among ships becomes "like a small town, with no cohesion, different languages spoken, the west-end quarter composed of millionaires and the east-end quarter composed of slum dwellers."

Carelessness in regard to fire and other matters becomes on these ships a serious menace. The extreme luxury that exists on board encourages such carelessness. Even in harbors able to receive them, the monster ships are somewhat unmanageable, as has been demonstrated already in the two largest ships afloat. Another objection is that of insurance. The capital embarked in these great boats is so enormous that their owners can not rely on their reserve funds to meet a loss, but must take out policies with insurance companies. While these objections in the main apply also to ships of war, others applicable to dreadnoughts are set forth by the same writer:

"In the first place, many of our best naval officers hold that three *King Edwards* at the same cost would be more than a match for two dreadnoughts. Secondly, the dreadnought makes previous ships obsolete, and it was a piece of insanity for Great Britain (whose navy several years ago was about four times as strong as that of Germany) to introduce a type which would enable any other naval Power, by making similar financial sacrifices, in the course of five or six years to challenge our naval supremacy. In the third place, the development of the torpedo, of the submarine, and of floating and contact mines all point to reducing rather than increasing the size of the battle-ship; for the larger the ship, the more it is at the mercy of those infernal submarine contrivances.

"Suppose, for example, in some fit of madness, like the Fashoda crisis, war were declared upon France, does any one suppose that a super-dreadnought, costing £2,750,000, carrying thousands of men, could venture to steam down the Channel? Let us remember that a submarine boat could discharge a torpedo at a distance of 8,000 or 10,000 yards, with a fair probability of striking this huge capital ship, and sending her straight to the bottom."

By Parcel Post.—WIFE—"You deceived me. When you married me you said you had a job on the road."

HUB—"Well, so I have; only it's a long time in arriving."—*Boston Transcript.*

Deep Breathing

By D. O. Harrell, M.D.

I BELIEVE that we must all admit that deep breathing is a very desirable practice. Furthermore, we know it to be a fact that not one person in twenty, or perhaps one person in a hundred, really breathes deeply. Every physician can verify the statement that we are daily called upon to prescribe drugs for ailments that owe their cause directly to insufficient and improper breathing—Oxygen Starvation.

Breathing is the Vital Force of Life. Every muscle, nerve cell, in fact every fibre of our body, is directly dependent upon the air we breathe. Health, Strength and Endurance are impossible without well-oxygenated blood. The food we eat must combine with abundant oxygen before it can become of any value to the body. Breathing is to the body what free draught is to the steam boiler. Shut off the draught, and you will kill your fire, no matter how excellent coal you use. Similarly, if you breathe shallowly, you must become anæmic, weak and thin, no matter how carefully you may select your diet.

I might continue indefinitely to cite examples of the great physiological value of deep breathing.

The main benefit of physical exercise lies in the activity it gives the lungs. What we term "lack of healthful exercise" in reality means insufficient lung action. Exercise that does not compel vigorous deep breathing is of little real value. Unfortunately, few persons have the strength and endurance to exercise violently enough to stir the lungs into rapid action. This is especially true of women and also of men who have permitted their muscles to become weak. Common sense, therefore, dictates that the lungs should be exercised independently through deep breathing gymnastics.

Recently there has been brought to my notice a brochure on this important subject of respiration, that to my knowledge for the first time really treats the subject in a thoroughly scientific and practical manner. I refer to the booklet entitled "Deep Breathing," by Paul von Boeckmann, R.S. In this treatise, the author describes proper breathing, so that even the most uninformed layman can get a correct idea of the act. The booklet contains a mass of common sense teachings on the subject of Deep Breathing, and "Internal Exercise." The author has had the courage to think for himself, and to expose the weaknesses in our modern systems of physical culture.

I believe this booklet gives us the real key to constitutional strength. It shows us plainly the danger of excessive exercise, that is, the danger of developing the external body at the expense of the internal body. The author's arguments are so logical it is self-evident that his theories must be based upon vast experience. Personally, I know that his teachings are most profoundly scientific and thoroughly practical, for I have had occasion to see them tested with a number of my patients.

The booklet to which I refer can be obtained upon payment of ten cents in coin or stamps by addressing Dr. von Boeckmann directly at 2021 Tower Bldg., 110 W. 40th St., New York. The simple exercises he describes therein are in themselves well worth ten times the small price demanded.

563 Lincoln Building Minneapolis, Minn.

DELCO

ELECTRIC CRANKING LIGHTING IGNITION

The Delco System has made the gasoline car an all the year round convenience

Very few Delco equipped cars will be put up during the winter season.

The Delco system has reduced to a negligible quantity the discomforts, delays and dangers of cold weather driving.

You step from the curb to your Delco equipped car—

You touch a button and your motor starts—

You touch another button and your lamps are lighted.

You sit comfortably in your closed or curtained car forgetful of the difficulties encountered in the old days of hand cranking—forgetful of the storm and cold—forgetful even that there ever was such a thing as seasonableness in motor car driving—

And therein you find the real secret of Delco leadership—

All seasons are alike to the Delco equipped car.

The real superiority of the Delco system is shown in its ability to maintain the reliability and efficiency of its service even under unfavorable conditions—

It is shown in the ability of the Delco generator to supply current to the battery to meet the excessive demands made upon it during the winter season when rapid and persistent cranking are often necessary and when the use of lights is heavy.

It is shown in the reliability of the Delco ignition, that insures the perfect spark without which no cranking device would be effective.

And it is shown in the remarkable ability of the entire Delco system to stand up under hard usage and perform its duties unfailingly, day after day and month after month regardless of weather conditions.

THE SPICE OF LIFE

Used to It.—LAWYER—"The cross-examination did not seem to worry you. Have you had any previous experience?"

CLIENT—"Six children."—*Kansas City Star.*

His Share.—The under dog usually gets $50,000,000 worth of sympathy and two cents' worth of assistance.—*Cincinnati Enquirer.*

Usual Treatment.—"Mrs. Brown has the kleptomania."

"Indeed; what is she taking for it?"

"Anything that looks good to her."—*New York Times.*

He'd Treat Himself.—"If you had, say, $500,000,000, would you build libraries or start colleges?"

"Neither. I'd have meat three times a day."—*Chicago Record-Herald.*

Hookworm Victims.—MAYOR—"Do you mean to tell me you were surprized to find three of the employees in the City Hall at work?"

REPORTER—"Oh, no, your honor! I said I was surprized to find them awake."—*Judge.*

A Reprimand.—"You knew your lesson to-day," said the head of the team accusingly.

"Yes, captain."

"Well, let it pass this time, but it looks as if you were neglecting your football."—*Washington Herald.*

A Good Idea.—"A famous educator says everybody ought to read a little poetry every day."

"I agree with him. If more people would read poetry every day, perhaps there wouldn't be so many trying to write it."—*Birmingham Age-Herald.*

Why.—"We don't have any grass growing in our streets," sneered the New Yorker.

"No, I dare say not," replied the Philadelphian. "I suppose your street-car horses nibble it off as they browse along."—*Lippincott's Magazine.*

Her Preference.—Before the fire Christmas eve two old maids were planning for the holiday.

"Sister Molly," said the younger, "would a long stocking hold all you'd want for a Christmas gift?"

"No, Elvira," said the elder, "but a pair of socks would."—*Philadelphia Public Ledger.*

Hit It.—POLLY (to big sister's admirer)—"Guess what father said about you last night."

ADOLPHUS—"Oh, I couldn't guess, weally."

POLLY—"I'll give you a peach if you can guess."

ADOLPHUS (flustered)—"Oh, Polly, I haven't an idea in the world."

POLLY—"Urr—you was listening."—*Sydney Bulletin.*

The Worst Kind.—GABE—"What is a bore?"

STEVE—"A man who doesn't talk to us about ourselves."—*Cincinnati Enquirer.*

The Blame Placed.—VISITOR—"How does the land lie out this way?"

NATIVE—"It ain't the land that lies: it's the land agents."—*Philadelphia Record.*

A Bent for Bills.—"Do you believe in women holding office?"

"Sure I do. Some day I'm going to run my wife for Congress on her knack of introducing bills into the house."—*St. Louis Republic.*

His Successor.—"Is that the same fellow we saw doing stunts in his aeroplane?"

"When was that?"

"About six months ago."

"Well, hardly."—*Life.*

Danny's Ignorance.—The Boston Americans were playing the Nationals in the Bean City one afternoon. Tris Speaker knocked out a long fly that fell between right field and center.

Danny Moeller, the speedy right fielder of the Nationals, went after it, crying out for the guidance of Milan in center:

"I have it! I have it!"

As soon as Moeller had caught the fly a disgusted Boston fan remarked:

"That guy don't even know his own language. What he should have said is: 'I've got it!'"—*Popular Magazine.*

CURRENT EVENTS

Foreign

November 13.—The Nobel prize for literature is awarded to the Hindu poet, Rabindranath Tagore.

Greece and Turkey sign a treaty of peace.

November 14.—The French Cabinet approves the recommendation of the Finance Minister for the issue of a $260,000,000 loan.

The national Unionist conference at Norwich, England, refuses to pledge the party to woman-suffrage, but votes in favor of a referendum to the electorate on the question.

November 15.—Ciudad Juarez is captured by Mexican Constitutionalists under Generals Villa and Herrera, who surprize the Federal garrison by an early morning attack. Seventeen Federals, four Constitutionalists, and one American non-combatant are reported killed.

November 18.—Mathilde Marchesi, one of the most famous vocal teachers the world has ever known, dies in London. She was 87 years old.

The French Chamber of Deputies passes the Electoral Reform Bill.

Domestic

November 13.—Twelve are killed and about one hundred injured when three coaches of a Central of Georgia excursion train plunge over an embankment near Eufaula, Ala.

About 2,500 trainmen and enginemen on the Southern Pacific lines between New Orleans and El Paso walk out after six months' futile negotiations.

November 14.—The latest dispatches say the loss in the storm on the Great Lakes is estimated at 256 lives and from $6,000,000 to $10,000,000 in property.

The Standard Oil Company of California obtains control of the Murphy Oil Company at a price said to exceed $22,000,000.

November 16.—Governor O'Neal, of Alabama, appoints Frank P. Glass, an editor, of Birmingham, to succeed the late Joseph F. Johnson as Senator.

November 17.—The striking employees of the Southern Pacific lines in Texas and Louisiana return to work, the company agreeing to meet representatives of the unions.

November 18.—Twenty-four men are killed by an explosion in an iron-mine at Acton, Ala.

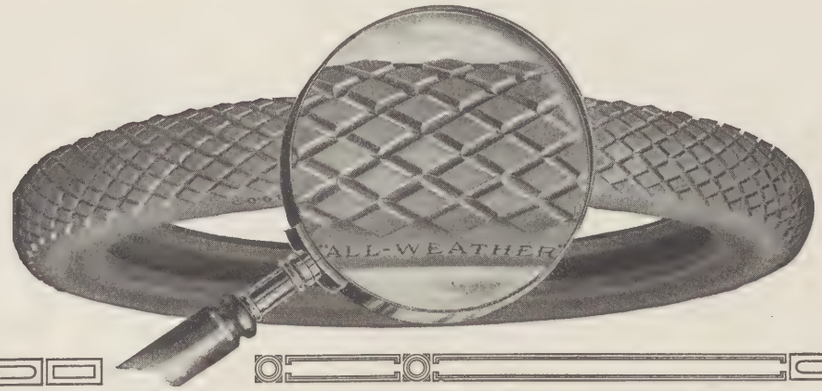
REAL ESTATE

VIRGINIA LANDS. Reliable information concerning Virginia farms, timber lands, orchards and country estates will be furnished free to homeseekers and investors by Edward S. Wilder and Company, Charlottesville, Va.



All-Weather Treads

On Dry Roads

As smooth as a plain tread. Equally economical. The blocks are broad and flat. They are regular, so they do not cause vibration.

The tread is double-thick. It is extra tough. The grips last for thousands of miles. And the blocks widen out so they meet at the base, spreading the strains over the whole fabric surface, just as with smooth-tread tires.

On Wet Roads

Countless sharp edges face the skidding direction—45 degrees. And the edges stay sharp, always affording an almost resistless grip.

Effective on any slippery road, ice, asphalt or wet clay. An ever-ready safeguard, matchless in efficiency, instantly acting in any emergency. And the grips are so deep, so widespread and tough that they never all wear off.

Use on Every Wheel in Winter

We tire makers all made many mistakes in the early days of anti-skids.

We made the treads too thin, the projections too shallow and soft. We used rounded edges which often failed to grip.

Some of us used irregular projections, and they caused vibration. Some of us used separate projections. They centered the strains at small points in the fabric, causing short-lived tires.

So you preferred a plain-tread tire when the roads weren't skiddy. And perhaps you added something extra when you needed anti-skids.

But now Goodyear inventors have solved all of these problems. They have created an "All-Weather" tread. An enduring anti-skid, combining every plain-tread advantage with a most tenacious grip.

A tread for all wheels and all seasons. Even last summer it outsold our plain treads with users—on the largest-selling tires in the world.

In winter, every careful driver will use "All-Weather" treads exclusively. You will find they excel, at every point, all old-type anti-skids. And yet eight types of anti-skids cost more than "All-Weather" treads.

The Fourth Advantage In No-Rim-Cut Tires

This adds a fourth advantage to No-Rim-Cut tires. And the other three have made these tires the most popular tires in the world.

Note now what you get.

You get a tire that can't rim-cut. And this great feature, which gives you a feasible hookless tire, is controlled by Goodyear secrets.

You save in addition the countless blowouts due to wrinkled fabric. To save this for you, No-Rim-Cut tires are final-cured on air bags shaped like inner tubes. Thus the fabric stretches out, adapting itself to actual road conditions. This extra process, used by us alone, adds to our tire cost $1,500 daily.

Then we combat tread separation by a patent "rivet fabric." We paid $50,000 to control this method for reducing the waste of loose treads.

The Price Men Pay

Men who go without these features must always pay the price.

Our latest statistics, secured by public accountants, show that 31.8 per cent of all clincher tires are discarded for rim-cuts only. That's almost one tire in three.

In tires which are not final-cured on air there are thousands of needless blow-outs. And tread separation is a common fault in tires.

No-Rim-Cut tires, in saving these things, save millions of dollars annually. As one result, these tires now outsell any other tire in the world.

Now comes this "All-Weather" tread, which ends the troubles you had with anti-skids.

Have you, on the other hand, a single reason for not adopting No-Rim-Cut tires?

This is the Day of the "Six"

No one ever goes back to a "Four" after driving a new Chalmers "Six."

Because no "Four" can ride as easy, live as long or live as cheaply. Let's find out why.

Try to Match It

Run the New "Six" up a long hill. Creep it through a crowd. Send it through the deep sand or where the going is rough.

Then ask the maker of any "Four" to duplicate its silent, flexible power—its freedom from vibration, its lack of stress and effort.

You'll know then why the New "Six" will live to serve you long after a "Four" has been discarded.

Yet the New "Six" costs but a trifle more than a "Four" at the start, and far less in the end.

The New "Six" Lasts Longer

The explosions of the New "Six" give a continuous push to the pistons. There's no interval—no gap in the power stream. This even pull—this absence of vibration gives a smoothness no "Four" can equal; a smoothness that spells economy.

For vibration means wear—renewals. It is the chief enemy of endurance. The absence of it means long life and low upkeep.

The Hare and the Tortoise in One

With the New "Six" you can do nearly everything on high gear. You can idle down to a tortoise-like crawl in a crowd and then at the touch of the throttle away with the speed of the hare. Gear shifting is rarely required.

This unusual flexibility is all in the motor itself. There's no need to weigh down the New "Six" with supplementary gear mechanism.

Facts About Fuel Economy

Everyone knows that, other conditions being equal, it requires the same amount of fuel to develop a given horse-power whether it be delivered from four cylinders or from six.

The difference is that each cylinder of the "Four" must do one half more work, and consequently must consume one half more gasoline, than each cylinder of the "Six."

Judge for yourself which will run smoother and last longer; which will be easier on the car and easier on the passengers.

A New Factor in Safety

The motor of the New "Six" can't be stalled. It can never "go dead" in crowded traffic, nor fail you under sudden overload.

The silent Chalmers Entz electric starter won't allow the motor to stop even should the gas be cut off. Simply release the clutch and it keeps the motor running until it picks up again. The starter is always ready. You don't have to give it a thought.

Beauty That's More Than Skin Deep

The low-hung chassis—the long wheel base—the under-slung springs cushion the bumps of the roughest road; yet they give to the New "Six" the lithe and speedy grace of the thoroughbred.

The oval fenders sit so close not a drop of mud can reach you, while their long, graceful sweep completes the stream-line effect of the roomy bodies.

So all the distinctive features of the New "Six" are more than merely beautiful; they mean greater utility as well.

Let the Car Itself Win You

We can not tell you in words all the virtues of the New "Six." You must see it in action. Your dealer is ready to take you on the Chalmers Standard Test Drive. See him today, and when the car has won you, be wise and place your order immediately.

Oratory That Made Men Famous in a Day

Copyright, Underwood & Underwood

THE brightest thoughts of the world's most famous orators—the wittiest sayings of the wittiest men of the Nineteenth Century—epoch making speeches that moved not only audiences but nations. They are all here just as they were delivered by these distinguished speakers, and gathered in such form as to instruct and entertain you where and when you will.

Modern Eloquence

Each Speech, Lecture or Address is Complete

Everything is of proved value and interest, and is printed in its *entirety.* Speeches that have been flashed around the world, lectures that have been repeated again and again to never-tiring audiences, "occasional" addresses that have made men famous in a day, masterly orations that have moulded public opinion and directed the march of progress—these are brought together for the first time in this remarkable library.

From the Great Commoner

Hon. Wm. J. Bryan says: "In commending 'your work MODERN ELOQUENCE, which I do most heartily, I feel that I am doing a favor, not so much to you as publishers, as to those who may be led to purchase and read the work. It is a valuable addition to any library."

300 After Dinner Speeches

by Joseph H. Choate, Benjamin Disraeli, James G. Blaine, Wm. M. Evarts, John Hay, Oliver Wendell Holmes, Sir Henry Irving, Chauncey M. Depew, Henry Ward Beecher, Mark Twain, Henry W. Grady, Joseph Jefferson, Robt. G. Ingersoll, Seth Low, Albert J. Beveridge, Woodrow Wilson, etc.

150 Great Addresses

by Lyman Abbott, Charles Dudley Warner, William Cullen Bryant, Rufus Choate, Theodore Roosevelt, Arthur J. Balfour, Jonathan P. Dolliver, Edward Eggleston, William E. Gladstone, Charles Francis Adams, John L. Spalding, Joseph Chamberlain, Grover Cleveland, Fisher Ames, Lawrence Barrett, Henry Drummond, James A. Garfield, Hamilton Wright Mabie, William J. Bryan, etc.

60 Classics and Popular Lectures

by Charles A. Dana, Robt. J. Burdette, Russell H. Conwell, Canon Farrar, John B. Gough, Andrew Lang, Wendell Phillips, Josh Billings, John Tyndall, Geo. William Curtis, Artemus Ward, Paul DuChaillu, John B. Gordon, Newell Dwight Hillis, John Morley, John Ruskin, Henry M. Stanley, Wu Ting Fang, etc.

2,000 Short Stories and Anecdotes

by Mark Twain, Chauncey M. Depew, Horace Porter, Champ Clark, Joseph H. Choate, John M. Allen, etc.

A Wonderful Bargain

Send us the attached coupon *at once*, and we will tell you how to get the Library on *Easy Monthly Payments*, and with our terms we will also mail you Henry W. Grady's Great Lecture, **"THE RACE PROBLEM"**—*FREE.* Reprinted from the work itself. Champ Clark says—**"THE MOST FAMOUS AFTER-DINNER SPEECH WITHIN THE MEMORY OF ANY LIVING MAN."** Sending the coupon places you under no obligation to buy. If you are interested tear it off and send in NOW. Don't wait. The offer is limited.

Are YOU ever asked to Respond to a Toast, to Write an Address, or to Make a Speech? If so, you will find these volumes the greatest help imaginable, because they contain nearly every variety of good pattern for the various classes of oratory. And many an inexperienced banquet chairman, toastmaster or honored guest, casting helplessly about him for a good story or appropriate remarks, has found here just the inspiration needed.

This Great Work is Sole Occupant of a New Field

It has neither predecessor nor competitor. The most brilliant men of the world today endorse it unqualifiedly. To read it is a liberal education—a treasure trove of information accessible in no other form. No intelligent man or woman can fail to be moved by the words gathered here—words which have brought men to tears or laughter, to pity or scorn, to indignation or repentance. Each address is a separate gem and from the standpoint of inspiration alone is priceless.

CONSISTS OF TEN BEAUTIFUL, RICHLY BOUND VOLUMES

elaborately indexed, beautifully illustrated with over 80 photogravures on Japanese vellum; paper, presswork and bindings of very highest quality.

STUDY LAW

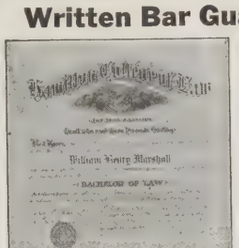
AT HOME—BECOME AN LL.B.

Only Law School of its Kind in America

Special and Exclusive Features

ONLY **recognized resident law school in the United States conferring Degree of Bachelor of Laws-LL. B.—by correspondence.** ONLY law school in U. S. conducting **standard resident school** and giving **same instruction, by mail.** ONLY law school giving **over 450 class-room lectures** to its **extension students.** ONLY law school giving a full **3-year, University Law Course, by mail,** having an **actual faculty** of over **30 prominent lawyers,** in **active practice.** ONLY law school in existence giving **Complete Course in Oratory and Public Speaking,** in conjunction with its law course.

Written Bar Guarantee



Our Degree Bachelor of Law, LL.B. NOT a Diploma or Certificate

We give an absolute written guarantee to prepare our students to pass bar examinations.

The Hamilton College of Law IS a **regular, thoroughly recognized, bona-fide College of Law** and NOT an "institute," "correspondence school," etc. It occupies the entire third floor of the New Advertising Bldg., where its **large** and **commodious resident classrooms** and executive offices are located.

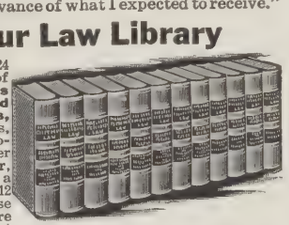
Direct From Class-Room to Student

is the way we teach law. We are the **only school** doing this. Our system of teaching is intensely interesting—not dull and dry like the average law course. Our system of conducting examinations is the most **thorough, complete** and **expensive** (to us) of any examinations ever given. A student can, if he chooses, take **part of our course** by mail and finish in **our resident school** where he will receive **full credit** for all work done **by mail.** Our resident school **is recognized** by all standard law schools in the United States.

The Hamilton College of Law is highly endorsed and recommended by **Government Officials, Business Men, Noted Lawyers, Graduates** and **Students.** We have as students a number of practicing lawyers (not graduates of recognized law schools) **who are now earning their degree of LL. B.** Many other lawyers are using this course as a review. A probate Judge, (one of our active students) says: "I am delighted with the course prescribed and your method of teaching law. It is far in advance of what I expected to receive."

Our Law Library

consists of 24 volumes of **Student's Standard Text Books,** two volumes bound together under one cover, making a total of 12 books. These books were prepared at an **enormous cost especially for the students of the Hamilton College of Law,** by one of the **largest** and **best law book publishers in America.** This is the **only set of text books** ever prepared **exclusively** for **students' use.** We would be glad to have you submit these books to any lawyer or judge in the country and get **his** opinion regarding them.



These 12 Volumes are Free to Students

Illustrated. $1.00 net, postage extra
A story of a bright young baseball player who gets a job on the Panama Canal.

THE CUSTOM OF THE COUNTRY
By EDITH WHARTON

$1.35 net, by mail $1.47
This novel suggests "The House of Mirth," rather than any other of Mrs. Wharton's books.

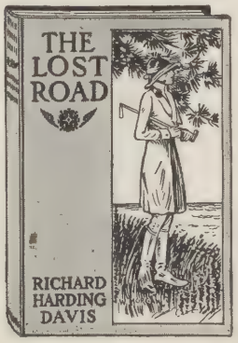
THE DARK FLOWER
By JOHN GALSWORTHY

$1.35 net, by mail $1.47
Mr. Galsworthy portrays the romantic life of a man with an intensity of literary power hardly suggested in his earlier novels.

MERRILIE DAWES
By FRANK H. SPEARMAN

Illustrated in color. $1.35 net, by mail $1.47
A story of love and a panic in Wall Street.

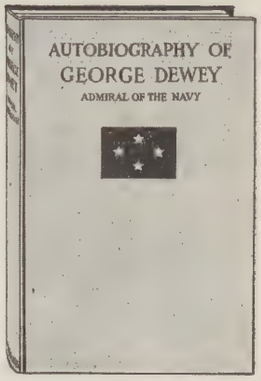
THE LOST ROAD
By RICHARD HARDING DAVIS



Illustrated. $1.25 net, by mail $1.37
The name Davis on a book is like that of "Sterling" on a piece of silver.

THE HEART OF THE HILLS
By JOHN FOX, Jr.

Illustrated by F. C. Yohn. $1.35 net, by mail $1.47
Like "The Trail of the Lonesome Pine," this novel deals with the life and people of the Kentucky Mountains.



AUTOBIOGRAPHY OF GEORGE DEWEY
ADMIRAL OF THE NAVY

Illustrated. $2.50 net, by mail $2.80
The greatest living American Sea Fighter tells the story of his life. His active career began under Farragut and culminated in the capture of Manila. This is the most important and interesting American biography in years.

HISTORY AS LITERATURE AND OTHER ESSAYS
By THEODORE ROOSEVELT

$1.50 net, by mail $1.65
A collection of Colonel Roosevelt's distinctively literary essays.

EARLY MEMORIES
By SENATOR HENRY CABOT LODGE

$2.50 net, postage extra
"Early Memories" is made up of recollections of boyhood and young manhood in Boston, not extending into the Senator's political activity, but full of the most vivid and boyish impressions of the men and surroundings of these younger days.

REMINISCENCES OF A SOLDIER'S WIFE: AN AUTOBIOGRAPHY
By MRS. JOHN A. LOGAN

With portraits and other illustrations. $2.50 net, postage extra
This book is both biography and autobiography, for Mrs. Logan, in recounting her own eventful career from pioneer days in Illinois, gives a life of her celebrated husband.

GENTLEMEN ROVERS
By E. ALEXANDER POWELL, F.R.G.S.

Illustrated. $1.50 net, by mail $1.65
Describes the brilliant careers of Eaton, Reed, Smith, Ward, Walker, Boyd, etc., some of America's greatest heroes, the men who won us half our territory.

SHAKESPEARE AS A PLAYWRIGHT
By BRANDER MATTHEWS

With colored frontispiece and illustrations. $3.00 net, postage extra
This book is not a biography of Shakespeare; it is a study of his stagecraft.

THE POEMS AND BALLADS OF ROBERT LOUIS STEVENSON

Complete in one volume. With portrait. $2.00 net, postage extra
This complete collection of all the verse written by Robert Louis Stevenson in a convenient and comprehensive household edition was induced by the great and increasing popularity of Stevenson.

PACIFIC SHORES FROM PANAMA
By ERNEST PEIXOTTO

With illustrations by the author. $2.50 net, postage extra
Mr. Peixotto uses the pen and the pencil in the field of description with an equal and almost unequaled skill—in this case to describe "Spanish America on the Pacific."

THE PANAMA GATEWAY
By JOSEPH BUCKLIN BISHOP

Secretary of the Isthmian Canal Commission.
Fully illustrated. $2.50 net, postage extra
"Mr. Bishop's book is the first authoritative and comprehensive work on the building of the Panama Canal."—The New York Times.

Charles Scribner's Sons Fifth Ave., New York

NEW MACMILLAN BOOKS THE BEST HOLIDAY GIFTS

"The Most Important Book of the Year"

THE LIFE OF COL. ROOSEVELT

THEODORE ROOSEVELT—*An Autobiography*

In this stirring autobiography, replete with the most varied and interesting experiences, Col. Roosevelt writes intimately of his life, his philosophy and the achievements which have helped to mould his remarkable career.

During many years no other single personality of the present day has attracted such general attention in national and world-wide policies, and no more vivid picture of contemporaneous history probably will ever be written than Col. Roosevelt's own story of his life.

In its interpretation of Col. Roosevelt's striking personality, this work is not only of national but of international importance.

The book is handsomely bound and is unusually attractive, with illustrations of portraits, facsimiles of various documents, pictures of buildings, localities and other interesting and appropriate matter. *Decorated cover. Gilt top. Richly illustrated. Octavo.* **$2.50 net; postpaid, $2.75**

You Will Be Reading Comfort Next Year—Why Not Begin Now?

DOWN AMONG MEN

By WILL LEVINGTON COMFORT

Author of "Routledge Rides Alone." ***12mo, Net $1.25***

EXTRACTS FROM SOME OF THE MOST REMARKABLE REVIEWS EVER GIVEN AN AMERICAN NOVEL

Which Will You Like Best?

THE WAR PART — *or* — THE WOMAN PART

"No better writing since Frank Norris has come to us."—***Boston Transcript.***

"Superbly he describes it all."
—***New York Times.***

"An almost perfect tale of courage and adventure."—***Chicago Record-Herald.***

"Fine passages; powerful episodes."
—***New York Sun.***

"And, judging from the war narrative, one of the strongest books ever written in the United States."—***Chicago Tribune.***

"Such is the strength and goodness, and yet the naturalness of this story-woman—that all world-women are honored."—***Kansas City Star.***

"The man and woman are the latest and finest spirits of our own era. They are of the surging new time, that is now fusing the past and forging the future."
—***Edwin Markham.***

"Comfort's men are not without flaw; they fall and are sustained by women—Marys who weep bravely, thrice crucified, at the foot of the Cross."
—***Boston Herald.***

Or Will You Like It All After the Manner of These?

"Serving men, loving men, and standing alone—this is the heart of the book, yet there is more, very much more, in it; few richer novels than this of Mr. Comfort's have been published in many a long day."
—**L. M. FIELD, in *New York Times.***

"It is a duty and pleasure to record the remarkable fact, that in this book, Mr. Comfort has corrected at a single stroke all the defects in the two previous books, faithfully catalogued by this reviewer. It is an astonishing feat, but it is something more. In meaning much for Mr. Comfort this means much for us all. Here is a new and unshackled Comfort."—**BURTON KLINE in *Boston Transcript.***

"In some respects 'DOWN AMONG MEN' is a great novel; in all respects it is a novel above the ordinary, a novel to stir ideals, to compel thought, to provoke discussion. Read it and see."—**EDWIN L. SHUMAN in *Chicago Record-Herald.***

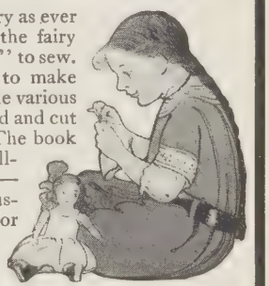
The Most Fascinating and Instructive Book for a Girl is the

Mary Frances Sewing Book

Or Adventures Among the Thimble People — **By JANE EAYRE FRYER** — **Author of "THE MARY FRANCES COOK BOOK"**



It tells, in as quaint and delightful a story as ever appealed to a child's imagination, how the fairy "Thimble People" teach "Mary Frances" to sew. It teaches *the reader* how to sew—how to make every variety of garment—how to make the various stitches—how to use patterns—how to fold and cut the material—how to piece it together. The book includes a complete set of patterns for doll-clothes—undergarments—street clothes—coats—hats—even a wedding dress. Illustrated with 300 colored drawings that for interest and instruction are absolutely inimitable. 320 pages, 7¼ x 9½ inches. Cloth bound, with colored inlay in front.

When You See This Book You Will Want It

No description can do the book justice. But when you examine it—when you read a few pages—realize the fascination of the story and see how clear and complete the instructions are—when you see the remarkably interesting and instructive illustrations—when you realize what a wonderful idea the detachable patterns are—you will understand how entertaining and instructive this book is to any girl.

SENT FREE. All Charges Prepaid for Examination

Because we cannot adequately describe the charm and value of this unique book we will gladly send it anywhere on approval, all charges prepaid. If it does not exceed your expectations, send it back at our expense. If you want it, simply remit the price, $1.50, and 20 cents postage.

REVELL'S NEW BOOKS
AT ALL BOOKSELLERS

By the Author of "The Story-Life of Lincoln," etc.

The Story-Life of the Son of Man
A Living Panorama of the Life of Christ *By WAYNE WHIPPLE*

Nearly a thousand stories woven into a continuous and complete chronicle of the life of the Savior. Story by story, the author has built up from the best that has been written, a vivid and attractive narrative of the life of lives. **Illustrated, $2.50 net.**

The Work-A-Day Girl
A Study of Present Day Conditions
by Author of "Everybody's Lonesome"
By CLARA E. LAUGHLIN

"Nobody could read this book without a quickened sense of his duty toward the girl who works. Miss Laughlin has looked deep indeed and with sympathy and tender insight."—*Chicago Record-Herald.*

Illustrated $1.50 net

By the Author of "The Master of the Oaks"

The Keeper of the Vineyard
A Tale of the Ozarks *By CAROLINE ABBOT STANLEY*

This story of a "return to nature," like the author's "Master of the Oaks," pulsates with real life. "*A return to nature* story—the exceptional kind of story one likes to find riding on the crest of the sea of fiction."—*Indianapolis News.* **Illus. $1.25 net.**

The Torch Bearer
A Camp Fire Girls' Story
By I. T. THURSTON *Author of "The Bishop's Shadow"*

"The Camp Fire Girls of America will gather innumerable recruits out of this good story alone. Any healthy, normal girl reading it will be unable to resist and, like bee to clover bed, will she betake herself in haste to the most near-by of the order's recruiting stations."—*Washington Star.* **Illustrated, $1.00 net.**

Doc Williams
A Tale of the Middle West *By CHAS. H. LERRIGO*

"The homely humor of the old doctor and his child-like faith in 'the cure' is so intensely human that he captures the sympathy at once—a sympathy that becomes the deepest sort of interest."—*The Topeka Capital.*
Illustrated. $1.25 net.

Books for Christmas
A few important items selected from our Holiday Catalogue which describes 500 Books. This catalogue will be sent upon request.

Henry Labouchere
LIFE. By ALGAR LABOUCHERE THOROLD
Photogravure Portrait. *$4.50 net.*
The most important biography of the season, full of amusing stories about a man who was as much admired and liked by half the world as disliked by the other.

An American Prima Donna
Memoirs of CLARA LOUISE KELLOGG
8vo. 48 Illustrations. *$2.50 net.*
A delightful book by this famous singer, full of entertaining reminiscences about interesting people.

The Old Boston Post Road
By STEPHEN JENKINS. *200 Illustrations.* *$3.50 net.*
Every mile of this road from Battery to Boston is full of historic interest.

My Beloved South
By Mrs. T. P. O'CONNOR. *Portrait.* *$2.50 net.*
Mrs. O'Connor is a Southerner by birth and very much a Southerner in feeling. Her book is a series of charming pictures of home and social life in half a dozen Southern states.

The Conquest of Mt. McKinley
By BELMORE BROWN. *Over 100 Illustrations.* *$3.50 net.*
A thrilling book of daring mountaineering experiences, containing the story of three expeditions through the Alaskan wilderness to Mt. McKinley, North America's highest and most inaccessible peak.

To the River Plate and Back
By W. J. HOLLAND. *Over 50 Illustrations.* *$3.50 net.*
The narrative of a journey of an American naturalist to Argentina by a man who as scientist, as artist, as man of letters, has attained enviable eminence.

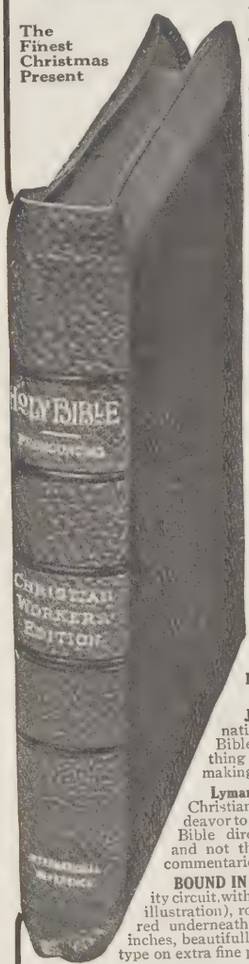
The Finest Christmas Present



EASIEST READING BIBLE

The Bible has never been published in any form in which the reading of it has been made so attractive to both old and young as in the "International"

CHRISTIAN WORKERS' BIBLE

By an entirely new plan, **a thread of red ink**, running from Genesis to Revelation, binds in one harmonious whole each leading topic. All the precious truths which lie hidden under the mass of unconnected matter and escape the mere reader are brought to light and tied together. **Three Thousand References marked on this plan.**

Prominent People's Opinions

John Wanamaker: International Christian Workers' Bible is an advance on anything hitherto attempted in making the Bible usable.

Lyman Abbott: Valuable to Christian Workers in their endeavor to get at the teaching of the Bible directly and immediately, and not through the medium of commentaries.

BOUND IN FINE MOROCCO, divinity circuit, with overlapping covers (like illustration), round corners, gold edges, red underneath. Size of page 8¾ x 5¾ inches, beautifully printed in large, clear type on extra fine paper.

SPECIAL OFFER The Christian Workers' Bible will be SENT FREE for examination, ALL CHARGES PREPAID. If it does not please you, return it at our expense. If it pleases you, remit special price.

Published at $4.75, but for quick introduction we offer it at the SPECIAL PRICE OF $2.50.

Avert Christmas Tragedies

People lose their heads in buying Christmas gifts. Under the spur of holiday hysteria, tons of good money are spent for foolish fripperies. You are apt to give your friends things they don't want and have no use for. They do the same to you. You and they might as well have built a big bonfire of the Christmas money, for all the good it did you or them.

Be Sensible This Christmas. Give the one you wish to *aid* and *honor most* a set of the

New International Encyclopaedia

($1.00 Puts It In Immediate Possession)

Expensive? No. It would be *cheap* at double its price, which is *moderate.* And you can pay for it so very comfortably—cash, with a liberal discount; or, the entire set will be delivered on payment of $1.00, the balance to be conveniently covered (after Christmas) by small monthly remittances.

Maybe You'd Like To Give *Yourself* This Peerless Gift?

Whoever the recipient, you couldn't pay him or her a greater compliment. To give a good encyclopædia is a high compliment to the intelligence; to present the New International, **The Finest Encyclopædia in Existence,** is the supreme act of friendship and courteous homage. Beyond all argument, **Everybody Needs This Encyclopædia.**

NEW THIN PAPER EDITION (Half the Weight)
22 Volumes 70,000 Titles Thousands of Illustrations Hundreds of Splendid Maps
An Exhaustive Treatment of the Whole Field of Learning from Earliest Times Until the Present Day

Its Editors: Most learned, most practical men from the largest universities of this and foreign countries. They have drawn on practically every important educational source in Europe and America. They have thus produced a reference work international in character but American in viewpoint. Never before was such an organization of scholarship assembled. The minute accuracy, the comprehensiveness in number and treatment of subjects, the strict alphabetical arrangement of subjects, the plain Anglo-Saxon style have placed the New International Encyclopædia foremost of all reference works of to-day. That's why the New International Encyclopædia is the "first" reference book in all important Universities, Colleges, Schools and Libraries, the Department of State, with professional men and in the home.

Guide to Systematic Reading: This volume is invaluable. It increases the utility of the Encyclopædia many fold. Whatever course of study the reader wishes to pursue, the guide volume directs him to every article pertaining to that subject the Encyclopædia contains. Every general topic that belongs to a high school or college curriculum is similarly handled, so that, by means of the guide volume, the Encyclopædia becomes a veritable college course in the home. It accompanies each set of the Encyclopædia without extra charge.

Late Subjects: While the province of an encyclopædia is not necessarily to give late information, it being rather a summary of finished things than a record of the doings of the day, still the New International gives the latest authentic information on practically every subject it treats, and it treats (under alphabetical arrangement) fully 50% more subjects than any similar work. A few of such subjects selected at random are Polar Exploration, Aeronautics, Wireless Telegraphy, Packing Industry, Panama Canal, Electric Railways, Roosevelt. Also accounts of latest progress in Politics, Economics, subjects of interest to women, scientific research. And latest statistics, military and naval progress, engineering feats. Bequests, benefactions, biographies, necrology, reviews of literature, music, drama, painting, sculpture. In addition, every important event, discovery and invention in every department of human knowledge is recorded alphabetically and is thus easily accessible.

Bibliography: It gives lists of best books on all important topics, thus directing the reader to wider investigation should he desire to pursue any subject further.

Sign and mail the coupon. It will bring you a book describing the Encyclopædia and its scope; giving samples of paper, printing, color plates, maps and bindings, and details of our easy payment plan.

What a Dollar Bill can do

for your backyard and the high cost of living.

IF you have a backyard or a garden that is not working for you to the limit of its possible efficiency, here is the best investment you can make. The intensive culture of gardens can be so developed by the "Garden Profits" System that small plots will frequently produce as much as the average small farm does now.

In this book, by one of the Agricultural Editors of *Country Life in America*, the best stories of 1000 garden successes are gathered together, reduced to simple terms and systematized for your ready use. Every phase of gardening is discussed comprehensively and expertly. Fifty illustrations and scores of plans and planting tables point the way to as many economies of time, work and money. A carefully prepared index adds great value as a ready reference guide throughout the planting season.

THE GARDEN MAGAZINE

is the final authority on all things horticultural. It aims to interest people in gardening by showing them how to get results in the most attractive and practical way. It has helped to decrease the cost of living in hundreds of homes by encouraging the use of once-neglected backyards for truck gardens.
It has brought health and joy into households by bringing their members into closer touch with nature. Among the leading features for the next year are the following:

Efficiency in Backyard Gardening

By Adolph Kruhm. These articles will help you make your garden produce more. They deal with the following subjects: Preparation of the soil, sowing and seeds, the cultivation of crops, crop rotation and the keeping of records.

New and Better Plants for the Hardy Garden

A series of articles written by experts dealing with improved types, races and varieties of shrubs, herbaceous plants, etc.

The Home Fruit Garden

By J. R. Mattern. These articles will show you which orchard fruits are best suited to your soil, climate and needs and how to plant them.

The Months Reminder

What to do right now and why and how to do it in *your* garden. The timeliest practical advice, warnings and explanations.

$2.00 worth for $1.00

A well-printed, strongly bound book of over 200 pages. It retails at one dollar. And *eight* issues of the *Garden Magazine*.

IF YOU HAVE GOODS TO MOVE YOU SHOULD BE INTERESTED IN A $133,000,000 TRANSPORTATION SYSTEM

THAT the Motor-Truck has grown to be an institution of vast importance in the commercial world is shown impressively by the proportions to which it has grown. The total investment in Motor-Trucks in the United States is $133,000,000. The grand total of trucks in operation is now 60,000. It is estimated that each of these trucks has displaced five animals, or a total of 300,000 mules and horses. Merchants and manufacturers who would understand the fundamentals of transportation efficiency and economy cannot afford to ignore the motor commercial vehicle.

Whether you are a retailer with a single horse-drawn delivery wagon or a great manufacturer with thousands of loads to transport, the commercial vehicle should be investigated.

It is possible that the truck may effect four important improvements in your road or street transportation:

1st: A saving over your present maintenance and operating expenses.

2nd: An increase of capacity per ton mile per vehicle and a decrease in number of vehicles.

3rd: A more extended zone of delivery with consequent possibilities of business expansion.

4th: Reduction in haulage time.

Whether the self-propelled vehicle can accomplish these business betterments depends upon local conditions and efficiency of operation. The important point is that the subject should be investigated carefully by every merchant or manufacturer, big or little, now operating horse-drawn wagons or trucks.

WE ARE READY TO HELP YOU AS WE HAVE HELPED HUNDREDS OF OTHERS

The Motor-Truck Department of The Literary Digest has been consulted during the past few years by hundreds of merchants and manufacturers interested in the adoption of the Motor-Truck. The requests for information have ranged all the way from officials of great manufacturing establishments to retailers in small towns.

The Motor-Truck Department is not equipped to supply technical engineering data. Its object is to put applicants for Motor-Truck information in touch with traffic engineers, who are experienced in the particular line of transportation in which the reader is interested. All readers of The Literary Digest are invited to avail themselves of the service of the Motor-Truck Department. This service is free to all without any obligation whatever.

In writing to us, do not fail to mention the character of goods which are to be transported by you; the average weight per load; average distance hauled; general character of roads or streets, etc. Your letter will receive our careful and individual attention.

Better English

the *key* to a *higher*

BROADER Business Social SUCCESS

Is *your* every-day speech above reproach?

Are your *letters* forceful and winning?

Would you like to write a *pulling advertisement*—an *acceptable story?*

Dollars-and-Cents Value of "Forceful English"

Good English is useful in every walk of life—

Minister—Lawyer—Physician—Politician—Advertiser—Financial Man—Banker—Credit Man—Correspondent—Stenographer—Secretary—Young Business Man—Ambitious Clerk—Salesman—Sales Manager—Office Manager—School Teacher.

ALL can gain their *results* easier and quicker by making a stronger, more direct and more *human appeal* through their spoken and written words.

HOW

Sherwin Cody has found a way to make the re-study of English one of the most absorbingly interesting things we can do.

He is a *practical* business man himself, but at the same time an *original* English scholar.

He has successfully taught "Business English," as well as the "Literary" kind, to many of the leaders in professional and business life, who felt the need of learning his *peculiar knack of forceful expression;* and he has qualified hundreds of poorly paid clerks for positions of trust and responsibility, by teaching them to use his "straight-from-the-shoulder" English.

These private pupils paid him from $15–$25 apiece for his separate correspondence courses in special branches of English—such as Letter Writing, Advertisement Writing, Story Writing and Journalism, etc.—and hundreds owe their success to the *practical help* he gave them.

Mr. Cody has combined these $15–$25 correspondence courses into 6 cloth-bound books called

"The Art of Writing and Speaking the English Language"

1. "Word Study"
2. "Grammar and Punctuation"
3. "Composition and Rhetoric"
4. "Story Writing and Journalism"
5. "Dictionary of Errors"
6. "How to Read and What to Read"

They are yours for 5-days' *free examination*, and then can be made *your very own* for a trifle.

"I cannot conceive of its being necessary to advertise them further than to allow persons to look them over."

—CAROLINE M. BEAUMONT,
Editorial Department of *St. Paul Globe.*

We have prepared a number of sets of these vitally helpful books, attractively bound in green cloth, *pocket size*, (5½ x4x½ in.) to send to "Digest" readers who "just want to look them over"—one set for *you*—for your *free examination* 5 days.

Take one of the books with you whenever you go out of the house; you will become absorbed in the pithy *Codyesque* paragraphs, and by snatching 5 minutes here and 10 there, will gain every day in your *power of expression*—the power to make yourself "*felt* as well as heard when you use words."

A Young Man Applied For a Position

the other day at the office of one of the largest American advertisers. His personal appearance was since described as "like a singed cat"; but the General Manager saw him heard him and *made a place for him*, because he spoke clean-cut *forceful* English.

Isn't there a moral in this for you?

The books themselves are their own best advertisement, and we feel morally certain that you will never let them go out of your hands once you get them.

For you cannot afford to turn away the practical, personal suggestions with which Sherwin Cody has filled every one of the 775 pages. But if for *any* reason you desire to return them, we will take them back just as cheerfully as we send them.

Look These Books Over 5 Days Free

50 cents brings them to your home carriage *prepaid* for free examination; 5 further monthly installments of 50c each—and *The Art of Writing and Speaking the English Language* will be yours.

The total cost of these several $15–$25 Cody Correspondence Courses in 6 ***bound books*** is thus *only* $3 if you fill out and send us the privilege coupon **TODAY.**

VALUABLE { This coupon entitles to 5 days free examination of Cody Correspondence Courses in book form.

FUNK & WAGNALLS CO.
44-60 East 23d St.
New York.

I want to look over Sherwin Cody's "Art of Writing and Speaking the English Language," which please send me for 5 days' *free examination.* I enclose 50c stamps and, if I decide to keep the books, will send five further monthly payments of 50c each, $3 in all. Otherwise will return books in 5 days and you are to refund the 50c paid.

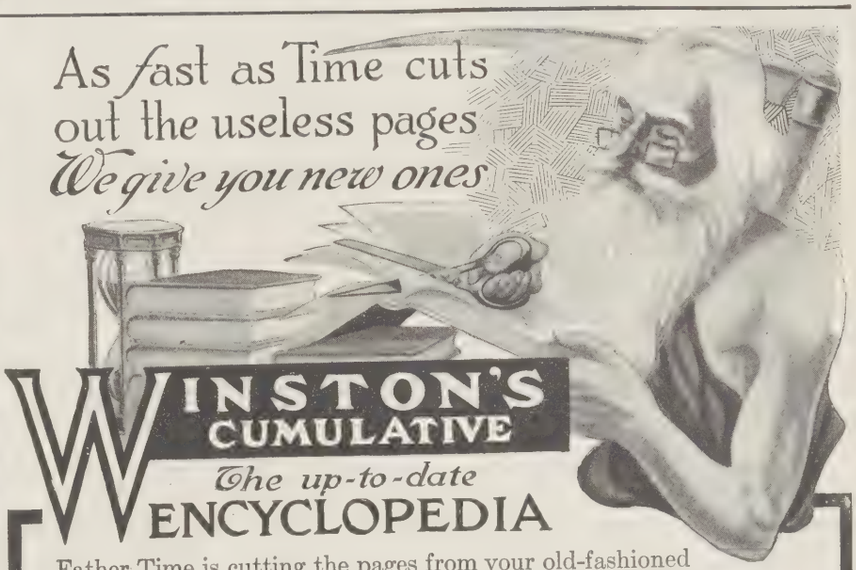
Puritan Pub. Co., 777 Perry Bldg., Phila., Pa.



As fast as Time cuts out the useless pages *We give you new ones*

WINSTON'S CUMULATIVE *The up-to-date* ENCYCLOPEDIA

Father Time is cutting the pages from your old-fashioned encyclopedia. It grows old and unreliable before you have had it six months. World leaders die, important explorations and discoveries are made, governments change, the useful sciences advance—yet on all these points your encyclopedia is silent or misleading.

WINSTON'S CUMULATIVE ENCYCLOPEDIA

Furnishes you with the **latest information on every important topic,** by means of a patented system of adding new material. Yet you can obtain Winston's Cumulative Encyclopedia for a small fraction of the price of other encyclopedias.

Advantages Not Found in the Old-Fashioned, High-Priced Encyclopedias

Made for Americans—it gives thorough attention to American subjects.

It is complete, compact, authentic—not merely a revision of older encyclopedias.

It's editor-in-chief, Charles Morris, has had longer experience and greater success in editing works of this kind than any other living American.

Typographically it is far superior to any other encyclopedia at any price—the topics are more easily found, the subject matter more easily read.

Facts are stated in language easily understood. Color plates, diagrams, and photographs are used wherever desirable for clearness.

Maps of every state in the Union and of every country in the world make this encyclopedia an up-to-date world atlas.

Every Home, Every Business Office, Every School, Needs This New Encyclopedia

Leading educators, and business and professional men have adopted it and recommend it in preference to any other at any price. Adopted by Boston, Mass., and other city schools.

J. H. Collins, State Supt. of Schools, Springfield, Ill., says: "Students will find this work one of the most helpful published."

H. M. Wixson, State Supt. of Public Instruction, Denver, Colo., says: "It seems to cover the entire range of human knowledge. Far more valuable to busy people than a voluminous edition would have been."

Special Offer and Easy Terms

For introductory purposes we are making a special offer which is open only for a limited time, and which is sent only in a direct letter to those who mail the coupon.

10 vols. 5,600 pages. 40,000 subjects. 2,750 illustrations, colored plates and maps. Covers the whole range of human knowlege

Our Book "Up-to-Date Facts" FREE

To those who mail the coupon NOW we will also send *free* a handsomely-printed book—illustrated with numerous line etchings, half-tone engravings and colored plates and maps—and filled from cover to cover with interesting, instructive and useful facts on a wide variety of live subjects. It also explains Winston's Cumulative Encyclopedia, and shows the value of this unique work to every man, woman and child who reads, writes and thinks.

The John C. Winston Co., Philadelphia

The Season's Newest Books FOR HOLIDAY GIFTS

BEAUTIFULLY PRINTED—ATTRACTIVELY BOUND

"The Rose Book"

A HANDSOME HOLIDAY GIFT. If you could *see* it—just once—you'd *want* it

The most beautiful book published on the subject of Roses and Rose-growing. Illustrated with over seventy full-page plates in color and half-tone, and embracing within its pages a vast fund of practical knowledge concerning Rose selection and every phase of Rose culture.

An all-year-round guide for the lover or grower of Roses. By H. H. THOMAS, author of "The Ideal Garden," "The Garden at Home," etc., assisted by MR. WALTER EASLEA, Member of the Council of the National Rose Society of Great Britain. In addition to the unusually beautiful pictures which the book contains, the practical section gives full and complete guidance in

How to Plant—How to Care For—How to Perfect Various Types of Roses

Rose Gardens in general—situation—soil—planting—pruning—budding—layering—grafting—seed—cuttings—manures for roses—diseases and insect pests—Roses for the greenhouse—Rose hedges—Roses for walls. Roses for fences, arches, pillars, etc.—Rose-growing for exhibition—lists of varieties for various purposes, etc.

12mo, CLOTH, $2.00 NET; BY MAIL, $2.15

Everyday Life in the Holy Land

By JAMES NEIL, M.A.,

AUTHOR OF "PALESTINE EXPLORED," ETC.

A volume of beautiful paintings depicting life in Bible lands; accompanied by an explanatory text which makes clear for the first time thousands of scriptural allusions which are quite obscure without a knowledge of that every-day life in the Holy Land which the author is so well qualified to expound. Dr. Neil, the author, has made the study of Palestine manners and customs his life work, and under his direction, Mr. James Clark, R.I., assisted by Mr. James McPherson Haye and Mr. S. B. Carlill, has produced a unique series of paintings in which the utmost care has been taken to render the scenes and allusions of Holy Scripture with minute accuracy in every detail.

OCTAVO, CLOTH. $2.50 NET; BY MAIL, $2.72

The Country of "The Ring and the Book"

By SIR FREDERICK TREVES

AUTHOR OF "THE OTHER SIDE OF THE LANTERN," ETC., ETC.

A living, vital document, describing the scene of a story of two hundred years ago—the story of the Franceschini, husband and wife, and of the priest who came between them. It is of these three that the tale is told in Browning's wondrous poem of "The Ring and the Book," as pathetic, as lurid, and as dolorous as a Winter sunset. The present volume is a great and beautiful book by a keen observer and a lucid writer. Illustrated with a colored frontispiece of the Madonna by Fra Filippo Lippi, and more than a hundred beautiful, full-page half-tones on super paper.

ALL BROWNING Lovers Will Especially Appreciate This Volume

8vo. CLOTH. $5.00 NET; BY MAIL, $5.22

A BEAUTIFUL SET Famous Paintings FOR ALL ART LOVERS

Selected from the World's Great Galleries and *Reproduced in the Original Colors.* With an Introduction by G. K. CHESTERTON

The possession of a volume of reproductions of the famous paintings of the world of all schools and of all Nations, from Botticelli down through the Florentine and Venetian schools, the Spanish, the Dutch and Flemish schools, the French and English schools—down to and including our own times, will be a source of permanent pleasure and profit. The possessor of this volume will virtually have at his instant command the greatest masterpieces of the world's art—where he may enjoy them at leisure. Furthermore, these pictures are not cold, lifeless reproductions in black and white, but faithful sympathetic reprints in the veritable colors of the originals.

Examples of the work of the following artists are included: Sir Edwin Landseer—Henry Holiday—Fred Walker, A.R.A.—Sir James Guthrie, P.R.S.A.—G. D. Leslie—Duverger—Peter Graham, R.A.—Ralph Peacock—J. Seymour Lucas, R.A.—Botticelli—Charles W. Furse, R.A.—Dagnan-Bouveret—Zorn—William Small—Titian—W. Dendy Sadler—John Constable—Sir Thomas Lawrence—Bompard—Cazin—John M. Swan, R.A.—Sir W. Q. Orchardson, R.A.—Franz Hals—J. M. W. Turner—Velasquez—Greuze—Rembrandt—Jean Francois Millet—Rubens—J. McNeill Whistler—Sir E. Burne-Jones—J. J. Henner—Sir Joshua Reynolds—Meissonier—G. F. Watts, O.M., R.A.—Charles Chaplin—John Crome—W. H. Gore—Holbein the Younger—H. H. La Thangue—Romney.

Each illustration is mounted on heavy paper and is followed by a page of descriptive and explanatory text

The New Cyclopedia of Practical Quotations

Compiled by J. K. HOYT

1,205 Pages. 8vo. 30,000 Quotations
Substantially Bound in Rich Buckram

HON. JOSEPH CHOATE, EX-AMBASSADOR TO ENGLAND, Says:

"I have always found this cyclopedia the most complete and useful book of the kind ever published."

OVER thirty thousand choice quotations are given, with eighty-six thousand lines of concordance, and an Appendix containing quotations from the modern foreign languages, Latin law terms, with translations, etc.

Every quotation is selected with discrimination as to its pertinence to the subject which it treats, the prominence and authority of its author, and its probable usefulness to the user.

FOR LAWYERS
An apt quotation often clinches a strong argument. Lawyers will find an unexcelled storehouse of quotations in this cyclopedia, besides a full list of Latin law maxims (translated), foreign quotations, etc.

FOR BANKERS
Occupying the important place in the municipality which a banker invariably does, he is frequently called upon to address the public by speech or pen upon a wide variety of topics. This great work will be found indispensable to him in the preparation of such material.

FOR PHYSICIANS
The physician who is a contributor to medical journals and who is a moving spirit in local affairs, or who desires to become either or both, will find a wide use for this cyclopedia. It contains thousands of apt quotations particularly applicable to his profession and suitable for all occasions.

FOR CLERGYMEN
The cyclopedia contains an immense number of religious illustrations, both in prose and poetry.

FOR TEACHERS
A glance at the many quotations under *Duty*, *Patience*, *Fidelity*, *Delay*, etc., will suggest the value of the cyclopedia to teachers.

FOR WRITERS
Authors, editors, letter-writers, and others will find countless literary gems with which to add brilliance and force to their writings.

FOR SPEAKERS
Political speakers, after-dinner speakers, lecturers, and others who have occasion to address the public, will find abundant quotations.

FOR READERS
How often in reading we meet with quotations whose authors are unfamiliar! The cyclopedia gives name and other data relative to the author of every quotation.

Unquestionably the Best Work of the Kind

Hon. Horace Porter, ex-U. S. Ambassador to France: "A work which will commend itself to all scholars. No library will be complete without it."

Prof. Wm. Hand Browne, Johns Hopkins University: "Remarkably copious and accurate in its extracts, and is admirably arranged for convenience of reference."

Ex-Pres. Francis L. Patton, Princeton University: "It is prepared with very great care, and is very complete."

New York Herald: "By long odds the best book of quotations."

Young's Analytical Concordance to the Bible

By ROBERT YOUNG, LL.D.

4to. 1,238 Pages. Bound in Fine Cloth

Meets the Wants of the Most Profound Scholar as well as the Simplest Reader of the English Bible

TWENTIETH EDITION, thoroughly revised, and containing 8,000 changes. It includes 311,000 references, marking 30,000 New Testament Readings. It gives the original Hebrew or Greek of any word in the English Bible with the literal meaning of each, together with reliable parallel passages.

Its Analytical Character It gives at a glance the various shades of meaning of related words represented in the English by one word. No other work in existence gives such a key to the intricacies and ambiguities of the English Bible.

Especially Helpful Arrangement Every word is given in alphabetical order, and arranged under its Hebrew or Greek original.

Arrangement of Proper Names The proper names of all persons and places, unlike most Concordances, are given in their alphabetical order with their literal meanings. Dates and eras of all persons are also given, so that they may be distinguished from others of the same name.

Many Exclusive Advantages No other Bible Concordance combines these inestimable advantages of variety and position. They enable every student to be his own commentator even if he has no knowledge of the Greek or Hebrew languages.

Valuable Complementary Articles Helpful supplemental articles add great value to this Concordance. The Rev. Thomas Nicol, B.D., of Edinburgh, contributes "*A Sketch of Recent Explorations in Bible Lands.*"

A New Appendix has been added containing complete Hebrew-English and Greek-English lexicons to the original scriptures of the old and new covenants, with other valuable matter.

A PERMANENT LEGACY TO BIBLE STUDENTS

Philip Schaff, D.D., LL.D.: "The most complete Concordance in the English or in any other language"

The Religous Telescope: "The masterpiece of our time—invaluable."

The Christian, London: "A work of immense learning and research."

The New York Tribune: "It is at once a Concordance, a Greek, Hebrew and English Lexicon of Bible words, and a Scriptural Gazetteer, and is as valuable to students of the Holy Word as an unabridged dictionary is to the general reader."

Helping the Manager to do more work with less strain

IT has been said that a regiment is simply a multiplication of its Colonel. The same thing is true of any kind of management. To multiply himself—to duplicate his own efficiency in every unit of his force—that is the manager's ideal.

So that a manager who is looking for 100% of efficiency in his force must first find it in himself. And to be fair to his force he must first be fair to himself. He must give himself all the chances of generating the fullest man-power.

The head of a sales division in a big western Indiana plant got hold of this idea and applied it with what he at first thought was some success. But he found himself working harder than ever and the strain began to tell.

It was then that one of the directors happened to introduce a visiting electrical engineer who spent several days in company with the sales chief. By this time the engineer felt free to talk plainly.

"Mr. Blank," he said. "You're a splendid example of energy but you're not giving yourself a square deal. You're not giving yourself the right help."

"The right help!" cried the manager. "Haven't I got a fine force here?"

"You're people are all right, and you've made them imitate your energy, but neither they nor you have the right help. You're all working, so to speak, with old fashioned tools. The help you all want is electricity. Yes, I know you've got electric lights—old fashioned ones in the wrong places. But there are at least twenty ways in which electricity could help you that you're not using—twenty more people would not help you so much and would only be an additional burden to you. Some day they're going to cut out all that overhead belting and shafting over there in the factory and use motor drive for each machine. Meanwhile you could apply that electric drive principle to the people in your office here. You could apply it to yourself. With the help of electricity you could do the same thing for this office that cutting out the overhead belting and shafting will do for the factory—make the general conditions better for all, and the particular conditions better for each.

"Let me show you what I mean—and your own case is most important because if you are slowed down your force is likely to reflect you. Take your lighting. You yourself have poor light. You go after people or send after them, when a button in your desk would do the thing better and save hours of your high-priced time every week. A moment ago you got up and opened your window. A little electrical help here would purify that air fuel your human engines are stoking up on. You're not using electricity for any of the mailing or adding machines—and that clerk who is mounting photographs, for instance, could do it in one-quarter of the time with an electric flatiron. I venture to say that you could accomplish 80% more work here with half the wear and tear if you made use of electricity in even a fraction of the ways in which it can be used."

This plain talk fitted in so well with the sales manager's first thought on the efficiency question that he promptly acted on the detailed advice secured from the engineer, and supplemented by the local electric light and power company. As a result, within a year he was able to compute that without increasing his office charges by a single dollar he was doing much more work and found himself in a position to shorten his own too heavy hours.

Perhaps you who read this have a man-power problem in your own person. Take up the matter today with your electric power and light company or any General Electric Co. agent in your vicinity. You will find them more than glad to co-operate with you, and no matter how complex your problem may be they have at their command the service of any part of our organization that may be most helpful to them and to you.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 354–360 Fourth Ave., New York

VOL. XLVII., No. 23 NEW YORK, DECEMBER 6, 1913 WHOLE NUMBER 1233

TOPICS OF THE DAY

THE MICHIGAN COPPER STRIKE

DURING A CONFERENCE not long ago of union officials at the scene of the copper-miners' strike in northern Michigan, one of the leaders said: "If we could just get our feet under the same table with the managers, we could work out a fair agreement." That remark explains why the strike was not settled soon after it was begun on July 23 last. It seems that the main reason why the mine managers have refused for so long to negotiate for an adjustment is not so much the demand for better wages and other concessions to the workers themselves, but their unwillingness to recognize the Western Federation of Miners. It is the first serious strike in the Calumet-Hecla district in fifty years, and it probably is for that reason the operators are especially hostile to union interference. "Read Harry Orchard's confession over again if you haven't read it recently," said one of the managers when interviewed by Graham Romeyn Taylor, a writer for *The Survey* (New York). "Then come back and tell me whether if you were in my place you would have any dealings with the Western Federation of Miners." State officials made a series of mediatory efforts during the summer and early fall, and then the Federal Department of Labor suggested a plan of arbitration, which was refused by the operators on September 21. A prolabor description of conditions in the district is furnished by James Lord in *The United Mine Workers' Journal* (Indianapolis):

WHERE BULLETS SPOILED A SUPPER.

Guards hired by local authorities fired through the windows of this house in the copper-strike district in northern Michigan, killing two strikers and wounding three as they sat peaceably at supper with the boarding boss, his wife and children. One of the wounded men is seen at the right at the top of the steps.

"The copper barons absolutely control most of the houses and stores that the miners live in and deal with. The mines are absolutely tied up, and out of 15,000 striking miners there are less than 2,000 at work in the entire district. Most of those at work are the scum of the larger cities, such as New York, Chicago, Milwaukee, and Detroit, who have been raked up by the strike-breaking agencies in those cities and shipped directly to the mines under armed guards. The district is absolutely overrun with the worst degenerate type of gunmen and the militia. Men have been murdered in cold blood for simply marching with the strikers. Women and young girls have been outraged by the soldiers and gunmen, and one woman especially, a Lithuanian miner's wife, was dragged into the woods by three drunken soldiers, in the presence of her husband, and the husband himself almost beaten to death. Another foreign-speaking miner was killed in his own house, sitting at supper with his family, by one of these gunmen, and the miner was partially avenged by seizing the gun from the gunman while he was actually dying and sending a bullet through this degenerate's brain. A baby in its mother's arms had its face powder-burned by the fire from the gun of this armed guard. Nowhere in the United States, not even in West Virginia, have the mine owners, with their hireling courts and soldiers and imported murderers, gone to greater lengths to defeat the just demands of the workers."

The production each year, from 42 mines of the district, is 220,000,000 pounds of copper, about 20 per cent. of the country's output, says Mr. Taylor in his article in *The Survey*. At the present price of 17 cents a pound this annual production yields about $33,000,000. In the mine operations in the entire district some 16,000 men constitute a normal working force. The companies report, says Mr. Taylor, that on the day before the strike about 14,300 men were at work. During the first twelve days of July a vote was taken to decide whether the union officials

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 354–360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

should ask for conferences with the operators, and a strike be called in case the operators refused to meet the union men. The union officers say 98 per cent. of 9,000 votes cast were in favor of the proposed action. In a more temperate vein than that in which Mr. Lord writes, Mr. Taylor reviews the situation thus:

"The letter sent to each mine manager on July 14 exprest the earnest hope that a strike, with all the suffering it would bring employees, employers, and the public, might be avoided, and that the question at issue might be settled 'amicably with fairness and justice to both sides.' But it bluntly threatened a strike unless an answer was forthcoming by July 21, appointing the conference for some time before July 28. No reply or acknowledgment was received by the union officers, and in some instances the unopened letters were brought back by the mail-carriers with 'Refused' written across the face of the envelop. When July 21 came the strike was called for July 23. The walkout of the underground men was practically complete. Such as were not members of the union were either caught by the spirit of the crowd or coerced into joining union ranks.

"There were cases of intimidation and rough handling of men returning to work, the experience of some old men being especially pitiful. In the first two days more than a score of injured people were received at the hospital.

"This led to prompt action by the Governor, and the State militia, 2,700 strong, arrived on the ground before the strike was half a week old. Their presence has undoubtedly been a large factor in preventing violence. Their methods, and particularly the excesses of a few individuals such as are always present in any large number of young men, have been vigorously criticized, sometimes justly, by union leaders. But the average striker feels that the soldiers, many of whom are trade-union members, have in general treated them fairly. . . . . .

"The strikers have evinced little disposition to destroy property, tho the stoppage of the pumps in some mines has done damage. They are charged with the burning of a store, but little evidence has been adduced to prove it. To prevent depredations, lines of incandescent lights have been stretched around the mine locations, and two of the companies play search-lights over their property each night."

The men ask for an eight-hour shift and a minimum wage of $3 a day, and they complain that the introduction of a one-man drill to take the place of the two-man drill is a scheme to make them turn out about twice as much output, with much harder work, and at little advance in pay. Mr. Taylor says a minimum wage of $3 a day would benefit less than half the workers. We read further:

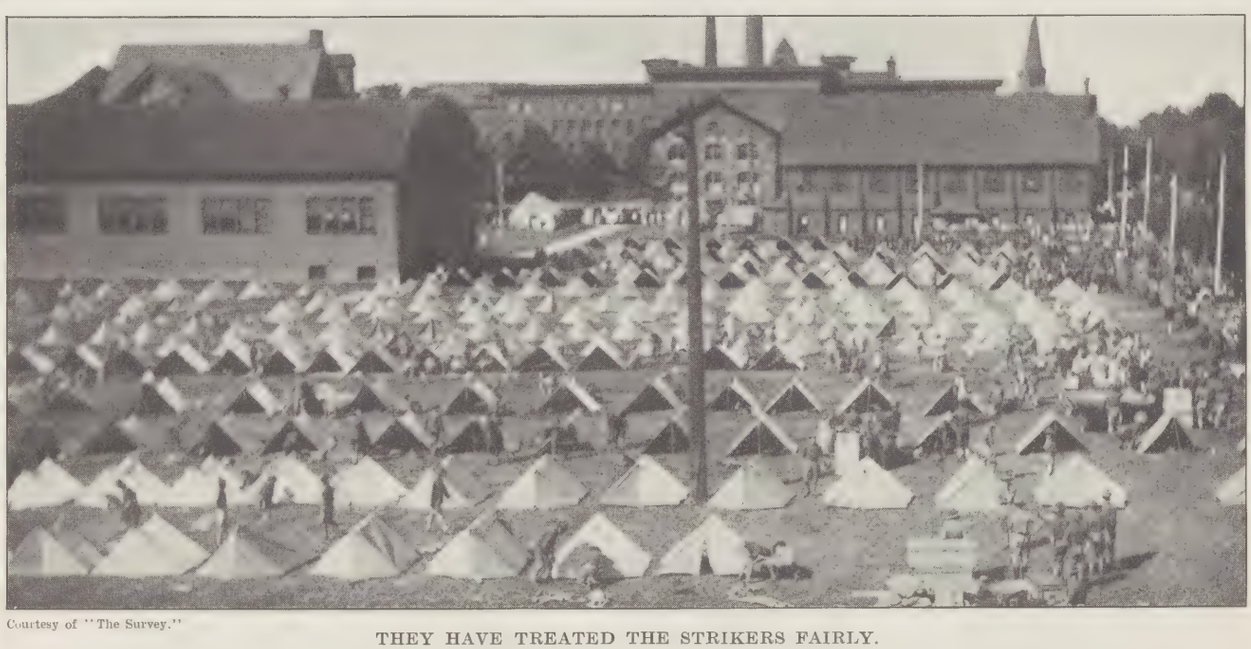
"The opposition of the managers to the Federation goes much further than refusal to recognize or deal with the union. They seek to extirpate it, root and branch, and declare that any man returning to work must renounce his membership and agree not to become a member so long as he continues in their employ."

The San Francisco *Bulletin* insists that "this and similar situations constitute an absolute menace to the common welfare, and they ought not to be tolerated." The California paper goes on to express its alarm:

"The danger in such a situation as this is not so much in violence which may occur during strikes. There has been almost no violence during the strike at the Calumet and Hecla mine. The real menace is in the toleration of a kind of government which allows a few property owners to make a mockery of the first principles of democracy. The miners are denied the right of expressing themselves politically, just as they are denied the right of dealing with their employers through their unions. The Board of Supervisors of Houghton County, in which the Calumet and Hecla mine stands, is controlled by the mine owners, and through this board the mining men practically control all the minor officials. That is, there is an oligarchy pure and simple."

OIL AND IDEALS IN LATIN LANDS

THAT OIL AND IDEALS, like oil and water, will not mix, is a lesson that some watchers of recent developments in Mexico and nearby countries feel President Wilson may soon be learning. If his present Mexican policy leads to armed intervention, says a London weekly, the President will have nothing more nor less than an "oil war" on his hands. Ex-Ambassador Wilson denounces the "sordid" mixing of rival oil concessionaires in Mexican politics, and in his lectures declares that British oil interests are behind the present Government in Mexico, just as American oil interests were behind the Madero Administration. British cruisers and United States battle-ships are on hand to protect the works of the Pearson oil interests near Tampico, which are imperiled by the operations of Mexican revolutionists. Lord Cowdray, head of the Pearson



Courtesy of "The Survey."

THEY HAVE TREATED THE STRIKERS FAIRLY.

At least such is the testimony, according to *The Survey*, of the average striker regarding the 2,700 Michigan militiamen who have been sent to keep order in the copper country. Some of them are here seen in camp. The conspicuous building at the left is the company-owned armory which is leased to the State, and the Calumet and Hecla Company's office is seen directly back of the flag-pole.

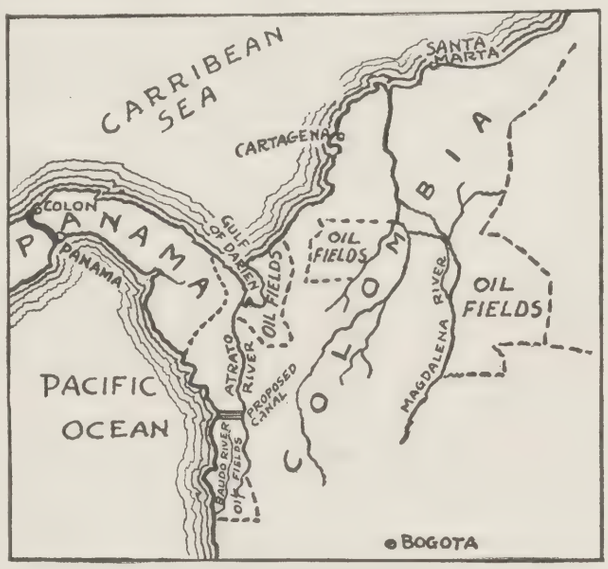
Copyrighted by the American Press Association.

THEY ARE FIGHTING FOR THIS IN MEXICO.

Whether or not rival oil concessionaires are behind the opposing forces in Mexico, there is no question of the value to the ultimate victors of the control of rich oil properties like this. At the left is the Tuxpam oil-field; at the right, the Potrero gusher, near Tampico, the largest in the world.

companies, "has put the Monroe Doctrine to the test," notes the New York *Commercial*, by personally asking our Government to protect the interests he represents. This gentleman's solicitude "about his oil properties in the neighborhood of Tuxpam and elsewhere in Mexico is natural enough," observes the New York *Sun*, in view of the importance of petroleum nowadays, especially since the maritime Powers are substituting it for coal as fuel for their battle-ships. But this oil feature of the Mexican tangle is but a small part of the great problem of the Caribbean oil-fields, we read in a carefully prepared article in *The Sun*. The very fact that the Pearson contract for an oil concession in Colombia was withdrawn before its ratification by the Colombian Congress on the ground of its "being used to stir up American opposition" is taken as an indication of the growing realization of the importance of the problem in all the countries concerned. Efforts of British concerns to control the production of petroleum in the region of the Panama Canal are vastly significant, it is stated by *The Sun's* Washington correspondent, because they are bound up with the maintenance of British naval supremacy on the one hand, and on the other with the future of the Canal and our relations with Latin America under President Wilson's new "idealistic" policy. The difficulty apparently lies here: the only way the resources of the countries to the South can be developed is by granting concessions to foreign capital; the United States can not afford to let the oil supplies in the region of the Panama Canal "fall into the hands of potential enemies," yet our Government takes a position as discouraging to American as to European investors. To quote *The Sun's* remarks upon the prospect of British control of the Caribbean oil supply:

"What such a control would mean can hardly be appreciated until two great facts but little known are taken into consideration. One is that the mercantile marine is rapidly converting itself into an oil-consuming instead of a coal-burning agency. The other is that by virtue of the richness of the Mexican and other Caribbean oil-fields, together with their location, oil from these regions can be laid down at the Panama Canal for about half the cost of coal delivered at the same spot. These two facts, it is declared by experts, are alone sufficient to insure the unbounded success of the Panama Canal and make the control of the Caribbean oil-fields a tremendous weapon in the hands of their possessor."



OIL-FIELDS NEAR OUR CANAL.

This map shows why the handing out of oil concessions by Latin-American governments is a matter of serious concern to President Wilson and Secretary Bryan. It also indicates where the Pearsons would probably have staked out their 10,000 square kilometers if the publicity aroused by their negotiations had not led to their voluntary withdrawal from so conspicuous a field for exploitation.

Great Britain has discerned this, continues *The Sun*, and it finds reason to believe that Germany and France are also awaking to the situation. Now, we read further:

"What would be a perfectly normal situation of keen competition for acquisition of one of the richest oil-fields the world has ever yet known is complicated by the attitude taken by President Wilson with respect to the development of Latin-American natural resources. President Wilson, in his Mobile speech, declared himself as opposed to the granting of concessions by Latin-American governments, and announced that it was the mission of the United States to free these governments from foreign domination."

It is generally believed in Washington, according to this correspondent of *The Sun*, "that if President Wilson endeavors

to put this declaration into practical effect, he will have embarked upon a very bold policy of international domination and that he will have to prepare himself for complications with the Old World Powers." For,

"If the Caribbean regions are to become the world's greatest source of supply of petroleum, which will also be obtainable at the lowest cost once the development of these fields is under way, it is hardly to be expected that these Powers are going to permit themselves to be deprived of the benefits of such natural resources because of a moral issue which they do not recognize."

England in particular, according to *The Sun*, has a long-term contract with Lord Cowdray for a "continuous supply of oil-fuel at a steady price" for the use of the Navy, and so is "bound by her most vital self-interest, that of maintaining her naval supremacy, to stand behind the Cowdray oil operations in every way." In Colombia, the Pearson interests wanted Congress to ratify a concession entitling them to exploit petroleum and carry on all works necessary for producing and transporting it in an area of 10,000 square kilometers "in any part of the national property." Press denunciations of this as a monopoly were answered vigorously by Lord Cowdray, who pointed out that there was no mention of "exclusive rights over the whole of Colombia" anywhere in the contract. Competitors of the Pearsons, who have obtained concessions in Colombia, support this assertion with regard to the final proposition, tho they add that the original Pearson scheme was to secure complete monopoly. The New York *Herald* quotes a prominent Colombian's comment that the Pearson contract "in reality" would have constituted a monopoly, because under it the British firm "would claim all the ground notoriously rich in oil and lay claim to any oil regions that might be discovered in the future." And several Washington correspondents heard the concession described as the groundwork for a system such as the East India Company built up in India and which would violate the spirit of the Monroe Doctrine. Altho the United States Government took no official stand against the contract, correspondents of the New York *Sun* and *Herald* agree that our State Department hoped for its rejection by the Colombian Congress, and received the news of its withdrawal by Lord Murray "with undisguised pleasure." The outcome is regarded as a "diplomatic victory" of "double value" to this country, according to *The Herald*, because—

"It at once establishes the policy with regard to Latin-American concessions laid down by President Wilson in his Mobile speech of October 28, and removes the one obstacle that stood in the way of a thorough and uninterrupted discussion of the Panama controversy with Colombia."

Lord Murray withdrew his contract, according to an explanation cabled by Pearson and Son to *The Herald*, "owing to the political feelings which have been engendered by the negotiations." Lord Cowdray, in a New York *Times* interview, insists that "misrepresentations of the concession in the American press influenced the withdrawal." But *The Times*, speaking editorially, deems it "more probable that the objections of Colombia herself to making contracts which would grant the right to develop oil-fields anywhere within her territory have been the controlling influence in the matter."

An important result of this withdrawal, says the New York *Herald's* representative at Washington, will be "according to one view," that "President Wilson now will be obliged to formulate and make known his policy for the development of Latin-American countries." *The Herald* reports further:

"Critics of the Administration declare that the President has not taken into consideration that the concession is a Latin-American institution; that all of those countries have, since the beginning, sought their development through concessions and in no other way, and that since the governments own all, or practically all, of the resources which foreign capitalists would seek to exploit, it is absolutely necessary to do business with the governments and to obtain concessions.

"If, then, the President is to oppose concessions, they ask, what means will he consider proper for the development of these countries?"

Still another question which President Wilson may have to face, in the opinion of this authority, is put thus:

"There are at the present time several American firms seeking oil concessions in Colombia in competition with the Pearson interests, and their efforts now may be expected to bring this question to an issue—What stand will the Administration take toward American concessionaires?"

DELAWARE'S WHIPPING-POST

THOSE PRISONERS in a Delaware jail, whose backs were still smarting from the first instalment of the whippings to which they had been sentenced, and who were shrinking from the appointed twenty lashes of the next "whipping-day," probably never knew that a Montana Congressman was urging the House of Representatives to step in and interpose the Federal arm between them and the complete carrying out of the sentence. Mr. Evans's arguments failed to convince his hearers of the need for immediate action, and the objects of his compassion received their full quota of stripes at the Newcastle whipping-post, despite his endeavors. Yet his efforts were not wholly wasted. For he succeeded in stirring up a chorus of protest and denunciation from those to whom "the falling of the lash upon the bared back of a culprit seems like a relic of barbarism," and, in answer, he elicited some thoughtful as well as spirited defenses of Delaware's ancient institution. "The whipping-post is a disgrace to your State, and, to my mind, to every one who upholds it," wrote one of New York's leading physicians to Governor Miller, in one of the many such communications the Delaware executive has been receiving of late. In Wilmington, Delaware, Socialists met and adopted resolutions denouncing the whipping-post as a "degrading, humiliating, and barbarous torture of its victims," offering support to those trying "to remove this blotch from Delaware," and urging Delaware's representatives in Washington to cease their efforts to "perpetuate a form of punishment which is a disgrace to a civilized State." But the one Congressman from Delaware, Mr. Franklin Brockson, quite undisturbed, rose in the House of Representatives and quoted Theodore Roosevelt as authority for the statement that "probably some form of corporal punishment would be the most adequate way of meeting the crime of wife-beating," and cited the Bible's warnings against sparing the rod. As quoted in the press dispatches, he said in part:

"I have but little patience with any man who permits his sympathy to run with a felon so far as to forget the rights of law-abiding citizens of the State.

"The State of Delaware being satisfied of the justice of her laws, is willing to stand alone for that which is right rather than to stand with the multitude for that which is wrong.

"All through the Bible, we are taught that corporal punishment does have a good effect.

"'Withhold not correction from the child, for if thou beatest him with the rod he shall not die.' 'Thou shalt beat him with the rod and thou shalt deliver his soul from hell.'"

And Governor Miller, besides reminding his correspondents in a public statement that they should memorialize the State legislature, which alone "can amend or repeal statutes," declares himself personally in favor of whipping because it is "the most effective barrier to vicious criminals on our statute-books." Crime is at a minimum in Delaware, according to the Governor, because of the "fear and public disgrace of the whipping-post." And he concludes:

"The whipping-post has been the fundamental punishment

AT THE THIRTEENTH WHITE HOUSE WEDDING.

The President's second daughter, Jessie Woodrow Wilson, was married to Mr. Francis Bowes Sayre, in the White House, on November 25. The bride will be easily recognized in this picture of the wedding party; at her right sits her sister, Miss Margaret Wilson, and Miss Eleanor Wilson is seen at her left. Mrs. Wilson stands in the center behind them, between the President and the bridegroom. Dr. Wilfred T. Grenfell, Mr. Sayre's best man, stands beside him, directly back of Miss Eleanor Wilson. Washington observers detected in the wedding a note of that "Democratic simplicity" which has become recognized as characteristic of the Wilson régime.

in Delaware since 1656. It will continue in force until the people of Delaware of their own accord decree otherwise."

Congressman Evans's plan, upon which Congress has taken no action, would have the Attorney-General secure an injunction to prevent the Delaware officials from violating this provision of the Federal Constitution: "Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishment inflicted." But, comments the Brooklyn *Eagle*, there is a question, first, whether this amendment limits State action; and, second, whether whipping is a "cruel and unusual" punishment. Cruel it may be, "but it was certainly not unusual when the amendment was drawn in 1789." Moreover, according to *The Eagle*, "even now some States other than Delaware use the punishment in treating certain offenses."

One of the papers which tells Delaware to "abolish its whipping-post," the Philadelphia *Public Ledger*, remarks that its best defense was made by the late Chief Justice Lore, of that State:

"Judge Lore called attention to the position of the little State. It lies wedged between other States, sticking its populous northern nose up to within a few miles of the evil men of the great city of Philadelphia. It is situated upon the trunk lines of great railroad systems, and is the gateway of the travel for migrant criminals who flit from New York and New England through Philadelphia toward Baltimore, Washington, and the South and West. What more natural than that the birds of prey should touch Wilmington and fly; harass the State, rob and despoil it, or even make of it a temporary or permanent stamping-ground? The way to warn them off, said Mr. Lore, was to give them a strong dose of the cat-o'-nine-tails and hold its terror over them. Whipping is a discipline that brutes can understand; a corrective, a punishment, and a preventive."

But the Philadelphia daily is not convinced even by this argument, and proceeds to answer thus:

"If Delaware should adopt a method of burning at the stake for petty larceny, those of larcenous mind would undoubtedly give it a wide berth, for a time at least, but larceny in the remainder of the United States would not decrease. . . . An undue sentimentality with respect to criminals is to be discouraged, but brutality and cruelty never constituted a reformative process. If all the States were to revert to the whipping habit to-morrow the country would feel a sense of outrage."

And this, thinks the Washington *Star*, is about the last thing any State is likely to do. It says:

"It is inconceivable that any modern community should adopt the whipping-post as a means of correcting any form of offense against the law. It might, as in the case of Delaware, hold fast to the whip-handle, from force of habit, or because of a distaste for acknowledging that possibly it has been mistaken, a sense of pride preventing reform. But that is as far as the whipping-post will go as an American method of punishment, and it is a matter of national congratulation that it is maintained in only a few communities, and remains there as a relic of an ancient day. Its total extinction is only a matter of time, whatever may be the fate or the effect of the resolution now pending in the House."

Perhaps some of these Commonwealths that are so anxious to pluck out the mote that is in their brother's eye have penological beams in their own that need attention. As the New York *Times* observes:

THE LIGHT AND DARK SIDES OF OUR MEXICAN PROBLEM.

"Delaware's whipping-post is a symbol of conditions in jails about which the public does not like to think, and therefore they are neglected. Most States have abolished the whipping-post, but most States have jails and workhouses that are hotbeds of filth, immorality, cruelty, hardship, and, to make wretchedness more bitter, of favoritism."

STARVING THE RAILROADS

FINANCIAL STARVATION, our railroads say, is the fate confronting them unless they are permitted to increase their freight rates. So acute, in fact, is the condition of our great transportation systems, according to the testimony of railroad men, that the only alternative to increased rates is government ownership. "The margin between what we are taking in and what we are paying out is steadily growing narrower; we are suffering from slow starvation," declares W. C. Maxwell, traffic manager of the Wabash, and this statement virtually summarizes the evidence laid before the Interstate Commerce Commission last week, when it listened to the plea of the Eastern railroads—those in the territory east of the Mississippi and north of the Ohio and Potomac rivers—for a 5 per cent. rate increase. The shippers' side of the case is to be heard later. The advance asked for, according to a railroad official quoted in the New York *Journal of Commerce*, "would add between $35,000,000 and $40,000,000 to the revenues of the railroads involved," and of this total "about 50 per cent. would accrue to the three main systems, the Pennsylvania, the New York Central, and the Baltimore & Ohio."

As explained to the Commission by Daniel Willard, president of the Baltimore & Ohio, the railroads of the country have felt the burden of the increased cost of living like all other enterprises or individuals, "but, unlike all others, have not been permitted so far to raise their prices or adjust their charges in recognition of that burden." Mr. Willard submitted figures to show that since 1910 the petitioning railroads have spent more than $600,000,000 in additions and improvements, while their net income in the same period has decreased more than $16,000,000, because operating expenses have increased faster than operating revenues. "These companies," he said, "apparently not only failed to earn any return whatever on the new capital invested, but saved even less from gross earnings, as returned upon the original property investment, than they were able to show before this large additional expenditure was made." Wage payments, he pointed out, "have gone up by leaps and bounds, largely as a result of mediation and arbitration proceedings," and he cited the recent award of $6,000,000 annually in increased wages to conductors and trainmen as an instance. Moreover, "the effect of the so-called 'full crew' laws alone has been to increase the expenses of these carriers more than $4,000,000 per annum." The Commission's decision in this case, argued Mr. Willard, "will mark an epoch," since it will very largely determine whether the country shall continue as in the past to look to private capital and private enterprise for its transportation requirements, "or be compelled finally to accept the only alternative possible—government ownership and control."

Wages and the cost of living have advanced throughout Europe in much the same way that they have in the United States, remarks the New York *Commercial*, and European railroads, like ours, "are feeling the burden severely." But—

"While many shippers and a large part of the public are opposing advances in freight-rates in the United States, European countries have authorized them in many important cases, and the roads owned by the governments have not hesitated to put additional burdens on every one who travels or ships goods."

"The wisdom of starving the railroads to death is difficult of demonstration," remarks the Brooklyn *Eagle*, and the New York *Sun* thinks that "the case for the railroads, in the main, is as clear as crystal." Among other papers which concede the justice of the railroads' petition are the New York *Tribune*, *Herald*, *Press*, *Times*, and *Journal of Commerce*, and the Baltimore *Sun* and *News*. The Boston *Transcript*, however, thinks that if the railroads win the desired increase "it will hardly be without challenge," for while the larger shippers are disposed to accept the higher rates "the small ones are more numerous and have already filed a formidable batch of protests against any change." And in the Chicago *Tribune* we read:

"Railroads are not only suffering from the sins of the past; they are suffering from the minor faults of the present management. A wider adoption of 'the public be pleased' policy would assist in creating a public opinion more favorable to the railroads and their real needs than yet exists—and that would be not merely for their benefit, but for that of the public. For it is a fact that unjust prejudice and excessive hostility against the common carriers react finally against the shipper and consumer—upon the whole nation, whose economic health and prosperous growth depend upon an adequate system of transportation."

THE CONSERVATION SPLIT

SHALL EACH STATE regulate the use of all natural resources within its borders, or shall the final control rest in the strong hands of Uncle Sam? This question is the rock on which the conservation forces split during the fifth annual session of the National Conservation Congress in Washington last week. A struggle between the two factions for the control of the convention was predicted in advance, and both sides were freely accused of "packing" the meetings with their own adherents. As the St. Louis *Globe-Democrat* (Rep.) explains, the advocates of national control believe that "the people of a State, Esau-like, are too prone to sell their birthright for a mess of pottage, and, in their eagerness to see a speedy development of their community, are likely to give away rights that will wrong their children." On the other hand, in the States chiefly concerned there is an influential body of opinion which fiercely resents dictation from Washington concerning the disposition of their natural resources, and complains that the tendency of the present conservation policy is to tie up these resources in red tape so that nobody can get any benefit from them. As an illustration, the St. Louis paper cites the case of Alaska, "whose people have been long protesting because they are compelled to buy coal shipped from far-away points and sold at a high price when they have billions of tons of coal at home which the Government will not permit to be mined."

Photograph by Harris and Ewing.

HE LED THE REVOLT.

In the recent Conservation Congress Senator Bankhead, of Alabama, led the champions of State's rights in their unsuccessful effort to wrest control of the convention from the Pinchot forces.

This States' rights point of view found expression in the Conservation Congress in such incidents as the resolutions of the Arkansas delegation insisting on the abolition of the forest reserve and contending that the waterways of their State belong to the State and should not be governed by a bureau at Washington. This delegation then withdrew from the convention with threats to launch a rival organization to advance its views. The States' rights faction was led by Senator John H. Bankhead (Dem.), of Alabama, a close ally of Congressman Underwood. Of the other faction ex-Forester Gifford Pinchot is the generally accepted leader.

Altho the Pinchot forces finally triumphed to the extent of putting through a resolution recognizing the principle of Federal control of water-power, it was not until a number of delegates had withdrawn in dudgeon, and some editors see in the result only a barren victory. "The victory of the followers of Gifford Pinchot seems to be complete, but it may be that it has been achieved at fatal cost," remarks the Washington *Post* (Ind.), which notes that, in addition to the defection of the Arkansas delegates, "Governor Stewart, of Montana, says that he will never again appoint delegates to the Conservation Congress, and the Washington State delegation says that it is through." *The Post* argues that the resolutions of such a congress "are not worth the paper they are written on unless they represent public sentiment," and it goes on to say that "the West and Southwest are practically a unit in opposition to the Pinchot plan of water-power restrictions," and "Congress, too, is a bulwark of States' rights to-day." Hence, in defying the States' rights element, this Washington paper contends, "Mr. Pinchot is plunging his cause into politics in a fashion which separates the goats and the sheep into Progressives and Democrats." Of this aspect of the situation *The Post*, which leaves no doubt as to where its own sympathies lie, goes on to say:

"Now that the policy of Federal control and the States' rights doctrine have locked horns for fair on the conservation question, the political side of the issue thus sharply raised assumes proportions and features hitherto kept under the lid by general consent. All parties fell in with the sentiment that the new principle of the conservation of natural resources should not be made the plaything of politics or permitted to give rise to sectional feeling. Once in practise, however, the people of the States directly affected by the operation of the new-fangled system realized that they had been hoodwinked, and then began the internal struggle which had its climax in the disruption of the national body on Thursday.

"Party lines were not sharply drawn, it is true, but the political leanings of the leaders of the opposing sides show a line of cleavage too clear-cut to be misunderstood. Behind Gifford Pinchot, who, doubtless seeing that conservation and States' rights are too antagonistic to tolerate one another in the same territory, precipitated the split, there stand the group of ultraprogressives whose high connections with the Roosevelt and Taft Administrations gave opportunity for the enforcement of the conservation policy to extremes far beyond what the undeveloped States of the great West could support. . . .

"The battle will be to the finish, for there is no basis of compromise. The policy and the doctrine are irreconcilable on the main point in dispute. Who can doubt, surveying the situation from an outside coign of vantage, that the historical States' rights doctrine will survive? It is only when bureaucracy is permitted to write veto messages invalidating water-power legislation that the props are kicked from under the rights of the States to regulate their internal affairs."

Instead of a "battle to the finish," however, the St. Louis *Globe-Democrat* predicts a solution by compromise:

"The residents of the sections most affected are bitterly against the national policy. Oh the other hand, the Federal Government is not likely to relinquish control to the States. The present clash will continue until there is a compromise. The most likely solution is that the Government will adopt some practical plan that will eliminate red-tape delays and permit the development of the natural resources of the country, but will check the wastefulness that has prevailed in the past, and also prevent the monopolizing of natural resources by exploiters."

This year's Conservation Congress, in the opinion of the New York *Press* (Prog.), "included a good many people looking like Trojan horses"—in other words, "there were too many delegates from water-power States, representing exploiting interests rather than the public." *The Press* goes on to say:

"Anybody familiar with the methods and the personnel of the water-power lobbies that have been present in Washington so much of the time in recent years recognized familiar faces among the delegates to the gathering and wondered whether it was really a conservation gathering or a reunion of the lobby.

"Delegates to the convention came from the States with credentials from the Governors. Now that the popular zeal for the cause has somewhat subsided, the agents of selfish interests find it easy enough to get credentials from their Governors or other authorities with the appointing power, and these went to

Washington, masquerading as Simon-pure conservationists, when, in fact, they were devoting their energies to the defeat of the very purposes which are presumed to animate, and did originally animate, these gatherings.

"To say this is by no means to impugn the motives of all, or probably a majority, of the men who went to take part in the gathering. It is merely calling attention to a condition which can not escape the notice of people observing the evolution of this movement."

The New York *Evening Mail*, another Progressive paper, also notes the zeal for States' rights displayed by the water-power interests, and remarks that—

"The principal opponents of national control, by the way, were not Southern men, but men from Oregon and the State of Washington, where there is extremely little sentiment in favor of conservation of any kind. Some of the most earnest advocates of national supervision were Southern men. The movement, like the cause of sanitation, has done a great deal of political good by inducing a national habit in looking at national questions.

"Conservation of the great national resources has never been and never will be a local question; and suspicion of national control in such a matter is itself suspicious."

The Phenix *Arizona Republican* (Rep.) rejoices over the outcome of the "brilliant fight for the people" led by Mr. Pinchot "against great odds and a splendidly organized force representing the special interests." It goes on to say:

"The latter won in the committee on resolutions, but it was defeated on the floor of the congress. It was hard there to offer any excuse in favor of monopoly. The friends of the people were wideawake and saw through the transparent argument against national control of the power sites and the forests."

No doubt there are two sides to this controversy, remarks the St. Louis *Republic* (Dem.), which thinks that, whether right or wrong, the decision of the majority to stand pat for national control of water-power has value, because—

"It gives general notice of the fact that there is a large and earnest body of men abroad and on guard who are determined that the resources of the country shall be managed for the benefit of the people of the country. They are opposed to water-power monopoly and opposed to any improvident granting of water-power privileges. It is complained that these men are retarding development in some States. If they are, they can not prevail very long, and in any event a little retardation now will be better than haste, with the resulting hopeless and permanent regret which some States already feel."

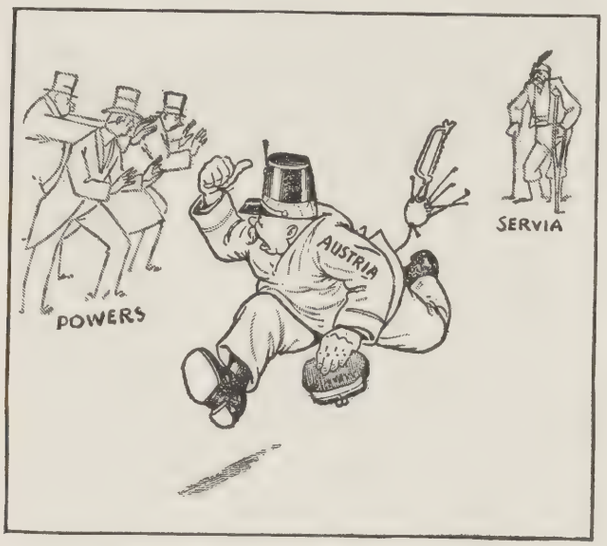
FOREIGN COMMENT

BALKAN INGRATITUDE TO RUSSIA

BITTER DISAPPOINTMENT is felt in Russia at the ingratitude of the Balkan nations, who seem to be taking their orders from Vienna after Russia saved them from Austrian invasion during the late unpleasantness. Russia has always regarded the Slav countries in the Balkans as foster-



RUSSIA'S VIEW OF AUSTRIA'S ACTIVITIES.
AUSTRIA—"Police! Police! A highwayman is chasing me!"
—*Novoye Vremya* (St. Petersburg).

children, saved from the Ottoman yoke by Russian arms, and to see these thankless offspring turn to Austria is a great grief to St. Petersburg. The Czar's Government feels as if the Balkan ground were slipping from under its feet, and is making great efforts to win it back. In a long editorial the semiofficial *Novoye Vremya* (St. Petersburg) reminds the Balkan Slavs of their not very remote past, and hints at the danger in the future if they continue to disregard the wishes of Russia:

"All the Balkan countries, not excepting Rumania and Greece, were not long ago provinces of the Ottoman Empire. They won political independence and exist as nations by the efforts and sacrifices of Russia, and, as long as they are not dead politically, can not forget to whom they owe their liberation. No matter how Russia's enemies try to pervert the truth, the Russian name will be sacred over the whole area of the Balkan Peninsula as long as the Serbs, Bulgarians, and Greeks are morally alive.

"The political influence of Russia in the Balkan Peninsula in 1913 has undoubtedly weakened. But not because Russia has forsaken the Balkan nations and considers her rôle in the Near East finished. Without the support of the Russian people, the Balkan War would have had a very different character. Bulgaria in the course of the war received from Russia clothing and footwear for her army, coal for the railroads, and large sums of money. Without the support of Russia, Bulgaria would have remained helpless at the critical moment. If, because of a shortage in fuel, the Bulgarian railroads should have ceased operations, the offensive campaign would have become impossible. The war would have been prolonged for an indefinite time, for the enemy could then have concentrated his forces. A short delay would have been enough to enable the Turks to fortify the Tchaldja positions and make them impregnable. The victorious beginning and termination of the first war were made possible, first of all, by Russia's support. Servia and Montenegro, if not for the help of Russia, would not now be dividing between themselves the Sanjak of Novi-Bazar.

"Austria concentrated against Servia her mobilized Army, but refrained from invading Servia exclusively for the reason that Russia had retained under colors 400,000 reservists. . . . Only Russia's readiness to protect Servia by force of arms averted an Austrian invasion of Servian territory. Further, only to Russia are the Serbs obliged for the extension of their border lines in the direction of Albania.

"All these disinterested acts of Russia for the benefit of Servia and Bulgaria were soon forgotten by their leaders. When the decisive moment came, neither the Bulgarian Czar nor the Servian King agreed to the unconditional arbitration of the Russian Emperor. Then followed the disintegration of the alliance, and the fratricidal war. The war was begun despite the efforts of Russian diplomacy, despite the hopes of the Russian people. At that tragic hour Russian diplomacy did not reveal either art or strength. But even then Russia did not turn away from the Balkans. Behind the Balkan politicians with their criminal mistakes were their nations, innocent and obedient to the commands of their masters. For their sake Russia continued her work, saving from the fire all that was possible.

"A great deal has been saved, more than was expected. All the Bulgarian territory to the very capital was occupied by the enemies' troops. Notwithstanding that, Bulgaria emerged from the trial . . . with an enlarged territory. Servia is still being protected by Russia against an Austrian invasion. With all that, it is impossible not to see that the leading political circles of the Balkan countries are hostile toward Russia, and inclined to enter into closer relations with Austria-Hungary. And not only inclined, but actually doing so.

"Russia has not forsaken the Balkan peoples, and continues to guard their interests. It is due solely to her efforts that each disputed question is solved, as far as possible, in accord with the needs of Bulgaria, Servia, Montenegro, and Greece, and against the claims of Austria. But after all it somehow happens that

RISKY THRONE OF THE BALKAN PEACE ANGEL.
—*Wahre Jacob* (Stuttgart).

the vision of the Balkan statesmen is turned with vast respect toward Vienna, and with total indifference toward St. Petersburg.

"Russian diplomacy warned the Bulgarian Government that an attack upon Servia and Greece would be ruinous to Bulgaria; Austro-Hungarian diplomacy assured the Bulgarian statesmen that at the decisive moment they would have the support of Austria. Relying upon the Austrian assurances, the Bulgarian

Government risked a new war and lost all that had been gained in the war with Turkey. It might have seemed that in their wrath they would have turned against Austria, who instigated Bulgaria to an insensate war with Servia. But in reality it appears that the Bulgarians attribute their failures, not to the blunders of their leaders, and not to the instigation of Austria, but to Russia, who tried hard to keep them from that false step."—*Translation made for* THE LITERARY DIGEST.

THE IRON HAND IN PEKING

VICTOR HUGO, in his "History of a Crime," described the autocratic act by which Napoleon III. imprisoned the deputies and established himself in the seat of supreme authority. Perhaps Hugo's novel has been circulating in China, or perhaps Yuan Shi-kai has been reading the life of Cromwell or the dispatches about Huerta. At any rate, the President-Dictator of China has recently "purged" his Parliament by expelling the three hundred members of the Kuo Ming Tang party. This party was formerly headed by Dr. Sun Yat-Sen, who led the recent Southern rebellion and is now in exile. At the time of the rebellion the party was required to dismiss its Southern leaders, but it kept up its fight in Parliament for the curtailment of Yuan's authority. The crisis came when the Kuo Ming Tang proposed the adoption of a constitution that would make the President entirely subordinate to the Parliament, and Yuan met the crisis by expelling the party. Disorders and disaffection are reported by cable as being very prevalent throughout the Republic, and executions in Peking are "numerous." Yuan's purge paves the way for a constitution more to his mind, and, in fact, as the Peking correspondent of the London *Times* says, "it was intended to get rid of that party's opposition to his demand for a constitution giving him comprehensive powers." The correspondent goes on to say that Yuan's demands are reasonable in view of the obvious incapacity of the Young China Parliament. Editorially *The Times* observes:

"Foreigners at Peking concur, it seems, in the opinion that, as matters stand, the best interests of the country will be served by concentration of power in the hands of the one man who has proved himself capable of evolving something like order out of the republican chaos; but they entertain grave misgivings, according to our correspondent, with regard to his means of obtaining it. The establishment of an autocratic régime, by summary measures of the kind which Yuan Shi-kai has adopted, is evidently fraught with danger to himself and to the State; but desperate diseases require desperate remedies. Admission of the necessity for one-man rule at the present juncture would appear to involve the necessity for heroic measures. The Kuo Ming Tang has given conclusive proof, during the past two years, that constitutional government in China is at present an unattainable ideal. Its constructive activities have achieved nothing beyond voting itself salaries on a liberal scale, while its destructive energies have been persistently directed to thwarting the head of the State and his advisers in every important measure of foreign and domestic policy. Its disappearance from the scene puts an end to any immediate prospect of representative institutions at Peking, but there is evidence and to spare, at the capital and in the provinces, that the Chinese people are weary of political adventures, and that Yuan Shi-kai's assertion of an effective dictatorship, however unconstitutional, will be generally approved."

THE FIRE-FIGHTER.

Yuan finds the crown the best extinguisher for revolutionary flames.

—*Tokyo Puck.*

TAKING ON THE PILOT.

—*National Review* (Shanghai).

The President of the Chinese Republic has been over and over again charged with an ambitious aim at reviving in himself the ancient imperial supremacy of an extinct dynasty. Of this the great London daily observes:

"In wiping out his political opponents Yuan Shi-kai, following the dynastic traditions of China's rulers, is at pains to explain and to prove to the nation that the Kuo Ming Tang has been guilty of the sin of rebellion and of organized conspiracy against the Government at Peking. The blow which has now fallen was by no means unexpected. In his inaugural address, delivered on October 10, . . . the President said certain things which, to a Chinese audience, pointed unmistakably to a conservative reaction on definite lines, and to forcible control of militant Young China. . . . . .

"Yuan Shi-kai believed then, and evidently believes now, in educating the people to some conception of the principles of self-government before giving them Parliamentary institutions. His political attitude is, in fact, strongly reminiscent of the statecraft of Prince Ito and the Elder Statesmen of Japan. In executive matters he has exprest with equal frankness his determination to put an end to 'the restrictions which had been placed on his authority,' following up this announcement by recommending to the Senate certain drastic amendments of the Provisional Statutes, with a view to relieving Parliament of further concern in the making of treaties, the declaration of war, or the appointment of Cabinet Ministers and Ambassadors. In a word, the President has boldly assumed the prerogatives which, from time immemorial, have been vested in the Throne."

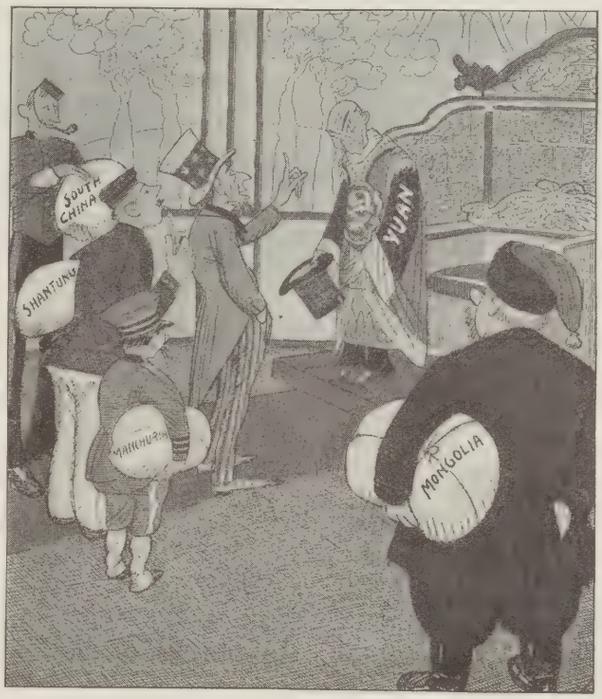
SWITZERLAND AS A WAR HOSPITAL

SWITZERLAND, the cradle of the Red Cross Society, now offers its services as a common hospital for the European nations in case of war. The land of William Tell is to be made sacred and inviolable, and the wounded soldier is to be within its border a patient for the most skilful and well-equipped surgeons and nurses in the world. Such at least is the proposal of the *Tagblatt* (Berne), which puts it in this way:

"It is supremely necessary that Switzerland be accorded neutrality and inviolability in case her neighbors go to war. But our country would also suffer irreparable loss if, while they respected our territorial rights, our neighbors should find it was to their own interest to prevent exportation of foodstuffs and coal. We should be in a sad plight if we were suddenly reduced to exist on our own native resources. It is certain that the Helvetian authorities should at once, in the time of peace, fix their attention on this subject."

The matter can only be arranged and the remedy for a possible contingency obtained by means of a treaty with some powerful neighbor, Germany for instance, and we read:

"It is quite reasonable to think that Switzerland should negotiate a treaty with one of the neighboring States which would guarantee the passage through its territories of goods required by Berne or Geneva. But even such a treaty with only one of the countries on her frontiers would not insure her security from hindrance or molestation from other Powers. . . . It is therefore an absolute necessity that Switzerland should come to a definite understanding with all the countries by which she is surrounded."



YUAN'S LESSON.

UNCLE SAM—"Waal, Yuan, if ye want to make yer new republic go, what I say is, pay off yer creditors!"

—*Wahre Jacob* (Stuttgart).

Switzerland, however, continues this paper, must not expect to get something for nothing, and the daily of the Swiss capital continues:

"In exchange for the protection and immunity which she requires, Switzerland must undertake in case of war to take charge of the wounded of both parties to a war. Payment for such service must be fixt at a definite rate. Switzerland would undertake to care for those wounded and return them to their country on their recovery. . . . The fear of being boycotted or cut off from the supplies she needs would at once be banished if Switzerland made herself the common ambulance hospital of Europe."

Indorsing this proposition the *Journal de Genève* says:

"The idea put forth by the *Tagblatt* is both original and interesting. Switzerland, the cradle of the Geneva Convention and the Red Cross Society, will feel honored on being accepted as the Good Samaritan of Europe, and will act as such under the auspices of all belligerant Powers. Of course, much material expenditure will be needed before this scheme can be realized. This will necessitate due preparation in time of peace. In any case war among her neighbors will demand great sacrifices on the part of Switzerland. We should be happy to think that the main part of these sacrifices would merely mean the care of the wounded, the relief of agony. To prepare for such a work and to carry it out would be in accord with our best traditions, and the rulers of our State could certainly count on the eager cooperation of the whole people."—*Translations made for* THE LITERARY DIGEST.

ARGENTINA'S ADMIRATION FOR THEODORE ROOSEVELT

ARGENTINA, the paradise of the toreador and the Spanish cowboy, can also admire the manly and literary qualities of the former ranchman who has stood at the head of affairs in a sister republic. Thus it is that Colonel Roosevelt, one of the conquerors of Spain in Cuba, a mighty hunter, rider, and traveler, is at present receiving a good deal of genuine homage from the press of Latin America. Argentina seems to regard him as a real and sympathetic friend. He is the object of gratitude as a President of the United States who won for the Government at Buenos Aires the admission to the Hague Conference, and we read in the *Prensa*, the great daily of that capital, the following glowing tribute to our countryman:

"This visit of the ex-President has antecedents which make it particularly pleasing and interesting to the nations for whose international position and rehabilitation he used his influence, urging that they be invited to participate in the Hague conferences. It was at The Hague that they figured for the first time in the concert of the great Powers as peoples with the rights of nations.

"If for nothing more than this, Mr. Roosevelt is entitled to the consideration and gratitude of these countries, elevated through his influence and intercession to the rank of recognized nations, but up to that time obstinately considered by the Powers as something less than colonies.

"He is also worthy of our acknowledgment and gratitude for the continental unity which he has cultivated, seeking to embody in Pan-American relations their economic and commercial conveniences from which the United States, the great Republic, proposes to derive solutions for the arduous problems which its growth as an industrial and financial power presents, and whose abundance of resources and energies makes necessary the expansion of its foreign trade.

"For this policy no other part of the world is more propitious and favorable than South America, with its vast and growing elements of progress and wealth, with indigenous and spontaneous industries to attract capital and labor, with consuming markets in rapid development; a field open to-day to the competition of the great nations who are seeking profitable outlets for their capital and merchandise.

"As among these, none is more apt or auspicious for this purpose than the Argentine Republic, as it alone has 40 per cent. of the foreign trade, as a whole, of the twenty Latin-American republics of the continent."

This paper dwells with particular emphasis on the ex-President's tact and geniality in modernizing and so far modifying the application of the Monroe Doctrine as to be "adapted to the requirements, interests, and reciprocity" of relations between the United States and Latin America. As the *Prensa* puts it:

"Mr. Roosevelt will now have the opportunity of seeing with his own eyes and corroborating by personal investigation his calculations on which he based and inspired his continental policy, and thus confirming the judgment which he may have formed at a distance through the information of others.

"Altho he does not bring official credentials, he brings them unofficially from the great people he has governed and with whom his words have such great influence. It is therefore fitting

that we should endeavor to make his stay agreeable and also to furnish him with everything that may serve him as an element of judgment and of appreciation of the degree of national development, of the live and powerful energies which give it an impulse, and the limitless sources of wealth, and almost all of these in an embryonic stage of exploitation and requiring capital to make them grow.

"The distinguished visitor, thus informed and imprest by the vigor of a great country as yet in formation, will be able to recognize with the sure eye of a statesman, developed in a country of growth similar to this, all its inborn power and vitality, and from his commanding position will be able to make the most efficacious propaganda ever made in favor of this Republic."

Great hopes are exprest that a reelection of the Colonel will still further strengthen the ties which bind the sister republics lying north and south of the Equator:

"If later in the varying course of political events in the United States, where his name has such great weight, he should again

UNCLE SAM—"I'll water these revolutionary mushrooms, and, when they are ripe, I'll gather them."

—*Hojos Selectas* (Barcelona).

be called to rule over its destinies, we should have in him a decided and enthusiastic promoter of this policy of international solidarity, insisted upon by him with the fervor of his convictions which marks all his campaigns.

"Meanwhile, this careful politician and great statesman will return our amiable hospitality by a series of lectures on certain interesting subjects. On these subjects his opinions and views will be good counsel, based on the experience and wisdom acquired in governing men and their interests."

The republics of South America are quite ready to sit at the feet of the Colonel and take the lessons of political wisdom which this soldier and statesman can so vigorously impart. As this paper declares:

"At the farewell banquet given him in New York he sketched his themes for the lectures he is to deliver here, and his discourse, freed from the enthusiasm of the moment and the occasion, states some of the evils from which we should try to preserve ourselves, so as not to fall into errors and indifference which complicate the problem of conservation and national welfare, a problem recognized by all political parties in their programs for the purification of politics and government.

"Mr. Roosevelt's visit is therefore welcome, and will be interesting and instructive and even of national importance."

THE VERDICT IN THE KRUPP SCANDAL

THE SECOND TRIAL in the case of the Krupp Manufacturing Company reveals the fact that the prevalence of graft and political corruption is not confined to one side of the Atlantic Ocean. In the first trial of the Krupp Company the charges were not plainly established. The second trial was brought about by a speech made in the Reichstag by Liebknecht, who appears to have taken the place of Bebel as leader of the Socialist party. This speech had an immediate effect. The Ministry, headed by the Chancellor, Mr. Bethmann-Hollweg, felt bound to start a second investigation, and it was soon found that Brandt and Eccius, Krupp officials dealing with the Government, were revealing to foreign governments the plans of the German War Office. This was especially the case with regard to Brandt, who had formerly been a subofficer, or non-commissioned officer, in the German service, and at the time of his trial was the Berlin agent of the Krupp firm. Mr. Eccius, one of the directors of the Krupp factory, was also involved, according to Liebknecht, in the same nefarious transactions which, as the Socialist leader declared, redounded to the "social, political, and financial profit" of the persons concerned. Brandt having been condemned to fine and imprisonment, and Eccius to pay a heavy fine, the German press think the character of German armament manufacturers and of the German Government has been vindicated before the world. As we read in the *Berliner Tageblatt:*

"A German law court has never been called upon to confront a more delicate case than that of the Krupp scandal. Military questions of the utmost importance were at stake. The reputation of a manufacturing firm of world-wide fame was at stake also. In this trial the judge was bound to consider not only the rights of a commercial firm, but also the reputation abroad of the German nation.

"The sentence was all the more commendable when we consider the attempts that had been made to influence in one or another direction the independence of the tribunal. The sentence which condemns Brandt to a fine which he is quite able to pay, and to a short imprisonment which he certainly can endure without much physical or mental inconvenience, is, in our opinion, good and reasonable. The world will now recognize the fact that Berlin, in the face of all the Krupps, maintains the purity of her judicial ermine."

But the Krupp house, which has done so much to enrich stockholders and enable nations of various grades of civilization to destroy each other with the finest of modern machinery, declares the *Vossische Zeitung* (Berlin), will suffer both in trade and reputation from this last dismal act of the Krupp scandal. To quote the words of this organ of the middle class in Berlin:

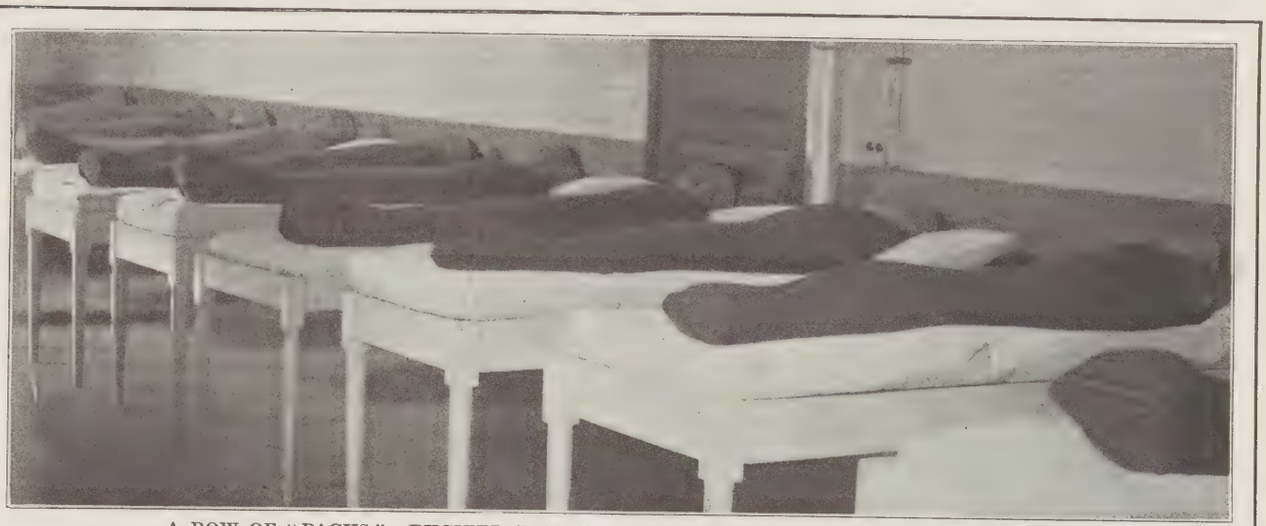
"Much damage will be done to the reputation of the Krupp firm by these recent revelations. The business honor as well as the actual worth of their industrial productions must suffer injury from the results of the Brandt trial. But, however grave have been the consequences of this case, the German Government stands helpless in facing them. One thing is certain. Justice in Germany has been vindicated, without respect to either private or public interests.

"The Krupp trial has not involved the reputation of either a high military officer or a Minister of the Government. The Ministry, with Bethmann-Hollweg at its head, can present itself to the Reichstag with clean hands. Pitiless has been its prosecution of the guilty ones. For the doings of the Krupp house the German Government accepts no responsibility."

The *Hamburger Nachrichten* and the *Frankfurter Zeitung*, both organs of more or less commercial character, agree in regard to the sentence passed on Brandt. The former says in a long editorial:

"The tragedy is closed. Four months' imprisonment for Maximilian Brandt, the Berlin Government superintendent of the Krupp house, and a fine of 12,000 marks for Director Eccius close the deal. . . . Germany stands vindicated before the nations."—*Translations made for* THE LITERARY DIGEST.

SCIENCE AND INVENTION



A ROW OF "PACKS." EXCITED PATIENTS BEING CALMED BY WATER-TREATMENT.

WATER TO QUENCH THE FIRES OF MANIA

HYDROTHERAPY, or water-cure, is being used with great success in the Government Hospital for the Insane, at Washington, in the treatment of mental disease. Its methods are described in *The Modern Hospital* (St. Louis, November), by Dr. Mary O'Malley, senior assistant physician to the hospital. This form of treatment, we are told by Dr. O'Malley, has been growing in favor in this country during the past ten or fifteen years, both in mental and other ailments, and all authorities now recognize that there is a rational basis for its employment. The action of water on the human economy is very wide in its scope, owing to its capacity for gradation. It can be used as a vapor, a liquid, or a solid; in applying heat and cold, as an unadulterated agent, or with medicinal properties in solution. It can be applied with various degrees of pressure in showers, sprays, etc. The writer goes on:

"The physical forces—cold, heat, and pressure—produce the physiologic action from which the resultants are received that combat disease. The physiologic action is produced through the skin, and the reaction of the blood-vessels and nerves in the skin to the physical forces applied by the water is an indication of the effect produced by it. The physiologic effects are eliminative, stimulative, sedative. . . . . .

"Hydrotherapy is capable of good, and it is also capable of doing harm, and all conditions must be taken into account, so that it may combine the greatest benefits with the least possible injury. Two of the greatest benefits consist essentially in securing quietness in the day and sleep at night. These are among the main objects to be obtained—to keep the patients quiet, and, what is most important, to maintain a hospital instead of an insane asylum. The sustaining of the general hospital tone in an institution of this class is of the greatest significance to the patients. We win thereby both our position and theirs in the estimation of the public."

The writer considers quieting the patients one of the most worthy objects of the whole treatment and one of its essential problems. To secure this, every means seems right which does not require too much compulsion, or where the force required does not outweigh the benefit. And to quiet a noisy patient, a hot or cold pack two or three times daily is better than to have the whole ward disturbed. One of the ways in which hydrotherapy is applied in cases of mental disease is the continuous bath, called by Dr. O'Malley, "the treatment *par excellence* for all cases of mental disorders." As we read:

"They have been used in this country for the past ten or twelve years, but have been in existence in Germany for at least a quarter of a century, being introduced by Kraepelin and others. To quote from Kraepelin, 'it has been proved by experience that the treatment of excited patients in the continuous bath possesses advantages over all other treatments.' . . . . . .

"A bathtub especially adapted for use with a constant inflow and outflow of water, regulated by a control table, and in which the patient may be suspended in a hammock in the water, is necessary for the successful continuous bath, the head being well supported above water by an air-pillow. All restraint or influence of this nature should be avoided in continuous baths; it is not advisable even to throw a sheet across the tub, but let the patients follow their inclinations—wander at will about the room. If they get out of the tub, they usually return to the bath after a chilly sensation is experienced from leaving the warm water. The duration of these baths depends to some degree on the patient's mental condition at the time. Sometimes one or two hours in the bath will relieve distressing symptoms, and, again, it will require hours or even days to subdue an excitement. The temperature of the water should at no time exceed 100° F., altho it is advisable, where it is possible to do so, to vary the temperature of the water between 95° and 98° F. Our bath mistress is always instructed under no conditions to allow the water to rise above 98° F. However, with the greatest precautions sometimes in a large institution, where there is such an irregular demand on the hot-water supply, the temperature of the water may rise to 100° F., or more. It is in these conditions that a serious depression or collapse may ensue.

"We obtain excellent results from the association of prolonged baths with repose in bed for the treatment of excited cases. In the general treatment the procedure is as follows: the patient remains in the bath during the period of excitement, be it one or several hours, and at times the bath is frequently extended throughout the day and occasionally into the night. As soon as quietness ensues she is placed in bed, where she stays as long as she remains quiet or until the return of the excitement. She is then placed again in the bath until the symptoms have disappeared. By this treatment we find complications are prevented, and the period of excitement is shortened and in many cases entirely suppressed; isolation and destruction to clothing and furniture are avoided and trauma lessened. . . . . .

"Next to the continuous baths, the cold pack is the most valuable remedy in cases of excitement. Its immediate effects are calming, and it is apparently the most practical method, as it is available at any and all times. . . . Tho the continuous bath is superior in many respects, yet it can not be well carried out extensively in large institutions. . . . In excited cases these

treatments should be administered for from forty-five to sixty minutes, and may be renewed three or four times daily. In this hospital patients are sometimes packed before breakfast, before the hydriatic department has opened for the day; the patient is again treated in the douche room during the morning hours; after her return to the ward, if she is very restless, she is again packed. These cases are often given a pack at bedtime, and it performs wonders during the night if a patient is restless or becomes excited."

Other applications of the water-cure in such cases are the hot pack, sitz baths, and needle douches. That the patients

"THE TREATMENT *PAR EXCELLENCE*"

For all cases of mental disorders is the "continuous bath."

do not object to the treatment and recognize its good effects is shown by the following anecdotes, quoted by Dr. O'Malley from a recent paper by Dr. Reid:

"In one of our wards at the present time is a woman who for many years has been treated for recurrent attacks of mania. For certain reasons it is necessary to keep her in a chronic ward at some distance from the hydrotherapy room. When her excitement becomes so intense that it is impossible to bring her to the hydrotherapy room for treatment, she asks permission to sit under the shower-bath for two hours daily. Notwithstanding the fact that her excitement and confusion become so great as to render her almost incapable of performing a rational act or uttering a coherent sentence, she makes her way to the bathroom and takes her treatment with great regularity. A retired army major who has recently recovered from an attack of mania told me that he had tried all possible combinations of the water treatment, and had worked out for himself quite an elaborate program, which he found of great benefit in lessening his excitement. This consisted in taking the hot box for fifteen minutes, cold pack for one hour, hot needle bath, followed by cold shower, and Scotch douche. He also found that sleep could be induced during his periods of greatest excitement by the use of a continuous bath at 99° F. for one hour."

SANITY AND INSANITY

BEFORE WE TALK about the recent increase of insanity, it will be well for us to inquire whether we have not been making our tests of sanity more rigid. If more students fail in the entrance examinations of a college than failed fifty years ago, it would be unsafe to conclude that boys are growing more stupid; the examinations may be harder. Dr. C. W. Saleeby, in an article entitled "Some Varieties of Sanity," contributed to *The Pall Mall Gazette* (London), raises this question, which he considers worthy of serious thought. The popular and legal view that insanity is a condition of the intellect or reason, Dr. Saleeby pronounces "pure nonsense." The intellect, he says, may be feeble, mediocre, acute, shallow, or profound, in sanity or insanity. The trouble lies quite otherwhere. The supposed irrationality of the lunatic is absolutely reasonable, but reasonable upon false premises; and they are false because his mind is diseased, in the realms of memory and emotion and control. He goes on:

"Once we realize that a criterion is not to be found in the realm of reason or logic, we find ourselves compelled to think, for quite a long time, before we can substitute new criteria or definitions. Gradually it becomes clear that, as real students of the mind have always known, there is no hard-and-fast line between sanity and insanity. Once start thinking about it, and you will find that the whole truth of the matter was humorously and finally exprest by Robert Louis Stevenson, when he said that 'Every man has a sane spot somewhere.' And when practical judgments for practical purposes are needed, we shall find ourselves, if free to do so, making our decisions, not upon any grounds of theory, but simply with the hope of doing the least harm and the most good in the circumstances.

"Before me is a volume on 'The Criminal Responsibility of the Insane,' published by Churchill in 1856, for the author, Dr. Caleb Williams, whose grandson I happen to be. Dr. Williams, a leading alienist of his day, and visiting physician to the Retreat at York, had done his best to save the lives of two lunatics who had committed murder. In one case Baron Bramwell dismissed his evidence with a series of contemptuous observations, based largely on the view that the Retreat was a humane institution, and that those connected with it had views of peculiar sentimentality; and the man was hanged. Any one reading the case and the subsequent comments of knowledge upon it may see that in our own day the murderer would have been sent to an asylum. No kind of opinion, in this country now, less than sixty years after, would call this man anything but a lunatic, tho Dr. Williams was looked upon as mad himself for maintaining that view then.

"In a word, we have immensely raised, in certain arbitrary directions, our standard of sanity; and when Sir James Crichton-Browne reminds us of the great increase in the number of certified lunatics in the last half-century, we must remember that, in that period, our notions of what constitutes sanity and insanity have been markedly changed—in some chance respects.

"Now, how much further are we to go in this process? Have we gone far enough, or too far, and how many directions are there? I suggest that until the most competent students of normal psychology, such as Dr. McDougall, and the most competent students of insanity, meet and try to teach each other all they know, from their very different points of view, we shall never reach wise conclusions for practise. Meanwhile no medical school in this country requires any study of normal psychology. But such conclusions are more urgently needed than ever in history. The number of the certainly insane is appalling; the number of those whose conduct is injurious to themselves and others—whatever unexamined terms you choose to apply to it—is enormous, and we eugenists have abundant evidence behind us when we declare the importance of the hereditary factor here."

The kind of stuff one reads on this topic, Dr. Saleeby says, belongs to the category of the stories we give to children, in which every one is either "good" or "bad." "Good" and "bad," "sane" and "insane," are terms which the author insists can not be applied as a whole to that infinite, sensitive complex which we call the "soul of man." We shall learn, he says, that there are as many kinds of soul and conduct, each

in part making for enhanced life and in part making for death, as there are faces in the human family. He concludes:

"I have known intimately two men of towering genius, Francis Galton and Francis Thompson—both idealists, both profoundly wise in apparently irreconcilable senses, both utterly unique, each offering the most extreme and violent contrast to the other in a dozen fundamentals of thought and conduct, each a glory and a treasure to his age and all ages to come. Once compare and contrast these two men, the statistician and the poet, realize that both were sane, if the word ever has any scintilla of meaning, and you will want what I want—an Encyclopedia of Sanity, with 'clinical lectures' on its varieties, its etiology, its differential diagnosis, symptoms, prognosis, and treatment. For this I will gladly forego the reading of any further compilations on insanity for the next decade."

STARVATION AND EDUCATION

MORE THAN ONE struggling author has tried to "cultivate literature on a little oatmeal," but the successful ones were not children. The little ones require plenty of food, especially when, in addition to their physical growth, we are trying to shape and develop their brains. Observation seems to show that in the lack of proper nutrition we have a serious enemy of primary education. In other words, pupils in some public schools can not study properly, simply because they do not have enough to eat. This is shown strikingly by an experiment tried in the Wood School at Philadelphia by Dr. Walter W. Roach and reported by him in *School Progress* (Philadelphia). In this school there were numerous physically deficient children who were also backward in their studies. Proper feeding for only four weeks increased the total weight of 113 children by over 250 pounds and improved their standing in their classes proportionately. Writes Dr. Roach:

"This school draws its pupils from a neighborhood inhabited by poor families, largely of Polish, Italian, and mixed nationalities, and many hard-working Americans. The children are interesting, but an educational problem, because many are undernourished. They have all been carefully weighed, measured, and physically examined. More than one hundred, about one-third of the school, need better nourishment in order to cope with the school program.

"Many of these children were found to be coming to school with insufficient breakfasts, and some with no breakfast at all. The clinic was organized May 18, and suspended for the summer vacation at the close of the regular school sessions, June 13, so that the nutriment was administered during a period of four school weeks of five days each. . . . . .

"The 'Food Clinic' was authorized by the District Superintendent and the school principal, and the food has been served under the direction of the school medical inspector. The children were weighed each Friday, and careful notes made concerning their school progress.

"Through the generosity of five large Philadelphia milk firms, each donating milk; a prominent firm donating cereal food (oats, corn, rice, wheat, etc.), for the clinic; the Home and School League cooperating with the serving equipment, and a liberal gentleman covering the cost of preparing the food, these children were given a nourishing ration of properly cooked cereal, and milk, each morning at recess period (10.30 A.M.).

"The form of the cereal was changed each day—corn mush one morning, oatmeal the next; rice next day, with zwieback and hot milk the next, thus interesting them in a change every morning. Fifty quarts of milk were consumed each day by 113 children, each child receiving nearly a pint as its quota. On Mondays, rice was prepared by boiling. For each of the other days the cereal was cooked over night in a fireless cooker, securing all the benefits of the slow application of heat with thorough chemical change.

"On the first day or two many of the children, unaccustomed to cereal and milk, refused to eat. Some were shy and timid, but by degrees, with the aid of the encouragement of their class teachers, they began to eat and enjoy the nutrient."

The fact that these children gained in weight a certain number of ounces or pounds from a given amount of cereal and milk in four weeks Dr. Roach does not regard as the essential point. They all improved in color, showing that their blood had become richer; they gained in spirits and activity; were less nervous, not so irritable, and carried the atmosphere of cordiality from the luncheon tables back into their classrooms. To continue:

"They were able to study better, as shown by a comparison of their work before the clinic began, and week by week as it progressed. For instance, comparing the whole school averages in spelling and arithmetic for the week ending May 16, before the clinic began, and the week of June 13, with the averages of the groups of those children of the second, third, and fourth grades and the special classes attending the clinic, it was shown in every comparison that the improvement was most marked in the work of the children receiving the nutrient. . . . . .

FEEDING THE BRAIN THROUGH THE BODY.

Proper feeding not only increased the total weight of 113 children 250 pounds in four weeks, but improved their standing in their classes proportionately, and made them less nervous and irritable.

"Unknown to the grade teachers, the weekly report-sheets concerning the children of each second-, third-, and fourth-grade class, and the special classes attending this food clinic, were carefully noted. The result of these scorings for the week preceding attendance at the clinic and the fourth week of the feeding was as follows:

	Spelling		Arithmetic	
Whole School	76.4	82.3	69.0	72.0
2d Grades	71.0	87.0	59.6	71.3
3d Grades	83.6	89.6	61.1	81.4
4th Grades	67.3	82.9	58.0	68.1
Special Classes	57.7	78.2	73.0	79.0

"This would look as tho it is an economic question in education, aside from the physical benefit to the child, to administer the proper nutrient to the school children at the time they need it, *i.e.*, about the middle of the morning session. This clinic will be continued during the coming school year.

"The energy which Nature stores up in the grains of wheat,

oats, corn, rice, and other cereals (made available by proper cooking), together with the energy stored in the milk of the cow, appears to be our logical source of supply, and parents will do well to note this fact in the feeding of their children at home."

MENTAL AND MORAL EFFECT OF LIGHT

THAT the right or wrong lighting of our homes, offices, and shops may have an important bearing on our lives is argued by Dr. F. Park Lewis in an article on "The Psychic Values of Light, Shade, Form, and Color," contributed to the *Transactions* of the Illuminating Engineering Society. The mental and moral effect of light and shade, Dr. Lewis believes, can not be ignored. Excessive lighting brings out sordid details with unpleasant glare which is as bad in effect as insufficient light. The beauty of light sources should not be forgotten. Good lights for the poor will make the home beautiful. He urges collaboration on the part of illuminating engineers, architects, school men, ophthalmologists, and others to secure broader instruction on the care of the eyes. Here is a tale that illustrates the writer's position on the utility of art:

"In a mining district within an hour's journey from Pittsburg, a few years ago, the homes of the miners were sordid and unkempt, the streets being littered and the back yards repositories for all sorts of rubbish. The corporation in charge of the community introduced in the management of the plant improvements in accordance with the most advanced methods, and among other measures prizes were offered for the best garden-plots to be found about the homes of the workmen. This has resulted in an eager and intelligent competition, and in place of an offense to the eye the town has become a beauty-spot. Fences are lined with rows of hollyhocks and golden rod, the walks are bordered by attractive arrangements of garden flowers beautifully kept; vegetable gardens have become productive and in some instances have added to the annual income of the miners as much as $100. Miners working in dark coal-shafts, straining their eyes to see and having them dazzled by millions of reflections from the shiny surfaces, suffer from an affection known as miners' nystagmus, the rapid oscillation of the eyes. . . . I am told that the refreshing change from the gloom of the mine to the soft colors of the garden in which they work has already exercised a most beneficial influence upon this serious affection. In its moral effect in giving an appreciation of the values of better civic conditions in developing a civic spirit, interest has been aroused; they have not only made gardens; they have made men and citizens.

"The mental and moral effect of light and shadow, the difference produced upon our state of mind by the glaring brilliancy of an unshaded Welsbach light, especially an old one, or the soft glow of an even yellow illumination is felt by every one, altho by no means always recognized as a cause of nervous irritation. In some of the most persistent cases of eyestrain, after the ophthalmologist has employed the highest degree of skill in determining the correct combination of lenses to be employed, it will be found that the discomfort is due to a badly placed lamp, to the improper use or absence of shades, to an insufficiency or an excess of light, to some specular reflection, or other local fault in the illumination about which he has not been advised.

"There is probably no one simple element that more deeply concerns the welfare of all people than correct lighting.

"In the studies in efficiency in lighting we seem to have forgotten the beauty of light itself. No mere luminosity will replace a visible light source. By grouping lights of low power and properly planning them—using translucent, frosted, or prismatic globes, effects of great beauty may be secured. It would seem unnecessary to put emphasis too strongly on the superiority of indirect illumination. . . . . .

"When a man comes home after a hard day's work, stumbles through a dark hallway and finds the living-room dimly lighted by an unshaded lamp with a smoky chimney, glaring, yet insufficient, bringing out all of the misery without softening any of its harsher outlines, is it to be wondered that he makes his stay as short as possible, seeking in preference the brightly lighted saloon where appeal is made to his eyes as well as to his appetite? Until we make the homes of the poor fit habitations for them to live in we can not expect them to spend much time in them, nor can we expect to make good citizens out of them. How can we hope for civic pride or civic righteousness to come out of an unlovely, dirty tenement-house? A stream will not rise higher than its source, and the source is the home and the family.

"One of the easiest, one of the least expensive methods of making the poor home livable would be to introduce good lights in it. Could a more effective or a more helpful propaganda be inaugurated than to teach the poor to light their homes adequately, beautifully, and cheaply? This could be done with a minimum of effort, for many of the homes are lighted imperfectly, in an ugly way, and at an extravagant cost. It should be one of the first steps in the new movement for the conservation of vision. . . . . .

"In our auditoriums the lights, to paraphrase the meaning of the apt French expression, 'jump to the eye.' In unnumbered public schools to-day, in which artificial lights must be used, the children are facing flickering gas-lights in a vain attempt to see the marks on shiny blackboards. The school authorities have not yet learned that dark red and green walls absorb the light for which the children are suffering.

"The time has fully arrived when an authoritative body composed of architects, of illuminating engineers, of school-men, of ophthalmologists and of all others who have to do with the management of light or the use of the eyes should collaborate in the development of authoritative plans for the education of the public on sight protection. The American Medical Association is now forming a sub-committee from the medical societies in every State in the Union on the conservation of vision. The National Education Association is deeply interested and is now ready to support any proper effort for broader instruction on the care of the eyes."

IS MOONLIGHT HARMFUL?

STUBBORN BELIEVERS in old superstitions will rejoice at the experiments, reported from Australia, which are said to show that moonlight favors decay. Moonbeams have long been "in bad odor." Even to-day many citizens, otherwise intelligent, object to sleeping in the moonlight, fearing that some harm may come to them. Our very word "lunacy" is a relic of the belief that moonlight causes insanity. The Australian experimenter suggests that the fact that the light of the moon is largely "polarized," or caused to vibrate in one plane, may explain why it hastens decay. Two pertinent questions might be "*Does* it hasten decay?" and "Why should polarized light produce this effect any more than ordinary light?" Be this as it may, so serious a journal as *The Lancet* (London, October 25) deems the matter worth a paragraph, which we reproduce as follows:

"It is an old tradition that to sleep in the moon's rays was a dangerous proceeding, and there is such a thing as 'moonblink,' a temporary blindness said to be due to sleeping in the moonlight of tropical climates, while some observers have reported a devitalizing action of the moon's radiations on vegetable life. There is even quoted a death the cause of which was officially stated to be exposure to moonlight. Apparently the food most seriously affected by the moon's radiations is fish, and seemingly trustworthy statements have been made as to the ill-effects produced in persons who had partaken of fish which had been freely exposed to moonlight. Mr. E. G. Bryant, B.A., B.Sc., writing in a recent number of *The Chemical News* from Port Elizabeth, South Africa, suggests that a possible explanation of these phenomena, assuming them to be true, might lie in the well-known fact that the light of the moon, being reflected light, is more or less polarized, and possibly polarized light may exert a peculiar chemical action. Subsequently, polarized light was obtained from a powerful metallic filament lamp, the light being polarized by means of a pile of sheets of plate glass backed with silver and placed at the correct angle. The experiments showed certain marked results when fish was submitted to the polarized light obtained in this way, altho it is probable that stronger effects would be obtained with a more powerful source of light. When two slices cut from the same fish were hung, one in the direct light and the other in the polarized beam, the latter invariably began to decompose before the former, tho the temperature of the polarized beam was several degrees lower than

the direct light. There were indications also in the case of other perishable food-substances of a tendency to decompose when they were bombarded with polarized light. The question is worth further investigation, and there should be little difficulty in pursuing such a line of research. There are so many influences ascribed to moonlight that it would be of obvious interest to have some scientific evidence tracing a definite action to the rays. It would be curious to find that such terms of obloquy as 'moonstruck,' 'moony,' and 'moonshine' were, after all, not entirely empirical."

UNCLE SAM ON RAW FOOD

THE UNITED STATES GOVERNMENT has gone on record, through its Department of Agriculture, against the system of diet that rejects all cooked food. *The Medical Record* (New York, September 27) seems just a bit impatient with the uncooked-foodists in the following editorial on the subject:

"Of all the numerous diet systems, the advocates of which plague the average citizen with their vociferous claims and persistent advertising, one of the most illogical, inconsistent, and dangerous to health is the raw-food faddism. The high priests of that cult and of others nearly as bad, whether fakers or just cranks, have been making of themselves such nuisances that people all over the country have written to the Agricultural Department calling its attention to the misstatements in the advertising literature and seeking protection from the annoyance. In response to their requests the specialists in the Department have issued a statement warning people against adopting the dietary recommendations of persons having no scientific standing. In most of the arguments of these self-styled 'experts,' the statement says, there is hardly a shadow of reason, tho they may seem plausible. An example is cited of a raw-fooder who fed rabbits on cooked food exclusively and found they did not thrive, and therefore, with admirable logic, offered the conclusion that human beings should confine themselves to raw food. Not only is the fact ignored that civilized man for ages has cooked the greater part of his food and that his palate and his digestion will accept only a few raw things, but the danger in raw foods of infection with pathogenic microorganisms and infestation with intestinal parasites is never mentioned, probably because unknown to these faddists.

"Another assertion made by them—for of course, like most diet cranks, they abhor meat-eating, corpse-eating as they call it—is that meat is filled with bacteria. But it is tiresome to catalog the absurdities of these diet cranks who pick up a few isolated facts or bizarre notions and attempt to base on them a system of living adapted to all sorts and conditions of men. The Agricultural Department does well to warn the people against all these fantastic diet systems."

THE "LAWN-MOWER FOR THE BEARD."

A LAWN-MOWER FOR THE BEARD—A miniature mowing-machine, for shaving, run by electric power, will soon be put on the market by a Chicago firm, we are informed by *The Electrical World* (New York, November 8):

"It consists of a safety-razor connected to a motor by means of a flexible shaft, the blade being actuated in such a way as to cut the beard by impact or blows. The blades, therefore, do not need to be so sharp as in hand-shaving. No soap is necessary, wetting of the skin being sufficient, and a clean shave can be accomplished, it is declared, in a very short time. The after-effects are described as being those following a mild massage. A plug is provided for attaching the razor to any lamp-socket."

MORE POISON IN NEWSPAPER OFFICES

THE SINS of the modern daily press are already plentifully set forth by divers moralists in many places. One of them, however, these gentlemen seem to have missed, and the curious thing about it is that it would affect a blind man quite as quickly as one with perfect vision, and an illiterate as well as a reader. The trouble in question is caused in the printer's trade by poisonous substances used in connection with it. These have been making themselves especially obnoxious in Germany, as appears from an editorial on "The Printing Industry and Skin Disease," in *The Journal of the American Medical Association* (Chicago, November 15), parts of which we quote below. During the past year, the writer tells us, an exceptionally large number of cases of disease of the skin have occurred among printers in Berlin. At the outset the skin was inflamed, unduly warm to the touch, and exhibited incipient blisters. Later exfoliation and other signs of artificially produced eczemas put in an appearance, giving evidence of localized occupational disease. The testimony of the workmen indicated that these manifestations had their beginnings with the introduction of trade substitutes for the oil of turpentine employed to wash and clean type. We read further:

"The newer products which have been employed to replace the oil of turpentine for removing the ink from printers' forms include benzin, lye, petroleum, and certain kinds of pine-oil. All of these are either of themselves obviously injurious to the skin, as is well known to be the case with strong lye, or they frequently contain irritating adulterants or impurities which are present owing to the imperfect rectification in the processes of manufacture. In one Berlin printing-office, in which nearly half of the workmen who had to deal with the type forms showed symptoms of skin disease, the diverse cleaning fluids used were in every case objectionable. . . . Nearly all of the substitutes for oil of turpentine contain inferior benzin, which is decidedly toxic. Benzin products are said to be finding their way into cheaper grades of paints, and call for scrutiny from the point of view of danger to those who have to handle them. In the same Berlin printing-office a turpentine substitute used under the name of Fütterin was found to be a strongly alkaline, caustic fluid. Like ordinary pine-oils such stuff ought to be excluded entirely. Out of thirty-seven samples of these cleaning materials examined by Zellner and Wolff in Berlin, thirty-two, or 87 per cent., failed to meet a reasonable technical requirement for freedom from ingredients like benzin, lye, etc., unquestionably harmful to the skin. The health of the employees coming into contact with these objectionable fluids has made an immediate return to the utilization of high grades of oil of turpentine an imperative necessity. . . . . .

"In insisting on the exclusion of objectionable benzin from processes in which the skin is brought into contact with it, reference may be made to a few illustrative instances of skin damage caused by this liquid. Dr. Oestreicher, of Berlin, has seen eczemas induced by wearing gloves cleaned with benzin. He states that harmful effects have further been produced by cleansing the skin with benzin prior to operative procedures and by removing the remnants of skin plasters and salves by the application of the same organic solvent.

"The irritant action of the volatile oils, among which the turpentine-oil group is included, is presumably attributable to their volatility. They may cause redness, itching, and warmth owing to a local dilatation of the vessels. . . . Turpentine-oil is far less irritant than many of the more powerful ones."

LETTERS AND ART

A HINDU VIEW OF TAGORE

THE NEW NOBEL PRIZEMAN, it appears, has long been famous in India, both for his poetry and his beauty. The portraits that have appeared in the newspapers since the appointment have rather puzzled the beholder, because they have consisted mainly of peering eyes and flowing hair and beard. Basanta Koomar Roy, evidently another Bengali, writes in *The Open Court* (Chicago) about "his bright, black, magnetic eyes, chiseled nose, firm but gentle chin, delicate sensitive hands, his sweet voice, pleasant smile, keen sense of humor, and his innate refinement." All these are calculated to "make him a man of rare and charming personality." The welcome that the West has given this Eastern poet is no uncertain tribute. The writer in *The Open Court* records that at a recent banquet given Tagore in London the British literary men were lavish in showing admiration of a very unusual degree, "some even, in Hindu manner, touched his feet by way of salutation; others were disappointed in not being able to do so." Mr. W. B. Yeats is quoted as saying: "I know of no man in my time who has done anything in the English language to equal these lyrics." Family tradition, adds the Bengali writer, is but continued in the career of the poet:

"He was born in the illustrious Thakur, angliciced into Tagore, family which has loomed high in the horizon of the intellectual and social life of India ever since the tenth century. Among the Tagores are counted men like Prosonno Koomar Tagore, a landowner, a lawyer of great reputation, and editor, a writer on legal and educational subjects, founder and president of the British India Association; Raja Sir Sourindra Mohun Tagore, undoubtedly one of the highest musical authorities in India, the founder of the Bengal Music School and the Bengal Academy of Music, and the author of many volumes on Hindu music and musical instruments; Mr. Abanindranath Tagore, a distinguished painter and an undisputed leader in the Hindu art revival; Maharaja Ramanath Tagore, brother of our poet's grandfather, a political leader and writer; Dwarakanath Tagore, the grandfather of the poet, a landlord, a founder of the Landholders' Society, a philanthropist, a social reformer, preeminently an agitator against the suttee, an ardent worker for the 'identification of the feelings and interests of the Indians with their government,' anxious to 'strengthen the bond which unites India with Great Britain.'

Copyrighted by Frank Wolcott, Chicago.

THE MANY-SIDED RABINDRANATH TAGORE.

The new Nobel prizeman is described as "a profound philosopher, a spiritual and patriotic leader, an historical investigator, a singer and composer, an able editor, a far-sighted educator, and a kind and considerate administrator of his 'Zamindary' estate." His father was one of India's spiritual leaders and intellectual giants.

"Debendranath Tagore, the father of the poet, was not a Maharaja (great king). He did not care to be decorated that way. Instead he was decorated by the people with the title of Maharsi (great sage). He was one of India's greatest spiritual leaders and intellectual giants. His godliness was contagious. Once a skeptic friend of his came to him and asked: 'You talk of God, ever and again of God! What proof is there that there is a God at all?' Maharsi pointed to a light and asked his friend, 'Do you know what that is?' 'Light,' was the reply. 'How do you know that there is a light there?' 'I see it; it is there, and it needs no proof; it is self-evident.' 'So is the existence of God,' replied Maharsi, 'I see him within me and without me, in everything and through everything, and it needs no proof, it is self-evident.'"

English appears to have been acquired by Tagore in his childhood. At seventeen he first visited Europe, and his letters from there "show his command over the Bengali language, his breadth of vision and keen sociological insight." His English prose style has few equals in India. We read further:

"Mr. Tagore's versatility is astonishing. To name a few of his activities and accomplishments: he is a profound philosopher, a spiritual and patriotic leader, a historical investigator, a singer and composer, an able editor (having edited four different magazines, *Sadhana*, *Bangadarsan*, *Bharati*, and *Tattwabodhini*), a far-sighted educator, and a kind and considerate administrator of his vast 'Zamindary' estate. But he is, above all, the poet

—the poet of love. Love flows from his heart, mind, and soul in a continuous stream, assuming all different forms in its windings from the gross to the spiritual, from the known to the unknown, from the finite to the infinite. He interprets love in all its multiform expressions—the love of mother, of son, husband, wife, lover, beloved, patriot, of the Dionysian, nature-drunk, and of the God-frenzied. Each and every one of these he portrays with his characteristic softness of touch that recalls the lyrics of Théophile Gautier, and with the exquisite felicity of Shelley and Keats. His verses carry within them an emotion which thrills, enraptures, and causes every fiber of a human being to ache with joy that almost stops the throbbing of the heart and draws tears to the eyes.

"Expression of love is so natural to him because of the fact that he has, like many other poets, passed through all the phases of love and life. Like the prose-poet Tolstoy, he has traveled from the worship of the senses to the quiet of sainthood. He understands the thrills of love, the romantic passion, the gloom of disappointment, the depth of despair, the profundity of quiet, and the ecstatic realization of 'being, intelligence, and bliss' (*sat, chit, anandam*).

"When the surging tide of youth overtook the young poet quite unawares, he, in the onrush, could see only love and romance. The same nature, the same people, the same life; still everything looked different to him. He was at a loss to know whether it was himself or the world that had changed; and it did not take him long to discover that as he changed first, so the world changed to keep in touch with him. Love was no longer a thing far off—something to be imbibed from without; but instead, it became a reality to be drawn out from within. It was no longer a fancy, but a thing tangible, that first overpowered him. Thus for a time he became an epicure and bon-vivant; fashionable dress—the finest of silk robes—delicious dishes, ardent romances, love lyrics, literary production, constituted his interests, tho there was always present in his subconscious self a strong undercurrent of spirituality which he inherited from his father."

LOVE IN MODERN NOVELS

THE NOVELIST of our grandfathers' day wrote of love as a lover might; the novelist of our day writes of it as a scientist would discuss a strange animal or a new disease. Eighty years ago, points out an editorial writer in the London *Times*, the novel, like the drama in the reign of Queen Elizabeth, was too much concerned with love, "and it taught foolish girls to think of nothing but love and, worse still, of lovers." Jane Austen, in "Northanger Abbey," laughs at such readers as well as the novels they devour, and in her other books is a little shy of the whole business. In this *The Times* thinks she was in advance of her age, for "the novel of the present, if it has any pretensions to be good, is more curious about love than absorbed in it." We read:

"That, no doubt, is the main reason why we are less afraid of novels than our grandfathers were. They may be foolish or dull or even unpleasant, but at their worst they are seldom contagiously passionate. They do not pretend that love is the only thing in life, even when they display a prurient curiosity about it. Indeed they are often more eager to rob it of all romance than to make out that there is nothing else romantic.

"In this respect bad novels as well as good ones illustrate a change that has come over the novel generally, a change by reason of which it has gained credit and freed itself from the old reproach of frivolity. The novelist of the romantic past was, or appeared to be, himself possest by the passions that he described. He wrote of love like a lover, and, unless he was a great writer, he seemed to be a fool rushing in where poets might fear to tread. But the modern novelist writes as if he were more curious about the passions than possest by them, and, even if he is a fool, curiosity is his pose rather than ecstasy. He does not profess to be one who has learned in suffering what he teaches in inadequate prose, but rather a disinterested scientific observer who tells us what he has noticed about other men and women; and his plot is contrived rather to suggest criticism than to sustain excitement.

"Dickens, perhaps, was the first in England to take the critical attitude, but he was critical of institutions rather than of human nature. Our best novelists now, such as Mr. Wells or Mr. Bennett, are critical of human nature as well. Their object, when they write about love, is not to make the reader feel as if he were in love himself; and they do not assume, like the older novelists, that he knows everything about love that there is to be known. To them love is a strange and novel phenomenon to be observed and discust, not a delightful experience to be communicated to the reader. And their heroines are often ordinary young women whom they do nothing to make as wonderful to us as they are to the heroes. Rather they are interested in the fact that the heroes find them so wonderful; and it is this kind of scientific interest that they express and emphasize in their plot."

This scientific interest gives to the novel, as a form of art, asserts this writer, a peculiar quality of its own and a justification which it did not formerly possess. Further,

"One feels that the older novels, when they try to express passion, would be poetry if they could; for their medium, as a means of expressing passion, is manifestly inferior to verse. But for the expression of scientific curiosity prose is evidently the only possible medium. One may say, dogmatically, that works of art can not be made out of scientific curiosity; but it is safest not to lay down the law until all the facts are known, and at present the facts about the modern novel are not known. It is only in the making, and we should see what comes of it before we condemn it. Scientific curiosity is at any rate a most valuable ingredient in works of art, for without it they fall into sentimental prettiness and become more and more imitative of the art of the past. The novel, now because of its scientific curiosity, is at least not imitative. It is making new forms for itself as it is discovering new subject-matter. It may be that no English novel of our time is a masterpiece, that the best of them are experimental; but in every art periods of experiment come before periods of great achievement, and they are fruitful only when they are discoveries of new subject-matter. At any rate, our novelists now do not assume that everything is known about human nature that is to be known; and they do not merely spin ingenious plots out of past discoveries. Their art may be a lower art than poetry, but it is one that will perhaps provide new riches for the poetry of the future. It may not be all pure art and may lack much of the beauty of pure art. But we can not go on reproducing the beauty of the past; and, if we have the misfortune to live in a time when the older art is exhausted, we can at least do our best to prepare for the art of the future."

HOW TO TELL GOOD SONGS FROM BAD

WHISTLER, it was, who believed that nearly every American drawing-room had some bad ornament on the mantelpiece that "gave the whole show away." Whatever else was there to prove the fine taste of the possessor, this little telltale bit of bric-a-brac contradicted it. Apparently there is some such flaw in everybody's armor. "Men and women ashamed to be caught reading an illiterate novelette or examining a crude and vulgar oil-painting," says Gerald Cumberland in *T. P.'s Weekly* (London), "unblushingly proclaim their liking for treacly messes that go by the name of 'drawing-room ballads,' or for piano valses that are sterile in thought and unctuous in melody." Since this is so, Mr. Cumberland doesn't leave us, like Whistler, to our fate, but proceeds to lighten our darkness as to what are the particular signs by means of which a vicious and vulgar song may be recognized:

"What distinguishes a great song from one that is merely good? How may a fine song be known? These questions are often asked; it is my intention to answer them in the present article. A fine song is almost inevitably associated with fine words. There are, apparently, exceptions in the music of Mozart, of Handel, and of many more so-called 'classical' composers, but there are very few exceptions among more modern musicians. Mozart's Arias, merely as music, are great in spite of the words to which the music is wedded; but one might quite legitimately withhold the word 'great' if the Arias be considered as songs. The words, in many cases, are rankly stupid, and as a song is neither words alone nor music alone, but a welding of both, a song obviously can not be regarded as

fine if the verses are beneath contempt. In every song, then, the poetry is of great and fundamental importance. If one comes across (as, of course, one frequently does) royalty ballads with meaningless words, one may quite safely dismiss the music as beneath contempt, no matter how 'pretty' the melody may be nor how seductive the harmony.

"But it frequently happens that noble verses are set to ignoble or stupid music. And here we come to the heart of the whole matter. The music of all good songs expresses not only the prevailing mood of the poetry, but it is an exact counterpart of that poetry in accent, in movement, in color, and in meaning. The musical phrase must fit the literary phrase with inevitable exactitude; its 'curve' must correspond with that of the literary sentence. In many tawdry songs, each musical phrase corresponds with each *line* of verse, no matter whether the conclusion of the line completes the sense or not; the result, of course, is sheer ineptitude and nonsense. Take, as an example, a verse from Synge's 'To the Oaks of Glencree':

> My arms are round you, and I lean
> Against you, while the lark
> Sings over us, and golden lights, and green
> Shadows are on your bark.

"The prosperous balladmonger would invent musical phrases for each separate line, punctuating it thus:

> My arms are round you and I lean.
> Against you while the lark.
> Sings over us and golden lights and green.
> Shadows are on your bark.

"It will be seen that, by adopting this method, the composer does not merely disturb the meaning of the words—he destroys it. Yet quite half the most popular songs of the last fifty years have been written on this principle. Needless to say, they are not songs at all; they are not even music; they are merely fatuous noise. That, then, is the prime essential of a good song: that the music shall express the words not only in mood, but in meaning also. If a song fail in this, it fails in everything."

Yet a song may accomplish all this and fall short of greatness. There should be a feeling that in one way, and one way only, can the words be exprest in music. Schubert's "Erl King" is cited as a case in point. Furthermore:

"The great song is always strange; its beauty is new; it comes to the ear as a surprize. There is not a familiar cadence in it; the musical phrase, once begun, is always completed unexpectedly; one's immediate anticipations are always being falsified. When a song repeatedly confirms the ear's prophecy, one may be sure that, whatever other qualities the music may possess, it certainly has nothing of that strangeness which is invariably associated with great work. The royalty ballad beloved of suburbia is full of musical *clichés;* the great song contains not a single one.

"The amateur in music is almost invariably afraid of big names. If he sees a song bearing the name of Schumann, or Schubert, or Brahms, his mind is at once made up, and he tells himself that the work must of necessity be great. But nothing could be further from the truth. Schubert wrote an immense number of worthless songs, and both Schumann and Brahms made errors of judgment and betrayed flagging inspiration. It is very easy to have too much reverence for genius, for reverence is apt to stultify the critical faculty and to compel it to accept what, under normal conditions, it would unhesitatingly reject. No lover of music should give his allegiance to any song until he can supply ample justification for his allegiance. Let him subject each song he hears or learns to the closest scrutiny, and reject it if it fail to fulfil the conditions of great music. An hour spent in a critical examination of a volume of Schubert will teach him far more than a wholesale acceptance of that composer's music.

"Some of Schubert's faults are sufficiently obvious. He will take a poem, for example, write a tune with pianoforte accompaniment for the first verse, and repeat precisely the same tune and accompaniment for each of the succeeding verses, no matter whether they express their meaning or not. I give his 'The Fisher' as an example. Here we have a poem of Goethe's consisting of four verses, each of which is different in meaning, and, to some extent, in sentiment from the remaining three. But does Schubert make any attempt to express this difference in his music? He does not. The music for all the four verses is, note for note, the same. Obviously, then, it is not a great song; nay, it may even be said to be a bad one, in so far as the music fails to interpret the words. Do I oppose my own judgment to that of Schubert? Most certainly I do. And if any amateur fails to do likewise he will pass his years making no intellectual progress, and cultivating a spiritual sloth and cowardice that will ruin the finest part of his nature. . . . . .

"It may be said, without reservation, that those who wish to form a sound musical taste would do well to ignore the typical drawing-room ballad altogether. When they can trust their own judgment they may safely make their own choice. But the great song-writers are just as attractive even to the untrained musician as the royalty ballad composers."

OUR SECOND-HAND ART

THE SAD DECLINE of fame once thought assured has just been witnessed in the case of one of the most prominent of the "precursors"—those artists of our mid-Victorian period who chose to adopt Europe. Hiram Powers was perhaps the foremost American sculptor of his day who elected to live in Rome instead of America. He is immortalized in Hawthorne's "Marble Faun," if not by his own "Greek Slave." That work was one of the glories of its time and passed ownership for $11,000, we are told. The other day it was resold, at auction, and "knocked down" for $1,000. The apparent anomaly has set many people asking what it is in a work of art that places and maintains its money value for all time. The answer given by the sculptor, Mr. Gutzon Borglum, in the New York *Evening Post*, points out that "the loss of value shown in the sale recently of Powers's "Greek Slave" is a signal and remarkable demonstration of the passing of a myth:

"The first appearance of Powers's "Greek Slave" created a stir in the then comatose condition of esthetics in America. Its production in our semi-wilderness was little short of a miracle and it refreshed, like a cold douche, the Puritanical customs of the hour. The greatest merchant of the day, and perhaps the greatest advertiser, stept forward and secured this American-done *à la* Greek at, rumor tells us, a fair cost of $11,000—or what would be equal to $25,000 to-day.

"Why—the question should be fairly put and truly answered—did Powers's 'Greek Slave' in fifty years drop from such a value to $1,000, when Houdon's head of his daughter rises to $125,000, rumor also tells us, and throughout the country are marbles of various degrees of antiquity which cost and are valued at prices fabulous as compared to their original market value? There is a reason for this, and it is a real reason. Houdon's head is an original production; it is individual to the artist and the period; it is distinct and individual in the art of that period, and it has lived through the test of a century of criticism. The same must be said of every single piece of marble coming to us from the past if it survives and grows in value."

The great mass of what is termed and sold as art, continues the sculptor in mordant vein, "has no real value above a legitimate cost of production and reproduction, and 80 per cent. of art is reproduction and contains little new beauty, new point of view, new expression." But—

"A real painting, drawing, or marble is as new, as unique, as individual as an invention, which, of course, it is in fact. A work awakens in the beholder the same surprize that comes to us in experiencing any wholly new sensation, and its value lies in the depth and reality of that sensation.

"The charm and beauty of the art of Greece, of the art of Egypt, of the art of Donatello, della Robbia, Angelo, of the Goths, and Rodin are precious to-day because they were honest to the hour, were true in their reflection upon the life of their period. Donatello did not copy della Robbia, nor Angelo anybody. Phidias has no leader, nor is he the slave of a school, tho he has enslaved more than any other single influence in art. Rodin is alone, and whether we care for these men or not, their productions are individual, sincere, and bear reverence for the life of the hour in which they lived. Powers was the real Greek slave; his production was the reproduction of an accepted formula of art 2,000 years old.

"We have but to look about us to see how unimportant these Greek reproductions are. Our public buildings are covered with them, often better done than Powers's 'Slave,' yet they give us no individual place in the history of this century's art, and

they do not even interest the archeologist. Real Greek art has lost none of its charm nor market value, nor has the art of Rome nor Egypt. With each year the wonder of these long-gone people grows, but the collapse of Powers's 'Slave' shows us in a very real way that art must carry some reflection of the hour in which it is made, must be vital, individual, and documentary.

"There is another interesting point not to be overlooked here, and that is that far the greatest and certainly the most precious examples of sculpture in the world are in marble. If a sculptor has a subject especially dear to him, his one dream is to 'get it into marble,' and for one reason: to cut into marble a figure or group means to again find and reveal his thought in a finer medium, and if he is a real artist he will struggle with that marble as only a sculptor struggles with marble, for he labors to invest stone with thought and life, and this brings up another vital point touching the value of an art work. Marbles that have great value are cut *by the sculptor*, at least in their completion, and a sculptor should be constantly at hand when putting his creation into marble, for all creative work is constantly growing until it is completed, and, therefore, a marble figure becomes original if done by the artist. A creative man does not cut and recut a half dozen examples of any one of his subjects, simply because it is impossible for the creative mind to retramp its completed thoughts forever and maintain the freshness of the original impulse, and so, when you see, I would say, over two marbles of a kind, you may be sure some one other than the sculptor himself is cutting them. Powers is said to have cut four Greek slaves. It is easy to imagine how that figure, conceived in a worn-out and dead formula, should have further lost even its individuality by reproduction."

THE MAD KNIGHT IN OPERA

DON QUIXOTE LIVES perennially in art, in literature, in drama, and now in song. Massenet's opera on the theme of the mad knight was first produced in Monte Carlo in 1910 with the famous Russian, Chaliapine, in the title rôle, but it was sung for the first time in America at Philadelphia on November 15. The impersonator was Vanni Marcoux, the French barytone, who has sung the rôle more than one hundred and fifty times in Europe. *The Musical Courier* (New York) speaks of "his tall, gaunt figure, the gentle shabbiness of his attire, his haggard facial make-up, the nobility of his expression and demeanor, his rare power of eloquent gesture, and his histrionic force and sincerity united to present a picture which was irresistibly compelling and pathetic." Mary Garden appears to have been no less successful in her part of *Dulcinea*, and added "another striking characterization to her distinguished gallery of operatic portraitures." *Musical America* (New York) records, in addition, that the music is "peculiarly adapted to Miss Garden's voice," and "enables her to give the part something of real value vocally." Massenet's score offers "a continuous flow of melody, light, sometimes almost inconsequential, and not often of dramatic significance, but at all times pleasing, of an elegance that appeals to the esthetic sense, and in all its phases appropriate to the story." "Sketched rather briefly by Henri Cain from the voluminous romance of Miguel de Cervantes," the version is further indicated by *Musical America:*

"In the beautifully spectacular production that was disclosed at the local Metropolitan on Saturday is shown first a street in a Spanish town, before the house of *Dulcinea*; then a stretch of country landscape, with the revolving windmills, which *Don Quichotte* valorously attacks; the lair of the brigands, which the Don seeks in his determination to win *Dulcinea's* favor by recovering for her the stolen pearl necklace; the courtyard of *Dulcinea's* house during a fête, and the forests, where, broken of heart, alone with his faithful *Sancho*, *Don Quichotte* yields up his still uncomplaining spirit. All of these scenes are beautifully staged, particularly that of the windmills, and the final tableau, showing through the forest trees the dim blue, snow-peaked Sierras in the distance."

It is in the impersonation of the chief character that the opera made its principal impression. Marcoux had been seen as *Scarpia* in "La Tosca," but his new work called for a direct contrast of effects:

"His *Don Quichotte* is essentially a comedy portrayal, but presents a keen analysis of character and is imbued with an underlying vein of tenderness and pathos that obviates the comic effect of the poor old knight-errant's unconscious grotesqueness. Marcoux's make-up might be called a cross between *Mephistopheles* and *Svengali*. Of a slender figure, which he accentuates, he looks tall, gaunt, and ungainly; peaked of countenance, with parrotlike nose and sunken of cheek; clad in a semblance of armor and carrying an exaggerated spear

Courtesy of "Musical America."

VANNI MARCOUX AS *DON QUICHOTTE.*

His make-up is described as "a cross between *Mephistopheles* and *Svengali*," with "parrot-like nose" and sunken cheek.

nearly twice as long as himself, the Don is not a person to win admiration, and yet, so skilfully does Marcoux suggest the man's innate gentleness and nobility of soul that one bestows admiration and forgets to ridicule. Even the Don's hopeless adoration of the fair *Dulcinea*, who laughs him to scorn, inspires a pitying smile, and in the end, realizing the futility of his hope, having been thrust aside even after he had fulfilled the lady's wish and recovered the stolen jewels, thinking that her hand was to be his reward, his death in the lonely forest, accomplished with realism and accompanied by music written in Massenet's most sympathetic style, is tearfully impressive. Marcoux's costume and make-up have the authority of the illustrations of Cervantes's book in its early editions, and the scenes of the opera also in several instances suggest a reproduction of the sketches in the book."

Musical America adds:

"Massenet has set the simple and moving story to very effective music, music written more in the manner of his 'Jongleur,' 'Griselidis' and 'Cendrillon' than that of his earlier works. The note of passion is absent altogether from 'Don Quichotte,' even the love declarations of that swain to his *Dulcinea* being touched in the score with a certain pathos that seems to give them more exaltation than amorousness."

RELIGION AND SOCIAL SERVICE

KILLING THE CIGARET HABIT

IN CHICAGO they have a "clinic" where any one who wants to rid himself of the cigaret habit may go for treatment, and come away, according to an article in *The Continent* (Chicago), "with a positive dislike for tobacco." "Messenger boys of the loop district, schoolboys as young as four and a half years found by their parents to have the tobacco habit, young business and professional men, and women from the stage," says Mr. Herbert H. Smith, in this Presbyterian weekly, "are all in the growing throng which has been seeking the assistance of the Anti-Cigaret League to cure themselves of the desire to smoke." They are cured, we are told emphatically, "and so far as reports have been received by the officers of the League, the cure appears permanent." Before Dr. D. H. Kress took charge of this work, he had been an active worker in the Anti-Cigaret League, and had cured and counseled cigaret smokers in private practise. From this came the suggestion of the establishment of a clinic under the auspices of the League, and in its offices. From the first, it seems, "applications for help were very large."

Copyrighted by Norman Alley.

TREATING THE "DEMON" MESSENGER BOY.

"Tommy" Donnahue takes the "cure" from Dr. D. H. Kress while Miss Lucy Page Gaston of the Anti-Cigaret League assists.

"Men prominent in business who had been smokers for twenty or even thirty years have come to the office for assistance. Women who were afraid to confess the habit to their husbands have been given the assistance which has helped them to regain their former self-respect."

With all its wonderful effectiveness, the cure is simplicity itself. As we read:

"Its base is the chemical reaction of silver-nitrate solution with nicotin. This creates an unpleasant taste. The smoker who has previously rinsed his mouth with a diluted solution of silver nitrate might go far enough to put a match to a cigaret, but he is almost certain to say 'Bah!' and throw it away after the first puff or two. 'No more for me.' The effect is immediate. Dr. D. H. Kress, general secretary of the Anti-Cigaret League, who has forsaken his practise to devote a large share of his attention to this newly established work, does not claim credit for the discovery of this cure. The details of the mouth-wash were in fact published in 1908, but attracted little attention. Through the treatment of the cancerous mouth of a patient a number of years ago the attention of Dr. Kress was focused upon this chemical solution as an aid in taking away the desire for tobacco. He already had observed that habitual smokers are large consumers of tea, coffee, meats, and highly seasoned foods. He found that when a man limits his diet to milk, baked cereals, and fruits, desire for tobacco is very much lessened. Combination of attention to diet with the silver-nitrate mouth-wash constitutes the basis of the cure."

The news of this cure and its success has, says Mr. Smith, "inspired letters from every State in the Union and from foreign countries, bringing requests for details of the cure." So the campaign "which has begun so auspiciously in Chicago is to be carried to other cities of the country through clinics and special meetings." In Illinois the Anti-Cigaret League is also doing effective work in helping to enforce the State law against smoking by minors:

"In the six weeks after prosecutions were brought it is said that cigaret sales of one chain of stores in the loop district of Chicago fell off 10 per cent., which is the same as saying that sales decreased an average of 8,500 cigarets a day. Practically all of these previously had been sold to minors and contrary to law. The use of tobacco among schoolboys is also being diminished through special officers employed by the League who may arrest any one under 18 years of age seen smoking in a public place."

By means of an instrument adjusted to the wrist of a smoker, Dr. Kress, we are told, can generally tell "from the pulse beats as traced on a smoked paper" the extent to which he uses tobacco. The *Continent* article concludes with this up-to-date explanation of the harmfulness of cigaret smoking, especially for the young:

"Recent scientific investigation and examination of the smoke produced by the burning of a cigaret show that the nicotin of the cigaret is far less virulent than are the carbonic oxide and other products of its combustion. The loose structure of the cigaret is said to cause the production of this poisonous gas. Carbonic oxide thus enters the blood through the lungs, and the damage done is in direct proportion to the quantities inhaled. Acrolein is another of the drugs produced by the burning of cigaret paper. It is this that makes the smoke irritating. Acrolein in considerable quantities is extremely dangerous. It is said by doctors that the constant irritation of the nervous system of the young, especially by cigarets, causes restlessness and inability to concentrate thought."

WHEN MINISTERS GO WRONG

MATHEMATICALLY CONSIDERED, fewer ministers go wrong than members of other professions; but if we adopt the basis of what should be expected of the clergy, compared with other callings, then the percentage of delinquents might be counted larger. This is the assertion of "A Preacher" himself, and he goes on to note in *The Standard* (Chicago) that "there are few issues of the daily newspaper without at least a single item narrating the fall of a clergyman." He thinks, moreover, that "it would be hard to find a man or a woman who has not at some time in life become personally acquainted with a profest exponent of religious truth and high moral ideals who has demonstrated the depths of human depravity." Over and beyond these "journalistic annals," and "personal knowledge of gross faults," the "Preacher" thinks there is an indictment against the profession of a much more subtle character. Thus:

"It would be folly to deny that,taken as a class, ministers live lives as pure and as free from criminal or grossly immoral taint as any other class of persons. The indictment takes rather the form of a general impression, amounting almost to a conviction, that the minister does not have the clear-cut and high standards which the business world demands.

"Business men feel that there is something about the 'cloth' that makes its wearer a 'doubtful proposition' when it comes to square dealing between men. A prominent lawyer in Chicago said, only the other day, 'I dread seeing a clergyman enter my office; I do not want his business; he does not have the commercial honor of the man of affairs.' He went on to give instances of ministers who disregarded their business obligations and even ignored the sanctity of the oath at the bar of justice.

"It is a well-known fact among houses accustomed to extend credit that ministers are the slowest to pay and the most difficult from whom to collect. In the smaller towns it would be difficult to find a grocer without an uncollected account against some minister who had left the place. Over five years ago such a preacher boasted in his farewell sermon that all his bills were paid in the village, and he 'owed not any man'; he should have said that he had paid not any man, and some of his bills are still unpaid.

"A charitable organization in Chicago allowed a minister in a village nearby to become indebted to it. He promised to pay the small account at a certain date; but a year from that time, altho many letters had been written, the bill was unpaid. Nor was settlement made until this prominent minister on a good salary was sent a sight draft for the amount.

"A struggling professor in an eastern city consented to pick out a few books for a preacher up-state and to have them charged to his own account, being assured that payment would be made at once. The books were sent, but the cash never was forthcoming and, after a lengthy correspondence in which many excuses were offered, the professor had to count his loss as the price he had paid for a lesson in trusting the 'cloth.'

"Such evidence could be extended indefinitely. The facts back of it, with the many other instances of which these few are but slightly indicative, have produced the decided opinion in the business world that the minister is unreliable and that the ministry does not stand of necessity for admirable manliness.

"There are many exceptions. The manly, four-square ministers are the more noticeable because they are exceptional. There are still more ministers who are warmly admired by their congregations, but they are admired rather for professional traits and pulpit graces than for the rugged virtues that count on the street and in the store and office. On the whole, men of honor feel that to-day it is no honor to be entitled 'Reverend'; the average man looks somewhat askance at the clergyman."

The "Preacher" who takes so discouraged a view of his fellow preachers may do so from a hypersensitiveness, but he declares his point is proved when a minister leaves his profession and enters business. He finds there a strong prejudice against his past; it is regarded as unfitting him for work. Further:

"When such a man goes into an office, experience shows that he is likely to lack the qualities that make for trustworthiness in details in the individual and for harmony in a large force of employees.

"Now if the business of the minister is to teach the people how to live he ought at least to know how to do it himself. His principles are valueless if they will not stand the wear of daily life. Is the trouble with the teachings, with the message, or is it with the man himself?

"The first reason ministers go wrong is because they are men. They are not angels; they are not the reincarnated ideal saints that the sisters and the sisterly brethren like to think they are. Because they are men they have human frailties. But, while that does account for the fact that ministers steal and break the express commandments the same as other men, it does not account for the fact that they are held below par in commercial esteem.

"As a profession the ministry seems to offer a premium on the pretender, the impostor, and the hypocrite. So long as there are the intentional pretenders and the unconscious hypocrites in the Church they will enjoy the ministry of the pretender and hypocrite. So long as the churches say, 'There's nothing either good or ill but seeming makes it so,' the man who can succeed in fooling the people with appearances of virtues with saintly air and pious phrase will be the man who reaches the top of his profession.

"Then no mortal being can stand for long the fawning and adulation which the preacher is likely to receive, especially from foolish and emotional women. He is sure to come to believe that he is a superior being, one who either can do no wrong or can do only right. Steady feeding on flattery unfits him for sound counsel regarding his shortcomings; he gets into the habit of judging his own actions, not by any undeviating principles, but by the measure of praise they receive.

"There are peculiar temptations incident to the work of any man who appears to weak minds as a demigod on occasions, whose work makes unusual demands on his nerve forces, and who is obliged to work almost exclusively with women. There is not only the temptation to license in personal virtue coupled with opportunity in pastoral visitation; there is the tendency to conformity to feminine standards, so that the man becomes womanly and usually a poor kind of an old woman at that.

"Mere preaching puts a tremendous strain on a man's moral fiber. It is the habitual statement of duties and ideals which the preacher knows he does not reach and do. It is the expression of the phrases of character, not necessarily accompanied with their expression in living and doing. It results in the mental habit of considering a duty done as soon as it is declared. It exhausts the moral impetus in phrases. It makes the man act the lie."

The editor of *The Standard*, tho printing the "Preacher's" article, dissents from some of its positions. He denies that the preacher is under "a special and higher kind of moral obligation which ordinary people need not observe." The idea is at variance with "Protestant ecclesiology." Going on:

"That there are grounds for the charge of unbusinesslike standards no one will deny, but the physician and the teacher share with the minister this limitation which a professional life entails upon them. Saying that the minister is unbusinesslike is the same as saying that the sardine manufacturer is a poor sermonizer, or that a banker is not at home in the pulpit. In common with other learned professions, the calling of the ministry does not bring one into close familiarity with modern business methods. If it did, teachers, physicians, and ministers would not preponderate in the 'sucker' lists of promoters.

"Furthermore, 'one of the principal reasons for the disrespect in which the preacher is often regarded by the business world lies in the shamefully unbusinesslike manner in which the preacher has been treated in regard to compensation for his work.' This quotation, which is from the article in question, really points the gun away from the minister and turns it upon the business man, whose unbusinesslike methods in church support are really responsible for whatever of truth there is in this charge.

"Whenever a minister goes wrong, the average yellow journal will get twice as black in the face as it will over any other person of equal prominence. A cross-roads clergymen who runs away with his organist will get more attention than a congressman who goes off with his stenographer. The senile philanderings of a former United States Senator did not get a front-page position so often as did a comparatively obscure clergyman who a few years ago failed to get gold out of sea-water, but did get it out of the purses of customers who thought they had a 'good

thing.' Why? The answer throws a flood of light upon the question at issue. Because out of tens of thousands of ministers, all of them working under the obvious limitations and temptations to which the article makes reference, those who go wrong are so few that, when such instances occur, they are played up, because they are news. When a lawyer, or a physician, or a bank president, or a commercial traveler is found with the broken fragments of the seventh commandment on his person, it is no news, at least relatively speaking, and it is given an inside page. This is an unconscious tribute of the sensational press to the high estimate in which the clerical profession is in general held."

"THE PSYCHOLOGY OF SUDDEN DEATH"

NOTHING in the history of man has brought the psychology of sudden death so vividly home, writes Mr. Gerald Biss in the London *Daily Mail*, as have motor-racing and flying. What does it mean, he asks, "to men who live with their lives in their hands and know it, such as airmen and racing motor-drivers—men who never know when at two miles a minute they will only have a fraction of a second in which to balance their books of life before they are hurled into eternity?" Percy Lambert, the automobile racer, whose recent death on an English race-track apparently prompts Mr. Biss's reflections, was once questioned on the subject after a previous narrow escape. He answered, "in his cheery way," says Mr. Biss, "Of course, one has to take pot-luck every time; but I've always had the luck so far." Under the influence of "the new philosophy, created by circumstances bred of the internal-combustion engine," this daring racer "deliberately placed the possibility of the 'pot' part in the background or wrote it off completely in his optimism." But,

"One can not but wonder over the psychology of that fraction of a minute—at the outside five seconds—in the sudden battle with death, when every instinct of self-preservation is suddenly called into play. One wonders how much thought a man can crowd into a three-hundred-yard skid at two miles a minute, a bare five seconds of concentrated action, mental and physical. Does he have time to set the house of his soul in order? Does he realize with sickening conviction that this time the car has got the better of the man and that he can not control it or bend it, usually so pliant, to his will? It would be interesting to know how long a man really lives in those five seconds of tense struggle, and how far and how fast he travels mentally; for, after all, actual time is only a comparative term.

"It is a point in the new philosophy unplumbed by past masters who lived under less strenuous conditions, by Plato, Aristotle, and the ancients, by Hegel or Schlegel, or by even the most modern of the cult. Accidents at high speed which do not end fatally, as a rule, prevent any lucid statement upon the subject by concussion, which is apt to efface the whole episode when memory returns, leaving the tablets of the mind bare with the happening entirely erased. The new philosophers often say that they would rather be killed outright than badly injured; but would they, if they actually had the option? The instinct to live is great.

"Charles Jarrott, who has twice been all but killed in motor accidents and once actually laid out for dead in an Irish farmyard with a sheet over him, overheard the doctors say on the more recent occasion two or three years ago that he would probably be blind. His feeling, he said, was that he did not care—he was so happy to be alive! Percy Lambert was full of the joy of life, as his cheery smile always showed, and he ever appeared the least nervous person on the track on such occasions.

"Hubert Latham was a totally different type of the new philosopher. The danger of the thing was the spice of it to his mind. I discust the perils of flying with him at the first big British meeting at Blackpool. 'Dangerous? Of course,' he said, with his very characteristic shrug of the shoulders, 'or where would the interest be?' Some of these new philosophers have premonitions, and some of them will not discuss the subject at all. Some of these men who live with their lives in their hands adopt the old 'eat, drink, and be merry' philosophy in view of the morrow's risks. The psychology of sudden death has never been so vividly brought home by anything so much as by motor-racing and flying."

There have been many instances—like the recent bichloride of mercury poisoning cases—when one has hours "in which to balance one's moral books and wonder if one has had the right philosophy of life or whether one has been on the wrong tack." Under such circumstances, says Mr. Biss—and he knows, for he has been given up by doctors and lived to fool them—"it is no laughing matter, but a profoundly serious study in psychology." And this brings him back to the query, What is the position of these men, aviators, motor-racers, and others "who deliberately live with their lives in their hands and know it"? This is as near as Mr. Biss can come to answering the question:

"It seems to me that they must in a sense live to die, and be constantly stock-taking morally and balancing the ledgers of their lives, and that the net result of it must tend not only to their own good but to the common weal as well. Thus they face death fearlessly and philosophically after reiterated introspection; but the key to the whole psychology of the subject is whether in that climactic five seconds it is brought home to them with conviction whether their philosophy rings true or not. Surely it must make conscience travel at a million miles a minute and a man think quick. The secret of those five seconds reducing the human factor to a fraction in chronology, with that swift leap into the 'great perhaps,' is unfortunately as much a riddle as the question of whether consciousness lasts after death, which the French medical profession made such a practical effort to solve in 1864, when their notorious colleague, De la Pommeraies, deliberately endeavored by the aid of the guillotine to assist the famous Velpeau by arranging to give a signal after his head had fallen into the basket of sawdust, but unfortunately with very indeterminate results. Seneca tells us that we should endeavor to die without fear, and Montaigne says that one of the greatest benefits good living confers is a contempt of death. Surely these new philosophers should logically tend to all-round betterment by their constant handgrips with death. Or does familiarity in the majority of cases breed contempt? The best psychology of life is equally the best psychology of death, and Robert Louis Stevenson has happily summed it up in his 'Requiem' in one line, 'Glad did I live, and gladly die.'"

WHERE RESPONSIBILITY LIES—A warning against the consequences of a too vociferous demand for the teaching of sex hygiene to children is issued by *The Advance* (Chicago), which believes it to be one of the dangerous aspects of the "epidemic of sex consciousness" now prevailing. Tho it admits the "real need of something in this direction," the Congregationalist weekly wishes to remind its readers that "the attempt to secure instruction on sex hygiene in public schools constitutes one more effort of parents to shirk their God-given responsibility." It says:

"No well-meaning maiden lady, giving blushing lessons out of a text-book, no imported lecturer with exaggerated ideas of sex consciousness, can be any proper substitute for fathers and mothers, and these may do great harm. We have no doubt of the good intentions of most of the people who are behind this movement, but we have grave doubts of the practical wisdom of many of them. If a father or mother refuses to do his or her own duty, and turns it over to school-teachers and paid lecturers, it were better that a millstone were hung about the parent's neck."

Moreover, *The Advance* has

"more than a doubt concerning the wisdom of too much instruction on this question at the present time. This is not the best time in the world's history to pass judgment on matters of this character. As some one has remarked, 'Just now it is sex o'clock in literature.' There is a morbid sex consciousness. God has his way of teaching through the reticences of life as certainly as through the screaming stark-nakedness which sometimes parades itself in the disguise of purity.

"It is not by thinking purity that the mind becomes pure. There is real danger in brushing the bloom off the cheek of modesty.

"This is no defense of prudery, nor of ignorance, but it is what we believe to be a timely warning."

REVIEWS OF NEW BOOKS

CHILDREN'S BOOKS—FORTY OF THE YEAR'S BEST

IN the following list of forty of the year's best juvenile books, omissions do not necessarily mean that the omitted books are not worth attention, but rather that space is limited. Many books fail to deserve condemnation; but at the same time are not so excellent as to require special mention. The aim here has simply been to find among the many a few that can be well recommended as deserving of the Christmas-giver's attention.

Arthur, Ella Bentley. Sonny Boy's Day at the Zoo. Illustrations by Stanley Clisby Arthur. Small 4to. Pp. 64. New York: The Century Co. 90 cents.

The whole scheme of this book is novel. The writer of the verses and the taker of the pictures have a little boy who is on speaking terms with all the animals at the Bronx Park Zoo. The camera has caught this little fellow standing before the cages of his friends intent on fathoming their innermost secrets as they pace up and down before the iron bars. That the little fellow sometimes had fears that the bars would not be strong enough to hold the fiercest of his friends is very well indicated by his hesitation before the lion's cage. But on the whole his pictures indicate perfect confidence that they would not eat him if they were free. The book is an excellent pictorial guide to "Star" places at the Zoo.

Baker, Emilie Kip. Stories of Old Greece and Rome. Pp. 382. New York: The Macmillan Co. $1.50 net.

Had we the deciding vote in every Board of Education we would adopt a general rule that all children should be made familiar with mythology at an early age. In our efforts to keep education practical we are letting slip much that will serve us culturally in later years. Mythology is ignored in many schools. This book by Emilie Kip Baker is an admirable guide and is published in a form that gives it the appearance of a good reading book. The author has compiled a suggestive appendix which may be taken as a sort of literary guide to mythology. The plan of the book is to be commended. It is judiciously illustrated with reproductions of old statues and paintings.

Barbour, Ralph Henry. The Junior Trophy. Pp. 309. New York: D. Appleton & Co. $1.25 net.

As usual, Mr. Barbour does not fail to include ample sport in his school story for the year. The Juniors, headed by the heroic "Kid," rebel against the exactions of the upper-class men, and four of them organize a secret society to maintain their rights. They win their standing, and then the society takes upon itself a new mission. It offers a silver trophy to the school. Most of the story deals with frantic efforts on the part of "Kid" to earn ten dollars as his contribution. He undertakes the agency for cough drops, and finally, after getting himself into devious troubles, saves a train from wreck. As a reward, a meager purse is collected for him, and he lives up to his promise. The story shows haste in composition, but there are evident those popular touches which indicate Mr. Barbour's thorough knowledge of boy nature.

Boylan, Grace Duffie. The Pipes of Clovis: A Fairy Romance of the Twelfth Century. Illustrated by Emily Hall Chamberlin. Pp. 258. 12mo. Boston: Little, Brown & Co. $1 net.

With an easy style and a certain charm the author tells a story, half historical and half fairy, of a forester's son who possesses the power to win over, through the magic of his pipes, the animals of fields and woods. But he has not yet been able to draw forth from these pipes the music which will bring to him all the horses far and near. Then he captures a wild horse with fairy shoes, and discovers the magic sounds he most covets. Clovis is a twelfth-century boy, and his king is threatened with invasion by the Huns. All is told simply and with a certain semblance of truth. The story is interesting to the finish.

Canton, William. A Child's Book of Warriors. Illustrated by Herbert Cole. Pp. 319. New York: E. P. Dutton & Co. $2.

The scope of this work is very well indicated in the first verse of a rimed dedication:

> "For you who love heroic things
> In summer dream or winter tale,
> I tell of warriors, saints, and kings,
> In scarlet, sackcloth, glittering mail,
> And helmets peaked with iron wings."

The old English and the saga spirits are very well commingled. The narratives of kings and Roman emperors will have interest for many readers of fourteen years. The heroes are not generally familiar. The style is old in flavor and maintained with the dignity and rhythm revealed in ancient manuscripts. The end papers typify the warrior character of the book.

Cox, Palmer. The Brownies' Many More Nights. Pp. 144. New York: The Century Co. $1.50.

The Brownies are an institution like "Chatterbox." They are whimsical, clever, and funny without being vulgar or viciously mischievous. They never grow any older, and they never vary. They always guarantee their good faith by an introductory card which tells how they work and sport while weary households sleep. During the course of years, other Brownies have joined the ranks, such as the Rough Rider, Buster Brown and his kindred, but they have not succeeded in wiping out the quaintness of these little men. They are equal to any occasion and are ready for any invention.

Dawson, Sarah Morgan. A Confederate Girl's Diary. Pp. 441. Boston: Houghton Mifflin Co. $2 net.

If girls are looking for a human document—one with plenty of real heart throbs and uncertainties—this record of a girl's life during the War should come to them with forceful truth. The circumstances under which it was published are charming. Mrs. Dawson's descriptions are graphic, and emotional, but they are real. Except for the omission of certain names, the book now given to the public is the same in contents as the faded diaries found by her son in the attic of his home at the time of his mother's death. The scenes are chiefly laid around Baton Rouge and New Orleans.

Eaton, Walter P. The Boy Scouts of the Dismal Swamp. Pp. 304. Boston: W. A. Wilde Co. $1 net.

We warned Mr. Eaton last year that he would readily fall into the series class as a writer for boys. And now there is no gainsaying the fact that he is dyed in the wool. For this new Boy Scout narrative—a continuation of "The Boy Scouts of Berkshire"—introduces us to the doings of some of the characters made familiar in the first book. When all is told, Mr. Eaton is using fiction solely to inculcate the methods and ethics of the scout movement. The slight characterization is enough to give the book a healthy spirit of sport and adventure. Geology and forestry peep perceptibly forth from the pages. Mr. Eaton's book will find a sale; there are numberless boys who devour all books on the scout movement. We should like to see a real piece of fiction from Mr. Eaton's pen of the sort that boys like, without any propaganda motive back of it.

Fenollosa, Mary. Blossoms from a Japanese Garden. 4to. Pp. 60. New York: Frederick A. Stokes Co. $1.50 net.

This book is in every way artistic. It accomplishes admirably and with feeling what it sets out to do: to tell of the customs of Japanese children. The verses are written with the simplicity of Stevenson, and the color plates, themselves examples of Japanese art, are beautifully reproduced. Play, humor, child philosophy, local atmosphere and custom all find their way into these simple jingles. The book will please many a grown person and afford many moments of pleasure in the twilight hour when grown-ups should take breathing time to read to the juvenile part of the household.

France, Anatole, Boutet de Monvel. Girls and Boys. 8vo. New York: Duffield & Co. $2.25 net.

There is nothing but praise to bestow on a book so charmingly illustrative of the facts: first that one must have a genius for drawing pictures, and second a genius for telling stories. Both of these conditions have been met by Boutet de Monvel and Anatole France. The scenes from the country and the town are described in simple text, feelingly translated by some silent collaborator. The pictures are expressive of the moods so exquisitely hinted at by M. France. The publishers seem to have heeded our long-raised cry to import whatever Boutet de Monvel has done for children; he is a prince among illustrators. All his pictures reproduce like water-colors, and all display a sympathy with the awkward dreaminess of childhood.

Fry, Emma Sheridan. Educational Dramatics. Pp. 69. New York: Moffat, Yard & Co. When Mother Lets Us Act. Stella G. S. Perry. Pp. 146. New York: Moffat, Yard & Co. 75 cents net. Plays for the Home. Augusta Stevenson. Pp. 181. Boston: Houghton Mifflin Co. $1.25 net.

In these days when the dramatic instinct has become an educational consideration,

you can eliminate the worries and keep a tight rein on expense by installing a few

SIMPLEX
Electric Lamp Socket
SPECIALTIES

In the cooking department you'll want

Simplex Toaster—Always toasts every slice of bread an even, appetizing golden brown. Every slice is flat, with no scorched edges. You make toast as you need it; always hot, no waste. Costs a cent a meal.

Simplex Table Range—With one lamp socket connection you can carry on two or more cooking operations at the same time and provide an entire meal for 3 people at an average cost of 3 cents.

Then there's Simplex *Heating Pad,* which has superseded the hot water bottle on account of its convenience and durability.

Simplex Chafing Dishes, Percolators and Afternoon Tea Kettles are a delight to the housewife.

Don't overlook the Gift-Making Possibilities of Simplex, and write today for our free booklet, *"The Dainty Way to Keep House"*. You can get Simplex Specialties everywhere. We tell you how.

Simplex Electric Heating Co.
91 Sidney Street CAMBRIDGE, MASS.

any books on the subject are eagerly sought. Mrs. Fry had something to do with the Children's Educational Theater. She is now the director of the Educational Players. Hence her handbook on dramatics will give ample suggestion to the teacher contemplating a school play. In this small brochure the play element is wisely and briefly conjoined with life experience and expression. Many suggestions are given which will be serviceable if put into practise. In the second volume mentioned above, theory is applied. It tells how to make statues, and how to give tableaux, shadow plays; how to manage revels, pageants, and festivals. It suggests good acting stories, good acting poems, songs, and dances. The third volume advances still further; it dramatizes incidents from Grimm, Æsop, Andersen, and the Arabian Nights, giving a minimum of dialog—only what is essential to carry the story. The author of the last-mentioned volume, in her preface, says: "From an educational point of view, the acting of plays by children is beneficial in two ways: first, it develops natural expression in the voice; second, it gives freedom and grace in the bodily attitudes and movements which are involved in reading and speaking." But another thing that "play acting" does is clearly indicated in the verses written by Miss Parry:

"I acted to-day the part of an Elf
Who was ever so helpful and kind;
And I liked it so much that I said to myself
When the acting was done, I will *be* like that Elf,
For it makes me so glad in my mind."

Goss, Warren Lee. The Boys' Life of General Sheridan. 8vo. pp. 318. New York: T. Y. Crowell Co. $1.50.

Mr. Goss tells in complete manner the story of the active and varied career of General Sheridan. He enters very minutely into different battles, such as Chickamauga, Chattanooga, the Wilderness, and Cold Harbor, and for the clearer understanding of the reader includes among his illustrations some of the battle plans. The "rebel" element is too often dwelt upon, however, and justice is hardly done to the strategy and tactics of the enemy. Otherwise the book adequately fulfils its purpose.

Grinnell, George Bird. Blackfeet Indian Stories. Pp. 214. New York: Charles Scribners' Sons. $1 net.

A very attractive cover design and an equally attractive atmospheric frontispiece introduce this volume of real Indian stories. The author was wise not to load his book with any details of an ethnological character. He tells simply the stories as they have been passed down traditionally from generation to generation, and tells them with an amount of directness which has good effect. The book closes with a description of how the ancient Blackfeet lived.

Hall, A. Neely. The Handy Boy: A Modern Handy Book of Practical and Profitable Pastimes. Pp. 396. Boston: Lothrop, Lee & Shepard Co., $1.60 net.

We always feel somewhat abashed when we read such a book as this. For we are told at the beginning that a handy boy becomes an accurate worker. So we go through the index to find how much of all this we can do and find that there is precious little we know how to do. Every year a book on this order comes to our desk, telling us how to turn our boys' energies to usefulness about the house. When we are done examining the recommendations, illustrated and explained by means of text and six hundred pictures and diagrams, we feel as tho our education had been wofully neglected. Manuals of this sort are full of wise and new hints; they are up to date and every year have to have something new added to them. The handy boy seems to have his hand in everything of a mechanical nature. It is a positive saving to have a handy boy in the house.

Herrick, Christine Terhune. My Boy and I. 12mo, pp. 278. Boston: Dana Estes & Co. $1 net.

This is a book of advice for mothers, written by a mother who has had ample opportunities to study the growing needs and interests of boys. We should hate to have our weaknesses and virtues extolled in a book, were we the son of Mrs. Herrick. But nevertheless, we must give her credit for showing a great deal of sanity in the guidance of her son through all the years that include kindergarten, school, college, and early manhood. Cobbett's "Advice to Young Men" is a priggish sort of book—one always presented to boys by devoted uncles who have had their day and want to appear wise. Mrs. Herrick's book is not such a theoretical treatise. It does contain some sound advice. The book is not for children, but about boys for grown-ups.

Irving, Washington. Tales of a Traveler. Pp. 235. Illustrated by George Hood. Philadelphia: J. B. Lippincott Co. $2.50 net.

We relish the sumptuous volumes issued by the publishers for the holiday season, and among them this may be accounted one of the richest. The illustrations are ambitious in their color scheme, the print is large, and the margins are generous. Besides which the stories are as refreshing as ever they were. The new *format* only enhances the zest with which we renew our acquaintance with Irving. And to those who are here introduced for the first time to the various adventures, we promise a treat as rich and varied as the physical features of the book. It is an addition to any library, let alone the children's bookshelf.

Johnson, Clifton. A Book of Fairy Tale Bears. 16mo, pp. 184. Boston: Houghton Mifflin Co. 75 cents net.

If there happen to be any children in your house who are especially devoted to fairy tales dealing with bears, here is a book that will please them immensely, for it has nothing to do with any other heroes than bears. The volume is just the gift for a youngster of five. It is small and can easily be put under the pillow at night. The stories are taken from folk-lore, and are short enough to be read before going to bed. La Fontaine, Grimm, and the American Indian contribute to the volume, while there are also bear stories from Russia, Norway, England, France, and India. It is a rich collection for such a little book at such a small price.

Johnston, Annie Fellows. Miss Santa Claus of the Pullman. Illustrations by Birch. 12mo, pp. 172. New York: The Century Co. $1 net.

Barring a little too zealous moral tone, this simple story will please youngsters of seven. Stepmothers might consider it a special plea for their benefit, for during the course of the narrative, Will'm, the hero, learns that his "new" mother does not make him unhappy as he expected she

would. And he is prepared for this pleasant surprize while traveling on a Pullman with a girl for companion who is richly endowed with the Christmas spirit. Naturally, Will'm and his sister speak of her as Miss Santa Claus, and when she leaves them she has accomplished some excellent missionary work and incidentally left behind her some presents to delight the hearts of the little travelers. There is a kindly motive to the story—a not too brilliant but a gentle tale for the nursery.

Kipling, Rudyard. The Jungle Book. Octavo, pp. 331. Illustrated in color by Maurice and Edward Detmold. New York: The Century Co. $2.50 net.

The one mistake made in the manufacture of this sumptuous volume was to allow the beauty of wide margins to be invaded by a green border decoration on all the pages. We have seen annotated editions of Shakespeare with a few lines of text amid a sea of comment. We do not like to read our Kipling, especially such masterpieces as the Mogli stories, in a confusion of green ink. The intentions of the publishers are excellent, and one thing they accomplished well right at the beginning. Never have we seen a more appropriate cover design—one richer or more promising of what to expect within. The type is clear and beautiful, and the sepia plates are striking.

Lang, Andrew. The Strange Story Book. By Mrs. Lang. Edited by Mr. Lang. Pp. 312. New York: Longmans, Green & Co. $1.60 net.

A picture of Andrew Lang graces this last of a long line of children's books. Twenty-five years ago he planned the first of the series, and the rainbow volumes have proved an event every year since then. It may be that Mrs. Lang will continue the work, for she has already written much under the editorial guidance of her husband. There is much of an ethnological character in "The Strange Story Book." Looking at the variety of stories through a variety of times, we wonder how these two could have had the patience to ferret out so much that might have remained buried. Children like the novelty of the volumes.

Maeterlinck, Madame Maurice. The Children's Blue Bird. Illustrated by Herbert Paul. 8vo. New York: Dodd, Mead & Co. $2.50 net.

A charming-looking book has here caught our eye, Madame Maeterlinck's prose narrative of her husband's famous play. No one could help not going further than the delectable cover design of this holiday issue. Artistically and typographically "The Children's Blue Bird" deserves warm recommendation. But we are not quite reconciled to the retold version, wherein much of Maeterlinck's own text is served up to us in shortened conversation.

Olcott, Frances Jenkins. Story-Telling Poems. Pp. 384. Boston: Houghton Mifflin Co. $1.25 net.

Miss Olcott confesses that story-telling poems develop and feed the poetic instinct of children. More than that is done. Poetry at its best fires the imagination. We are perfectly willing to let the instinct take care of itself provided the imagination is cared for. There is much in this judicious little volume to satisfy the fundamental hunger of the boy or girl at the Christmas tree. The ground plan is avowedly educational, but the form will not scare children on that account. A subject-index furnishes a key to the ethical content of the volume. The foreword is addrest to the story-teller. The book is a

(*Continued on page* 1125)

IT IS PRETTY NEARLY TIME TO GET THE NET ON THIS WHOLE BACK-TO-THE-LAND BOOM. "This serial is not the usual rhapsody of the first summer back on the land, with the intelligent city feller as his own hero, beating the country people at their own game. On the contrary it aims to show how difficult the country game really is, and what mistakes the would-be farmer will fall into. I have had my eye upon country readers too, and am writing from their point of view even more than from that of people who are all lit up by books on Three Acres and Liberty. What I am after is the truth, indicated by the word *net* in the title." This is what the author says of his story, *BACK TO THE FARM—NET*, an unusual serial without a line of love-making in it. It begins in January in *The Country Gentleman*.

MILK IS AN IDEAL FOOD FOR BABIES AND GERMS. The germs thrive on it; the babies don't—if the germs see it first. You can work out your own mathematical formula: Clean milk = one healthy baby; or, unclean milk = one sick baby + doctor's bills + the undertaker. We hate to mention the undertaker; but we'd best face him, and keep him out of the house—*really* clean milk will keep him out. Get acquainted with Herr Doctor Schlossman's slogan, *Sterben keine*—none die. It goes deeper into the question of baby life saving than you've ever dreamed of. Because Doctor Schlossman's fact of today in Germany is our dream of a decade hence is no reason why you should not read Milk for the Babies, in *The Country Gentleman*.

BOOKER T. WASHINGTON is better qualified than any other man in the country to write about the problems of negro labor. Big planters take their troubles to him when they aren't getting along right with their black labor; the negroes take their side of the argument to the head of the Tuskegee Institute for solution. Because he is the one man to talk intelligently on both sides of this question, so vital to the South, we asked him to write an article for us. He tells how *not* to succeed and then how *to* succeed in Some Suggestions as to Negro Labor, which will be printed in *The Country Gentleman*.

Everything about the BUSINESS of farming you will find in THE COUNTRY GENTLEMAN, the national farm weekly. Five cents the copy, of all newsdealers; $1.50 the year, by mail.

Independence Square Philadelphia, Penna.

A Useful Present to the Family

AS a gift you cannot express your Christmas Good Will and most appreciative sentiments in a more rare and exquisite form. The magic of Santa Claus is represented at its best in this beautiful 1914 Detroit Electric. With it you merely *wish* the miles away.

Beginning with Christmas day, this beautiful Detroit Electric will enter *intimately* into the daily—yes, hourly life of *every* member of your family. It becomes a family institution.

The satisfaction of possessing the superior and exclusive advantages of a Detroit Electric adds much to your pleasure and permanent satisfaction.

Our purpose in maintaining the leadership of the electric automobile industry has been, not to cheapen, but to raise the quality of the Detroit Electric by ways possible only in an institution of such national scope as ours.

Fortunately this purpose has resulted in such a *large volume* of business that we are able to make substantial reductions in the *prices* of our cars for 1914, although we have *added many improvements* in design, quality of materials and methods of manufacture.

We offer a choice of *worm or bevel* gear axles, a variety of seating arrangements, a choice of front seat drive, rear seat drive or the Detroit Duplex Drive (permitting operation from either front or rear seat), increased battery capacity, larger tires, larger brakes—electric hand brake, longer wheel base, 12 ft. shorter turning radius, Hanlon patented rain vision shield and *many exclusive* appointments.

The prices on 1914 enclosed cars—four and five passenger capacity—range from $2550 to $3000 f. o. b. Detroit. Send for our new catalog in full colors. New cars are now on exhibition by our dealers in 175 leading cities.

REVIEWS OF NEW BOOKS

(*Continued from page* 1123)

good anthology arranged according to deeds of right and wrong. We find many old favorites. There is a wide range from Percy's "Reliques" to Arthur Guiterman. Apart from the child interest, the story-teller should welcome such a compilation.

Olcott, Frances Jenkins. The Arabian Nights. 12mo. New York: Henry Holt & Co. $1.50 net.

It is encouraging to have Miss Olcott's assurances that the text of Lane's "Arabian Nights" was changed only where she found it necessary for the better understanding of children. She selected the Lane version because of its epic treatment and its dignified style. Three of the stories included will, so the editor claims, be new to most young readers. We have in mind many editions of the "Arabian Nights" during the past few years, among them the volume edited by E. Dixon from the Galland Text, and the Kate Douglas Wiggin edition illustrated by Maxfield Parrish. Neither of these contains "The Story of the City of Brass," "The Adventures of Hassan of Balsera," or "Caliph the Fisherman." No better, no more conscientious guide could be found than Miss Olcott.

Quiller-Couch, Mabel and Lilian. The Treasure Book of Children's Verse. Illustrated in Color by M. Etheldrada Gray. Pp. 336. New York: George H. Doran Co. $2 net.

Anthologies always have their specific uses, and this one seems to have been judiciously compiled and arranged under artificial headings. The collection is up-to-date, since it contains examples of the work of Alfred Noyes. This is an altogether delightful-looking book except for the color insertions which destroy the dainty effect. For the pictures, rather overcolored as they are, are themselves mounted on dark paper. Looking at the leaves from the side, there is a resemblance to a rather flat layer cake. Nevertheless the book is a treasure and will have a sale.

Rackham, Arthur. Mother Goose. Gathered and illustrated by. 4to, pp. 262. New York: The Century Co. $2.50 net.

There is always room for another Mother Goose, especially when such an agreeable artist as Mr. Rackham is the sponsor. We find that every new edition unearths some version of a familiar jingle with which we were not familiar. Mr. Rackham confesses in his introduction that he gives the form he knew when a boy. A glance through his index of first lines delights the eye. For there are small line-drawings of some of the pictures given to us later in larger reproduction. The majority of the illustrations are in black and white. The color plates, however, are full of charm and delicate tints.

Rostand, Edmund. The Story of Chanticler. Adapted from the French by Florence Yates Hann. Illustrated by J. A. Shepherd. 4to, pp. 144. New York: Frederick A. Stokes Co. $1.50 net.

The adapter of Rostand's play has justified her work by the freshness and delicacy of her accomplishment. We must confess that we enjoyed this retelling quite as much as the original. This is largely due to the fact that the narrative is not written down, that it contains all the satire of the play, and all the human quality of its La Fontaine spirit. Where it excels for young people is in the simple directness with which the strictly literary embellishments of the drama are discarded, with no harm to the story and with no detraction from its charm. In fact if grown people will take the trouble to compare this book with the play, they will find how excellent the translated passages are.

Scott, Sir Walter. Ivanhoe. Illustrated by E. Boyd Smith. Octavo. Boston: Houghton Mifflin Co. $2.50 net.

We are glad to notice this reprint in a form wholly in accord with our belief that Scott is not more read these days because the old editions are forbidding-looking. While Mr. Smith is not the artist best suited to the task, he has succeeded in adding dash and delicate color to a story which every boy and girl should read. The publishers have wisely clothed the book in a cover design that is worthy of it. Where can we find such historical romances as Scott has written? Certainly not among the Christmas books of this year. We cheerfully recommend this volume.

Skinner, Ada M. Children's Book of Christmas Stories. Edited by Asa Don Dickinson and. Garden City: Doubleday, Page & Co. $1.25 net.

From its cover to the very end, this little book is pervaded by the Christmas spirit. The quaintness of the Leech frontispiece sufficiently assures us that the old-time charm of the festal day is not entirely lost. These stories come to us guaranteed as having brought pleasure to thousands; there are many familiar friends in the table of contents. The book was compiled to fulfil a want felt among librarians for some anthology to satisfy the Yuletide demand. Christmas stories have been written since the world began, so it seems to us. It would have pleased us had the editors given an additional list of Christmas stories.

Smith, E. Boyd. The Railroad Book. Illustrated. Oblong. Boston: Houghton Mifflin Co. $1.50 net.

There never was a boy yet who was not gript spellbound by the railroad. Nursery carpets are worn threadbare by the shuffling of feet in imitation of engine noises. The publishers of Mr. Smith's "Railroad Book" therefore will find a ready audience for this pictorial guide to the mysteries of train land, from the engine-shed, through the most modern station to the boundless prairies. Dining-cars, conductors, porters, flagmen—the whole world of travel—are pictured and storied in these oblong pages. Mr. Smith's color work is characteristically pale and literal.

Spyri, Johanna. Heidi. Translated by Helene S. White. 8vo, pp. 433. New York: T. Y. Crowell Co. $1.50 net.

This is one of the first stories read nowadays by children. The libraries all attest its widespread popularity. Many editions are on the market, but this one seems to be ideal for a holiday present. It is a German classic written by an author who has done many other stories still to be translated into English. It recounts the adventures of a little girl who lives with her grandfather in the Alps. The present edition is fully illustrated. Here is a story to be strongly recommended.

Stevens, D. K. Ballads of the Be-Ba-Boes. Pp. 102. Boston: Houghton Mifflin Co. $1.50.

Usually when we meet with a book that exploits in verse the escapades of odd little

TO make sure that the growing hair of girlhood will become the beautiful and luxurious hair of womanhood, see that it receives proper care *now*.

Thousands of mothers will tell you from their own wise experience that "proper care" includes systematic shampooing with Packer's Tar Soap.

The systematic use of this soap helps to maintain the vitality and lustre of the hair —from childhood to manhood and womanhood—and on to old age.

To help you get the full benefit from Packer's Tar Soap we have printed a manual, "The Hair and Scalp—Their Modern Care and Treatment." Sent postpaid on request.

Send 10c for a sample half-cake

Packer's Tar Soap

(Pure as the Pines)

If you prefer a liquid soap for shampooing, ask your druggist for our new high quality preparation—Packer's Liquid Tar Soap (perfumed), price 50c per bottle; or send us 10c additional to cover packing and postage and we will see that you get it promptly.

THE PACKER MFG. CO.
Suite 84-A, 81 Fulton Street, New York

people like the Brownies or the Be-Ba-Boes, we place our whole dependence for interest on the pictures which are full of detail. But this is not the case in the present instance. Tho the drawings made by Katharine M. Daland are clever, the ballads by D. K. Stevens are even more striking. They are filled with constant surprizes of incident and rime, and certain ironical touches make them as true as they are amusing. There is a spontaneity of wit that comes with the freshness of Lewis Carroll. It is to be hoped that we shall hear further from D. K. Stevens.

Stevenson, Robert Louis. Kidnapped. Illustrated by N. C. Wyeth. Pp. 289. New York: Charles Scribners' Sons. $2.25 net.

Children must have their *editions de luxe* and many grown people will just as warmly welcome a reissue of Stevenson's "Kidnapped" in form companionable with last year's sumptuous edition of "Treasure Island." There is nothing new to be said about this "pennydreadful" except to remark upon the dramatic color plates done by N. C. Wyeth. They are full of action and thoroughly in accord with the adventurous character of the story. The whole imaginative quality of Stevenson is successfully depicted. If possible the artist has put additional life into the book. We wonder whether such books, so rich in *format*, encourage parents to hang a bookshelf in the children's room? They should.

Strang, Mrs. Herbert. The Rose Fairy Book. Illustrated by Lilian A. Govey. Pp. 304. New York: George H. Doran & Co. $2 net.

Except for the mounting of the pictures on a dark background, here is indeed a regal feast for the young mind. Fairy tales are fairy tales in whatever form served up, but when they come in a regal volume they seem all the better. Some of the tales have been newly translated from the original. All of them have been written with especial attention to the requirements of the young reader. But alas, we no longer recognize our beloved Little Red Riding Hood since it was shorn of the thrill at the end! Why will editors think they are doing wisely when they take the strong element from fairy tales? There are mothers who will not have children frightened by what they call the "terrible." Every change made by Mrs. Strang only serves to make us doubt the "authenticity" of her book.

Sweetser, Kate Dickinson. Book of Indian Braves. Illustrated by George Alfred Williams. Pp. 184. New York: Harper & Bros. $1.50 net.

A child who loves Indians will immediately be drawn to this book first by its telling cover design. There are seven chapters dealing with as many heroes: Powhatan, Osceola, King Philip, Joseph, and Sitting Bull, and others. History is skilfully blended with narrative, and the true Indian atmosphere is maintained. Now that the Indians as a race are no longer free, their leaders assume heroic proportions. Only recently some of the best-known living braves visited New York to unveil a monument to the American Indian on Staten Island, and there was a mythical touch to their presence. So in this book, Mrs. Sweetser succeeds in viewing them as distant objects in our civilization. Her understanding of their nature will give many a boy a thrill of pleasure.

Swift, Jonathan. Gulliver's Travels. With an introduction by W. D. Howells, and more than one hundred illustrations by Louis Rhead. 8vo, pp. 350. New York: Harper & Bros. $1.50.

W. D. Howells, in an introduction to this edition, calls "Gulliver's Travels" one of the supreme books, despite changes in literature from age to age. Personally, we have just read it over and we tingle as much as we ever did in days gone by. Perhaps we see more of the Swift satire than of yore, but the fundamental adventure quality of the story, the large and small proportions of the folks—all these characteristics remain unstaled and just as stimulating to the imagination. The present issue is one in a splendid series. Bearing the same *format*, we have previously reviewed "Robin Hood" and "Tom Brown's School Days at Rugby" and "The Swiss Family Robinson." "Gulliver" is equally as welcome. It is illustrated by Louis Rhead in heavy line imitative of woodcuts.

Taggart, Marion Ames. Her Daughter Jean. Pp. 332. Boston: W. A. Wilde Co. $1.50.

Miss Taggart is loath to leave the family she has been writing about for these seven years. And indeed we can readily understand how she has grown to like that wholesome group which is the product of her fertile imagination. We have had occasion before to laud this writer's ability to make the domestic story attractive through her skill in drawing interesting characters who are thoroughly human. The story might almost belong to the "Six Girls Series," but it is separated from that series by dealing with a generation removed, when the girls are in the middle age of life. Jean has all the simple qualities of her forebears, and her sacrifices, her heartaches, are described with the freshness of the first volume.

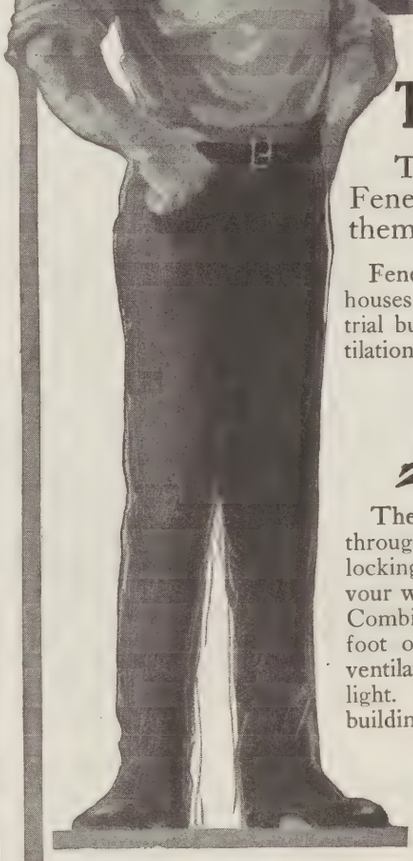
Thurston, I. T. The Torch-Bearer: A Camp-Fire Girls' Story. Pp. 253. New York: Fleming H. Revell Co. $1 net.

Mrs. Thurston has spun out a creditable story on the theme of camp-fire girls. Naturally a book of this character has to champion the cause very emphatically and drive home again and again the noble principles upon which the organization is founded. The one consuming fault with such propaganda literature is that it overstates, and makes the effects of the movement crowd one upon the other in too artificial a manner. The girls in this book are all natural as far as the camp-fire girls idea will allow, but they grapple with their weaknesses too self-consciously. In style and in spirit Mrs. Thurston succeeds admirably as a champion of the cause.

Verrill, A. H. Harper's Wireless Book. Pp. 185. New York: Harper & Bros. $1 net.

This is a serviceable and concise book, telling how to use wireless electricity in telegraphing, telephoning, and the transmission of power. Especially will it appeal to young readers, for the author has been zealous to record the doings of young operators in the field. Ever since the *Titanic* disaster and the *Volturno* fire, we have come to regard wireless as the greatest invention of modern times. Marconi seems to be carrying his ideas even further. Important as it is, we may regard wireless as almost a young man's special care. Mr. Verrill's book will be eagerly read. After finishing it, there is good reason to believe that many a boy will be

Interior View of Welch Grape Juice Co.'s Plant



TYPE of worker in Fenestra-lighted plants. Strong-bodied, level-headed—the man of multiplied energy.

The 100% Producer

The efficiency factor alone in Fenestra Solid Steel Windows makes them essential to good business.

Fenestration of factories, stations, warehouses, car barns, theatres, schools or industrial buildings of any type, means *better* ventilation, health and quality of work produced.

Fenestra
SOLID STEEL WINDOWS

The only windows of *solid steel* sections throughout—equipped with patented interlocking joints—literal *fire-insurance* built into your walls in place of brick, wood or stone. Combined in standard sizes to illuminate every foot of wall space, Fenestra gives abundant ventilation and makes possible longer daylight. Indestructible, lasts as long as your building without upkeep or repair expense.

Let us send you Catalogue "V" and special literature, or send a list of dimensions. Our Engineering Department will quote you without obligation.

SPECIAL TO BUSINESS AND PROFESSIONAL MEN

How would you like to get a $50 check from us every month? **You can have it if you will.**

You are coming in daily contact with the very best element in your community. You know all the business and professional men personally. You know who has need of a typewriter and what the probabilities are of an immediate sale. Why not give us all this information? We will immediately write the parties and offer to send them a typewriter for trial. If they decide to buy it they can send us a little as first payment—just whatever they can spare—and pay the balance $5 monthly. **On each sale made you get your commission.**

You need not even be known in the deal if you would rather not—or we can refer to you as our Local Representative if you prefer. We furnish free all the advertising matter and order blanks.

If you need a typewriter for your own use we will let you have a Sample at the Wholesale Agency Price, and the very fact that you are using a Fox Typewriter will help you immensely to make sales. Better think carefully, then act quick. Send for catalog and full particulars and be sure and mention The Literary Digest.

WHITTALL'S
· THE MARK OF QUALITY ·

Aladdin's Wonderful Lamp
never furnished anything more marvellous than the Whittall reproduction of Oriental Rugs.

¶ All the varied phases of the mystery-laden life of the Oriental, the unbounded faith of the Mohammedan, the limitless patience of the artist weaving his heart into his rug—all these and more found expression in the genuine antique.

¶ Everything good that went to the making of these glorious masterpieces is to be found today in

Whittall Rugs

¶ The beauty of design and color is all there—the same Oriental wools are used, the dyes are scientifically made and vastly superior in point of endurance, and the texture is superb.

¶ The story of Aladdin's Lamp is only a myth, but there is real magic in the making of Whittall Rugs and in the extraordinary combination of Whittall Standard Quality and Whittall Standard Price.

¶ *Send for our latest booklet—"Oriental Art in Whittall Rugs"—it will interest you from start to finish and tell you the secret of Rug buying. It is free.*

ISENBERG CIGAR CO., Wheeling, W. Va.

inspired to look into wireless as a possible vocation. The manual is fully illustrated.

Verrill, A. Hyatt. Harper's Book for Young Naturalists. Pp. 382. New York: Harper & Bros. $1.50 net.

Now that the boy-scout idea is controlling the boy world, every practical guide ever written finds ready welcome. The Harpers have done much to add to the literature of practicality, and this year they add one more book to an already large list. The boy is always on the lookout for the latest, the easiest, and the least expensive methods of experimenting, whatever his tastes. How many young naturalists will peruse eagerly the present "guide to collecting and preparing specimens, with descriptions of the life, habits, and haunts of birds, insects, and plants." Doubtless many a boy will know exactly how to skin a mammal and how to mount it after carefully going through chapters of Mr. Verrill's lucid explanations.

Wells, H. G. Little Wars. A game for boys. 4to, pp. 180. Boston: Small, Maynard & Co. $1.20 net.

Last year we had occasion to express unalloyed pleasure in reading Mr. Wells's "Floor Games." This year his "Little Wars" arouses equally our enthusiasm. Supporters of the Peace Society will never countenance such a perfect manual of warfare, but we welcome it as a novel activity, and one that could be put to more than an imaginative test. Military strategy and tactics require keen wit and acute analytical powers. Many a nursery floor will be turned into a battle-field, once the code of warfare, as worked out by Mr. Wells, is mastered. We can imagine Napoleon feasting on such a diversion.

BOY SCOUT AND CAMP-FIRE GIRL BOOKS

Burgess, Thornton W. The Boy Scouts on Swift River. Pp. 336. Philadelphia: Penn Publishing Co. $1 net.

The author believes that in the woods the unexpected happens at any moment. This story deals with a canoe cruise, and tells how a bull moose—not a political one—acted queerly. Boy Scout principles are applied in nearly every chapter.

Comstock, Harriet T. Camp Brave Pine. 12mo. Pp. 398. New York: T. Y. Crowell Co. $1.25 net.

Mrs. Comstock chummed with a camp-fire organization in Poughkeepsie. The consequence is her story is filled with natural color and enthusiasm. Her girls are healthy, and zealous upholders of the movement. The story is well written and borders on the romantic in places.

Eldred, Warren L. St. Dunstan Boy Scouts. 12mo. Pp. 335. Boston: Lothrop, Lee & Shepard Co. $1.50.

This is the fourth volume in the St. Dunstan Series. Here the Boy Scout movement is brought in contact with school life.

Fitzhugh, Percy K. For Uncle Sam, Boss, or, Boy Scouts at Panama. 12mo. New York: Thomas Y. Crowell Co. $1.25.

Naturally the Canal Zone would figure this year in juvenile literature. Amid exciting adventure, the hero incidentally learns a great deal about the Canal and about Isthmian history.

Hawkes, Clarence. The Boy Woodcrafter. Pp. 224. Chicago: F. G. Browne & Co.

It is quite the fashion these days to dedicate books to the Boy Scouts. Publishers and authors believe it insures a sale. But did they know that the Boy Scouts have a Book Doctor who recommends books after rigorous examination? This is not meant to throw any doubt upon the sincerity of the volume herewith mentioned, which tries to awaken the enthusiasm of the naturalist in every boy reader who happens to pick the book up.

A Sherbet is made tasty and delightful by using Abbott's Bitters. Sample of bitters by mail, 25 cts. in stamps. C. W. Abbott & Co., Baltimore, Md.

Hornibrook, Isabel. A Scout of To-Day. Pp. 290. Boston: Houghton Mifflin Co. $1 net.

Even the women writers are alive to the benefits of the Boy Scout idea. Mothers recognize that here is a movement which furnishes things for idle hands to do—hands that otherwise might be up to mischief. The author shows the good effect of the work in every-day life.

Otis, James. Boy Scouts in a Lumber Camp. 12mo. New York: T. Y. Crowell Co. $1.25.

The title tells the story, except the fact that the locality is in the Maine woods.

Spears, Raymond S. Camping on the Great Lakes. Pp. 372. New York: Harper & Bros. $1.25.

The fourth in a series which will be read with avidity by all boys interested in life in the open. There is a plot, of course.

Wilson, John Fleming. Tad Sheldon: Boy Scout. Pp. 231. New York: Sturgis & Walton Co. $1 net.

Stories of adventure along our coast.

A FEW HISTORICAL TALES

Bedford-Jones, H. Flamehair, the Skald. Pp. 310. Chicago: A. C. McClurg & Co. $1.20 net.

A tale of the days of Hardrede. It is a Viking story of saga proportions.

Curtis, Alice Turner. A Little Maid of Province Town. Pp. 212. Philadelphia: The Penn Publishing Co. 80 cents net.

A pre-Revolutionary story in which a little maid's father is held under suspicion. But fortunately for the patriotic tone of the volume he is at last found to be a staunch fighter for liberty.

Knipe, Emilie B. and Alden A. Beatrice of Denewood. 12mo. New York: The Century Co. $1.25 net.

The sequel to last year's "Lucky Sixpence." Many incidents in the latter part of the American Revolution are dealt with in this book. The style is agreeable.

McIntyre, John T. In Kentucky with Daniel Boone. Pp. 195. Philadelphia: The Penn Publishing Co. 75 cents net.

This author believes in fictionizing biography. He has written other books in which boys accompany historical figures in various adventure. The present volume contains a sketch of Boone as the final chapter of the story.

Tomlinson, E. T. The Boy Sailors of 1812. 12mo. Boston: Lothrop, Lee & Shepard Co. $1.25.

This book was evidently written as a memorial of the centennial of Perry's Victor··. Dr. Tomlinson may be trusted to give an amount of information in an interesting narrative.

Tomlinson, E. T. The Young Sharpshooter. Pp. 390. Boston: Houghton Mifflin Co. $1.50.

A story of the Peninsula Campaign in 1862. A timely volume in view of the recent war anniversaries.

MISCELLANEOUS

Claxton, William J. Lessons from Nature's Workshop. 12mo. New York: T. Y. Crowell Co. $1 net.

Nature talks for children, which may result in sharper eyes and quicker understanding of sounds and habits.

Davis, Charles G. Motor Boating for Boys. Pp. 86. New York: Harper & Bros. 50 cents net.

The frontispiece shows some very small boys at work. But the directions and descriptions herewith given will interest even older boys who are looking for sport on the water.

Dole, Nathan Haskell. The White Duckling, and Other Tales. 8vo. New York: T. Y. Crowell Co. $1 net.

A new edition of the Russian Fairy Book, with excellent illustrations by the Russian artist, Bilibin.

Foley, James W. Boys and Girls: A Book of Verses. Pp. 240. New York: E. P. Dutton & Co. $1.35 net.

A mixture of clever and bright verses and jingles which have appeared in the newspapers and magazines. Some are suited to girls and boys; some are not. But the volume as a whole will please the family entire.

STEINWAY

THE Steinway is the preferred piano of today. It is a mechanical and an artistic triumph—the master work of four generations of the world's greatest piano makers.

Fraser, Chelsea Curtis. Every Boy's Book of Handicraft, Sports, and Amusements. Pp. 695. Boston: Dana, Estes & Co. $2 net.

This volume holds a great richness of suggestion. Every possible activity in boy life is considered. The book is printed on thin paper. It is an encyclopedia on how to do things and how to have a good time.

Hawthorne, Nathaniel. Tanglewood Tales. 8vo. New York: T. Y. Crowell Co. $1.50 net.

A reprint of this classic is always welcome.

Holland, Rupert S. Historic Adventures. Large 12mo. Philadelphia: George W. Jacobs Co. $1.50 net.

A suitable book for a boy who is interested in American history adventures. Do you know how the Mormons came to settle Utah? Other questions of like character might be asked which Mr. Holland answers entertainingly.

OTHER NEW BOOKS—SERIES

Altsheler, Joseph A. Apache Gold. Pp. 383. New York: D. Appleton & Co. $1.35 net.

A story of our strange Southwest.

Barbour, Ralph Henry. Around the End. Pp. 319. New York: D. Appleton & Co. $1.35 net.

Another rattling story by the man who can write them so easily. Football is glorified on the cover design and in the story.

Camp, Walter. Danny Fists. Pp. 286. New York: D. Appleton & Co. $1.35 net.

There is a manly tone to Mr. Camp's stories. There is certainly a tone of authority when he comes to treat of football.

Day, Holman. The Rainy Day Railroad War. Pp. 257. New York: Harper & Bros. $1 net.

This story was originally published in *The Youth's Companion.*

Deland, Ellen Douglas. Country Cousins. Pp. 312. New York: D. Appleton & Co. 25 cents net.

A city girl has a year in the country while her parents are in South America on a diplomatic mission.

Kirkland, Winifred. The Boy Editor. Pp. 231. Boston: Houghton Mifflin Co. $1 net.

A story full of healthy energy and right doing.

Peattie, Elia W. Annie Laurie and Azalea. Pp. 295. Chicago: Reilly & Britton. 75 cents net.

Wesselhooft, Lily F. Laddie: The Master of the House. 12mo. Boston: Little, Brown & Co. $1.20 net.

The story of a dog.

NEW VOLUMES IN SERIES

Quirk, Leslie W. The Freshman Eight. Pp. 295. Boston: Little, Brown & Co. $1.20 net.

The second in the Wellworth College Series.

Channon, Frank E. Henley on the Battle Line. Pp. 314. Boston: Little, Brown & Co. $1.50.

One of a series in which American Boys take part in Indian Uprisings instigated by a famous emir.

Dudley, A. T. The Half-Miler. Pp. 332. Boston: Lothrop, Lee & Shepard Co. $1.25.

The ninth volume in the Phillips Exeter Series.

Kilbourne, Capt. C. E. An Army Boy in the Philippines. Pp. 351. Philadelphia: The Penn Publishing Co. $1.25.

This is by the author of "An Army Boy in Pekin." Books of this pattern are cut after a design; they carry atmosphere.

Pansy. Four Mothers at Chautauqua. Pp. 408. Boston: Lothrop, Lee & Shepard Co. $1.50.

Half fiction, half propaganda, this story gives the reader fictionized information about the summer center of culture and instruction. The book is illustrated with photographs.

Ray, Anna Chapin. The Responsibilities of Buddie. Pp. 266. Boston: Little, Brown & Co. $1.50.

The third and last of the Buddie books.

Scott, Gertrude Fisher. Jean Cabot in the British Isles. Pp. 327. Boston: Lothrop, Lee & Shepard Co. $1 net.

This is the second volume in a series.

Stratemeyer, Edward. Dave Porter and the Runaways. Pp. 301. Boston: Lothrop, Lee & Shepard Co.

Dave Porter has existed for nine years!

CURRENT POETRY

NUMEROUS as are the books of good verse at hand, we feel that we must temporarily postpone the consideration of several of them in order to make somewhat extensive quotations from a remarkable volume just published by the John Lane Company. It is called "Bread and Circuses," and the author's name is Helen Parry Eden. So far as we know, it is Mrs. Eden's first book, and we have no hesitation in saying that it is the best first book produced in many a year. Mrs. Eden's child-poems (she writes much about a certain delightful "Betsey-Jane," aged three, who evidently is her daughter) have the understanding and tender whimsicality that make "A Child's Garden of Verse" a delight, and she writes of things spiritual with the devout artistry of Crashaw.

"Effany" is a beautifully human poem. We commend it to the attention of the *English Review* school of intense young "realists."

Effany

BY HELEN PARRY EDEN

When elm-buds turn from red to green,
And growing lambs more staidly graze,
And brighter nettle-tops are seen
Along the hedge-rows' rambling ways;
When leaves unclose where late the hail
Rustled in naked hawthorn twig,
April comes laughing up the vale
And Effany comes round to dig.

Aloof among her nursery toys,
From her high casement Betsey sees
His vellum-colored corduroys
Stirring behind the apple-trees.
Clutching her trowel, she descends,
With unimagined projects big,
For Effany and she are friends,
And she helps Effany to dig.

Deep in the flowering currant-rows
The robin twitters gentle mirth
Where Effany with Betsey goes
Triumphant o'er the new-turned earth;
And the wind wanders out and in,
As doubting which it loves the best—
The grizzly stubble round his chin,
Or her beruffled golden crest.

His coat, lined with carnation red,
Hangs in the plum-tree's forked boughs,
Till sun is low and the day sped
And Betsey called into the house—
He scrapes his spade, her trowel she;
She looks and lingers, loath to start,
With little earth-bound feet to tea;
He takes his coat down to depart.

Half musing on the little maid,
He trudges toward the coming night,
Stooping beneath his shouldered spade,
To where across the curtained light
With leaves upon its fiery fold
His wife's thin shadow falls alone—
For she and Effany are old
And all their little ones are gone.

Many writers of religious verse take Francis Thompson for their teacher, and they are wise to do so. But Mrs. Eden needs to go to no poet of our generation

(*Continued on page* 1132)

Cadillac
Standard of the World

Cadillac again awarded the Dewar Trophy

Europe's highest Motor Tribunal pronounces 1914 Cadillac mechanical achievements to be the greatest of the year, demonstrating the advancement of the industry

In our first announcement of the 1914 Cadillac, and its two-speed direct drive axle, we said:—"The Cadillac is about to endow the motor car with A new element of efficiency, A new quality of luxury, A new source of economy."

After several thousand purchasers had received demonstrations of the truth of this prediction, we said in a later announcement:

"Motoring as you know it, and motoring as the owner of a 1914 Cadillac knows it, are two distinct and different things."

And we added, that the Cadillac owner was enjoying luxuries to which you must remain a stranger as long as you did not drive a Cadillac.

But we did not dream when we wrote the words, that so distinguished an endorsement as the second award of the Dewar Trophy was close at hand.

You will recall that the first award of the Dewar Trophy to the Cadillac pronounced it the most thoroughly standardized car in the world.

In the test, three Cadillac cars were entirely dismantled, all of the parts thoroughly mixed, and eighty-nine parts removed from the heap and substitute parts provided.

The three cars were then re-built into perfect running condition from the haphazard heap—wrenches and screwdrivers being the only tools necessary.

Standardization was defined to mean in this test—as it always has meant—that every Cadillac part was exactly like every other part of its kind.

It did not mean nearly like it or almost like it, but absolutely like it, down to the one-thousandth part of an inch, where that degree of accuracy was essential,

In other words, that there was complete interchangeability, perfect alignment of parts and units, perfect harmony in their operating relations with each other, and a total absence of ill-fitting joints and bearings.

The Cadillac is the only car which has ever passed this tremendously significant test of what constitutes standardization; and the award to the Cadillac was the only one ever made upon such a test.

And that fact lends especial significance to this second award of the same trophy to the same car, but from a new angle of analysis.

It is one thing to feel sure that your manufacturing principles are sound and scientific.

It is another, and a more pleasant thing, to have that fact almost universally appreciated by your own countrymen.

THE DEWAR TROPHY

The Royal Automobile Club, which conducts the contests for the Dewar Trophy, is the most conservative tribunal of its type in the world.

The Dewar Trophy is the motor classic.

It is awarded for the most distinguished achievement of the year, demonstrating the advancement of the industry.

It takes into account manufacturing principles as well as performances.

Sir Thomas Dewar, when he instituted the Trophy, had it in mind to seek out, each year, the car of super-excellence.

So the awards are as disinterested, and as scientific, as the awards of the Nobel Prize in a totally different field of endeavor.

We may all of us feel justly reinforced, therefore, in our good opinion of this splendid American car, the Cadillac.

We may feel that its virtues have not been overstated.

We may all feel that these announcements have not overdrawn the advantages of the latest Cadillac development, the Cadillac two speed direct drive axle.

It was not merely the point-by-point performance of the car over give-and-take roads for a thousand miles.

It was not merely the certainty and the endurance of the electrical devices in self-cranking, lighting and ignition.

It was not merely the remarkable record of 17.17 miles per gallon of gasoline (notwithstanding repeated stops and starts in testing the electric cranking device).

It was not alone the astonishing record of more than 1,000 miles per gallon of lubricating oil.

It was not only that the two-speed direct drive axle was a material factor in making possible these results; and that it gave to the word "luxury" a new meaning as applied to motoring.

It was not only the perfect record in the shifting of the rear axle gears from high to low and vice versa 520 times, by means of the electric shifting device.

No, the Dewar Trophy was awarded to the Cadillac for the second time—and the Cadillac is the only American car which has ever received it, and the only car in the world to which it has ever been awarded twice—because the Cadillac is the Cadillac, because it is what it is, and because it does what it does.

But it is gratifying in the extreme to have the approval of your own nation reinforced by an international verdict.

You, as a Cadillac owner—present or prospective—can take just pride in this second award of the Dewar Trophy.

It is more than a Cadillac achievement—it is a tribute from high sources to American skill and to American engineering initiative.

Because the Cadillac proved itself to be the car of all-around super-excellence as a complete entity.

Because it proved its dominant characteristics to be those which make most for all-around constancy and serviceability.

Because, as we have said, no other car rides or drives like the Cadillac.

Because, in fact, it is the Standard of the World.

CADILLAC MOTOR CAR CO., DETROIT, MICH.

Christmas Greetings

Let a box of Huyler's carry your holiday greetings to each of your friends. It is as full of the Christmas spirit as the holly and mistletoe, and its message is universally understood and appreciated.

Salesrooms: No. 1 W. 34th Street, New York

CURRENT POETRY

(*Continued from page* 1130)

for instruction; such a poem as "Sorrow," for example, is comparable only to the immortal songs of Richard Crashaw and Robert Southwell.

Sorrow

BY HELEN PARRY EDEN

Of sorrow, 'tis as Saints have said—
That his ill-savored lamp shall shed
A light to Heaven, when, blown about
By the world's vain and windy rout,
The candles of delight burn out.

Then usher Sorrow to thy board,
Give him such fare as may afford
Thy single habitation—best
To meet him half-way in his quest,
The importunate and sad-eyed guest.

Yet somewhat should he give who took
Thy hospitality, for look,
His is no random vagrancy;
Beneath his rags what hints there be
Of a celestial livery.

Sweet Sorrow, play a grateful part,
Break me the marble of my heart
And of its fragments pave a street
Where, to my bliss, myself may meet
One hastening with pierced feet.

Could any living writer except Mrs. Eden make a poem out of a child's Ark? We think not. James Whitcomb Riley might attempt it, but he would find it difficult to surpass the exquisite grace of these lines.

The Ark

BY HELEN PARRY EDEN

Vainly, my Betsey, to the weeping day
You sing the rime that drives the rain away;
And from your window mourn the patient trees
Buffeted by the peevish Hyades.
Come, let us shut the lattice, do you slide
From your old Ark the gaudy-painted side
And let the enlarged captives walk about;
For tho a deluge be at work without,
Secure within we've no concern for that,
And all the nursery is Ararat.
Not on the rug—a space of oaken boards
A firmer footing for the crew affords,
Softly, my Betsey, lest your fervor harm
The extreme frailness of a leg or arm—
Poor limbs, so often and so rudely tossed
And rattled down, no wonder some be lost
Beyond the aid of glue! What skill did cram
Into the hold vermilion-hatted Ham
And Shem with the green top-knot and the slim
Contours of Japheth, Noah (somewhat grim
With buttons) and his consort after him!
The wives are at the bottom, dear; but now
Come the black pig and terra-cotta cow,
Three foxes, this a purple collar round
His rigid neck proclaims the faithful hound;
The birds are not so nice, tradition fails
To account for such a quantity of quails,
But the old weary crow that flew and flew
Away from Noah has come to you.
Where is the dove? For if my memory speak
The truth, there *was* a dove and in his beak
The olive-leaves he plucked upon the day
When, as you know, the waters ebbed away;
Who perched on Noah's window with pink feet,
And without whom no Ark is thought complete,
Where is the missing dove? For now I see
Standing or prone the whole menagerie,
And the rain's stopt without and all above
Beams the benignant sky; and still no dove,
Of the same beautiful fact the feathered proof!
Why here—upon the ripples of the roof—
Here is your truant painted, to abide
When Shem and Ham are scattered far and wide,
And all the beasts are broke, to brood with furled
Pacific wings over the new-washed world.

Bed-Exhaustion is the bane of patient, nurse and physician.

To overcome this discouraging feature all sorts of expedients are tried—because "getting well" is difficult without rest and sleep.

The WALLACE
ADJUSTABLE Bed

ministers to the body by providing continual change in position. This is done mechanically, without touching the patient. It is most substantial in construction, very simple and sanitary. Is indorsed by doctors and nurses and used by all well-equipped hospitals.

If you would actually minister to the sick and suffering, see that they are provided with a

Funk & Wagnalls Company, 354 Fourth Ave., New York

JUST two or three strokes on this fine stone hone, each time you shave, give your razor a barber's edge—and it's as easy as stropping, if you use the

PIKE STROP-HONE
(For Safety or Ordinary Razors)

Two or three strokes take hardly a second because no time is lost wetting this hone—it's used "dry." This little honing makes less stropping necessary, hence better shaves in less time. Turn over the hone-side and you turn up the strop-side. Two razor needs in one—$1.00 at your hardware or tool dealer's, otherwise sent direct prepaid.

"*Pick a Pike.*"

FREE Send your dealer's name and 4c. (for packing and mailing) for our Pike India Vest Pocket Stone—*not* for razors but for pen knives, ink erasers, office use, etc., also our famous book "How to Sharpen."

PIKE MFG. CO., 184 Main Street, Pike, N. H.

Here is a charming sonnet. Our one adverse criticism of "Bread and Circuses" is that it does not contain as a frontispiece a portrait of Betsey—and of Betsey's mother.

The Moon

By Helen Parry Eden

Playthings my Betsey hath: the snail's cast shell,
Pebbles and small unripened pears; she dotes
On gentle things with furred or feathered coats,
A bunch of keys, a little brazen bell;
But none of these enticements please so well,
Nor pouring tea nor sailing paper coats,
As the rare moon that of an evening floats
In anchorages inaccessible.
On frost-bound nights a portly yellow moon
She kissed her hand to him before she slept,
The slim white stripling of an afternoon
In summer, still she longed for him and wept
Seeking to coax him down an elder wand,
For once, that she might hold him in her hand.

Miss Scheffauer starts out as a realist in these lines (from the London *Spectator*), but she is a romanticist at the end. There is a lovely picture in her last three stanzas.

Noon in the Pleasure Gardens

By Ethel Talbot Scheffauer

Rough clods of red-earth newly turned
For wilting, new-set plants,
And where the jack-o'-lanterns burned,
Strange little paths and slants.

Chocolate papers, red and gold,
Bright orange wrappers torn,
Half cigarets some novice rolled,
Lie in the grass forlorn.

The little stage is ringed about
With gaudy lantern lights;
The garden's glamour is put out
With the last lamp o' nights.

Yet—patience, till the day be dead,
Till sunset bury it,
Until in blue and green and red
The fairy lamps are lit;

Until the Chinese lanterns swing
Wavering in the wind,
And the cool winds of evening bring
Night from the hills behind.

Then music binds the spangled night
With spells and wizardries;
And lovers take their shy delight,
Whispering in the trees.

Beautiful are the gardens then,
The faint lights swing above,
Like fireflies in a fairy glen
Whose young seigneur is Love.

From *Munsey's Magazine* we take this pleasant little song.

At the End of Day

By Wanda May

Oh, love, good night! The deepening shadows blend
With daylight's gold; the silvered moonbeams wend
Their way to light our world till dreams descend.

Oh, love, good night! And may life's shadows blend
With youth's bright sun till evening falls, and then
Love's glory light thy pathway to the end!

PERSONAL GLIMPSES

BEILIS'S OWN STORY

THE graphic stories of prison life in Russia by Tolstoy and other famous authors may be accurate in most of the essentials, but they can not be like narratives from a person who knows from experience what it means to be incarcerated as a religious or political suspect in one of the Czar's jails. The novelists do not exaggerate, however, they only write in a less intimately personal vein. Proof of this fact is found in Mendel Beilis's story of the persecution that he was subjected to pending his trial at Kief on a charge of killing Andrew Yushinsky, a Christian boy, to get blood for sacramental purposes. Beilis talked with a correspondent of the Philadelphia *Public Ledger* shortly after his acquittal. He said:

In March, 1911, the body of the Yushinsky boy was found in the brickyard where I was employed. I had been busy all day and did not pay much attention to the discovery, in fact it was not until the day of the funeral that my attention was really brought to the case. On that day a friend of mine, Mr. Zacharchenko, who owns the house where Vera Cheberiak lives, said to me: "Mendel, I have just been to the funeral of the Yushinsky boy, and while there I saw a lot of handbills distributed and they said that the Jews had killed the boy."

Even then I did not pay much attention to my friend's words and forgot the matter entirely until some three months later.

It was then that the local Prosecuting Attorney called at my house and examined the premises thoroughly. He also went to the brickyard and carefully went over the works and grounds. He went away without saying anything to me. Two days later a number of spies, drest as tramps, came to my house. They behaved like animals, talked about ritual murder and tried to frighten me in numerous ways. It was then that my friends began to tell me that Vera Cheberiak had been telling everybody that I had murdered the boy.

Some time elapsed before I received another visit from the local Prosecuting Attorney. He examined the house again and finally asked me why I did not have a mazuza (Jewish talisman). I told him that as I worked in the brickyard, where a lot of Christians were employed, I could not very well be strictly orthodox. He then left.

On July 22, 1911, I was awakened at 3 o'clock in the morning by a noise, which I thought at first was the explosion from a cannon. Finally I heard a terrific knocking at my front door and I hastened to open it. When I did so I was greeted by a sight which frightened me nearly to death. Right at my door were a lot of policemen and behind them was about a regiment of soldiers, while the prosecutor was standing beside me.

He said, "Are you Mendel Beilis?" and when I said I was, he said, "You are under arrest." I asked for what, but I received no reply. I was trembling like a leaf and

my wife was fainting, and the children were crying and running about trying to hide, for they were terribly scared. I remembered they told me to dress and that I was to be taken to prison.

I was put in a cell away from the other prisoners, but about an hour after I reached the prison I heard a boy crying and sobbing something. After listening for a few minutes I recognized that it was my son David, then eight years old. My heart almost stopt beating and I pounded my head against the wall of my cell in my grief.

A few minutes later the governor of the prison came to my cell and said "the little son of Vera Cheberiak says that he was playing with the Yushinsky boy in the brick-yard and your son says he was not. Your son is a big liar and that is why he was arrested."

The Governor refused to listen to my explanation. Finally I began to cry and ask him why I was in prison. The only answer I received was that I would be sent to Siberia if I did not tell the truth.

The man left me alone, and for several hours I could hear my boy crying, and at each sob my heart bled. All I could do was to think of my unfortunate family.

The next morning I rang the alarm-bell in my cell, and the Governor came. He said, "Well, Beilis, so you want to make a confession." He either mistook my motive in ringing the bell or was trying to frighten me. I told him that I had nothing to confess, and asked him what he wanted me to confess. He did not answer this, and I then told him that he could do whatever he chose with me, but for God's sake to have pity on my David. I told him that if he killed David the blood would be on his head, but the Governor only laughed. However, he later sent David home in charge of a policeman.

I was full of joy and thanked God, for I believed he would help me through my trouble.

Several days later the Prosecuting Attorney asked me, "Is it true that the Jews require blood for the Passover cakes?" I told him I did not know of any such law. It was not until seven days later that I was informed of the hideous nature of the charge against me.

A few days later I was ordered removed to the chief prison, and as I was being taken through the streets by two policemen one of them noticed that I was half starved and stopt and bought me some pears. He told me that altho he was a Christian he knew I was innocent, but said the only thing I could do was to go to prison. . . . . .

At the expiration of eight days, I was taken to another cell where there were thirty men—all murderers or burglars. They also knew all about my case. A majority of these men said they believed me innocent, but there were a few who said I was guilty. It was here I received my first beating. My feet were cracked and bleeding from the nails in the rough prison shoes and I sat down on a bench near another prisoner. He hit me a stunning blow in the face, bringing blood to my mouth. I began to cry from the pain and the prison governor appeared and when he saw the lump on my face asked me what was the matter. I told him I had been hit, and he asked

Baker Electric Trucks

More reasons for higher purchase price and lower maintenance cost of Baker Electric Trucks

Springs of Special Steel

Baker springs never break or crack. They are made of a tougher steel than is found in ordinary springs, and they are large enough to stand a heavy overload.

Shackle Bolts Bronze Bushed

Each spring end and bracket is fitted with a bronze bushing. The shackle bolts are hardened, ground and lubricated. Road vibration causes them to move slightly in these bushings which wear slowly, and are cheaply replaced. If properly lubricated by grease cups provided, the parts will never need replacement during the life of the truck.

A Dallas, Texas, owner says: "One of the little things I like about my Baker Truck is the spring shackle bolt construction. I have just replaced two springs on one of my . . . trucks, for the holes in the ends had worn oblong and nearly through. All the shackle joints are loose as the holes are worn large. This in less than 4 years' time."

Get our book "Why an Electric Truck".

A Perfected Picture Machine for Home Entertainment

The foremost lens makers of America have solved the problem of satisfactorily projecting enlarged pictures from the pictures *themselves* as well as through lantern slides.

Bausch and Lomb HOME BALOPTICON

Shows colored pictures, photo prints, type matter or solid objects, such as coins, minerals, etc., with a clearness and brilliancy heretofore impossible except with lantern slides.

Shows Type Without Reversing. With no other popular priced instrument can you project written or printed matter without the extra expense of a reversing mirror. You will realize how this increases the opportunities for pleasure and entertainment.

Shows Solid Objects. Owing to the fact that the object holder is on the *floor* of the light chamber rather than on the wall as in other home instruments, it is possible to show solid objects. The works of your watch, pieces of jewelry, botanical specimens are all subjects possible to project readily in the Home Balopticon only.

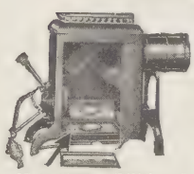
Scientific Illumination. The fact that the Home Balopticon is equipped with one of the famous B & L *achromatic* lenses and that years of laboratory experiment are behind its wonderful system of illumination and reflection, accounts in a large measure for the superior clearness and brilliancy of its pictures.

Another advantage is that each outfit includes two adjustable picture holders and an aluminum coated wall screen which makes the image many times more brilliant than can the ordinary sheet.

That this is the best of all home picture machines will be apparent if you compare demonstrations with any other similar projector at any price. At photographic dealers—not toy stores.

***For lantern slide users** the Home Balopticon can be supplied in a model combining lantern slides with opaque pictures giving instant interchange between the two.*

"Fun—and Better" *Free*



Note the possibilities of the flat object holder

A book about the possibilities of original home entertainment with the Home Balopticon. If you doubt that this picture machine is to the eye what the talking machine is to the ear, send for this book and read how the Balopticon can be used for pleasure and profit in scores of different ways.

who did it. I pointed out the man and the governor knocked him down, and then he asked the prisoner why he had hit me. The man replied that he hit me because "he killed a Christian child." I was then transferred to another cell, where there were but twelve men.

A month later Beilis was taken before the prosecutor, who informed him that several black hairs had been found on the pants which had belonged to the Yushinsky boy. Another official tore out a handful of hair from Beilis's head and beard. The prisoner was told that the hair was to be examined, and he was then put back in his cell. To continue:

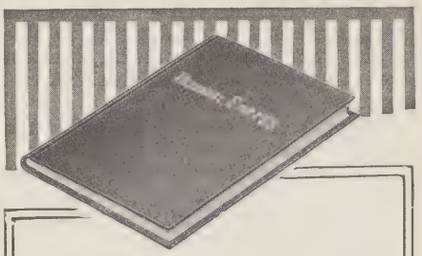
During all this time I had not heard a word concerning my family. A few days later a prisoner named Kasatskenko offered to smuggle a letter to my wife. I was frightened lest I should be discovered, but I wrote a short note asking how she was and telling her that I was alive and all right. A few days later I received a reply saying they were well. Kasatskenko then suggested I write another letter, but as my glasses had been taken away I told him I could not see. He offered to write what I dictated. I learned later that he wrote an entirely different letter from the one I told him to, because he was a spy. As a result of this letter I was put in a solitary cell, measuring four by three yards.

It was terribly cold and damp in there, and the only furniture was an iron bench and iron table. There was a tiny window near the top of the cell, but I could not even see the sky through it. I could not sleep that night, for I was nearly dead from the cold. I walked to and fro in the little cell until I must have fallen to the bench exhausted. I was kept in that cell for ten months and suffered terribly, especially during the winter months. My one longing was to see the sky, but this was impossible.

At length one of my feet became frostbitten, and I was taken to the hospital, where I spent a month and a half. At the end of that time I was returned to the little cell. It was at this time that I was first told I had been indicted for the murder of the boy. I read the indictment several times, and finally came to the conclusion that my case was not entirely hopeless, for I knew that I was perfectly innocent and that no evidence existed against me. From then on my hopes began to center on the acquittal.

After some days I was called before the governor of the prison, where I saw Margolin, the lawyer to whom my wife had appealed for help. I was fearfully excited when I saw Margolin, but he quieted me by saying that he had gone through the indictment carefully and had come to the conclusion there was no evidence against me. He promised to see me through my trouble.

He also promised to secure permission for me to see my wife and children whom I had not seen for eighteen months. My heart beat with joy when, several days later, I was taken to the room where the prisoners are allowed to see their friends. It was a large room in which were a number of wire cages in which the prison-



I Want to *Give* You "Human Energy"

My book explains the laws governing right exercise—some of them for the first time. It shows clearly and concisely why a few minutes daily of movements scientifically directed to reach your internal organs—most of which are muscular—will do infinitely more for your health and strength than hours of random exercise.

I offer it to you free, because I want you to understand the principles underlying The Thompson Course, which has brought thousands from uncertain health and inefficiency into fuller, more useful and serener life.

Sooner or later, you will adopt the principles of my Course—all men of sedentary life will. You will find "Human Energy" a real contribution to the science of making the most of oneself. It is startling, yet obviously true. Sending for it puts you under no obligation, except to read it as though it were written by a friend.

ers were placed in order that they might not reach their friends.

A few moments after I was locked in one of the cages, my wife and children were led to the visitors' door. I thought my heart would burst with happiness, but my joy quickly turned to anguish as I noticed my wife's appearance. She was deathly pale and looked many years older than when I saw her last. Neither of us spoke a word, and for a time it seemed as tho I must faint. I stood staring at my wife while I shook with horror and the tears rolled down my face. Finally, the prison governor broke the spell by saying: "Go on, Beilis, don't lose any of the precious time. You will only have a few minutes."

I shall never forget those few minutes. I noticed my brother, who was with the party, was wearing blue spectacles, and when I inquired the reason he removed them, and I saw his eyes were red and swollen. He told me they had become so through crying for me.

One incident of that meeting stands out clearly in my mind. Another prisoner was in the next cage to mine, and his wife was visiting him. Presently I heard her say to her husband, "Tell the Jew next to you that all the town knows he is innocent, and with God's help the real murderer will be discovered." I started to thank her, but the governor stopt me.

One Friday, I remember the day well, Lawyer Margolin informed me the trial had been postponed. This was a terrible shock, and in despair I fell to the floor on the cell and implored him to hasten the trial, for I felt that if I were to be kept in prison much longer it would be better for me to die at once. He told me to have courage, and said the postponement was caused by one of the experts being taken ill. As soon as I heard the word expert, I realized the trial was going to be very complicated and that religious questions would be involved. With this my hope of being acquitted failed somewhat.

About this time Margolin secured permission for me to see one member of my family each Sunday. The sight of my wife and children, who took turns in visiting me, was the only thing that kept my spirits up. I fell into deep despair a few weeks later when these visits suddenly stopt. I begged the prison governor to allow me to see my family, but it was not until after the special prosecutor of the Ministry of Justice at St. Petersburg visited the prison that I obtained permission for these visits to be renewed.

Several weeks later the same prosecutor came to the prison and read me the new indictment which had been found against me. It was several hundred pages long and took him two days to finish reading it. I studied the document most carefully for a week, and while I found many names mentioned in it, I only found my name on the last page, very near the end.

The indictment was so full of untruth that it affected my mind and I was not able to concentrate my thoughts upon the real facts of the case. Had it not been for the Bible, which was allowed

Dollar Watch

There is hardly another gift with so much of the real spirit of Christmas as the Ingersoll.

There is something about the tick of a watch that goes straight to the heart of a child. It is a gift that is cherished and enjoyed every day of the year. And the responsibility and "on time" spirit that it instills is the finest kind of training.

Older folks appreciate the Ingersoll just as thoroughly because it is far enough out of the "handkerchief" and "carpet slipper" class of gift to show real thoughtfulness and appreciation.

Its cost puts no burden on the shoulder of friendship. Its service fills a real need. It is a good looking and reliable timepiece that has already served nearly 34 million and will serve its coming millions equally well.

There is an Ingersoll for every member of the family. The five models are:

"The Watch that made the dollar famous"	$1.00
THE ECLIPSE—a thin model for men	1.50
THE MIDGET—a model for women and girls	2.00
THE JUNIOR—a small thin model watch	2.00
THE WRIST WATCH—for men and women	2.50

Send for the Ingersoll booklet, "Pointers"—it's free.

INVESTMENTS AND FINANCE

THE PROFITS OF THE 'FRISCO SYNDICATES

ONE of the notable outcomes of the 'Frisco Railroad receivership has been an investigation in St. Louis by the Interstate Commerce Commission of certain profits made by the syndicates that promoted subsidiary railway lines and then sold them to the parent company. Rumors that such profits were wrongfully made by officers of the company set in soon after the receiver was appointed. It is declared by the New York *Evening Post* that on the face of the evidence now submitted these profits, which reached the comfortable sum of $7,403,000, "mainly accrued to officers and directors of the 'Frisco company." The writer says further in detail as to the evidence brought out in St. Louis:

"Perhaps the most interesting example of how these subsidiary lines were sold to the 'Frisco was obtained in the testimony dealing with the St. Louis, Brownsville & Mexico. That 510-mile line, which extends the 'Frisco from Galveston to Brownsville on the Mexican border, was promoted and constructed by the chairman of the 'Frisco board, and several other directors.

"C. W. Hillard testified that he and the other directors, together with a number of 'Frisco officials, had each made a profit of 75 per cent. on the money advanced to the company that built the St. Louis, Brownsville & Mexico.

"In the defense of the chairman and his associates, it might be argued that the 'Frisco acted wisely in buying the Brownsville extension, and that the value of that extension had been fairly appraised. The answer to that argument is that, if the smaller road was a desirable acquisition for the 'Frisco, the 'Frisco should have been allowed to build the line with no profits to directors who acted in the capacity of both buyer and seller; also, that the acquisitions in question admittedly bankrupted the property on which they were unloaded.

"When the Interstate Commerce Commission made its report in 1907 on the results of the Alton investigation, it was pointed out in detail that the history of the company was 'rich in illustrations of various methods of indefensible financing,' and it was then added:

"By way of justification or excuse, we are told that the methods of the financing of railroads which prevailed in the year 1900 are now obsolete, owing to a higher degree of conscientiousness among financiers.

"'Frisco acquired control of the St. Louis, Brownsville & Mexico, not in 1900 but in 1910."

These disclosures have been widely commented on in financial circles. Indeed, they have made their impress on many readers not directly related to the world of finance. It is believed that labor agitators, socialistic writers, and in general, smaller patrons of the railroads will derive from them new ammunition in their unfriendly attitude toward the roads. The New York *Times* remarks that the profits "are apparently admitted by some of those who made them." Moreover, the record as it stands shows that certain directors of the 'Frisco, "in effect voted themselves large personal profits out of the treasury of the company whose management was entrusted to them, by the stockholders." So long as the testimony thus far produced, stands undisputed, it must "carry its own condemnation." The management have not only wronged the 'Frisco road, but have done a visible and great injury to all the railroad interests of the country. In the dealings now laid bare, officials of the road "stood upon both sides of the transaction and thus played directly into the hands of the demogogic assailants of corporations." The disclosures come at a most inopportune time—a time when railroad managers as a whole "are most desirous of winning and holding the confidence of the public by the integrity of their acts and by faithful compliance with the law," and when they are called upon to defend before the Interstate Commerce Commission their appeal for an increase in freight rates.

It is recalled by a writer in *The Wall Street Journal* that one of the attorneys of the 'Frisco system, at the time of the appointments of a receiver for the system, roused himself into a state of "splendid indignation," when arraigning society for "crushing the railroads between the millstones of rising wages and rigid rates." His remarks have now, says this writer, "a grim humor." The man has shown himself, not only a devoted attorney, but "a comedian as well." From the evidence this far submitted this writer finds "something very like a breach of trust in the precipitate buying of branches and connections for which the 'Frisco had no immediate need, and for which the management knew they could pay only with the greatest difficulty. In these acts they have done an injury "to the cause of all railroads in the court of public opinion," and have given "aid and comfort to the enemy."

WORDS OF CONFIDENCE FROM GOOD QUARTERS

Most observers still find in many parts of the country signs of a recession in business, particularly in iron and steel. While these facts are not questioned, careful observers believe that conditions are the result of causes destined within a reasonable time to disappear. One of these is the readjustment made necessary by the new tariff, another delay in the passage of the Currency Bill, still others the financing required by the Balkan War, and uncertainty as to the outcome of the trouble in Mexico. The Boston *News Bureau* quotes "a capitalist," as saying that while business is contracting, this is merely what Wall Street "foresaw six months ago." In other words, what the country itself now sees, the stock exchange saw then. This capitalist believes that readjustment in industrial enterprises "should be over very soon." Hence, in a short time, the stock exchange will "begin to discount business recovery and improvement in things generally."

The writer in the *News Bureau* believes this view is not alone the view of the man whom he quotes, but that it is shared by many other financial experts. In fact, most big men in Wall Street "have substituted for their pessimism of a month ago a moderate degree of hopefulness." They place much reliance on the "brighter outlook for sound currency legislation," and begin to feel that in due time the railroads will be permitted to advance rates. Coincident with these views were printed on November 22, by *The Odd Lot Review*, remarks made to its representative by Horace White, the veteran newspaper editor, who was chairman of the Hughes Investigation of the New York Stock Exchange. Mr. White said:

"The Stock Exchange will recover. The present situation which is confronting brokers and Wall Street generally is a reflection of industrial and business conditions. We are witnessing one of the downward sweeps of the pendulum. The direction will change in time. The public will come back into the market and brokers will again see the record of transactions on the floor equal and probably exceed the figures made at the height of the last period of general public interest in the stock market.

"The real cause of the present financial unrest is a comparatively simple matter if you do not go too far back. There is a scarcity of capital throughout the world. More demands are being made for money than it is possible to supply. The asking and refusing scares both the investor and the business executive. In fact, they are both in danger of getting the impression that conditions are more serious than perhaps is the case.

"War and the threat of war are largely responsible for the scarcity of money. The Balkan troubles extinguished many millions of capital and the atmosphere which has enveloped Europe since those events has not been reassuring. Practically every government on the other side of the Atlantic has been straining every resource to build navies and to strengthen armies. The difference between the present available supply of capital and an amount of money sufficient to satisfy all reasonable demands of legitimate business enterprise would be speedily adjusted if the excessive appropriations which governments have been demanding for armaments should cease. And I believe that the time is near at hand when we can look for more rational behavior among nations."

Sir George Paish, editor of the London *Statist*, now on a visit to this country, is credited with views similarly optimistic as to the outcome of the present situation:

"The United States is enjoying a large measure of solid prosperity, notwithstanding the relative failure of the corn crop, uneasiness as to the effect of the tariff on industry, the comparative scarcity of money, and the difficulty in making new issues of capital. At present the paucity of business in New York, as in London, is confined to Wall Street. Bankers are doing a great business, and are earning large profits. Altho in a few directions factories are somewhat less active than they were, on the whole they are fairly active and are giving good returns, while wages and consuming power were never higher or greater.

"There are, however, signs that the activity of trade is becoming less pronounced, and especially the new orders for iron and steel and locomotives and machinery are not as plentiful as they were a few months ago.

Transferring Time Supplies

for all kinds of records

Each Year's Letters as Handy as Today's!

Transferred letters *should* be findable as quickly and easily as letters in the current file. They *will* be if you transfer them in the right way.

The "Y and E" Vertical Filing System adapted to your business conditions is the right way, because it has the simplest, safest method of transferring. It *works* under all conditions. No letter is "buried"—six months after transfer time no letter need be hunted for. Last year's correspondence will be as much at your finger tips as letters in the current file are *when indexed in the "Y and E" way.*

Transferring by the "Y and E" System can be done in a fraction of the time you've heretofore thought necessary, *and with an actual money saving.* There is no confusion, no scattering of files over the room, no mix-up, no trouble.

Write for Our Book

KREMENTZ & CO.
101 Chestnut St., Newark, N. J.

"Apparently public opinion throughout the country, both East and West, has become much more favorable to the justice of the claims of the railway companies to obtain some compensation from the public for the increased rate of wages they are called upon to pay, and in a country in which public opinion is so powerful as in the United States, the change that has occurred is a matter of great importance, and seems to indicate that the railway companies will be allowed, both by the Interstate Commerce Commission and by States, to charge rates which will enable them to maintain their prosperity, and thus to obtain all the capital they need, both to refund maturing obligations, and to provide for additional expenditures.

"As far as it is possible to form an opinion at the present moment, the currency measure will, at any rate at first, tend to bring about trade recovery by increasing the banking facilities of the country. The financial position of the country is relatively strong, in consequence of the ability of the country to import a large amount of gold whenever the gold is available for import."

HOW PROFIT-SHARING IN "STEEL" HAS RESULTED

It is now eleven years since the Steel Corporation established for the benefit of its employees a profit-sharing plan. At present, upward of 40,000 employees have taken either preferred or common shares of this company. The average price they paid for the preferred was $98.32; it has since been above 120, and is now a few points above par. During the eleven years that the plan has been in operation, subscriptions were received from employees for 313,188 shares of preferred, the market value of which at present is about $33,000,000.

Shares of common stock were not offered to employees until 1909. The shares taken in these years have averaged in cost to employees $62.75; they have since been quoted about $90, but are now several points below the average cost. The total shares of common taken by employees is 139,965, the present market value of them being $5,500,000. In case none of the stock thus taken by employees has been sold, or forfeited, the total value of shares of both classes held by employees would be approximately $38,500,000. It is a fact, however, that a certain percentage of this stock has been forfeited, in one way or another—by cancelation of subscriptions, by leaving the service, or by sales in the open market. Just how near the present holdings come to an apparent total of $38,500,000 in value has not been made known. *The Wall Street Journal*, from which the information here summarized has been taken, prints a table showing the number of shares of preferred and common taken by employees in each year and the prices they paid:

	Pfd. Shares		Common Shares	
	Taken	Price	Taken	Price
1913.....	34,551	$109	25,793	66
1912.....	30,619	110	30,735	65
1911.....	19,229	114	29,119	70

If dissatisfied, return the box at our expense, no charge for those smoked to prove the quality. Quality must be right. A clear Havana cigar 7 cents. You judge.

GOODMAN CIGAR CO.
18 W. Eagle Street **Buffalo, N. Y.**

question, to what extent in dollars and cents have the employees of the Steel Corporation benefited through this profit-sharing plan. In order to make this clear, he takes an employee whose salary has been $1,090, or less, a year, with the privilege to subscribe for one share of stock each year, and says of the results to him:

"In 1903, when the profit-sharing plan became operative, he paid $82.50 for his one preferred share; in 1904, $55; in 1905, $87.50; in 1906, $100; in 1907, $102, and in 1908, $87.50, an average of $85.70 a share.

"The profit-sharing plan provides that if the subscriber keeps his certificate and remains continuously in the service for five years he shall be entitled to a share in addition to a special allowance of $5 a share annually, compensation derived from the following sources: (*a*) Cancelations of subscriptions. (*b*) Transfer of certificate from name of subscriber, whether intentionally or otherwise; thus passing the benefit to the employees' pool. (*c*) Others leaving the service, or failing to resume employment when requested.

"In 1908 the profit-sharing plan had been in operation five years, and the employee received his first return from sources (*a*), (*b*), and (*c*). It amounted to $65.04 on the one share of his stock. In addition, he received on his one share of stock during these five years dividends at the rate of $7 a share a year, or $35, and a bonus of $5 a share annually, or $25. In the five years the pool or 'kitty' netted him $65.04; preferred dividends, $35; and regular bonuses, $25, a total of $125.04, on one share of stock for which he had paid $82.50. Including the dividends paid since then, he has received from that one share of stock, purchased in 1903, a total of about $160, or nearly double the amount paid for it. The only charge against it is the interest of 5 per cent. per annum on deferred payments. But as the stock must be paid for in three years, the loss in interest on deferred payments is very small.

"Returns on preferred stock purchased in the first year the plan was in operation were much larger than returns on purchases in other years. The bonus of $65.04 paid in 1908 (five years after the plan was inaugurated) was largely the result of unsettled conditions in 1903–1904, when the preferred dropt to 50 and frightened many employees into forfeiting their shares. The special bonus in 1909 on the stock, purchased in 1904, amounted to only $19.10 a share, or $45.94 less per share than in 1908.

"The special bonus disbursements each year, from 1908 to 1913, inclusive, on stock purchased each year from 1903 to 1908, inclusive, were as follows:

Year	Bonus from St'k Forfeited, etc.	Year St'k was Purchased	Paid for Stock
1913	$25.55	1908	$87.50
1912	22.55	1907	102.00
1911	21.35	1906	100.00
1910	16.80	1905	87.50
1909	19.10	1904	55.00
1908	65.04	1903	82.50
Aver. per share.	$28.40	Av. price pd.	$85.70

"From the above table it will be seen that the average price paid for preferred stock in the six years was $85.70, and the "kitty" realized an average of $28.40 a year, making the actual cost per share (exclusive of preferred dividends and the regular $5 annual bonus), $57.30. Deducting the bonus of $25 for five years would bring the cost per share down to $32.30, which makes the present return on his investment 21.7 per cent annually.

"This year, subscriptions were received from 36,119 employees for an aggregate of 34,551 shares preferred and 25,793 shares of common. Under the plan there is a

FOR XMAS

bonus of $3.50 per share annually for the common stock, as compared with $5 paid on the preferred.

"No subscription shall exceed 25 per cent. of an employee's salary or wages. Employees receiving annual salaries of $1,090 or less may subscribe for one share of preferred stock; from $1,090 to $1,816, two shares, and so on until a maximum of 15 shares for an employee drawing between $19,756 and $33,790 annually is reached. An employee drawing a salary of $495 annually, or less, is entitled to subscribe to one share of common; $495 to $1,100, two shares, and so on up, until a maximum of 24 shares for an employee drawing between $19,387 and $32,340 is reached. In 1912, 15,349 men receiving less than $800 a year, 20,096 employees receiving from $800 to $2,500 per year, and 1,501 employees receiving over $2500 per year were subscribers."

PREPARING FOR THE PANAMA CANAL

From inquiries made by *The Wall Street Journal* the conclusion is reached that improvements now under way in North American seaports from Canada on the Atlantic all the way around to Alaska, by way of the Panama Canal, involve "an expenditure of not less than $100,000,000." That sum includes commitments already made, or under consideration, and Federal appropriations. Following are details brought out by this inquiry:

"For public harbor improvements at Boston the State Harbor Commission has at its disposal $9,000,000 for improving terminal facilities; $3,000,000 worth of bonds have already been sold, and another $3,000,000 is to be marketed in the near future. While the opening of the Canal was an important factor in this outlay, the possible canal needs are only part of a larger plan for increasing Boston's share in the foreign trade of the country, both by land and by sea.

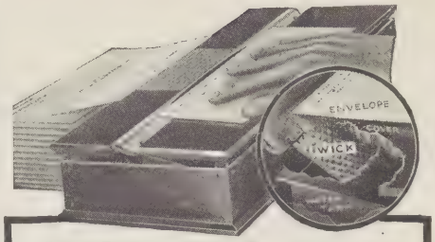
"At New York the port improvements with the Canal in view are likewise part of the general policy under which the Board of Estimate has set aside $15,000,000 for the Department of Docks and Ferries, of bonds representing self-sustaining dock properties. This does not, of course, include the allotment of $9,400,000 by the State of New York for canal terminals at this port, in connection with the improved barge canal connecting the lakes with the seaboard.

"Philadelphia has been developing her port resources more or less consistently by the deepening of the Delaware, and otherwise. Baltimore has planned a bond issue for harbor improvements, according to the report of the Chamber of Commerce, with special reference to increase trade from the opening of the Canal. Large areas of suitable water-front in their relation to manufacturing developments are receiving consideration.

"Norfolk has under discussion some financing with the Canal in view, but has not as yet taken any definite steps.

"On the Gulf, Pensacola, Mobile, and New Orleans are losing no time in strengthening connections and providing for needs. New Orleans has in contemplation an issue of $3,000,000 of dock and warehouse bonds for the building of a cotton warehouse and terminus as a means of maintaining the prestige of New Orleans as a cotton-exporting emporium.

"Galveston's position in common with other Gulf ports leads its authorities to expect increased demand on their accommodations for cotton as soon as Japan and China can get direct access to primary ports by way of the Canal."



Slide envelope across—it's sealed!

One motion moistens, folds and seals. ROCO is the simplest envelope sealer on market. Anyone can use it after one minute's trial. No crank, no lever, nothing to get out of order. Always ready, no adjustment necessary. Small, compact, portable, weighs only 3½ pounds. Can be used anywhere.
